trifle in general symmetry. Fan Fan, second, described in previous reports, won third. Devonshire Pearl is narrow in muzzle and throaty, otherwise she is quite trimly built and sound. Two received vhc., Duchess, wide in ribs, straight in shoulders and head somewhat coarse, and Hempstead Jilt, a bitch of ordinary quality with some coarseness.

**ENGLISH SETTERS (John Davidson, Judge).**—The English setter classes were strong in numbers and quality. Toledo Blade and Monk of Furness, dogs of sharply distinct type, were the competitors in the challenge class for dogs. The latter is largely Laverack in breeding and type, while Toledo Blade is more after the type of the modern setter, or rather the idea of type of the modern setters, for they are in fact of the greatest variety of types. Of the two distinct types, Monk is a better dog of his type than Toledo Blade is of the modern setter. Cincinnati was entered in the class but did not compete. Viatrix Llewellyn, in good condition, won over her two competitors, Cambriana and Albert's Nellie, the latter getting reserve. The dog class filled the ring to its utmost capacity consistent with judging. There were twenty-two competitors. Paul Bow was in excellent condition and won first; his head is his worst fault, the muzzle being light and the head not being clean cut. He has excellent back, body, ribs, quarters, legs and feet; ribs a bit too wide at the shoulders, good symmetry. Second was won by Netherwood Nymrod, described recently in these columns. The third winner, Washtenaw Grouse, is quite a good setter, a little heavy in shoulders and straight in stifle; fairly good general symmetry. Max Noble, the reserve, is long cast, but has excellent muscular development and good symmetry; he is about medium size, stands squarely on sound legs and feet, and has a workmanlike appearance; he was well conditioned and hard as nails. The vhc. dogs were above the average in quality. They were Monk of Furness Sting, Robin Goch, Wordsley Dude, Ben Hur of Riverview and Matano, both he and Max Noble pressing the winner of third very close. I fancied the latter for third place, he being a better finished dog with uniform muscular development.

There were eighteen competitors in the bitch class. Toledo Queen, first, had a very strong competitor in Luna, the latter a bitch of fine symmetry; she is slightly faulty in knees and sometimes stands with elbows in; she is better in head, neck and symmetry than Toledo Queen, though the latter is a bitch of much merit; her head is light and narrow, neck too short, body well shaped, strong in back and quarters, and symmetrical in form. Third went to Nellie Breeze of Washtenaw, a pretty bitch with a tendency to lateness. The reserve went to Cleopatra, quite a good bitch with a plain head, neck short and stifle too straight. Both she and Tube Rose, vhc., were strong competitors for third place. The others awarded vhc. were Sylvia and Liberty II.

**IRISH SETTERS (John Davidson, Judge).**—The kennel prize was taken by the Oak Grove Kennels. In the challenge class, Kildare Glenmore was first with Seminole the reserve. Edna H. had no competitor in the challenge class for bitches. The open dog class had four competitors, of which Finglas was easily first. Pemberton, shown in good condition, was second, and Killane, an ordinary dog, was third. Finglas, coarse in head, flat in ribs, throaty and ordinary, was reserve. There were ten in the bitch class. Nona was placed over Ruby Glenmore II., the same positions which they were awarded at New York. Rosamond won third. The remainder of the class was ordinary. Nita Concord, reserve, has a narrow head, light skull, short neck, but is fairly well built otherwise. Roxie, vhc., is light in muzzle, ears set high, faulty knees and ordinary in quality.

**GORDON SETTERS (John Davidson, Judge).**—Heather Lad won over Leo B. in the challenge class for dogs. In the bitch class Duchess of Waverly was first, Lady Gordon reserve. There were four in the open dog class. In which Duke of Wellington was first. Second was won by Judge S., somewhat long cast in form, narrow muzzle and thin in flesh, tan partly smudgy. Shot Boy, third, has a coarse head, throaty, heavy shoulders, pale tan, legs and feet good. Rab, reserve, has a flat, coarse head. There were five bitches. First went to Highland Yola, a good bitch, though rounding in hips, which gives her a heavy appearance. Montrose, second, is cobby in build, a bit heavy in shoulders and ordinary in symmetry. Dwight Effie, third, was first at Columbus last week. Mohawk Rosa, vhc., was but ordinary, as was also Lady Neva, the reserve. Dr. Dixon's dogs won the kennel prize.

#### LIST OF AWARDS.

**MASTIFFS.**—Dogs: 1st, L. Youngblood's Prince Cola; 2d and 3d, Dr. C. A. Lougest's Emperor William and Emperor Maximilian. Very high com. Dr. C. A. Lougest's Baufur. Bitches: 1st, Dr. C. A. Lougest's Lady Diana; 2d, L. Youngblood's Minnie Beaufort; 3d, withheld.—Puppies: 1st, Bay City Kennels' Kimball; 2d, C. A. Lougest's Campana.

SCOTT TERRIERS.—Best, Tirie.

PUGS.—Best kennel, Rookery Kennels.

ITALIAN GREYHOUNDS.—Best kennel, Joe Lewis.

HANDLERS' PRIZE.—First, B. F. Lewis; second, Thos. Blake.

Spaniel Club Meeting.

THE meeting of the American Spaniel Club executive committee was held at the secretary's office, 374 Broadway, on March 6. Present: Messrs. A. C. Wilmerding, president; E. H. Oldham, treasurer; Dr. S. Bradbury, and Rowland P. Keasbey, Secretary. Mr. Thomas H. Terry was duly elected a member of the club. Messrs. Bradbury and Keasbey were appointed a committee to audit the treasurer's books. It was also resolved that at all shows, where the Spaniel Club judges officiate and where the club's specials are offered, the judges are hereby instructed to make their official report at once to the secretary of the Spaniel Club of their awards, so that the same may be promptly paid by the club.

It was decided to offer the following special prizes at the coming Philadelphia show: "Bell" Cup for the best brace of other colored cockers; \$5 for the best brace of Irish water, or Clumber spaniels; \$5 for the best brace of field spaniels; \$5 for the best brace of cocker spaniels.

Messrs. Wilmerding and Keasbey were, on motion, appointed a committee to represent the Spaniel Club's interest in connection with the coming specialty show. The committee also decided to offer at the specialty show the Cocker Cup, value \$100, for the best American-bred cocker, and also to offer \$25 in cash, in addition to the usual \$20, that goes with Classification No. 1, the first mentioned cash prize to be allotted as the committee on special prizes sees fit.

Boston Show.

BOSTON, Mass., March 10.—Since the issue of our premium list the following special prizes have been donated to be awarded at our show:

The Great Dane Club President's Challenge Cup for the best dog or bitch in the show, to be competed for by members, and must be won three times before becoming the property of any one member.

Harry Dutton offers \$10 in gold for the best pointer, dog or bitch, in the show, donor not to compete.

The National Beagle Club offers a piece of silver plate, valued at \$25, for the best beagle the get of a dog or bitch that has been placed at a beagle field trial held in America. This is open to the world.

James L. Little offers \$5 for the best exhibit of four or more Scottish terriers, entered and owned by one exhibitor; donor not to compete. Also \$5 for the best exhibit of four or more dachshunds, entered and owned by one exhibitor.

The New England Kennel Club offers \$20 for the best exhibit of four or more bloodhounds, entered and owned by one exhibitor. D. E. LOVELAND, Secretary.

Honor To Whom Honor Is Due.

Editor Forest and Stream:

I was glad to notice your tribute to Mr. Booth, of whom I saw a good deal on the Canadian Circuit in 1892. The attention which this handler paid to his dogs not only on judging day but every day of the whole circuit, was worthy of all admiration. But it was as a man and a gentleman as well as a handler, etc., that Mr. Booth was an honor to the professional part of the kennel world. There is plenty of room for such professionals as Mr. Booth, and if there were more men in the ranks of the character, type and quality of this gentleman, fewer men of the right sort would desert the paths of the "fancy" disgusted, and more would enter the kingdom of dogmen which is not now quite synonymous with the Kingdom of Heaven. WESLEY MILLS, M. D.

MONTREAL Canada.

Cocker Rhea at New York.

WOODSTOCK, Ontario, Can., March 6.—Editor Forest and Stream: I notice I am credited with having won second prize for cocker bitch puppies at the recent Westminster Kennel Club show with the red bitch Rhea. Although the entry was made by me, Rhea was entered as the property of Mr. B. J. Rae, of Woodstock, to whom the credit of the win and the breeding belongs. ANDREW LAIDLAW.

[The entry was in Mr. Laidlaw's name and Mr. Rae's name does not appear in the catalogue.]

DOG CHAT.

The number of dogs for which taxes are paid in England is 1,128,000, Ireland 368,000, France 1,864,000, Germany 1,432,000. It is estimated that there are 2,000,000 dogs in the United Kingdom of Great Britain which pass the tax.

Mr. C. D. Roberts writes: I have had quite a stroke of hard luck, having lately lost seven out of eight of a litter of pups born Sept. 19, '93 by champion Duke of Dexter and out of my Devonshire Pearl. I tried my best to save them but got only one through. I shall try this nick again and from what I saw of this last litter I know they will be grand ones. Such heads I never saw yet on pups.

A patch on a bull-terrier is no longer considered a disqualifying blemish in England, and prizes are now awarded to patched dogs. Marked dogs have not been scored too heavily over here hitherto, though it will be well to draw the line pretty sharply and do all we can to breed out the barsnister.

A lady's dog club is the newest thing in kenneldom on the other side. At least Miss Darbishin is organizing such a club and has received great encouragement.

The Bedlington terrier Buckgrove Blue Belle, which Mr. Hopkinson, of Charlottesville, Va., purchased from Mr. Fred W. Smith, is now coming over from England in the steamship Maryland, bound to Baltimore, Md.

The Mascoutah show has a total of 781 entries, made up as follows:

Mastiffs.....	36	Boston terriers.....	3
St. Bernards.....	84	Dachshunds.....	13
Bloodhounds.....	5	Beagles.....	19
Great Danes.....	27	Toy terriers.....	51
Newfoundlands.....	2	Irish terriers.....	5
Russian wolfhounds.....	17	Scottish terriers.....	7
Deerhounds.....	6	Welsh terriers.....	1
Greyhounds.....	16	Bedlington terriers.....	2
American foxhounds.....	13	Dandie Dimout terriers.....	3
English foxhounds.....	3	Seyre terriers.....	14
Pointers.....	36	Schipperkes.....	1
English setters.....	55	Black and tan terriers.....	13
Irish setters.....	38	Yorkshire terriers.....	10
Gordon setters.....	18	Toy terriers.....	2
Chesapeake.....	8	Pugs.....	25
Field spaniels.....	7	King Charles spaniels.....	7
Field spaniels.....	15	Blenheim spaniels.....	7
Cocker spaniels.....	51	Prince Charles spaniels.....	4
Collies.....	71	Japanese spaniels.....	1
Poodles.....	18	Toy spaniels.....	2
Bulldogs.....	10	Italian greyhounds.....	6
Bull-terriers.....	40	Miscellaneous.....	4

White Wonder, the well known bull-terrier, lately owned by Mr. Harris, seems fated to create trouble wherever he goes. The dog was disqualified for deafness at the last Birmingham show. From this decision Mr. Pegg, his present owner, appealed to the Kennel Club. The committee, notwithstanding Mr. Sewell's certificate to the effect that the dog was not totally deaf and that he could hear a whistle, decided not to interfere with the Birmingham decision. Mr. Pegg can still continue to show his dog, but of course will probably be protested wherever he wins. It is a thousand pities that this splendidly formed terrier is so afflicted. He was the cleanest cut bull-terrier that ever came over here.

Mr. L. A. Klein, of Black Lake, P. Q., Canada, is getting together a kennel of dachshunds that are bred from both good German bench show stock and field trial winners. In 1891 he imported the bitch Hexe and the dog Lump, bred by Mr. E. Harder, of Stülze in Mecklenburg. Hexe is by Junker Racker, first, Nürnberg and Berlin 1890, Brussels 1891, and reserve in the field trials at Hanover; second, Berlin, first, two specials at Nürnberg, first, Schonberg in 1890, and first, Brussels 1891. Junker Racker's sire and dam were also winners of many prizes. Lump is now owned by Mr. Ed. Wertheim, of Chicago, and is descended from the great prize winner Hetman Black. With dogs of this breeding, Mr. Klein expects to show up well in the prize lists next year.

Mr. Schallenberger, the St. Bernard breeder, of Alma, Neb., sends us some capital photographs of his dogs. Alma would seem to be a good locality for the St. Bernard industry if one may judge by a picture of the ten-months-old pup Patrician, a smooth, by Aristocrat, out of Valkyrie, by Watch. This dog has a very deep massive head, and excellent body, chest and legs, and seems brimful of quality. He will probably be shown at Chicago with the rest of this kennel, and if the camera tells the truth he should score well. That good smooth Melrose is now an inmate of this kennel. A picture of Alton III. shows a heavily-coated, good-headed dog, with lots of quality.

Dog "Coaxers."

The New York Sun is responsible for a story that there is an old man living in one of the suburbs of Jersey City, who turns to his good account a dog's appetite for the parings of a horse's hoof, that part which the horseshoer cuts away after burning the impression of the shoe into the hoof. This man lives about eight miles from the nearest ferry to New York, and it is his custom to rise at five o'clock every morning and walk to the ferry. Armed with a pocket full of "dog coaxers" he passes through the streets where he knows there are good dogs, and gaining the attention of one of them he throws it a piece of "hoof" and the dog is encouraged to follow him, which it generally does. If the dog at any time shows signs of reluctance to follow, another piece of "coaxer" is thrown to him. In this manner they keep on until the ferry is reached. The man now assumes proprietorship of the dog, and if he does not succeed in selling the animal on the boat takes it to Wall street and generally disposes of it there. The old man has an elastic conscience, but if it should prick at all, reasons within himself that the dog followed him and, therefore he did not steal it.

Sayso—"Those who love books almost invariably love dogs. That is a rule with, I think, few exceptions." Nowitt—"I am one of the exceptions." Sayso—"You love books and hate dogs?" Nowitt—"Exactly." Sayso—"That is strange." Nowitt—"Not in the least—I am a book agent."—P. & S. S. Co. Bulletin.

Our Providence (R. I.) contributor "Tode" tells this: "The story comes from a neighboring city that some few days ago a man applied to the Mayor with a pitiable tale of woe. The good Mayor gave the man \$7 and he departed in good spirits. A little while after he ran into a man who had a bulldog for sale. Whether the unfortunate pined for the company of the dog or whether he considered the dog or his owner more unfortunate than himself we don't hear. At any rate, he gave the man \$5 for the dog, and departed toward his destitute home with a new addition and but \$2 in cash. Men with 'sporty' instincts must have the necessary paraphernalia. If they put the proposed tax on dogs, we suppose some of us poor fellows will have to go without a dinner some day to pay the tax on our beloved outfit."

Black and tan terriers do not receive much encouragement these days, and the breed has made little headway. It is a most difficult and disappointing dog to produce respectably, as generations of fanciers have found at the cost of much gold and mental, not to mention moral, turpitude (it is some

years since we saw this latter word used in reference to dogs, but it fits in here). Dr. Foote, A. W. Smith and others have done much laudable work for the breed, but somehow they have not produced a real good one and the imported ones are still the best. Prof. Wm. G. Graham, evidently has a tender consideration for this handsome terrier and through the FOREST AND STREAM has donated a handsome scarf pin to be presented to the owner of the black and tan terrier winning the most prizes on the present circuit of the shows. The pin represents the head of the usual toy terrier cut into crystal, and then painted after the manner of those we alluded to a couple of weeks since. The crystal is handsomely mounted in gold, and is altogether a handsome affair although a trifle large for the modest inclinations of our black and tan fanciers. The pin will be awarded to the winner after the Boston show.

Whippet racing is receiving considerable attention just now among sportsmen on the other side. Lord Lonsdale and other noblemen have become patrons of the National Whippet Club, and Mrs. Langtry and others are taking up the sport.

The best English mastiff that ever reached the Pacific coast succumbed to the poison fiend recently. This was Gavin McNab's Ingleside Crown Prince, by champion Ilford Chancellor out of Madge Minting, first, San Francisco, 1891, '92 and '93. He leaves many good puppies and grown dogs of his get, but unfortunately there were no bitches of equal quality on the coast to mate him with and none of his puppies promise to approach him in quality. He was not only large and grand in head, but an unusually strong, active dog for a big one.

During the Detroit show sales were slack. Miss Griffin, owner of Belle Isle Kennels, sold several pups; J. E. Dager, of Toledo, O., sold a pup by champion Monk of Furness to S. W. Wayson, of Detroit; Geo. Douglas, of Woodstock, sold a cocker by champion Black Duke to E. H. Donnelly, of Sandwich, Mich., and J. A. Spracklin placed two cocker pups with D. E. Phillips, of Detroit.

B. F. Lewis bought of Mr. J. B. Fisher, of Ypsilanti, Mich., a pup by Cincinnati out of Albert's Nellie.

Messrs. Hay & Alexander, of Windsor, Ont., have purchased from Seacroft Kennels the well-known Raby Pallissy, and did well at his first showing at Detroit.

As a consequence of the limited exercising time at Detroit show where so many dogs had to be turned loose in the ring at once, a distressing accident happened on Friday evening. While Eboracum was being exercised in the crowded ring, Fernwood Bruce, the St. Bernard, attacked him. There was a lively shindy, and Mrs. Meacham bravely came to the rescue of her dog, and in trying to separate the two she was bitten severely on one hand. She acted with great nerve throughout and we trust she will soon be all right again. This emphasizes the fact that henceforth a rule should be made at all shows, that no dogs shall be allowed off the chain in the exercising ring. There will surely be a bad fight some day if this matter is not attended to. Rings should be reserved for different sized dogs, the little ones need them as much as the big ones, but at present it is unsafe for many of the smaller breeds to be put down in the ring at exercising time.

B. F. Lewis sold, during the Detroit show, his well known beagle dog Doctor to C. A. Parkinson, of Detroit. Also an Irish setter pup to James McGregor.

Mr. Jarrett was busy at New York like the rest of the "regulars;" his Irish terrier, second in puppy class, he sold to Count von Rossen, of New York. The collie bitch Olive, second in open, puppy and novice classes, to Mr. Wilton, of New York; collie puppy Warwick, third in puppy class, to Mr. F. Molton, also of New York. Two collie pups will now belong to Mrs. Mayer, of Brooklyn. He also booked services for Christopher, his noted collie. Mr. Forsyth leased Iduna III. from Mr. F. Carswell for that purpose and sends his own Lass of Gowrie (by Christopher ex Denver Lass) to the same dog.

The Irish setter Nona was bred to Killane during the Detroit show. Killane is owned by J. B. McKay, of Detroit, Mich. He is by Kildare, sire of Queen Vie, dam Ruth (Dick Swiveler—Yuba). Nona is by Finglas, field and bench winner, out of the well-known Ruby Glenmore. Nona is a litter sister to Finglas, winner of second International field trials held at Chatham, Ont., 1893. Nona is winner of first New York, first Detroit 1894; Killane, first puppy New York 1894. The litter was purchased by L. N. Hilsendegen, of Prairie Mound Kennels. Great results are expected, as they are the cream of field and bench Irish setter breeding. The pups will not be for sale.

Our correspondent, W. Edward Wick writes: "Every dog has his day, and this was a day of fate for many dogs in Ohio. The House by an almost unanimous vote passed the dog tax bill, of which Lewis, of Delaware, is responsible. As it passed it provides that on the first day of October the auditor shall certify to the constables in each township, the names of the owners (or harborers) of dogs upon which tax has not been paid and the constable is to proceed forthwith to collect the tax or kill the canine."

Dr. Longest writes: "You must have been misinformed regarding the sale of my mastiff bitch Gerda II., as she has not been offered for sale, nor do I wish to part with her. I purchased the bloodhound dog Berry's Bradshaw at the late New York show."

Several dogs while exercising in the ring at Detroit persisted in jumping over the fence down to the main floor, a drop of about eight feet. Vinga, the noted Russian wolfhound, tried it and now she is nursing a broken leg. The leg was set in a glass cast and the bitch will stay during Chicago show at Windsor, Ont., and be taken home on Turner's return. This handicaps the Seacroft Kennels very considerably in the kennel special competitions at the next few shows, although they won the special here without her.

They say a prophet is without honor in his own country, but the cocker Pickpania has a brand of cigars named after him.

Dr. C. A. Lougest lost by death his very promising mastiff pup Frederick the Great, first at New York, while coming to Detroit show. Its death occurred between Boston and Greenfield, Mass. It did not appear very sick when leaving Boston and must have died from a fit, the stomach swelling considerably.

New York City Dog Law.

By a law just enacted, the license fee for a dog in New York city will be \$3 from May 1 for the first year, and \$1 a year renewal. Every licensed dog must wear a collar with metal tag bearing the number. Untagged and unlicensed dogs will be impounded by officers of the S. F. P. C. A. and held forty-eight hours for redemption (fee \$3). Cats are dogs in the eyes of this law. License blanks for dogs and cats will

be ready April 1, at the secretary's headquarters, No. 10 East Twenty-second street.

After three weeks of dogshowing and disappointments, Messrs. Dole and Jarrett intend to try a more rarefied atmosphere and will storm the Denver "Fancy" with their troupe. They will then try to jump from Denver, Col., to Philadelphia, Pa., in time for the Quaker show. They expect to "land with both feet." Just Fancy!

#### Philadelphia Dog Show.

We are requested to draw attention to an error on the entry blank which was not discovered until over 2,000 premium lists had been sent out. The date of closing is given as March 17, whereas it should have been March 16. Exhibitors will oblige the club by considering the premium list date the correct one and mailing their entries not later than March 16. A class has been added for toy spaniels other than King Charles. The club offers kennel prize for wolfhounds and splits challenge and open classes of black and curly poodles.

The Hempstead Farm Co. will give an exhibition of live stock in the Madison Square Garden, this city, beginning April 27. There will be all classes of live stock from hares to rabbits; and a novel feature will be the showing of family groups of old and young. In connection with the Farm exhibits there will be a specialty dog show by the St. Bernard, Collie, Spaniel and Fox-Terrier clubs. It promises to be a most interesting exhibition.

#### Vicissitudes of the Judging Ring.

CATSKILL, N. Y., March 8.—*Editor Forest and Stream:* Having read the letter of "Solus" in your last issue on "Spaniels in New York," I will state the experience of my friend, Mr. Frank Pidgeon, of Saugerties, and myself in the judging of the cocker Barefoot. I had a dog in another ring at the time the class for open black dogs was called, and Mr. Pidgeon was to go in with Barefoot. He did so, and was sent out with him, as Barefoot was not of cocker type. I soon went to Barefoot's stall and found him there. Not knowing that Mr. Pidgeon had had him in, I immediately took him in again and was awarded he. on him. Again, in the novice class I handled him and won vhc. on him. Still again, when the entries to compete for the special for "best American black dog pup" were called I again handled him and won the special.

Do not think by the above that we are looking for any name for Barefoot, for he was sold at the end of the show, but do understand this is written by me to find whether the judge, Mr. Wilmerding, changed his style of a cocker in less than ten minutes. F. M. THOMAS.

#### Toronto Show.

TORONTO, March 5.—The following gentlemen were elected the committee of the Toronto Industrial Exhibition Association's bench show of dogs, to be held at the city of Toronto from Sept. 10 to 14: Messrs. C. W. Postlethwaite, chairman; John Maughan, vice-chairman; J. F. Kirk, J. Henderson, J. Wilson, Robt. Junior, Jos. Dilworth, J. G. Williams, J. G. Mitchener, H. B. Donovan, W. P. Fraser, R. G. Wilkie, George Sweetman, A. A. MacDonald and C. A. Stone, secretary and superintendent. C. A. STONE.

#### Chicago Show.

CHICAGO, Ill., March 13.—The show opened this morning with an excellent quality of dogs. Judging commenced promptly. Mr. Anthony was prevented by sickness in family from judging pointers and Mr. Donoghue takes his classes. San Francisco and Portland will have no shows this year. H. W. LACY.

#### KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

#### NAMES CLAIMED.

##### Prepared Blanks sent free on application.

*Repat.* by Barnes Bros., Wellsville, N. Y., for fawn pug bitch, whelped Oct. 6, 1893, by Curly Penrice (champion Penrice—Sister Bonnie) out of Ruby.

#### BRED.

##### Prepared Blanks sent free on application.

*Bonnie Belle—Blenion Volunteer.* C. A. Sumner's (Los Angeles, Cal.) fox-terrier bitch Bonnie Belle to his Blenion Volunteer, Nov. 7. *Bonnie Buzz—Blenion Volunteer.* C. A. Sumner's (Los Angeles, Cal.) fox-terrier bitch Bonnie Buzz to his Blenion Volunteer, Sept. 22. *Lilla of Glenrose—Driver.* Barnes Bros.' (Wellsville, N. Y.) beagle bitch Lilla of Glenrose (Flute M.—Skip) to their Driver (Brittle—Pearl), Jan. 7.

*Hazel Weller—Spot.* Barnes Bros.' (Wellsville, N. Y.) beagle bitch Hazel Weller (Tony Weller—Hazel Kirk) to J. O. Fellows's Spot (champion Frank Forest—Vick R.), Jan. 7.

*Mischief—Nelson II.* Barnes Bros.' (Wellsville, N. Y.) Yorkshire terrier bitch Mischief to O. Valger's imported Nelson II. (champion Ted—Lady), Jan. 11.

*Merry Duchess—Micawber.* Barnes Bros.' (Wellsville, N. Y.) imported Yorkshire terrier bitch Merry Duchess (Bank's Royal—Smart's Juno) to their Micawber (Sandy—Mona), Feb. 8.

*Empress of India—Rip.* Barnes Bros.' (Wellsville, N. Y.) pointer bitch Empress of India (Tamarack—Fleet) to C. B. Macken's Rip, Dec. 14.

*Fritz's Fan—David of Hessen.* C. L. Smallwood's (Tuscaloosa, Ala.) pointer bitch Fritz's Fan (Hindoo Fritz—Bertie May) to T. T. Ashford's David of Hessen (Duke of Hessen—Princess Marguerite), Jan. 15.

*Ellen Terry—Eboracum.* Woodin & Hoyt's (Berwick, Pa.) St. Bernard bitch Ellen Terry (Plineum—Yorkie) to Swiss Mountain Kennels' Eboracum (Scottish Prince—Lady Glen), Feb. 14.

*Dolly—Kingstonian Count.* Woodin & Hoyt's (Berwick, Pa.) St. Bernard bitch Dolly to Col. Ruppert's Kingstonian Count (Scottish Prince—Septima), Feb. 8.

*Countess Adeline—Kent III.* A. D. Fiske's (Worcester, Mass.) English setter bitch Countess Adeline (Count Noble's Boy—Clip Roderigo) to A. B. Davis's Kent III. (Kent II.—Miss La Salle), Jan. 23.

*Heze—Jack.* L. A. Klein's (Wertheim Mere, B. Co.) imported dachshund bitch Heze (Junker Racker—Schnipp) to O. E. Levey's imported Jack, Feb. 5.

*Prairie Flower—Barnaby Rudge.* P. & H. Smith's (St. Stephen, N. B.) Skye terrier bitch Prairie Flower (champion Old Burgundy—Lowland Maid) to their Barnaby Rudge (Medoc—Nip), Feb. 14.

*Bessie—Ned.* M. J. Flaherty's (Providence, R. I.) pointer bitch Bessie (Dick Swiveller—Bloomie) to T. Phinney's Ned, March 3.

*Tube Rose—Paul Bo.* R. Merrill's (Milwaukee, Wis.) English setter bitch Tube Rose (Count Noble—Lila) to his Paul Bo (champion Paul Gladstone—champion Girl), Feb. 8.

*Lassie—Metchley Wonder, Jr.* Maple Grove Kennels' (Logan, O.) collie bitch Lassie (Hamish of Ruthven—Stella) to their Metchley Wonder, Jr., Jan. 3.

*Maple Grove Luath—Metchley Wonder, Jr.* Maple Grove Kennels' (Logan, O.) collie bitch Maple Grove Luath (Clifton Hero—Sparkle) to their Metchley Wonder, Jr., Jan. 7.

#### WHELPS.

##### Prepared Blanks sent free on application.

*Lass of Kippen.* E. G. Dunkle's (Brookton, Mass.) pointer bitch Lass of Kippen (champion Naso of Kippen—June II.), Jan. 7, thirteen (six dogs), by W. G. Lovell's Coronet (Greenfield—Lillian).

*Rochelle Carla.* Scott Robinson's (Allegheny City, Pa.) black and tan bitch Rochelle Carla (Broomfield Sultan—Broomfield Madge), Nov. 25, four (one dog), by Mr. McClintock's Job Trotter (Tony Weller—Rochelle Ma'ge).

*Adeline.* The Bay Kennel Club's (New York city) beagle bitch Adeline (champion Frank Forest—Ina), Feb. 1, four (two dogs), by their Fritz of Rockland (Scottie—Frances).

*Dot II.* Maple Grove Kennels' (Logan, O.) collie bitch Dot II. (Christopher—Active), Aug. 20, seven (four dogs), by their Metchley Wonder, Jr. (Metchley Wonder—Barby Rose).

*Maple Grove Luath.* Maple Grove Kennels' (Logan, O.) collie bitch

Maple Grove Luath (Clifton Hero—Sparkle), Sept. 21, two dogs, by their Metchley Wonder, Jr. (Metchley Wonder—Barby Rose). *Flossie May.* Maple Grove Kennels' (Logan, O.) collie bitch Flossie May (Randolph—Maple Grove Luath), Jan. 1, ten (five dogs), by their Metchley Wonder, Jr. (Metchley Wonder—Barby Rose). *Sedan.* Glendyne Kennels' Irish setter bitch Sedan, Jan. 1, two dogs, by their Glen Jarvis (champion Elcho, Jr.—Maid).

#### SALES.

##### Prepared Blanks sent free on application.

*Bonnie Broom.* White fox-terrier dog, whelped May 5, 1893, by Le Logas out of Bonnie Buzz, by C. A. Sumner, Los Angeles, Cal., to Mrs. S. A. Clarke, same place.

*Black and tan Gordon setter dog,* whelped Feb. 25, 1890, by Murkland Ranger out of Beaulah, by C. T. Brownell, New Bedford, Mass., to G. E. Hatch, same place.

*Curly Penrice—Midget whelp.* Fawn silver pug dog, whelped July 20, 1893, by Barnes Bros., Wellsville, N. Y., to Mrs. Fannie Loomis, Bath, N. Y.

*Curly Penrice—Vanity whelp.* Fawn pug dog, whelped Oct. 24, 1893, by Barnes Bros., Wellsville, N. Y., to W. Currier, Andrews Settlement, Pa.

*Curly Penrice—Ruby whelp.* Fawn pug dog, whelped Oct. 6, 1893, by Barnes Bros., Wellsville, N. Y., to Mrs. H. D. Voorhies, Jamestown, N. Y.

*Murkland Ranger—Queen Noble whelp.* Black and tan Gordon setter dog, whelped Oct. 27, 1893, by C. T. Brownell, New Bedford, Mass., to W. H. Picken, New York.

*Rose Lawn Dazzle.* White, black and tan fox-terrier dog, whelped Dec. 11, 1893, by Hillside Rascal (champion Ruby Mixer—Lady Reckon) out of Seacroft Boaster (champion Dominie—Brokenhurst Queenie), by Rose Lawn Kennels, Columbia, Pa., to Hon. J. S. Wilson, same place.

*Rose Lawn Roundy.* Black, tan and white dog; same litter, by Rose Lawn Kennels, Columbia, Pa., to H. C. Bruner, same place.

*Rose Lawn Sport.* White, black and tan dog; same litter, by Rose Lawn Kennels, Columbia, Pa., to W. W. Cleaves, same place.

*Rose Lawn Dolly.* White bitch, same litter, by Rose Lawn Kennels, Columbia, Pa., to H. Gladfelder, same place.

*Rose Lawn Fen.* White bitch, same litter, by Rose Lawn Kennels, Columbia, Pa., to Col. Jas. Duff, same place.

*Reckless.* Black and tan Gordon setter dog, whelped Aug. 16, 1893, by Reginald H. out of Nan, by Lawn Gordon Setter Kennels, Chicago Dawn, Ill., to W. F. Roos, Chicago, Ill.

*Negress.* Black and tan Gordon setter bitch, whelped 16, 1893, by Reginald H. out of Nan, by Lawn Gordon Setter Kennels, Chicago Dawn, Ill., to M. Paige, Chicago, Ill.

*Metchley Wonder, Jr.—Maple Grove Luath whelps.* Sable and white collie dogs, whelped Sept. 21, 1893, by Maple Grove Kennels, Logan, O., one each to J. R. Hopley, Bucyrus, O., and J. Smith, Greendale, O.

*Metchley Wonder, Jr.—Dot II. whelps.* Sable and white collies, whelped Aug. 30, 1893, by Maple Grove Kennels, Logan, O., a dog each to H. L. Shirley, Louisville, Ky.; T. E. B. Kernan, Philadelphia, Pa.; G. S. Allen & Son, Milliken, Mich.; and R. L. Overton, Nashville, Tenn.; and a bitch each to M. Davis, Circleville, O.; G. W. Lloyd, Sand Run, O., and J. A. Shaw, Logan, O.

*Metchley Wonder, Jr.—Flossie May whelps.* Sable and white collies, whelped July 12, 1893, by Maple Grove Kennels, Logan, O., a dog to J. C. McCallough, Cincinnati, O., and a bitch to F. M. Saunders, Haydenville, O., and W. H. Woodruff, Logan, O.

#### ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

J. T. P., Montreal, P. Q.—In about three or four months.

W. J. S., Warren, Pa.—Address O. H. Hardon, Indianapolis, Ind.

A. H. M., Central Valley, N. Y.—Try faradization to muscles of hip.

E. A. W., Ledalia, Col.—Write O. H. Hardon, Indianapolis, Ind., for jack rabbits.

W. M. W., Pittsfield, Mass.—B. F. Lewis's address is Lansdowne.

Geo. S. Thomas, Salem, Mass. Feb. Kirby, Woodbury, N. J.

E. E. C. S., Falmouth, Mass.—The address of the secretary of the Brunswick Fur Club is Bradford S. Turpin, Cottage street, Dorchester, Mass.

J. J. E., Potsdam, N. Y.—Certainly. It is only when the bitch is bred very young that these may be an improvement in succeeding litters.

H. O. C., Harrisburg, Pa.—The risks in 'spaying the pug at two years old are comparatively slight. Would probably be all right again in two or three weeks.

CONSTANT READER, Allegheny City.—St. Bernard slobbering so much is probably due to either of the following causes: Disease of the gums or teeth, or paralysis of the lips.

CONSTANT SUBSCRIBER.—Give forty drops of the syrup of iodine of iron and three drops of Fowler's solution of arsenic three times a day. For the stomach give one grain of opoid with each meal.

M. J. S., Hamburg, N. Y.—We do not give information where to buy dogs in this column. Consult our business columns, and if you do not find what you require the best way is to advertise.

Mr. J. S.—You will find the breeds advertised in our business columns. It would be invidious on our part to recommend any particular kennel, in this column. You had better advertise for what you want.

F. W. P., Highland, N. C.—Your suggestion is a good one, and will be followed in future. You will find FOREST AND STREAM pursues this plan in giving the entries for the different stakes and is the only kennel journal which does so.

M. J. S., Hamburg, N. Y.—We do not know of any "full-blooded Kentucky-trained bloodhounds." A Kennel Special in our business columns would probably bring you what you require, that is if you mean foxhounds used for man-hunting.

J. J. E.—Wash the ear out daily and apply the following ointment:

B. E. . . . . 3i  
Ung. zinci . . . . . 3iv

Mix. Apply to ear twice a day.

H. W. B., Syracuse, N. Y.—I have a very finely bred black, white and tan bitch, now 2½ years old, which is apparently barren. She comes into heat regularly, and I have had her served several times, the results being unfruitful in each case. Ans. Have the vagina and womb examined by a veterinarian.

J. H. W., New York City.—The collie bitch Dark was owned by Chestnut Hill Kennels, Chestnut Hill, Pa. Breeder, J. Pirie, England. Whelped July 6, 1890. We believe Mr. A. H. Mason of Manchester, England, owned her when she was bred to Caracatus, but this you can probably ascertain by writing to Mr. Jarrett, Chestnut Hill, Pa.

E. W., Boston, Mass.—Irish setter Eileen was bred by John M. Niall, Ireland; whelped May, 1875, by Goings's Bob out of Niall's Fan; Bob by Hutchinson's Bob out of his Lilly, Fan by Ponto out of Venus. Berkley was bred by St. Louis Kennel Club, whelped July, 1876, by Elcho out of Lou II.; Elcho by Charlie out of Nell, Lou II. by Grouse out of Maybe.

M. S. S., Germantown, Pa.—1. Will you please inform as to the address of the American Kennel Club stud book? 2. Also the American Kennel Register. I wish to get a copy of pedigree of the pointer bitch Miss Nan, by Rapidon out of Lady Bird. The above was registered three or four years ago. Ans. 1. No. 41 Broadway, New York. 2. No longer published. 3. Miss Nan (A.K.C.S.B. 12,931), by Rapid Don (4,098) out of Lady Davidson (8,015), by Duane's Hamlet out of Kate IV. Rapid Don, by Don out of Nellie Bird.

C. S. L., South Bend, Ind.—My beagle dog, 16 months old, had distemper three months ago and is now in good health, apparently, with the exception that he is distressed in breathing and makes a noise as though snoring when awake and at night breathes so hard that we cannot allow him in the house. At times he braces himself and acts as though choking or gagging. Ans. Paint chest with tincture of iodine three times a week. Give thirty drops of syrup of iodine of iron three times a day and one teaspoonful of cod-liver oil twice a day.

MASSACHUSETTS.—1. Is the New England Field Trial Club still in existence? 2. Do they intend to have a field trial on their preserve at Assonet, Mass., this fall? 3. Could a field trial of pointers and setters be successfully held where State protects game bird from being killed during the year? Ans. 1. Yes. 2. We cannot give a decisive answer on this point. It will all depend upon how the birds winter. If there are sufficient birds, the trials will probably be held. 3. Yes. When rules do not require retrieving it is not necessary to kill the birds.

H. M. S., Toronto, Can.—I have a pointer pup, six or seven months old, which has been ailing for several weeks with the following symptoms: Retracted eyes—discharge a thick, yellow fluid at times; nostrils—no discharge, yet he snuffles and uses his paws as though to

clear them: appetite good, but he is as thin as a barb-wire fence. The skin has broken out on the back of the neck about the size of a dime. Last week he appeared all right, but has fallen back into the old state. Ans. Probably distemper coming on. Give a two-grain quinine pill three times a day, and also give a dessertspoonful of cod-liver oil twice a day. If there is no improvement in two weeks write again.

G. F. P., New Rochelle, N. Y.—1. Feed St. Bernard pup four times a day with broth in which meat, vegetables, stale bread, oatmeal and rice may be mixed alternately, so as to afford a variety. Give raw meat chopped up three times a week. Dog biscuits crushed and fed dry may with advantage constitute one meal, at breakfast best. 2. Don't wash the pup; have his coat brushed with a dandy brush every day. The less you wash such dogs the better; grooming keeps them clean. 3. While so young it is advisable to keep him, not actually in a warm room, but where he will be free from draughts and perfectly dry. St. Bernards should not be coddled. 4. Mix vaseline and sulphur and rub on the sores.

J. G. S., Brooklyn, N. Y.—Have you treated for worms? If not do so. Give the following mixture:

Bismuth sub. nit. . . . . 3i.

Soda bicarb. . . . . grs. xii.

Papard . . . . . grs. xii.

Morph. sulph. . . . . grs. ii.

Mucil. acacia . . . . . 3i.

Aq. merth pep a . . . . . 3iii.

Mix. Give one dessertspoonful three times a day.

## Hunting and Coursing.

#### FIXTURES.

April 17.—South Dakota Coursing Club's inaugural meeting, at Mitchell. S. D. Entries close April 16. S. S. Batley, Sec'y; Fox Kenney, Judge; Joseph Dodd, Slipper.

#### Dakota Coursing.

MITCHELL, S. D., March 5.—*Editor Forest and Stream:* Spring coursing will open at Oaks, N. D., April 3 and following days, with Mr. E. H. Mulcaster in the saddle. First dog wins \$130, runner-up \$65, third and fourth each \$33.50. Should the stake fill the club will add four purses of \$5 each. The stake will be for thirty-two all-age greyhounds (or less), at \$5 entrance, with proportionate deduction in winnings if the stake does not fill. They will also offer a consolation prize. It is the wish of all coursers throughout the States that this inaugural meeting will be a successful one.

The Arctic weather with which the Altair Club had to contend may hold back a few of the boys. But, at the present writing here, the weather and ground are in very favorable condition for training. This meeting should be a success with such a man as A. P. Slocum at the back of it.

The next week the second annual spring meeting will be held at Huron, beginning the 10th and finish. Some \$200 will be given to the winners. First money \$100. And here the splendid Mr. E. H. Mulcaster will once more say which dog shall wear the crown. This town will surely hold a good meeting, and to guarantee this we only refer to the previous meetings held there.

The next week the South Dakota Club will hold its inaugural meet at Mitchell, beginning April 17 and run of following days. I think that Mr. Mulcaster will judge here. Mr. Wm. Fox Kenny, of Sioux Falls, has been asked to judge and we have not received a satisfactory reply from him. It was supposed that Mr. Mulcaster could not be with us, but later the club has heard from him and doubtless he will judge.

Sioux Falls and Artesian are talking strongly of holding spring meetings. If they do I have no doubt Mr. Kenny will do the judging at both places, as he has been spoken to. H. G. NICHOLS.

#### That Beagle Challenge.

*Editor Forest and Stream:*

In your issue of Feb. 24 appeared a challenge for me from Mr. C. S. Wixom. In answer I will repeat: I claim to have the best string of stud dogs in America. Does Mr. Wixom think the superiority of our kennels can be decided at a dog show? What matters which should beat on the bench; are not beagles sporting dogs, and can their superiority as a true, spirited and correct follower of a rabbit be tested at a dog show? Does not Mr. Wixom well know there are quite a number of the champions of to-day that could not compete favorably in the chase with an ordinary pack dog. In fact none are perfectly worthless in the chase. If Mr. Wixom is anxious to have our dogs tested in the chase (which I claim is the only way) I am willing to put up the forfeit money, and comply with the terms of his challenge at any time; and if he thinks I have hoisted my colors too high in my advertisement, he must lower them by beating my dogs in the field. I claim I am no usurper. I have won in field trials with said string, an Absolute, one first, one second and reserve. The superiority of a kennel of pugs could be decided at a dog show, but how a stud beagle can be I am at a loss to know, as sportsmen generally look upon dogs that appear to have been inmates of a bandbox suspiciously as a sporting dog. POTTINGER DORSEY.

NEW MARKET, Md., Feb. 22.

Mr. Freeman Lloyd makes a rather sweeping assertion when he says that England can "whack" the world in greyhounds and horses. This is probably true in regard to the latter, but before the former assertion will go down with graceful ease we would like to see some of the English cracks take a two mile breather with a Huron or a Kansas jack. English greyhounds may be a little smarter in working the hare, owing to the "dashy" style of work the English hare gives them, but for bottom and stamina we should say the prairie greyhounds can more than hold their own and are little inferior in sharp point work.

The Goelet and Bennett Cups.

ALTHOUGH no American yacht clubs are represented at the assemblage of yachts which takes place this week at Cannes, the racing cannot fail to be of interest to Americans, as two of the important events are for prizes generously donated by American yachtsmen. Since 1882 Mr. Ogden Goelet, of New York, has annually given to the New York Y. C. the two cups which bear his name, a most generous donation, as they have cost respectively \$1,000 and \$500, a total of \$30,000 in thirteen years. Ex-Com. James Gordon Bennett, of the steam yacht Namouna, has also been a liberal giver during his long term of membership in the New York Y. C., the many prizes which bear his name, including the Cape May, Brenton's Reef, Bennett-Douglas and other cups that have passed out of memory through being permanently won, aggregating an equal or even a still larger sum. Both of these gentlemen have spent much time abroad and have sailed much in French and other foreign waters, last spring being present at the regattas and review in the Mediterranean. So much were they impressed by the

GOELET-BENNETT CUP—FOR YACHTS OF 20 TONS AND UNDER.

energy displayed and the results accomplished by French yachtsmen in the encouragement of designing, building and racing, that they joined in the establishment of the handsome and valuable prizes which bear their joint names, and which are shown in the illustrations, which we reproduce from *Le Yacht*. These two cups have been given under the following conditions:

REGULATIONS FOR THE GOELET AND BENNETT CUPS.

ART. I.—These cups, established by Messrs. Goelet and James Gordon Bennett, are the prizes for international races to be run in 1894, in which may take part all yachts which conform to the conditions announced below.

ART. II.—The first prize is an object of art, in silver, to cost 5,000 francs (\$1,000), offered by Mr. Ogden Goelet, and of a compensation offered by Mr. James Gordon Bennett, representing the expense to the winning yacht of going from her home station to Cannes and returning.

The second prize is an object of art, also in silver, to cost 2,500 francs (\$500), offered by Mr. Ogden Goelet.

ART. III.—These two cups are, and remain, the property of the Union of Yachtmen of Cannes. The owners of yachts which may

GOELET-BENNETT CUP—FOR YACHTS OVER 20 TONS.

be holders shall have only provisional possession, except in the case provided for by Art. XII.

ART. IV.—The races shall take place in the roadstead of Cannes.

ART. V.—The racing rules and allowances shall be those of the Union of French Yachts.

ART. VI.—The races shall be open to yachts of all nations and of all rigs, with fixed keels or centerboards, of over 20 tons for the first cup and 20 tons or less, but over 5 tons for the second cup (the tonnage to be measured by the rule of the Union of French Yachts), provided the owner be a member of a club, either French or foreign, which is recognized by the Union of French Yachts.

ART. VII.—The possession of the cups shall be decided by but one race (each year) the details of which will be published each year in a special programme prepared by the Union of Yachtmen of Cannes, and approved by the Union of French Yachts. The length of course shall be at least 30 miles naut. for the first cup, and at least 20 miles naut. for the second cup.

ART. VIII.—In the case of no yacht having finished the course before sunset, the race will be declared off and sailed the following day, if possible, or at a future date.

ART. IX.—The races shall not take place unless at least four yachts start. Should this number not be present, the race may be postponed to a date to be fixed by the Union of Yachtmen of Cannes.

ART. X.—If the race for one or the other cup cannot be held, for any reason whatever, after having been once postponed, the Union of

Yachtmen of Cannes shall not be compelled to hold the race that year.

ART. XI.—The Union of Yachtmen of Cannes shall deliver, subject to a receipt, each cup to the club to which the winner belongs. The club shall be responsible for the cup to the Union of Yachtmen of Cannes.

ART. XII.—Each cup shall become the property of the yachtman who may win it for three consecutive years, with the same or with a different yacht, and when thus won it will be replaced, for the second time, by Mr. Ogden Goelet.

ART. XIII.—The cup belonging to the owner, and not to the yacht, shall not be transferred through the sale of a winning yacht.

ART. XIV.—The compensation to the winner of the first cup for the cost of the voyage going and returning, will be regulated according to the number of miles sailed and the tonnage of the winning yacht.

ART. XV.—In the case of the death of a holder of a cup, the club to which he belonged shall return it to the Union of Yachtmen of Cannes.

ART. XVI.—In the case of the dissolution of the Union of Yachtmen of Cannes, the cups shall be placed under the direction of the Union of French Yachtmen, and shall continue to be raced for under the same conditions; but Mr. Ogden Goelet reserves the right to designate the port at which the races for the cups shall be held, and he shall no longer be held to renew the prizes.

(Signed.)

J. OGDEN GOELET,  
JAMES GORDON BENNETT.

The President of the Union of Yachtmen of Cannes,  
VICOMTE DE ROCHEBOUQUART.

The President of the Union of French Yachts,  
REAR ADMIRAL BARON LAGE.

The handsome cups were designed and made by Tiffany & Co., New York; and, in place of the promised sums, cost, respectively, 8,000 francs (\$1,600) and 4,000 francs (\$800). The first prize to be paid by Mr. Bennett to the winner of the first prize this year has been fixed at a maximum of 6,500 francs (\$1,300). The races take place as we go to press, on Tuesday, March 13. The programme for the whole week is as follows: March 10 and 11, Cannes Nautical Society, international regattas. March 13, Goelet-Bennett cups, Union of Yachtmen of Cannes. March 14, Union of Yachtmen of Cannes, yachts above 20 tons, yachts from 10 to 20 tons. March 15, Union of Yachtmen of Cannes, racing yachts over 10 tons, cruising yachts, schooners and yawls over 10 tons, yachts of 10 tons and under. March 16, four classes, 1 to 5 tons. March 17, review of the fleet. March 18, miscellaneous craft, sailing and rowing races, illumination and fete. March 19, cruising match to Nice; Union of Yachtmen of Cannes.

The principal competitor in the races will be Britannia, sailed by Capt. John Carter, and her owner, the Prince of Wales, will be present. Mr. Goelet is at Cannes in White Layde, and Mr. Bennett is also there in Namouna.

Building at Nyack.

THE shops of C. L. Seabury & Co., at Nyack, N. Y., have been busy all winter, and the twin screw steam yacht designed by the firm, is now nearly finished. She is being built for a New York yachtman, and is 75ft. over all, 11ft. 6in. beam, 4ft. 6in. draft, bulwarks 13in. high. There is a cabin trunk 23in. high from the after end of saloon, over the saloon and engine room to the forward end of galley. The saloon is 14ft. long, fitted with transoms with lockers under them. The wine lockers and china closet are arranged in the after end. The finish is mahogany and gold panel work. A stateroom is arranged directly forward of the saloon on the port side with a large double berth, with drawers under it, and a dressing case with a mirror and drawers will be fitted. A toilet room is arranged on the starboard side, forward of the saloon, with an entrance from stateroom and saloon. Directly forward of the toilet room is arranged a small room with shelves and hooks, and with sliding door connecting with the stateroom. This apartment will also be used as a wardrobe. The machinery consists of two Seabury triple expansion marine engines of latest design, and a Seabury patent safety water tube boiler, fitted with all necessary appliances. The galley is forward of the engine room, fitted with a range, sink and pump, the smoke pipe is connected with main smoke funnel. Directly forward of the galley is arranged the forecastle or crew's quarters, with accommodations for six people. Forward of this is a large crew's toilet room. These apartments have a good light and ventilation. The deck is flush forward, with deck room on either side of cabin house, also a large after deck. She is schooner rigged, and will carry two boats on davits, etc. Her speed is 14 to 15 miles per hour.

The 30ft. cabin steam launch built for Mr. W. B. Higgins, of this city is completed. She is fitted with a fore and aft, compound engine and safety water tube boiler. She has a cabin forward, a cabin aft with a toilet room arranged with a w. c. and wash basin. There is good deck room forward and aft, and on either side of cabin-house, with bulwarks. The high speed steam launch Palos, owned by Mr. Jarvis B. Edison, of New York, is being fitted with a new triple expansion engine of latest design, and a safety water tube boiler. The high speed steam launch Daisy, formerly Henrietta, and now owned by Mr. Walter Langlois, of New York, is being fitted with a Seabury boiler. The high speed launch Imp, owned by Mr. J. L. Hutchinson, of New York, has had her engine re-built, boiler thoroughly overhauled, and looked over in general. Mr. Frank Bement, of the well known firm of Bement, Miles & Co., machinery builders of Philadelphia, Pa., placed an order for a safety water tube boiler, latest design, which will be placed in the new 30ft. steam yacht he is having built. Mr. J. S. Muckie, of Philadelphia, has also placed his order for a boiler, for his launch Scott.

Messrs. Seabury & Co. are now building a modern racing sloop for a New York yachtman, from their own designs. She will be a centerboard boat, 38ft. over all, 25ft. waterline, 9ft. beam, 4ft. 6in. draft with board up and about 7ft. 6in. with board down. She will be double planked above waterline, and will carry her lead outside.

George Hallet Balch.

MR. GEORGE HALLET BALCH, president of the Boylston Insurance Company, died suddenly of pneumonia in Boston on Feb. 24, in the forty-sixth year of his age. He was among the last of the boys to graduate from the counting house of William Perkins & Co., noted merchants and ship owners. After serving the customary four years, he was given a letter of credit of \$1,000, to be invested at his discretion in the East Indies, and the choice of ships as a guest for the voyage.

He sailed in the celebrated clipper ship Archer for San Francisco, Hong Kong and Manila. Leaving the ship in the last named city, he traveled extensively in China, the Straits settlements, India, Egypt, the Holy Land and Europe, being away from home nearly two years. It was partly this voyage which developed his great love for the sea, which in after years proved such a source of endless pleasure to him. After his return to Boston he became much interested in sailing, and was for a time regarded as the best amateur oarsman in the State. Afterward he purchased the celebrated catboat Firefly from the late Edward Burgess, but this afforded limited facilities for cruising, and he soon became owner of the cutter Vayu, so well known and admired in every harbor from Boston to Frenchman's Bay for the beauty of her lines and her bright and staunch appearance. Few possessed his thorough knowledge of the coast line, including its lights, buoys, courses, etc., which was derived from many trips and unceasing study of the charts and the "Coast Pilot." To enter a harbor once was sufficient for all its landmarks to be indelibly impressed upon his mind, never to be forgotten, and always ready for immediate use. His thoughtfulness and care in everything he undertook amounted to enthusiasm. About his yacht, which was his delight and pride, nothing but the very best could be used, and the result was that not even a piece of rope yarn was ever carried away during long cruises in all kinds of weather. He was a firm believer that nine-tenths of the accidents are due to carelessness and that the remaining one-tenth are unavoidable. He always handled and sailed his boat in a masterly manner, as though working for a prize; nothing was ever permitted to be done carelessly. Always kind and considerate of his men, he never exalted but what was just and right. His private character was spotless and richly endowed with many virtues. He had the highest ideals and the strength of will to realize them. His nature was so genial and sympathetic that he made a host of friends. He was modest and unassuming, except when occasion demanded, and then there was no hesitation or retirement. He will be long remembered as one who advocated yachting for its manly, healthful sport, and deprecated the abuses so often attributed to it. R. H. H. PHILADELPHIA, March 7.

Semiramis.

SEMIRAMIS, steam yacht, has just been purchased by A. J. Drexel, of Philadelphia, owner of Avenel, née Narod. Semiramis was fully described and illustrated in the FOREST AND STREAM of May 17, 1891. She was designed by Mr. Alfred H. Brown, of London, one of the leading designers of steam yachts, and is in many ways a model boat. She is 29ft. 6in. long, 19ft. 10in. L.W., 27ft. 6in. in beam, and 14ft. 6in. draft. Her accommodations are ample and elegant. The yacht will be a very important addition to the American fleet. She has just returned from a long cruise to the East Indies, undertaken under rather curious circumstances. She was purchased from her original owner, Mr. John Leyaght, by Mme. Lebaudy, a wealthy French widow whose son, Max Lebaudy, was enjoying Parisian life as an up-to-date fashion, the son of his mother, the French woman in yachting and remove him from some undesirable associations. Arrangements were made for a scientific trip to the East under the direction of M. Louis Lapique, but when the time came the young man refused to go, and the expedition started without him.

Steam Yacht Race.

MONACO TO GENOA, FEB. 27.

THE steam yacht race from Monaco to Genoa excited more than usual interest because it was not complicated by time allowances, and because, according to reports, the yachts were pretty evenly matched in point of speed, and Roxana and Fauvette are probably the fastest yachts of their tonnage afloat. The winner, Fauvette, was built in 1892 by Messrs. Ramage & Ferguson, engineers and shipbuilders of Leith, for M. E. A. Perignon, from designs by Mr. Dixon Kemp. The engines and boilers were designed and built by Messrs. Ramage & Ferguson; the propeller was designed by Messrs. W. White & Sons, Cowes, and cast in Stone's patent bronze metal. The speed of Fauvette on the measured mile in 1893 was at the rate of 15.6 knots an hour. Her mean speed this week on the run from Monaco to Genoa was 15.25 knots an hour. The Poros was built in 1891, and has recently had some improvements made to her machinery. The Namouna was built in 1882 at Newburgh, U. S. A. Originally she was fitted with ordinary two-cylinder compound engines, but during the past winter these have been replaced by triple-cylinder engines, at a cost, it is said, of £12,000. The Roxana was built at Nantes, and is twin-screw yacht.

Match for steam yachts for an *objet d'art*, value \$60, and medals for the other competitors; course, from Cap Martin (Monaco) to Genoa 75 miles.

Yacht.	Tons.	N.H.P.	Owner.
Poros.....	1086.....	400.....	M. A. Koosnetzoff.
Namouna.....	740.....	.....	Mr. J. Gordon Bennett.
Eros.....	737.....	155.....	Baron A. Rothschild.
Fauvette.....	420.....	144.....	M. E. A. Perignon.
Roxana.....	110.....	.....	Prince G. of Leuchtenberg.

The race was started off Cap Martin at 9:36, in a light wind and smooth sea. The Fauvette led, and maintained it easily throughout, her lead at the finish being about a mile and a quarter. The yachts crossed the winning line at Genoa at:

Fauvette (win'g).	H. M.	Mean speed	Roxana.....	H. M.	Mean speed
.....	2 22	15.25 knots	.....	2 40	14.34 knots
Namouna.....	2 28	14.88 "	Eros.....	2 44	14.17 "
Poros.....	2 30	14.62 "	.....	.....	.....

The yachts arrived at Genoa by the Chevalier Garibaldi Colletti, vice-president of the Regio Yacht Club Italiano, who acted as judge at the finish. The yachts were berthed in the Mole Orientale, and excited an enormous amount of interest among the inhabitants, as such a fine fleet of steam yachts had never before been seen in the port.—*The Field*.

New Yachts.

YACHT building about New York is this year even duller than last, as there is nothing on the stocks of over 40ft. in sailing craft, and of the smaller boats now under way nearly all are for cruising. The John Mumm yard, at Bay Ridge, which has been managed by Mr. Wintlingham for the past five years, has been taken by Mr. Chas. Olmstead, of Brooklyn, and a good building shed, with steam heat, was erected last fall in place of the open shed built to cover Yana when she was built in 1890. In this shed is a very handsome bulb finkeel of 35ft. L.W., designed by Mr. Olmstead and built by him for Henry F. Crosby. The 30ft. cutter Anita, designed by Mr. Olmstead for Mr. Crosby last year, was completely wrecked in the August gales, and the new boat will replace her. The model is of the Vasp type, with long ends, but the wooden keel is carried down into a compass keel, the hull being covered with a lead bulb. The dimensions are 50ft. over all, 35ft. L.W., about 12ft. beam and 7ft. draft, with cutter rig. The rudder will be of the usual form, hung on the sternpost. The frame is of sawn oak. There is a low trunk over the main cabin, and the two rooms forward, a stateroom and a toilet room to starboard and a spare stateroom, fitted for use as a butlers pantry, to port. The yacht is very well constructed, and shows good workmanship all over. She will be named Eridon.

Alongside of her is a finkeel, also of Mr. Olmstead's design, the frame being partly planked. She is for John Noble Stearns, who will race her about Greenport, the present home of Herreshoff's Dilemma, and she, as well as another finkeel for a syndicate, will come in the same class. The dimensions are about 40ft. over all, 27ft. L.W., 7ft. beam. The second boat has not yet been started. In the yard is the 35-footer Glenelg, designed by Mr. Olmstead last year. Her keel has been removed and will be recast, and her balance rudder has been discarded, the after side of the fin being fitted with deadwood and sternpost, to which the usual rudder is hung. In one of the sheds in the yard Capt. Jimmy Smith is building an 18ft. racing catboat of his own design for Mr. Maxwell, to be used about Pleasure Bay.

At Wallin & Gorman's yard, 54th street, Bay Ridge, the frame is up for a centerboard sloop for a Mr. Busen, from his own design. She will be 35ft. over all, 22ft. L.W., 11ft. beam and 3ft. 6in. draft, with long forward overhang. The firm have also built four open catboats recently. At Solheim & Aronson's yard is a new yacht of 24ft. L.W., similar to Golden Hope, built last year. She was designed by C. C. Gillespie, and will be owned by E. D. Cowman, of New York. Her dimensions are: Over all 36ft., L.W. 21ft., beam 9ft., draft 5ft. Alongside of her is a 17ft. catboat for W. J. Brundage.

Philadelphia Y. C.

THE retirement of Mr. Francis Shunk Brown from the commodoreship of the Philadelphia Y. C. has caused general regret in the club, which has prospered greatly under his leadership. As a fitting mark of the esteem in which he is held, the members of the club with their guests, to the number of fifty-five, met at the Manufacturers' Club on March 10 to do him honor at a yachtman's dinner. The tables were arranged in an oval, the space inside being filled with flowers, forming an imitation lake, on which floated a floral model of the flagship Schomer, decorated with miniature red and green electric lights, while from a lighthouse of white and pink roses a red flash light shone out over the table. The decoration was completed by yacht flags, electric lights and anchors, wheels and other nautical furniture in flowers. At the head of the table was the newly elected commodore, Hon. John E. Rayburn, with Commodore Brown on his right and Commodore Wm. S. Schley, U. S. N., on his left.

Among the members and guests were Com. C. H. Rockwell, U.S.N.; Lieut. Wm. Rowbotham, U.S.N.; Com. Robt. Center, New York; Hon. O. S. Pruden, Executive Mansion, Washington, D. C.; Wm. Findlay Brown, Robt. M. McVade, H. S. Furness, Wm. M. Slingerly, Samuel Snellenburg, Samuel L. Kent, S. E. Moore, Col. J. Lewis Good, Frank Bement, John M. Wood, Hon. Theodore F. Jenkins, Clarence B. Kugler, Col. Wm. B. Mann, J. G. Ramsdell, Dr. Thos. C. Steilwagen, G. C. Ramsdell, Geo. T. Gwilliam, J. Lindsay Little, John S. Wilbraham, Wm. S. Stockton, Samuel B. Barth, Dr. W. W. Hollingsworth, M. R. Muckie, Jr., I. N. Hannold, P. H. Johnson, Samuel F. Givin, James W. MacFarlan, A. J. Hass, C. H. Downing, John H. Lehman, Josiah R. Adams, John S. Muckie, T. Carpenter Smith, A. H. Haig, Matthew Dittman, Edwin B. Garrigue, Dr. W. Joseph Hearn, A. H. Marshall, J. Joseph W. MacFarlan, Wm. S. Snellenburg, Wm. P. Bement, E. Y. McCurdy, Edwin E. Sentman, Benson Mann, Chas. L. Wilson.

During the dinner speeches were made by Com. Reayburn, Com. Brown, Com. Schley and others. The affair passed off pleasantly and was in every way a success. The Philadelphia Y. C. is now, largely through Commodore Brown's efforts, in a very prosperous condition, with every promise of a continuance under the new board of officers.

American Model Y. C.

AT the last meeting of the above club an important rule was passed which will have a tendency to elevate model yachting in the future. This rule is called the five-eighths rule, that is, all future models will be designed to represent large yachts from 50 to 95ft. L.W., the object being to suppress racing catboat models against well-proportioned models, which was possible under the present rule. The present classification will not be altered, the 35in. boat will represent a yacht of 55ft., the 42in. a 67.2ft., 48 to 53in. equal 73.5 to 84.8ft. Also Class A. will be abolished, and the present class raised, namely, to equal 84 to 95ft. All computations in the future will be represented in feet.

The coming season will see the A. M. Y. C. with a suitable salt water station at Communipaw, in conjunction with the Jersey City Y. C., where the ability of the old and new models will be fully tested. The election of officers will take place the first Friday in April.

In centerboard last week a misprint occurred in the measurement rule; the area of the sail is measured, the square root of the result is extracted and added to the waterline length, the sum being divided by two; the Sawanahaka rule used by nearly all American yacht clubs.

Yacht Clubs of Puget Sound.

THE yacht clubs of Puget Sound, Washington, are as follows: Seattle Y. C., Seattle, Wash., W. W. French, Sec'y. Tacoma Y. C., Tacoma, Wash., E. Irving, Jr., Sec'y. Bellingham Bay Y. C., New Whatcom, Wash., R. G. Calvert, Sec'y. Fairhaven Y. C., Fairhaven, Wash. Anacortes Y. C., Anacortes, Wash. Port Townsend Y. C., Port Townsend, Wash. Port Angeles Y. C., Port Angeles, Wash.

Lasca, schr., John E. Brooks, New York Y. C., is now fitting out to under Capt. Rhodes for a cruise to British waters. Her racing sail is and gear will be shipped by steamer.

## Biscayne Bay Y. C. Annual Regatta.

BISCAYNE BAY, Fla.—The event of the year so far as this place and the Biscayne Bay Y. C. is concerned, has come and gone, and Feb. 22, 1894, which means to us regatta day, is a thing of the past. We had a pretty good time, but not quite as good as usual, for we lacked boats, wind, cups and music for a hop. We had some boats but not many, and some wind but not much, and some music but very little and very poor what there was of it. We had no cups because, although they were ordered early in January, we live too far away for them to have reached us yet. So the boats not having the glittering prizes dangling before their noses, like a bag of oats in front of a lazy horse, did not go so fast as they might. Still some very pretty work was shown, and we might have had a worse day as well as poorer sport.

The new Lawley boat, Flying Cloud, for instance, sailed like a witch, outpointing the wind itself, and leaving the ex cup winner Nethla so far behind that the latter was not in it. Com. Munroe, who has sold Wabun, and is consequently without a boat for the present, sailed Nethla, and thus experienced the novel sensation of being on a losing boat. As there were no other entries in the first class, the race was between these two.

In the second class there were so few entries that the committee found it necessary to bunch several boats of diverse rig and model, such as a big Cape Cod cat, a small sloop, a sharpie and two American raws, with a result that no one was satisfied. The race in this class was won on time by Mr. Alfred Peacock's wonderful sloop Widow, but she was disqualified on an unfortunate misunderstanding of rules by Mr. Richard Carney who sailed her, and the cup went to Mr. Haigh's Crosby cat, Reina.

The third class being composed of small open boats, found the light wind and smooth sea so great to their liking that they not only made a pretty race among themselves, but the winner, William Brickell's handsome cat-boat Dalphine, made a fine race in the five minutes handicap cat-starting, and finished among the big boats of the classes above hers.

The course was the usual triangular cup course, from off Coconut Grove to a stakeboat in the channel off Bear Out, thence to a boat off the inner buoy of the Cape Florida Channel, and back to point of departure, ten miles in all, sailed over twice by the larger boats, and once by the smaller. The wind was light from southeast. There were fourteen starters in the races, and as many more yachts, naphtha launches, etc., laden with spectators gathered to see the fun. The judges and time keepers were Messrs. Alfred Munroe, Wm. Albury, Walter Broune and Fred Morse. The regatta was devoid of incident, and the following tabulated summary will announce its results:

	Start.	Finish.	Elapsed.	Corrected.
Flying Cloud.....	10 52 41	2 51 30	3 38 30	3 58 30
Nethla.....	10 52 37	3 05 25	4 16 08	4 11 24

	Start.	Finish.	Elapsed.	Corrected.
Reine.....	10 51 50	3 23 08	4 31 18	4 31 18
Alapatta.....	10 52 27	3 59 16	5 06 49	4 54 54
Nicketti.....	10 52 30	3 55 34	5 03 04	4 51 09
Widow.....	10 52 42	3 55 58	4 43 16	4 26 10
Owen.....	10 55 00	W. Andrew.		

	Start.	Finish.	Elapsed.	Corrected.
Daphne.....	11 06 35	1 33 13	2 26 38	2 26 38
Lancelot.....	11 06 50	2 20 50	3 14 00	3 12 16
Lucille.....	11 06 45	1 57 18	2 50 53	2 44 02
Swan.....	11 09 45	1 52 24	2 42 39	2 34 49
Sunrise.....	11 10 10	2 24 35	2 14 25	2 10 10
Little Pet.....	11 07 59	2 05 34	3 00 35	2 49 30
Visilant.....	11 09 11	1 57 43	2 48 32	2 34 46

If we did not have a particularly successful regatta as compared with those of former years, we had a rattling good race between our two largest yachts on Feb. 16. The contestants were Whim, Mr. Bradford McGreger, and Flying Cloud, Mr. S. F. Moore. Whim is 8 years old, and was designed by A. Cary Smith for cruising purposes only. She is schooner rigged and very heavily built. Flying Cloud is a modern racer of the Gloria type, designed by her owner, and turned out by Lawley last summer. This was her first race. After considerable good-natured banter between the owners, a match was arranged to be sailed, 10 miles to windward and return, over the Biscayne Y. C.'s ocean course, out in the Gulf Stream, on the first day that the wind was either due N. or S., the prize to be a handsome silver cup furnished by the loser.

Two days later the conditions were favorable. The breeze was a howling norther, the stiffest we have had this season, and blowing against the current of the stream it kicked up the liveliest kind of a sea. To race in the open ocean under these conditions, without another sail in sight, nor even a tug to render assistance in case of accident, required pluck and the privilege of winning blood.

The two racers, accompanied by the big cat Reina, which was to act as stakeboat, and moved with all necessary speed under a five-reefed mainsail, and Nethla carrying a party of spectators, several of whom were ladies, started from the bay about 11 o'clock for outside buoy No. 1 of the Hawk Channel. Reina, by going through Bear Out got back after about 200 yards outside the buoy. Nethla turned the work too heavy for her passengers. Whim was sailed by her owner, and Flying Cloud by Com. Munroe. As they passed the stakeboat, Whim first at 12:34, and Cloud two minutes later, the sight was one to warm the cockles of a yachtsman's heart, and the little group on the wildly tumbling Reina were well repaid for the discomforts of their position by the sight of the winner. Whim stood up like a church and her crew, perched on the weather coaming of her cockpit, were as dry and comfortable as though on shore. Her stability and fitness for the work for which she was designed, were shown when at the usual hour her cook served a hot dinner to both cabin and fore-cabin as though the yacht was lying in port. As she dashed over the line with a handsome lead, her men raised a cheer that hearkened these hopes for the final result. It was however, their first and last, for when two minutes later Flying Cloud drove by the same point buried in a smother of spray that swept her from stem to stern, lee rail out of sight, water nearly up to the top of her cabin trunk, and crew hanging on by their eyelids, she was seen to be doing all of two points better than her competitor. Not only did she seem to be diving straight into the eyes of the judges, but she was so close that she was working a trifle to windward of it. However uncomfortable it was on board, it was glorious to see her plunge through those waves, smashing them into snow drifts of spray that flew a quarter of a mile to leeward, her white decks and yellow brass work gleaming in the hot sunlight, water streaming from every point like showers of diamonds, as she leaped from sea to sea, like the greyhound she looked.

A long lead seaward carried the two out into the Gulf Stream where a big north-bound Mallory steamer was showing her nose under with every plunge. When they came about, Whim was half a mile to leeward and her chances of winning had vanished. At the mark, which was the big red Biscayne Buoy off the house of refuge, Flying Cloud was a good three miles ahead, and the two came back together. Whim pulled out with a start, and the two came back together. It was pretty race and a plucky race, and both men have good reason to be proud of their boats.

Whim has proved herself so staunch and weatherly as to be the beau-ideal of a cruiser, while the Biscayne Bay Y. C. is willing to bet a cookie that in Flying Cloud they have the fastest bit of wood in Southern waters. This was the first time the two yachtsmen desirous of a bit of winter sport want to try conclusions in a sea that will test their boats to the utmost, let them take a run down to latitude 25 N. and borrow the Biscayne Bay Y. C. ocean course for a day.

O. K. CHOBEE.

## YACHT NEWS NOTES.

At the annual meeting of the Shackamaxon Y. C. the following officers were elected: Com., Richard L. Binder; Vice-Com., Wm. T. Craven; Recording Sec'y., H. S. Anderson; Financial Sec'y., R. B. Murphy; Treas., W. H. Sherman. Trustees: J. McCormack, W. C. Jones, F. Anderson. Fleet Capt., J. B. Brewer; Measurers, V. T. Craven, C. Stauffer, L. M. Beck. Regatta Committee: R. L. Binder, J. Eschner, H. A. Schenker. The report and the various orders for the last year were received, and showed a very prosperous season. The club house has been rebuilt and four new yachts entered in the club. An important departure was made in amending the constitution, removing the clause which confined membership to those having yachts on Shackamaxon slip, and opening the club to any one of good character interested in yachting. This move, it is hoped, will make this the most prominent yacht club in this section of the country.

The annual regatta of the Seawanhaka Corinthian Y. C. will take place off Oyster Bay, on Friday, June 23; and on July 3 there will be a special race to Lochmont.

The Columbia Y. C. of New York held its annual meeting on March 6, the following officers were elected: Com., J. F. Hiltchcock; Vice-Com., J. L. Hiller; Rear-Com., W. D. Ellis; Sec'y., G. Parkhill; Treas., J. A. Weaver; Fleet Surgeon, D. D. Stevens; Meas., J. J. Murphy; Steward, C. M. Armstrong. Board of Trustees: T. S. Coole, A. P. Scripture and C. N. Ironside. The club fleet includes one schooner, 20 cabin sloops, 5 steamers, 5 naphtha launches, 8 cabin boats and 8 open cats.

The annual meeting of the Corinthian Y. C. of New York was held on March 8 at the residence of Mr. N. Roosevelt Schuyler, the following officers being elected: Admiral, C. H. Tweed, cutter Shona; Fleet Captain, M. R. Schuyler; Meas., John Hyslop; Trustees: C. H. Tweed, M. R. Schuyler, E. M. Padelford, August Belmont and S. M. Roosevelt.

On March 6 the annual meeting of the New Bedford Y. C. was held, the following officers being elected: Com., F. C. Haskell; Vice-Com., E. M. Whitney; Rear-Com., O. C. Stevens; Sec'y., A. S. James; Treas., F. A. Booth. Directors: B. H. Anthony, E. B. Hammond, C. T. Allen, J. K. Nye, A. W. Forbes, J. B. Rhodes, N. Hathaway, H. K. Snow, A. W. Holmes, R. A. Terry, H. Wood. The club has 156 members and a fleet of 50 yachts.

The yacht sailors of Bridgeport, South Norwalk and Saugatuck are beginning to take an interest in model yachting, some boats are building and races will be sailed this year.

The Yale Corinthian Y. C. held its annual meeting on March 6, the following officers being elected: Com., G. B. Miller, of New Rochelle, N. Y.; scbr, Christine; Vice-Com., H. W. Harris, of East Orange, N. J.; slip Nymph; Rear-Com., W. A. Delano, of Philadelphia, slip Veto; Sec'y and Treas., H. W. Buck, of New York, cutter Yolande. Governing Board: G. T. Adee, '95; C. McL. Clark, '94 S. C. Fincke, '97; G. Z. Gray, '96; A. B. Hughes, '95; G. A. Phelps, '95, and B. G. Wells, '95 S.

Arthur G. Earle, owner of the yachts Zingara and Choctaw, died in New York on Nov. 5 of appendicitis, at the age of thirty.

Sparkle, steam yacht, W. M. Singler, was sunk on March 3 at Elkton, Md., through the bursting of a pipe below water. She was raised at once, the damage being slight.

At the annual meeting of the Portland Y. C. on March 7, the following officers were elected: Com., Chas. W. Bray; Vice-Com., Wm. Willis Gould. Sec., Chas. F. Flagg, Treas., Carl F. A. Weber; Fleet Capt., John F. A. Merrill; Meas., Abiel M. Smith; Trustees, Com. (ex officio) Wm. Senter, B. W. Jones, Chas. E. Somerby; Regatta Committee, Abiel M. Smith, Willis E. Carter, R. Samuel Raud, Wendel Kirsch; Membership Committee, C. J. Farrington, Frank H. Little, Edw. H. York. House Committee, W. V. Gould, Chas. D. Smith.

The Kingston Co., of London, builders of fast launches, has issued a challenge to the steam yacht Yankee Doodle on behalf of the yacht Hibernia, to race any distance on the Thames for a stake of \$5,000 per side, which challenge has been accepted by the owners of Yankee Doodle.

On March 5 a new yacht club was organized in Hamilton, Ont., under the name of the Victoria Y. C.

Mr. Gustave Caillotte, an enthusiastic yachtsman and successful amateur designer, died in Paris on Feb. 21, at the age of 46 years. Mr. Caillotte, one of whose designs we published last year, was a strong supporter of yachting in France, and has done much good work in writing, designing and sailing.

The Yacht Masters' Association, whose headquarters are at Tebo's, South Brooklyn, have elected officers as follows: Pres., Capt. Geo. E. Wicks, steam yacht Elected; Vice-Pres., Capt. Sam'l Lowburg, steam yacht Oneida; Sec'y, Chief Engineer John Leonard, steam yacht Utopia.

Alicia, steam yacht, H. M. Flagler, has sailed from New York for St. Augustine, Fla.

A very interesting lecture on "Explorations of the Arctic Regions," was delivered before the Philadelphia Y. C. by Com. W. S. Schley, U. S. N., on Feb. 21.

We have received the club book of the Biscayne Bay Y. C., which lively little club has now a membership of 25 and a fleet of 23 yachts.

Ambassadors, scbr., that huge and cumbersome failure more appropriately known as the "Actor House," has at last found her vocation, having recently brought to Boston from Newfoundland the largest and finest cargo of frozen herring ever known at that port. She is now owned by Dixon Bros., who have put her into trade, the fish trade. It has taken nearly twenty years to find out just what she was good for.

Mr. Henry J. Gielow, the designer, has been seriously ill through the winter, but is now nearly well.

## Canoeing.

## AMERICAN CANOE ASSOCIATION.

OFFICERS, 1893-94.  
COMMODORE: IRVING V. DORLAND, Arlington, N. J.  
SECRETARY-TREASURER: G. A. DOUGLASS, Newark, N. J. (136 Liberty st., N.Y.)  
LIBRARIAN: W. P. STEPHENS, Bayonne, N. J.

ATLANTIC DIVISION. OFFICERS:  
VICE-COM.: C. V. Schuyler, New York.  
REAR-COM.: F. E. Fredricka, New York.  
PURSER: F. L. Dummell,oklyn, N. Y.  
EX. COM.: J. B. Laid, F. W. Hayes, J. K. Hand.

EASTERN DIVISION. OFFICERS:  
VICE-COM.: E. H. Barney, Springfield.  
REAR-COM.: F. Schuyler, Jr., Holyoke.  
PURSER: E. C. Knappe, Springfield.  
EX. COM.: G. L. Parmele, Paul Butler, R. Apollonio.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of \$2.00 for entrance fee and dues for the current year. Every member attending the general A. C. A. camp shall pay \$1.00 for camp expense. Applications sent to the Sec'y-Treas. will be forwarded by him to the proper Division. Persons residing in any Division and wishing to become members of the A. C. A. will be furnished with printed forms of application by addressing the Purser.

## WESTERN CANOE ASSOCIATION.

COMMODORE—O. A. Woodruff, Dayton, O.  
VICE-Comm.—L. K. Ligit, Detroit, Mich.  
REAR-Comm.—James H. Egan, Chicago, Ill.  
SECRETARY-TREAS.—F. B. Huntington, Milwaukee, Wis.  
EXECUTIVE COMMITTEE—T. J. Kirkpatrick, Springfield, O.; G. B. Ellard, Cincinnati, O.; S. B. Mettler, Jackson, Mich.

Applications for membership should be made to the Sec.-Treas. on blank form which may be obtained from him, and should be accompanied by \$2.00 initiation fee and dues for the current year.

The description of the canoe exhibit at the exhibition in London is a good index of the present condition of British canoeing. The decked sailing canoe of standard dimensions is conspicuous by its absence, the canoe-yawl, open canoe and various nondescript craft making up the bulk of the collection. The future of the 16x30 sailing canoe is somewhat doubtful, in view of the many types of small craft that have been produced within recent years. It is however the parent of all these types, and the influence of canoeing as practiced between 1880 and 1890 in England and America will be visible for many years to come.

## Modern British Canoes.

From the Field.

Go to the yachting exhibition at the Royal Aquarium, Westminster, is the advice we would give to canoeers who are in London during this month of February. Canoeing, especially the canoe-yawl branch, is the only one of the water sports that has not been entirely abandoned for yachting, also include articles and novelties useful and adaptable to canoe fitting. The almost entire absence of small raters—there being only one of racing breed—is peculiar; the chief nesting-places of 1/2 and 1-raters—Coves and Southampton—do not exhibit a single craft. The solitary 1/2-rater yacht, as distinguished from canoe-yawls, is the Spruce II, built by Smith, of Oxford; and close by her in the "deck sailing" class, is the "Plover," a 1/2-rater, and near the fittings common to sailing canoes, including a sliding deck seat; her mast steps in a tabernacle, with slide lever action instead of forestry for lowering or lifting; she is also fitted with crutches for sculling—a mode of propulsion unnecessary, indeed detrimental, in a canoe. In the large types of canoe-yawls, of some 5 ft. beam, sculling or sweeping is almost a necessary mode of propulsion, and the canoe-yawl Nautilus under sloop rig, both owned by Mr. W. Baden Powell. The Pearl, as mentioned on page 10 of the official catalogue, was built for the Marquis of Anglesey in 1830, to the lines of Sainy a noted smuggler—at the time when the Marquis of Anglesey wished to build the

Pearl to beat one of Mr. Weld's yachts, he got Sainy released from Colchester gaol, where he had been imprisoned for an infringement of the excise acts." The old Pearl was, however, entirely rebuilt by Nicholson, at Gosport, in 1872; the amateur photograph was taken from the dinghy in a calm on the Solent. On one of the side tables there are photographs of the Spruce, canoe-yawl, and Spruce II, under sail.

The wonderfully light life-belt and life-buoy cushions stuffed with reindeer hair, which were so much used in canoes last season, are shown by Messrs. Bowers on Stand 29. So far as we have used these reindeer hair cushions, we prefer them infinitely to those stuffed with cork or formed of inflated rubber. The folding cushion, useable in a moment as a life buoy, is a most handy and useful piece of furniture in the canoe-yawl, where the ordinary circular life buoy is utterly out of place. One point we found by experience was the necessity of having cushion covers perforated with a suitable number of eyelet holes, so as to always dry the hair after a wetting, otherwise the scent is rather high.

A number of Canadian model canoes are shown. They are, however, mostly fitted as gilling canoes, with flat narrow and cushions and tiny reed lug sails, nice enough for summer evening Thames lounging; and, indeed, most are fitted with sculls and silver-plated crutches. There are no points of novelty in construction or fitment worthy of notice. A central, dry-storage, watertight compartment might well be added, both for safety and comfort, in these comparatively open craft; and, for those who wish to do real canoeing in the canoe-yawl, where the ordinary circular life buoy is utterly out of place, not for mere sailing, but for use when paddling with a fresh breeze ahead or on either side.

Turning now to the canoe-yawls, the real interest of the exhibition, from a canoeing point of view, is before us. It is a curious thing to note that not a single sailing canoe or first-class sailing racing canoe is in the show. The only new craft of this class which we hear of in the canoeing world are being built to order; whereas, in the larger class of canoe-yawls, in addition to those on exhibit, builders are producing several "on spec," and are selling them. Turk, of Kingston-on-Thames, is exhibiting one of 18 ft. 6 in. by 4 ft. 6 in., on the lines we published in the Field of Feb. 25, March 4 and April 15, 1893, fully rigged and fitted. She is for river and estuary sailing, and can easily be stripped of her rig and gear for housing or transport by land or by steamer. She is not intended for long passages on open coasts, being a little small for such work; but with expert handling, and some caution as to the approach of bad weather, she would be capable of doing a lot of open salt-water sailing. She is fitted with rod-and-yoke deck steering gear; a form we do not recommend for rough water, but which is cheaper in production than the horizontal head-and-deck wheels with chain gear (as fitted on the Nautilus). Her rig is of the balance lug battened type, main and mizen ketch.

Near by is a new form of collapsible boat (James's patent), which, if made quite small, say 10x3 ft., would prove a great blessing to the larger canoe-yawls when using coast ports where landing is bad and watermen are few. Though the yawl can be taken in to land her crew, she is apt to suffer very roughly on the shore or against a quay while the owner is waiting for a horse or a cart. The folding boat can be carried flat on deck while sailing, or might even be made to fit in the well, and form a bucket well. James's boats have one excellent point in their structure—they have only one skin of canvas—so the skin can be painted from time to time, or mended if damaged.

The Nautilus, canoe-yawl, which was built last spring, and sailed on the Solent and south coast for some two and a half months last season, is shown in the Field of Feb. 25, March 4 and April 15, 1893, fully rigged and fitted. She is of the sea-going type, a very powerful and able sea boat, so fitted with watertight bulkheads as to be practically unsinkable, and so ballasted by a loaded center plate as to be uncapizable. She is shown with her cruising rig of main and mizen standing lugs (her racing sloop rig, we have mentioned above, may be seen in the photographic gallery below). The mode of rigging the sail with main beam and yard halyards allows the sail to be hoisted or scandalized like a gaff sail, yet it can be taken off the mast in a few seconds for stowing ashore or on a yacht, or for shifting to the larger rig.

In size and weight the Nautilus is just about as large as can be slung to and hoisted on a yacht's steam launch davits, or lifted in on deck for passage to river or estuary, and for storage on a moorings last season. The absence of a counter and the peculiar form of the rig, go a long way toward easy storage on such occasions; and on railway trucks with rope slings she was often lifted, with centerboard and all ballast in position, and her mast lowered in its tabernacle trunk, immediately from sailing or ready to sail.

The center plate is of two sheets of steel plate, kept expanded by a wooden frame riveted to an iron socket at the lower corner for lead ballast blocks, which can be lifted in or out by hand, and the exposed plate edges are bent together and riveted, forming a fine edge for cutting the water. From a light weather racing point of view, the boat is rather too strong in substance of materials of build; but for rough water and for long life this is an advantage, and she has taken prizes. The sails are by Jackson of Norwich, and it will be noticed that the main beam and yard halyards are carried to the yard, and the sail is clipped with brass wire grips to a brass plate traveler on the spar, so that in damp weather the sail can immediately be eased in a long boom and yard, and then hauled out again on dry days, thus preventing that bad stretching, which one commonly sees on Mr. Johny Haultaut's boats. The peculiarity of the rudder is that it can be used as a standard rudder, or it can be fully dropped, the center of the effort thereof can be shifted as much as 2 in. by hauling on the plate tackle. Side hatches have been fitted to the well, but have as yet not been needed; nor has the pump ever been used for pumping a sea out, for the simple reason that she has never shipped a sea in the well.

The next boat worthy of note by the canoeers is the Midge pneumatic folding boat. The boat exhibited is a very small craft of the Kajak type, or Arctic canoe; she is about 12 ft. by 3 ft. 6 in. Lieut. Sayre, of the 1st Life Brigade, has sailed her for some time, and may be seen cruising canoes at Dover on June 18 next with whom we may compare notes, or make a match across Channel to Boulogne if wind N.E., or Calais if S.W." The boat shown has no rigging or other sailing fittings, so we are unable to judge of the possibilities of this type of boat; but the inventor claims she will prove as fast, or faster, than wooden boats. If the length is to be restricted to 12 ft., the match had better be kept within Dover Bay, unless the sea is dead calm, and then a sailing match for 24 miles would be "no go."

Another aspirant to fame lies within a yard of the Midge—the Porpoise. We published a letter last week from her owner, claiming that in the Porpoise he introduced a new type of canoe-yawl. He says: "My object has been to produce the smallest canoe-yawl, which although small, will be able to carry a man, a rowing machine, and a lot of kit, if not better, than any open sea boat of the kind. The Porpoise will be able to tackle weather which much larger boats of the inland and French polish schools dare not look at, will launch and beach easily and safely." In the catalogue she is described as of 14 ft. 6 in. length, 17 ft. 2 in. length, by 4 ft. 4 in. beam over all, sail area 100sq. ft. At the present time the hull only is in view; her rigging has not been furnished, nor has her steering rudder, her steering gear or her centerboard gear been set up in working order. As to model, there is nothing out of the common line of a boat, sharp at each end, such as the St. Lawrence skiff, partly decked in. The ends perhaps show fuller sections, and the waterlines are convex at the bow and stern. The measurements given in the catalogue do not say whether 17 ft. 2 in. is her l.w.l. length or whether that is over all, but as 17 ft. 2 in. by 100 ft. is a sail area of 1722 sq. ft., we may take it to be her l.w.l. length. The "inland, French-polished" Nautilus near her is 17 ft. 5 in. in l.w.l. length, and it would take a severe twist to turn one into the belief that Nautilus "would not look at the weather which Porpoise would tackle." However, Channel matches and tackling seas may be well left to paper for the present. There may be much to learn when the novelties are fully fitted; at present we only see the shell.

A new type of lighted center plate is exhibited by Mr. Brewster at stand 59, which, taken shortly, may be described as a hollow bent bulk head laden with leaden discs for half its length; the half of length of bulk occupies the whole of the fore edge of a center plate, dropped at an angle of 45°, and then the other half of length of bulk, bent in a gentle curve, becomes horizontal. When the plate is down the disc inside the bulk runs down the bulk, into and fill the horizontal, or lower part of the bulk. When the plate is up, the bulk runs up the bulk, and the bulk houses up in the case, and the discs of lead run back into the fore part of the bulk, which is then along the bottom of the boat's keel, the slot only being open for housing the bulk at its after end. Large scale drawings explain the working of the plate and the discs.

Very near the 1/2-rater Spruce II. In the catalogue she appears as "a new departure from the Oxford canoe-yawl, in that she has a bulk keel." But she has a counter and a transom, and her rudder is not hung abaft the stern, therefore she is not a canoe-yawl under the definition of the Royal Canoe Club, but may be under some other definition. That she is a clipper at match sailing we do not doubt, but her model is not such as goes dry in heavy briny water, but where flag winning is the only consideration, wet jackets matter little, and with bucket well and bulk keel little harm can come so long as the bulk holds together and the garboards do not open, and in Spruce they seem to hold on well.

Late in time, but perhaps not too late, a canoe of the first class, or R. C. A. racing type, has been added. Of course, to experts this goes for nothing much, but to those who are less in the know this thing is of considerable interest, as it fills the missing link in the chain of sequence of types. The exhibition now contains the sea-going canoe-yawl Nautilus; then the river-going canoe-yawls of medium size;

the first-class racing canoe; and the small type, late second class canoe.

It would have been an interesting thing to have also in comparison an up-to-date sailing canoe, built under the new rule, which permits overhangs, bulb keels and 8ft. of beam, seeing that the canoe exhibited is of the Stale design, now many years old. However, the craft shown is on a design which has done excellent racing work, and the boat is well built and rigged. She is on order for Rangoon, and will no doubt somewhat astonish the natives; but we should much prefer something absolutely uncapsizable for such waters, and with more beam.

### Toronto C. C.

Toronto, March 5.—Saturday evening, March 3, was "Athletic night" and the handsome house of the Toronto C. C. was again a blaze of lights, it being the occasion of their third, and for this winter the last, large complimentary social entertainment. The programme consisted of athletic and acrobatic feats, with just enough song and music to keep the boys in good spirits, and was started in the gymnasium with an exhibition of horizontal-bar work by Messrs. Morgan, Thompson, Slevett and Bruce, followed by a slack wire performance by Mr. Bruce. Commodore Tilley then requested the audience to repair to the dining room, where a stage about 16ft. square, erected almost in the center, the programme was continued. The inevitable Tommy Baker sang in his own happy way; he didn't sing of "Home, Sweet Home," but he reached the spot under the vest pocket just the same. Alf Sturrock sang of the rolling billows, and more than one of the boys went down to launch their canoes to go off to the wreck only to find that skates were the only mode of aquatic locomotion. There were also songs by Messrs. Joe Baker, F. Piggot, Henry Wright.

The athletic part of the programme consisted of three three-minute bouts with foils by Messrs. Cooper and Barton; tumbling by Morgan, Thompson, Bruce and Slevett; three two-minute rounds sparring by Messrs. Goldman and Barton; fancy club swinging by Mr. Loghead; three three-minute rounds sparring by Messrs. A. E. Bell and Alex. Wheeler. The events of the evening were, however, the acrobatic and hand balancing feats by Mr. W. Taylor, instructor Beaver Athletic Club, and his partner, Mr. Robert White. The last event on the programme, and the one that held every man to his place and made him take chances of missing the last car, was three five-minute rounds of scientific wrestling between Mr. W. W. LaMont, champion light-weight wrestler of Canada, and Mr. W. W. Taylor. The contestants in this event were so evenly matched that at the end of their fifteen minutes' work neither had secured a fall, and they were cheered to the echo. Commodore Tilley then invited the guests to the supper room, where lunch was served.

Among the three hundred present were many of Toronto's most prominent business men, and it speaks well for the T. C. C. to note that quite a number of the boys were not ashamed to bring their fathers with them. The entire arrangements were in the hands of the house committee, composed of A. E. Bell, Bert Smith and J. C. Iredale.

### The Newton Boat Club War Canoe.

About fifty of the local canoe men gathered at the Newton Boat Club house on the Charles River, on Thursday evening, March 8, at the request of the "crew" of the Wawbewaw, to take part in their third smoker of the season.

The chief entertainment of the evening consisted of a fine display of stereoscopic views of different A. C. A. meets by Com. Jas. W. Cartwright, Jr. of the Puritan C. C. The views were of the annual subscription's Neck, Peddock's Island and the Charles River were enthusiastically applauded, and proved to be of great interest. After having extended a hearty vote of thanks to Mr. Cartwright, the canoeists partook of light refreshments and listened to a most pleasant series of musical selections from the following gentlemen:

The Corey Hill Toboggan Club Quintette." Mr. L. G. Hoffman, leader; selections on banjo, mandolin, harmonica and piano; songs by Mr. Cartwright and Mr. C. B. Ashenden, who have many times been heard at A. C. A. meets; and selections on the violin and piano by Messrs. Robins and Pierce. Altogether the affair was most successful and the good time lasted until the small hours.

Among the canoeists present were: J. W. Cartwright, Jr., Chas. F. Dodge, Wm. Garty and Geo. R. Angus of the Puritan C. C., Com. H. B. Grant, E. T. Brigham, J. W. Brown, A. C. Wyer and E. F. Wyer of the Imiton C. C., C. L. Bennett of the Sprague C. C., Fred F. Smith of the Dedham C. C., ex-Capt. Wm. A. Hall, W. A. Wheeler, Louis S. Drake, Francis J. Burrage, Geo. B. Smith, L. A. Hall, W. A. Plimpton, John F. Linder, Wm. V. Forsaith, Chas. W. Knapp, Chester A. Howe, Thos. C. Phelps and W. H. Pulsifer of the Newton B. C., and Clarence B. Ashenden, L. G. Hoffman, E. A. Outhank, E. P. Small, F. P. Black, Noses Bamber, C. W. Young, A. H. Coolidge, Robt. A. Hens and F. I. Wynn.

Those responsible for the good time were the following members of the "Crew": Louis S. Drake, Capt. Francis J. Burrage, Lieut. Geo. B. Smith, John F. Linder, Wm. V. Forsaith, Chester A. Howe and Chas. W. Knapp.

The coming season will doubtless be interesting as far as war canoes are concerned. Mr. J. R. Robertson of Auburndale already has two nearly completed for the Springfield C. C., the other for Hartford. The members of the Puritan C. C. also intend to have one built, and in all probability the Boston C. C. will be equipped in the same way.

The Eastern Division meet will certainly be interesting if five war canoes are to compete in the races.

### Reforming the A. C. A.

Editor Forest and Stream:

Your issue of March 10 contains an article by "Pulex" under the above caption. The letter is for the most part irrelevant, as it does not treat on the reform in question. Now as regards this subject, I again claim the A. C. A. does not need reform. The Association is all right as far as it goes, the only trouble is that it cannot go far enough on account of the small means at its command. That an association of canoeists should be so small, but not by the A. C. A., I have had some experience in that line. The association has about a thousand members. What does that figure amount to for a circulation? Nothing. If the A. C. A. is to run a paper the dues of the members will have to be doubled. That would do no harm, as the A. C. A. needs the money. Now, the main trouble arises in the lack of members and the difficulty in obtaining more.

The present divisions are too large to be easily worked by their officers. Then again the rivalry between the divisions is not nearly so keen as it would be were the separate States each divisions. This has been proved a fact in the experience of the League of American Wheelmen. Then let us see what could be done if State divisions were the rule. In the first place, each State would have its board of officers, who would have a limited territory to travel and work in, a definite territory. Each State would, or should, have permanent division camp site, to which the men would become accustomed and learn to consider their meetings there a fixture. With a limited territory the divisions could publish maps of the same—another advantage. The rivalry between the States would become keen and, as sure as fate, the membership would grow. Again, by establishing State divisions the jealousy between two sections of a large division would be abolished, and that jealousy is worthy of serious consideration in some of the divisions as at present made up. Of course, all States would not now be divisions, as a minimum limit of A. C. A. men would have to be established to constitute a division, as in the L. A. W.; but it can be placed low, so that a division could be easily made up. The foregoing is not reform, but progress. We have nearly reached the limit of our possibilities under the present system, let us consider some other.

Friend "Pulex" speaking of a canoe club dubs them cruisers, because they cruise in a body, and ignores the fact that individual work makes a cruising club full as much as concerted action. My own club, the Puritan C. C., is a cruising club, if Saturday afternoon and Sunday trips may be called cruises. We do not call them such, hence we have no cruising in a body. Our aggregate of individual mileages will be about a thousand miles, but we would not be so proud of a hundred-mile trips we call cruises, and it is upon those trips that the A. C. A. men find the value of the Association.

"Pulex" intimates that the clubmen mentioned may be able to give points to the Librarian. Why don't they do it and give more power to his arm? Doubtless the racers can give them points on some equally important matters, such as canoe sailing. Races between well equipped cruisers are still as exciting and as interesting as those between racing machines. And there is not a shadow of a doubt but that any cruiser will learn more about sailing a canoe in a season's racing than he would in several years of cruising sailing. I know it for it has been my experience, and I know that such mild racing as a cruising club indulges in, will do more to produce a well equipped and well designed fleet than all the cruising that club can do in a lifetime. LEX.

Boston, March 10.

Editor Forest and Stream:

Before answering the communications from "lex" and "Pulex" allow me to express my condemnation of the action of "Pulex" in going out of his way to stir a gentleman whose only offense was that he came from Rutherford. To avoid any personalities in the future let me briefly state my case. Every canoeist should be an A. C. A. man. He will be, as a whole, and also it can be made to bend him. The A. C. A. has done much for canoeing and is not to be disputed, but it has also been in an indirect way, and at present it is rather at a standstill.

Nowadays no man gets anything out of his membership unless he goes to the meets. Not one of the answers I have seen have disproved my statements. I offered some suggestions. Those who replied, instead of doing likewise, expressed their horror at a supposed attack on the meet. I knew that "lex" advised me to get to work to enlarge the membership. Now what inducement can "lex" offer to a man to join; and what can he say to the probable response to such an invitation: "What good will it do me?" If the meet is urged it will be answered that the speaker is a clerk in a bank or a dry goods or commission house or some other business where he only has his regular vacation season at such a time as to prevent his going to the meet. Do you suggest the division meets? He will answer that he cannot leave business to go to them. What other inducement can you offer? None, absolutely none. He can get all the important news of the sport and the meet from the magazines and newspapers. The ideas as to fittings, etc., he can pick up well enough to suit him from his contact with others in cruising or visiting at neighboring club houses, and he is not apt to take much stock in the idea of joining for the sake of having his name in the year book. And yet such a man will be found to represent a large number who are practical canoeists.

At present the A. C. A. only appears to look after the men who come to the meet. They don't need so much care, but as to the fellow who stays in his own waters, why he is left to paddle his own canoe. If the A. C. A. is to increase its membership among such men, it must show something else besides the meet as an inducement.

I agree with "lex" when he says, "It is not so much reform of the few principles under which the A. C. A. exists as advancement—very good advancement—along those lines. And one of the greatest obstacles to the man who wishes to advance is the fact that the new and beneficial features can be introduced." If "lex" will re-read my letter he will see that it offers some suggestions. "lex" does not take his own medicine of "getting to work" in this, the only way at present open. Why?

Let me trespass on your space a little more and I am done. Here in Rutherford we have had a canoe club for the last eight years. After that eight years the A. C. A. membership has increased. The club has experience have not been able to show one solitary inducement to join the A. C. A. except the pleasure of going to the meet, and even that only covers the actual being in the camp. Everything else they get anyhow. Now, will "lex" show me how to work to increase the membership of the A. C. A. when there is absolutely no inducement to offer to new members?

If the A. C. A. is to grow among others besides racing men and those who have leisure to attend the meets, it must pay some attention to them.

Were it not for the wide circulation given it by the FOREST AND STREAM I should ignore "Pulex's" screed. "Pulex" apparently is not posted. If a practical canoeist is one who has passed a number of years in various types of canoe, in sailing, paddling and cruising, why then I am one. If attendance at the meet is the sole qualification, then I am not. By "Pulex's" own confession, no one who is not at the meet has anything to say in A. C. A. matters. Is that fair? Also, by the same token, there is nothing a member gets—bar the meet—but a list of his fellow members, unless he goes to the meet.

Mr. Burns shows more of the right kind of spirit. He had some ideas himself on the subject of advancement, and he gave them. If all our members were of the same caliber there would be no need for this discussion. Let us hear from some one else. JOHN TRUSTY HOLDEN.

RUTHERFORD, N. J., March 10.

### Life Membership in the A. C. A.

Editor Forest and Stream:

By-laws, Sec. 2, states that the annual subscription is one dollar, but does not provide for members compounding for an annual subscription. I would suggest that at the next annual meeting the by-law be so amended as to read after the word "accepted" on ninth line as follows: "Any member may compound for his subscription and become a life member by the payment of fifteen dollars. A separate account shall be kept of all moneys received from life members, to be called the life membership account, and the receipts shall be invested at interest by the honorary treasurer, and no payment shall be made from it unless authorized by a majority of members. The interest derived from investment mentioned shall be carried to and form part of the income of the Association. Should a life member resign, or cease to be an amateur, or be expelled from the Association, or otherwise cease to be a duly qualified member, no part of the life composition paid by him shall be returned to such life member. Seventy per cent. of the interest of the above composition shall be paid to the pursuer of the division to which the life member belongs and thirty per cent. retained for the A. C. A. treasury."

The advantages of having life members are numerous. I invite criticism of the above suggestion.

A MEMBER OF SIX YEARS' STANDING.

### A. C. A. Membership.

ATLANTIC DIVISION—Edward Muller, New York city. Northern Division—Chas. O. Wyatt, Montreal. Central Division—Lucius H. Washburn, Albany, N. Y. Eastern Division—William Garty, George R. Angers, Waldo P. Kennard.

### CANOE NEWS NOTES.

The Knickerbocker C. C. has elected the following officers: Com., Julius H. Seymour; Vice-Com., James K. Hand; Sec'y, William R. Farrell, Jr., 476 West 152d street, New York; Treas., Sidney M. Winttingham; Meas., Frank C. Moore.

The annual election of officers of the Yonkers C. C. resulted as follows: Com., William R. Haviland; Vice-Com., Daniel B. Goodsell; Sec'y, Thomas Hale, Jr.; Treas., Everett Masten; Capt., H. Lansing Quick; Lieut., Charles T. Middlebrook.

At the annual meeting of the Holyoke C. C. on March 7, the following officers were elected: Capt., F. H. Metcalf; 1st Lieut., E. T. Newton; 2d Lieut., J. M. Ramage; Purser, A. S. Seymour; Sec., W. L. Eaton; Executive Committee, W. D. Judd, W. C. Brown and R. T. Wyckoff. The annual regatta will take place on Sept. 3.

The annual meeting of the Tatassit C. C. was held on March 5, the following officers being elected: Com., T. H. Blood; Vice-Com., F. A. Goodard; Purser, W. N. Brooks; Sec., F. P. Kendall; Capt., F. P. Dean; Directors, Howard Frost and C. L. Allen; House Committee, W. F. Robinson, A. F. Townsend and F. D. Freeman; Membership Committee, C. S. Day, A. E. Davis and W. M. Freeman; Historian, G. U. Halcott; Auditor, A. O. Knight. The retiring Commodore, Howard Frost, was presented by Com. Blood with a huge wooden watch, a reminder of the money advanced on a watch by the Commodore to a tramp, the watch being worthless. In the wooden disc was embedded a beautiful gold watch, a gift from the club.

## Rifle Range and Gallery.

### General Comments on the Drift of Bullets, and Rifles and Rifle Shootings.

BY ARMIN TENNER,

Superintendent American Testing Institution.

The path described by a bullet in the course of its flight is governed by certain laws and conditions. These may briefly be enumerated as follows: In consequence of the tendency of the resistance of the air to the bullet, and the resistance of the bullet to the air, the bullet, in the right, a variation in the spinning axis of the projectile is brought about, causing the latter to drift away from the shot plane to the right. Thus a new axis of rotation is created, and while oscillating with its longitudinal axis around this new axis the bullet offers its left surface continuously to the pressure of the air and is thus forced to drift to the right, thereby creating a change in the axis of rotation and in the position of its longitudinal axis, and these conditions again on the other hand cause the bullet to lean toward the tangent path. This tendency of leaning toward the tangent path and of drifting to the right is greatly lessened by a counter pressure brought about by the meeting of the rotating with the resisting air, causing a condensation of the latter on the bullet's right side. The tendency of a bullet to press to the right not only holds forth throughout its entire flight, but the contrary increases as the stability of the longitudinal axis diminishes.

The trajectory of the center of gravity of a traveling bullet describes a curve with a double crook, around which all other points of the projectile, those resting upon the given axis of rotation excepted, must describe spiral (cycloidal) lines of continuously growing steepness. The sportsman can easily detect the effect of the deviation to the right, as indicated by a bullet which glanced off the ground after striking it. The track or grooves left by such a bullet will, under ordinary conditions, always show a slight crook to the right.

If bullets of different weights and sizes are employed for one and the same caliber and propelled by the same powder charge, the heavier will be, as shown further on, the least subject to deviation. A bullet thrown as far as 2,000 yds., will not perform a full cone oscillation short of 800 yds.

### THE DIRECTION OF DERIVATION.

The derivation will be to the right (1) when the bullet rotates from the left to the right, since the point of intersection of the resultant of air pressure and the longitudinal axis will then be found in front of the center of gravity of the bullet; (2) when the rotation is to the left and the point of intersection is found in or behind the center of gravity.

The derivation will be to the left (3) with bullets rotating to the right if the point of intersection is in or behind the center of gravity; (4) with bullets rotating to the left because the center of gravity will then be always in front of the point of intersection. The conditions 2 and 4 exist only theoretically as far as our modern elongated bullets are concerned. Practically the derivation of such a bullet is to the right if the rotation is to the right, and to the left if the rotation is to the left, since in both cases the point of intersection of the resultant of air resistance is always found in front of the projectile's center of gravity.

### THE TWIST OF RIFLES.

The spiral grooves in the rifle barrel called the twist serve no other purpose save that to prevent the bullet from tipping or "keyholing," and to give its flight the necessary stability.

For bullets two and one-half times in length of their diameter, and being propelled by a high velocity, the angle of the twist should be about 3½ degrees; longer bullets require a steeper twist angle, especially if the velocity is comparatively lower, and the same rule applies to the smaller calibers, regardless of the bullet's weight or shape. If a lighter and a heavier bullet are employed of the same caliber, that of the heavier specific weight will do better in a comparatively less steep angle of twist than the lighter one. With a properly chosen twist angle the length of a bullet can be extended to four times its caliber, and such a bullet can still be made to describe a regular path. The size of the bore of the barrel divided by the length of the twist gives the tangent of the angle of twist.

In this country the nature of the twist is described by the distance in which it makes one complete turn. Their lengths vary in American rifles between 12 and 72 in.

The number of revolutions made by a bullet within a unit of time—one second—at the speed with which it quits the muzzle is called the angle velocity. The latter is governed by the steepness of the twist or the velocity of the velocity of the bullet. If, for instance, the latter has an initial velocity of, say, 1,800 ft., and the twist makes one turn in 25 in., the bullet will make about 782 revolutions per second.

The larger calibers, as a rule, have and require smaller twist angles, i. e., a slower twist than smaller calibers, and this for the reason that with the same velocities and bullets of similar shape the surface of the smaller twist receives a greater angle velocity than the larger, or in other words, with the same initial velocities the angle velocities of the surface of the different similar bullets, the same as the tangents of the twist angles, must be in a reversed proportion to their calibers, and considering at the same time that the lengths of the twist must be proportionate to the squares of the calibers, in order to reduce the deviation caused by the twist to the desired lowest limit. This law is based on the observation that, although bullets with the large twist, owing to its greater surface, the air pressure from the side will grow in single proportion with the caliber, whereas the mass to be moved

Fig. 4.

will increase in cubic proportion to the caliber. A quick twist has a tendency to retard the velocity, and on this account the twist should not be chosen quicker than necessary to serve the purpose previously mentioned.

THE VELOCITY OF BULLETS OF THE SAME CALIBER BUT OF THE DIFFERENT SPECIFIC WEIGHTS.

If a lighter and a heavier bullet of the same caliber is employed in the same rifle, and both are propelled by a similar powder charge, the lighter bullet will show the highest velocity of the two, but the heavier bullet will retain its velocity over a longer distance. When a certain rifle propels a bullet weighing 380 grs., say at a rate of velocity equal to 1,745 ft., the same powder charge would propel a bullet weighing 365 grs. at the rate of 1,762 ft., one weighing 350 grs. at the rate of 1,789 ft., one weighing 335 grs. at the rate of 1,806 ft., one weighing 320 grs. at the rate of 1,823 ft., one weighing 305 grs. at the rate of 1,838 ft., one weighing 290 grs. at the rate of 1,853 ft., and one weighing 275 grs. at the rate of 1,870 ft., or thereabouts. As a rule the velocities are the four roots from the quotient of the load, and equal quotients of loads give equal initial velocities.

### EXPRESS AND AMERICAN RIFLES.

It is a matter of frequent occurrence to find things called by a wrong name in this country, or to find things we understand to differ from what a name really implies. Dogs of a certain species are called and known in America as "Great Danes," although the same dog is not known by that name in his native country. The common sparrow is here known as the "English" sparrow, notwithstanding the fact that this species of bird is found all over Europe and other parts of the old world and that the ancestors of the majority of the sparrows as they now inhabit our cities, towns and villages, were brought to this country from Germany. The common or Bohemian pheasant is here called the English pheasant, etc.

By an "express" rifle the American shooter, as a rule, understands a rifle made expressly to shoot an expanding or exploding bullet, and by an express bullet a projectile with a sort of a channel (as shown in Fig. 4) for being filled with a copper tube, wax or tallow, or with some explosive agent. This is all wrong. The majority of hunters on the European continent use the express rifle, but not one out of a thousand employs such a bullet; and this for the simple reason that they have no need for such a bullet, and that these bullets shoot less accurately and are much more liable to spoil the best part of the flesh of a roebuck or stag.

A bullet provided with a channel running from its front end to the center, or even beyond it, is of course more liable to "flutter," as its unsteady travel is called, than a solid bullet of the same size, and this for the reason that the former, in having its center of gravity shifted still further away and to the rear of its transverse axis, is more subject to the disturbing effects named in connection with the causes and results of derivation than the solid bullet.

I have before me the catalogue of the Ideal Manufacturing Co., which, as a whole and otherwise, contains much valuable information for riflemen, in which, speaking of express bullets, the following passages occur: "Properly speaking, the express cartridge consists of a heavy charge of powder and a short, light bullet," and "Rifles for this kind of ammunition have a slow twist and will not carry the long bullet point on," etc. Both of these statements are wrong and misleading.

The powder charge of an express cartridge is generally in proportion to the weight of the bullet, and the elongated bullet does and must travel on the longitudinal axis, i. e., point on, up to the distance for which such a rifle is intended and for which they are employed. Why should such not be the case?

According to the figures given in the catalogue named the twist in the rifles made up in 16 in. in some barrels, one turn in 30 in. in others. My three-barreled gun bears the mark: "Cal. 12-11-32," which means that the gun barrels are 32-bore, that the diameter of the bullet for the express rifle barrel is 11 mm., or about 7/16 in., and that the twist makes one turn in 52 centimeters, equal to a fraction over 20 in. The length of the bullet is 14 in., its weight is 255 grs., the black powder charge is 58 grs. or the equivalent in nitro powder, which latter have been used for years in my rifle successfully. Strictly speaking, every rifle with the spiral twist or one that will impart to the projectile a high speed of velocity is an express rifle.

The Marlin round-point bullet, cal. .33 for instance, is only a trifle longer than my express bullet; the former weighs 255 grs., the corresponding powder charge is 55 grs. But there are two more and shorter sizes of bullets of the same caliber besides, one weighing 175 grs., the other only 155 grs., with that same powder charge as used for the longer bullet.

The proportion of the weights of the powder charge and the bullet in my express cartridge is about 1 to 5, the proportion of the Marlin long cartridge is 1 to 4 1/2, and that of the two shorter cartridges is 1 to 3 1/2, and 1 to 2 1/2, respectively. The Marlin is an American rifle and still the American shooter is informed by the authority quoted that the express cartridge consists of a heavy charge of powder and a short, light bullet, and that for target shooting the slow twist of the express rifle it will not carry a long bullet point on.

It is true that the same authority says in reference to the shooting distances for which the express rifles are principally made, sighted and intended, namely 150 yds. The express rifle is designed for hunting purposes only. They have a comparatively great striking power and flat trajectory up to that distance. They should not be compared with rifles made for target shooting for the reason stated. Rifle making is not a secret, neither are the tools and machinery employed.

**Nitro in the Rifle.**

SOME months since we resorted to a trial of nitro powder in the rifle. Assisted by one of our local experts, F. C. Ross, we shot a score of 50 shots at Wissel's Cypress Hills Park, from the machine rest, the result of which was reproduced in *FOREST AND STREAM* on Dec. 16, 1893. The merits of this target were such that we were induced to go ahead with further experiments in order to demonstrate its qualities for reliable work.

The target shot on Dec. 16 was made with a combination of 7grs. nitro and about 4grs Hazard's F.G. powder in a .38-50 Ballard Schuetzen rifle. In the mean time we had the rifle rechambered for the 55grs. shell, and continued our experiments. Some weeks since we received from Messrs. Weibusch & Hilger, the New York agents for the S. S. Powder Co.'s nitro powder, samples of their rifle powder. A series of trials were made with the "Rifleite 450," with a full charge (55grs. measure); the result not being satisfactory, we went back to our original plan of using a small priming charge of nitro, and filling the balance of the shell with black powder.

On March 5 we fired, off hand, a series of shots at 200yds. on the German ring target, using a powder charge as follows: 10grs. Rifleite and 36grs. F.G. Hazard (apothecary weight), shells primed with the new Winchester No. 3, W. primer. The total of the series (50 shots) was 1,085, an average of 217 for each 10 shots.

Without cleaning, we proceeded to shoot two strings more of 10 shots each, using a 330 patched bullet. The shots are recorded in their order as follows:

22	25	22	21	24	21	22	22	21	23	—223
24	24	23	20	24	25	23	25	22	20	—230

In the 70 shots fired only one was out of the bullseye (21in. black), a 17.

The most interesting part of this series was the close work of the patched bullet. Including the preliminary shots some sixty shots were fired before starting with the patched bullets, and beyond blowing the smoke from the barrel after each discharge, the interior of the barrel was not disturbed.

On March 10 we fired the same style of load but substituting SR. for the Rifleite in a series of 80 shots, shooting off-hand, we made the following score in 10 shot strings: 201, 226, 226, 225, 222, 210, 221, 224.

In shooting this series we used the 330 lubricated bullet made in the Ideal mould. Our purpose in shooting this style of load was to get away from the excessive fouling which one gets in using black powder alone, when shooting without cleaning.

The nitro powder used in the Ballard in full charges is not safe and we would not advise its use. But used in the quantities as indicated in this article the results have been quite to our liking. Each discharge leaves the barrel comparatively clean as the scores with the patched bullets show.

In loading the nitro, it is necessary, in order to get uniform results to weigh each load. The black powder after the exact quantity to fill the shell is ascertained and the load is made in the Wilkinson machine. We trust that any of our riflemen who have brought into this combination will have as good success as our experiments have indicated and should they hit upon any improvement we hope they will favor the readers of *FOREST AND STREAM* with the results.

PLAISTED.

**Ross and Dorrier Will Shoot.**

AMONG the many topics that have been uppermost in the minds of our local rifleman for many months past has been a contemplated 100 shot match between Fred C. Ross and Michael Dorrier. Of the many expert riflemen in America these two are looked upon as being the best of all at the present time. To become expert in rifle shooting as these two sportsmen are, is no easy matter. In the case of Ross and Dorrier, there has been generated, largely through the aid of the participants of each, a strong desire to bring the two together in an individual match. Ross is one of the youngest in the present coterie of experts in off-hand shooting, he has developed phenomenal abilities in the few years that he has given to rifle practice. Dorrier, on the other hand, is one of the older gunners, who have been prominent for a number of years. In the game he has no equal, and at 30yds. the only man who could ever make him lower his colors was John Hayes, last year's champion. These two have met in several 100 shot contests, with the results on the whole rather in favor of Hayes. But Hayes has been in the fight a good many years. Time and business cares make it obligatory upon him to retire from championship competitions. Thus it has come to pass that the competition for the month, that Hayes has won so well these many years, is about to become a very interesting subject to the fraternity.

The admirers and followers of Ross in his rapid development as an expert, desire to see this much coveted honor rest upon his shoulders. In the other direction comes the old expert Dorrier, with his many admirers, who believe that this veteran has abilities in him that have not as yet been drawn out to the limit. The result is that with the continual showing and pushing on the part of the friends of these two worthy opponents of the rifle, they have at last been brought into a focus, and a match has been made and articles signed calling for a 100 shot contest, to take place in Wissel's Cypress Hills Park, on April 16; stakes \$100 a side. It is to be hoped that when the two come together on the day in question they will both be in condition to make the scores of all previous matches past records. The friends of both men believe that such will be the result.

**California Rifleman.**

Feb. 25.—The most noteworthy event of the Mid Winter Fair shoot this week is the performance of F. O. Young at the point target. He started on Wednesday to see how many points he could make on 100 consecutive shots. He finished his first 50 shots on that day, scoring 2,305 points. The remaining 50 to-day yielded 94 or a total of 190 in his 100 shots—a very fine score.

No other fine shooting has been done except on the man target, when within a short space of time the following were recorded by the secretary: H. Heeth 91, Dr. Rodgers 90, J. E. Klein 90.

The financial outlook for the total shoot is very promising to the projectors, as nearly \$5,000 has been taken in for tickets to date.

The Canadian Pistol and Rifle Club held its semi-monthly all comers' shoot to-day, but the scores were only ordinary. Practically no attention has yet been given to rest shooting by the club. As a consequence the scores are by no means praiseworthy. Facilities will soon be established for the encouragement of this fascinating department of rifle shooting.

To-day in the all-comers' rest match Dr. Rodgers scored 99. In the all-comers' army rifle match W. Glendeman scored 85, E. Hovey 84, F. O. Young 83, Dr. Rodgers 82, P. Bohr 79, D. C. Bablin 69, T. J. Carroll 78, L. Barrere 75, C. Mangels 69, G. W. Crane 65, H. B. Crane 56, J. Peters 56, A. E. Crane 63, H. G. Marsh 41.

In the all-comers' military match H. R. Brown made 75 and H. L. Pendleton 74. The following scores were made in the all-comers' pistol match: E. Hovey 90, H. L. Pendleton 89, S. D. Kellogg 89, C. M. Dais 88, F. O. Young 87, L. Barrere 83, A. H. Page 83, C. Thurlock 80, P. Bohr 76.

ROEHL.

**Jerseymen at the Targets.**

On Saturday of last week a number of rifleman from the Greenville and Excelsior clubs assembled in Armbruster's Park for practice. The weather was warm and fair. Mr. Dorrier, who is matched to shoot 100-shot match with Ross on April 16, was out for practice. He shot a series of 100 shots and made the remarkably fine score of 2,246. Hansen shot in good form, making a total of 1,081 in 50 shots. Colin Boag made the highest 50-shot score that he ever made in the outdoor range, making a total of 1,063. C. Scheeline and John Hill were present and participated in the shoot. The scores are appended:

Dorrier, 100 shots.....	222	226	223	230	232	220	227	222	214	230	—2246
Hansen, 50 shots.....	216	221	213	228	207	—1063					
C. Boag, 50 shots.....	210	222	210	214	207	—1063					
Plaisted, 50 shots.....	209	215	219	209	204	—1056					
Scheeline, 70 shots.....	176	173	215	158	196	—1118					
John Hill, 30 shots.....	141	178	—319								

**New York Rifle Club.**

NEW YORK, March 5.—The New York Rifle Club held its regular weekly shoot on the 3d inst. at Zettler's gallery, 12 St. Mark's place. The following members entered and made scores as follows:

Chadbourne.....	243	242	Crocker.....	231	229
Young.....	239	239	King.....	228	228
Geusch.....	235	238	Barker.....	225	226

March 12.—The New York Rifle Club held its regular weekly shoot at Zettler's gallery, No. 12 St. Mark's place, on the 10th inst. and the following members were present with the following results:

Young.....	242	240	Crocker.....	233	232
Geusch.....	240	239	King.....	227	230
Barker.....	235	226	E. R. Chadbourne, Sec'y.		

**Heidenreich Rifle Club.**

NEW YORK, March 6.—At our 100ft. range the members of the Heidenreich Club have shot the following scores, March 4: Horn 236, Roberts 236, Hicks 230, Doupsey 234, Steckel 233, Goodman 237, Koch 230, May 216, Heidenreich 215, Keller 219, Wm. May, Sec'y.

**Paterson Rifle Club.**

The members of the Paterson Rifle Club had a pleasant day's sport at the targets on March 4. The weekly shoots of the club on the Bunker Hill range are becoming a matter of interest to the citizens of Paterson, and every practice day finds a goodly crowd present to watch the shooting of the marksmen. The club range is 100yds. long and the 20-ring German target the official target. Scores:

James Welcher.....	18	20	17	20	18	18	20	18	19	—187
Wm S Brooks.....	15	20	19	18	20	17	19	17	183	
Wm Dutcher.....	15	20	19	18	20	17	19	17	183	
James Irons.....	15	20	19	18	20	17	19	17	183	
August Dietrich.....	15	20	19	18	20	17	19	17	183	
John W Johnson.....	15	20	19	18	20	17	19	17	183	
Abe Newby.....	15	20	19	18	20	17	19	17	183	
Ben Maskell.....	15	20	19	18	20	17	19	17	183	
John Ranson, Captain.....	15	20	19	18	20	17	19	17	183	
Jess W Foster.....	15	20	19	18	20	17	19	17	183	
Wm Maskell.....	15	20	19	18	20	17	19	17	183	
Thos Blake.....	15	20	19	18	20	17	19	17	183	
C. Pyle.....	15	20	19	18	20	17	19	17	183	

The 50-shot match between Jos. Irons and Aug. Dietrich for a purse of \$40 was shot off on the Bunker Hill range on March 11. A large gathering of the club members were present to witness the contest. The match was close and was won by Dietrich by eight points. Following the match came the regular club practice in which sixteen members participated:										
Dietrich.....	18	18	15	16	18	16	16	20	18	18—176
Irons.....	19	16	18	17	16	18	16	16	15—168	
Referee, J. Weston.....	17	18	14	17	18	15	16	20	19—168	
Jas Welcher.....	20	15	17	17	18	17	20	18	17—170	
Abe Newby.....	17	15	19	17	19	17	16	19	20—172—857

Wm Gregg.....	14	17	17	15	17	—80				

**With Eyes 64 Years Old.**

NEARLY every sportsman in America has heard of Samuel Castle of Newark, one of the most expert field and trap shots in the country, but few know of him as a rifle shot. In the days gone by, however, Mr. Castle was fully able to hold his own in any kind of company, either at rest or off shoulder work, but of late years he has confined himself almost entirely to shooting with the smoothbore. A short time ago, however, with a party of friends he strolled into John Hollenberg's North Ward ranges, at 423 Broad street, and tried a few strings at a rest on the 25yds. range, using a 3-F Ballard gallery rifle and 22 shorts made by the United States Cartridge Company, which had been left at the range by "Tee Kay" Keller.

He fired half a dozen or more of strings of 10 shots each, his lowest score being 116 out of the possible 120 points. On his fourth and fifth strings he made full scores of 120 each, and for the sake of showing what his 64-year-old eyes are capable of doing, full-size fac-similes of the two targets are here shown:

**Beideman Rifle Club.**

BEIDEMAN, N. J., March 5.—The following shows the weekly shoot of Beideman Rifle Club, week ending March 3, conditions 25yds., outside range, strictly off-hand, target 44in. ring, possible 250: Dr. E. L. Gardiner 245, L. Wood 243, Wm. Gilbert 242, W. Schmedman 232.

Pistol score, 50yds., standard American target, possible 100:

J. L. Wood.....	10	10	10	10	8	8	8	8	—89
E. L. Gardiner.....	10	10	10	10	8	8	8	8	—87

March 10.—The following shows the weekly shoot of the Beideman Rifle Club, week ending March 10. Conditions 25yds., strictly off-hand, outside range, 44in. ring target, possible 250: J. L. Wood 241, E. L. Gardiner 241, Wm. Wurflein 238, W. Gilbert 237, A. C. McGowan 233.

Pistol score, 50yds., standard American target:

J. L. Wood.....	9	9	9	9	9	9	9	8	—88
E. L. Gardiner.....	10	8	8	8	7	8	7	8	—81

WALT GILBERT, Sec'y.

**Zettler Rifle Club.**

ONLY ten members of the Zettler Club were present on Tuesday night to participate in the weekly club shoot. Fred C. Ross won the champion medal on the score of 247. R. Busse was second with 245. Henry Holges was high with the best 10-shot score, making 249. Ross was champion target. F. C. Ross 247, R. Busse 245, H. Holges 246, M. B. Engel 241, B. Walther 240, H. D. Muller 239, B. Zettler 244, C. G. Zettler 238.

Best 10-shot scores, 5 entries: H. Holges 249, F. C. Ross 248, B. Walther 248, R. Busse 246, M. B. Engel 241, Krauss 239, H. D. Muller 239, C. G. Zettler 244, Gus Nowak 245.

**Schlicht Rifle Club.**

THE weekly shoot of the Schlicht Rifle Club at its headquarters on March 5, brought together twenty-five members in competition for the class medals. Geo. Dorr won the champion medal, W. Schlicht the first class, Geo. Lautenberger the second class and A. Meyer the third class medal. Scores: Geo. Schlicht 240, Geo. Dorr 235, W. Schlicht 229, Geo. Lautenberger 227, Capt. Brönnelintne 227, G. J. Goehing 226, C. Seidel 225, A. Meyer 224, M. Dams 223, Ad Meyer 219, Chris Meyer 216, G. Richter 216, Jacob Diehl 215, J. Dorr 215, J. Schlicht 214, J. Dedrick 214, F. Lambrix 214, N. Mehr 210, C. Stein 208, J. Gebhardt 207, G. Tribut 206, G. Meyer 205, P. Man 210, A. Denbine 204, J. Bonder 202.

**Palisade Rifle Club.**

TEN members of the Palisade Club were on hand on March 4 to participate in the weekly shoot for the class medals. Fred Krobatsch won the first class medal, R. Glaser the second class and Geo. Dorr the third class. The members are all making good progress in their efforts to become proficient and each week the winners are compelled to raise their totals in order to retain their lead. Scores: Fred Krobatsch 231, R. Glaser 231, Geo. Dorr 227, Fred Wood 223, C. Heimberger 218, F. Esperer 217, W. Ahles 214, O. L. Orferheide 213, A. Ahles 209, H. Rose 209.

**Empire Rifle Club.**

THE following scores were made by the Empire Rifle Club, Tuesday evening, March 6: J. Grimm 245, Wm. Rosenbaum 241, B. Zahn 239, H. Zettler 236, Wm. Malsenholder 235, Chas. Zettler, Jr. 233.

BEN ZAHN, Secretary.

**RIFLE NOTES.**

The Turtle Bay Rifle Club has disbanded. It is reported that a number of the members will enter the ranks of the famous Zettler Club.

The Miller Club, in order to increase its membership, contemplates reducing its initiation fee.

The Our Own Club, of Hoboken, is adding new members to its roll every week.

The Greenville Club will soon celebrate its third anniversary, and among the interesting features of the occasion will be a match with the Excelsior Club team. Special invitations will be sent to the prominent clubs and societies of New York and vicinity to be present to participate in the hospitalities. The Greenville Club has gained an enviable reputation in the fraternity for its hospitable reception to visiting shooters.

At the weekly shoot of the Excelsior Club on March 6 only two members were present to participate in the competition for club medals. L. F. Hansen made 245 and C. Thomas 230.

The magnificent shooting that M. Dorrier has been doing within the past few days will add new zest to the interest of rifleman in the coming contest between him and Ross. The latter, by his work in the gallery of late demonstrates the fact that he too is in the line of improvement. When the day of the contest arrives and the match opens, Wissel's Park will contain a larger gathering of rifleman than has been seen there in many years. The amount of interest centered in this match is greater by far than that of any previous match among rifleman within our memory. That old veteran of the target Wm. Hayes, of Newark, has been requested to act as referee, and has accepted the position.

On Wednesday of last week Michael Dorrier, who is matched with Fred C. Ross to shoot 100 shots in Cypress Hill Park, on April 16, challenged G. W. Plaisted for a 100 shot race in the Greenville Park for a small purse, granting the latter a handicap of 50 points. Plaisted thought that inasmuch as Dorrier had just recovered from a severe sickness that with the aid of the handicap Michael would be an easy mark and accepted the offer. The match was shot off in the afternoon following. After the 100 shots had been shot and the totals footed up, Plaisted found that he had banked too much on his assurance that the invalid could not shoot. The scores are appended in 10 shot strings:

Dorrier.....	217	226	228	237	121	220	225	226	228	203	—2231
Plaisted.....	201	226	226	225	222	210	221	224	200	206+50	—2210

**Trap-Shooting.**

All ties divided unless otherwise reported.

If you want your shoot to be announced here send in notice like the following:

**FIXTURES.**

March 21.—Union Gun Club, 25 live bird shoot, \$20 entry, at Springfield, N. J.

March 22.—New Jersey Trap-Shooters' League team shoot, combined with all-day tournament of Maplewood Gun Club.

March 22.—"Dutchy" Smith vs. Aaron Woodruff, 100 live birds each, \$100 a side, at Marion.

March 26.—Acme Gun Club, open shoot at Dexter Park, targets and birds.

March 26.—Acme Gun Club tournament, at Miller's Dexter Park, Long Island. Targets and birds.

March 26.—Forest Gun Club, target tournament, Twenty-seventh street and Lehigh avenue, Philadelphia.

Nov. 28.—Central New York Trap-Shooters' League, eighth tournament, at Syracuse.

March 23.—Central New York Trap-Shooters' League, first tournament, at Auburn.

April 4.—Interstate Manufacturers' and Dealers' Association's grand American handicap at Dexter Park, Long Island.

April 4.—Texas State Sportsmen's Association eighteenth annual meeting, at Austin, Texas. Wallace Miller, Sec'y.

April 4.—California State Sportsmen's Association tournament, at San Francisco.

April 11.—Baltimore (Md.) Gun Club annual tournament, under management of H. A. Penrose and E. D. Miller.

April 18.—Interstate Manufacturers' and Dealers' Association tournament, at Pittsburgh, Pa. Pittsburgh Gun Club will add \$200.

April 27.—Central City Gun Club's tournament, Central City, Neb.

April 25.—Central New York Trap-Shooters' League, second tournament, at Rochester.

May 13.—Peekskill (N. Y.) Gun Club, spring tournament; two days targets, last day live birds.

May 16.—Arkansas State Sportsmen's Association's tournament, at Fort Smith, Arkansas.

May 23.—Interstate Manufacturers' and Dealers' Association tournament, at Springfield, O. Springfield Gun Club will add \$200.

May 10.—Arkansas State Sportsmen's Association's fourth annual tournament and meeting, at Ft. Smith, Ark.; \$1,000 added money; professionals and experts will be handicapped. Address Joseph Matthews, Ft. Smith, or John J. Sumpter, Jr., Sec'y, Hot Springs, Ark.

May 8.—Ohio Trap-Shooter's League annual meeting and tournament, at Columbus, O. Ed. Taylor, Sec'y, Cincinnati, O.

May 17.—West Newburg (N. Y.) Gun and Rifle Association's spring tournament.

May 17.—The Interstate Manufacturers' and Dealers' Association's fourth tournament, under the auspices of the Prairie Gun Club, at Garfield Park race track, Chicago, Ill. The Prairie Gun Club adds \$500 to the purses.

May 22.—Knoxville (Tenn.) Gun Club's thirteenth annual tournament, first day, targets, \$1,000 added money, known traps, unknown angles; last day, live pigeons. Open to the world. No handicap. R. Van Gilder, Sec'y.

May 30.—Eastern New York League tournament, at Canajoharie, N. Y., under the direction of the Canajoharie Gun Club. Charles Weeks, Sec'y.

May 30.—Central New York Trap-Shooters' League, third tournament, at Utica.

May 30.—June 1.—Interstate Manufacturers' and Dealers' Association fifth tournament, and second annual tournament of the Michigan Trap-Shooter's League, under the auspices of the Valley City Gun Club. \$300 added money.

June 4.—Illinois State Sportsmen's Association tournament, at Chicago. W. L. Shepard, Sec'y.

June 12.—Atlantic City Rod and Gun Club, three days' tournament. Address E. C. Griscom, Sec'y, Atlantic City, N. J.

June 14.—Sportsmen's Association of the Northwest, annual tournament, at Tacoma, Wash.

June 19.—Chamberlain Cartridge and Target Company's first annual tournament, at Cleveland, Ohio. \$1,000 added money.

July 25.—Central New York Trap-Shooters' League, fourth tournament, at Syracuse.

Boone's First Annual.

BOONE, Iowa, March 1.—The first annual tournament of the Boone Gun Club ended to-day. The attendance was fair, among the visiting sportsmen were Christensen and Peterson, of Randall; Georgeson, of Kelley; Abbott, of Charter Oak; Kline, of Manson; C. W. Grimm, of Clear Lake; Read, of Omaha; Trotter, of Kingsley; McCartney, Brooks and Budd, of Des Moines. The live birds were a good lot, and the match between Morgan and Georgeson was quite exciting and about 500 spectators witnessed the contest. When 59 birds had been shot at by each contestant, Mr. Georgeson was 15 birds in the lead and Mr. Morgan withdrew. C. W. Bunn.

On Oneida County Grounds.

UTICA, N. Y., March 5.—*Editor Forest and Stream:* Inclosed scores made to-day in a series of sweepstakes at live birds on Oneida County Sportsman's Association grounds. Birds were the finest we have ever trapped, many of them falling dead outside boundary, but scores failed to keep record of them. Mr. John Fulford is now securing live birds and hopes to be able to get enough to hold an all day shoot in the near future, notice of which will be given later:

	MANITOU.

Riverton vs. New Utrecht.

THE return match between teams representing the Riverton Gun Club, of Philadelphia, and the New Utrecht Gun Club, of Brooklyn, for the bronze trophy was shot off on the Woodlawn Park grounds on Thursday of last week. The previous match, which was shot some weeks since on the grounds of the Riverton Club, at Riverton, N. J., was won by the Riverton team with a margin of 8 birds. A special train from Bay Ridge carried a large number of enthusiastic sportsmen to Woodlawn in the early part of the day, among whom were W. H. Wolstencroft, J. A. R. Elliott, T. W. Morley, E. G. Downing, C. L. Flanagan, Lee Helgans, E. M. Günther, L. A. Bauman, J. Bennett, W. Hartje, C. Furgueson 3d, Dr. Winger, Jerome Eddy, Wm. Stewart, R. J. Van Brunt, Neaf Apgar, W. Townsend, Guy Robinson, W. S. Van Cleft, Dr. J. C. De Mund, A. P. Bigelow, John McKay, Dr. Cummings, Peter Hagenau, Neil Van Brunt, J. B. Voorhes, Anderson Squire, Dr. Shepherd, E. H. Pool, Major Bertier, Chas. Van Brunt, P. S. Bogart and John Matthews.

The Riverton men were handicapped by not having some of their best men present to participate in the contest. Messrs. Dolan, Macalester and Walsh, three of the best of the Riverton team being absent. The Riverton men, however, brought along a large supply of confidence and as the result of the match shows, the best element of the club was not needed to overcome the Long Island representatives. John S. Hoey was backed by W. S. Stokes was captain for the New Utrecht and D. S. Thomas for the Riverton.

The contest was opened at 11:15, with Dr. Wynn of the New Utrechts at the trap. The Doctor opened the ball by killing his bird with his second barrel. J. W. Smith of the Rivertons followed, missing a strong left-quartering bird. N. E. Money was the second man of the New Utrechts to face the traps; he killed his bird, an incomer, with second barrel. The second man of the Rivertons was C. L. Furgueson, Jr., followed for the New Utrecht, killing his bird. W. H. Sterling of the Rivertons was next and brought his bird to grass with his second barrel. C. E. Morris for the New Utrechts was next, killing his bird with the second barrel. A. Gillingham of the Rivertons scored a miss on his first. When the first four men of the two teams had finished their birds, the second man of the Rivertons was in the lead, and Long Island stock was inclined to be bullish. The second squad of five from each team to face the traps resulted in the Rivertons gaining five birds upon the New Utrechts, leaving the latter three birds in the rear. After lunch the last squad of five men from each team faced the traps. The Rivertons had a lead of three birds but the Long Island men were strong in the belief that they would overcome this lead, and the consequence was that a number of small wagers were made on the final result. The contest, however, proved to be an unfortunate for the New Utrecht team. They only succeeded in holding their own, each squad killing fifty-nine birds, leaving the Rivertons three birds in the lead on a total of 161 against 158 for the New Utrechts. Fourteen men shot on each team, and of the twenty-eight men engaged in the contest only one, J. H. Davis of the Riverton team, killed five birds. The best individual score on the part of the New Utrecht team was made by L. P. Davenport, who killed fourteen. The scores are appended:

Lakeview Rod and Gun Club.

LAKEVIEW, Mass., March 5.—There was a good attendance at the club shoot on Saturday, March 3. It was an ideal day for shooting, the sun shining beautifully and the wind to mar the flight of the targets. The shooting was not up to the average, the shooters' score being a mass of slush, making difficult footing. All but the first two events were rapid-fire, at 10 singles, in two squads with the following scores: No. 1, 5 single standards, known angles: J. T. Mascroft 3, R. W. Robinson 2, W. H. Buck 3, E. T. Kirschbaum 2, S. Randall 1, V. D. Kenerson 0, G. S. Davis 1.

No. 2, 5 singles, unknown angles, 5 traps, 3 moneys:

The next shoot of the club will be held March 17. The annual meeting for the election of officers will be held April 2. The secretary and treasurer's report will show a very successful season. The winners of the various club prizes will be announced at the meeting.

Unknown Gun Club.

THE monthly shoot of the Unknown Gun Club, at Dexter Park, on Thursday of last week, was highly successful; twenty-four members were present to participate in the club event. The weather was mild and spring-like and the birds of good quality. J. Vaghts was the only one of the twenty-four engaged in the contest who killed his full quota of 7 birds, winning the club trophy. Messrs. Flynn, Hyde, Voiling and Lakeman tied with 6 each for second place. Messrs. Broome, Boyd, Chichester, Rappman, Littlefield, Ring and Rommerman tied with 5 each for third place. A series of miss and out sweepstakes followed, won by Flynn, Littlefield and Chichester.

McMurphy vs. Van Gilder.

KNOXVILLE, Tenn.—I notice in issue of Feb. 17 of your valuable paper an article on the subject of protection to the amateur shooters of the country. The proposition advanced by Mr. McMurphy at first glance, and a slight study of his figures looks rather catching, but when thoroughly digested and at the same time compared with facts and figures gained through practical experience, his new scheme drops to pieces. I propose to give you figures, something from the May 1893 tournament of the Knoxville Gun Club, and will take the second day to get an average of the three days' shoot. On this day there were eight events at 20 targets each, \$3 entrance, with \$240 cash added for the day, five moneys—30, 25, 20, 15 and 10 per cent. Result of the full day's shooting of eight events:

24 men in for 1st place for \$460.00, put in \$ 72, won \$388.00	
41 men in for 2d place for \$384.00, put in \$123, won \$261.00	
67 men in for 3d place for \$335.00, put in \$201, won \$134.00	
81 men in for 4th place for \$184.75, put in \$243, lost \$ 58.35	
107 men in for 5th place for \$182.75, put in \$221, won \$135.25	

As will be seen by the above all first, second and third place men were winners, whereas in McMurphy's plan, our winners in second and third place would have been losers; our fourth money lost 71 cents each, while by McMurphy's plan they would have lost 60 cents, and our fifth money men, who win back \$138.35 of the \$321 they put in, would under McMurphy's plan have lost all they put in the pot. The figures show that the country plan is best for the amateur, while McMurphy's gives all or nearly all the "status" to the top gun and the top guns mostly mean experts and lets the amateur simply shoot all day and pay, then pay him back his entrance fee less his targets, and said amateur has the poor prospect of an all-day wrestle with the expert for top place. Our plan opens to the gaze of the amateur not only a chance to land on top, but he also has the chance to land in second and third place and come out a winner; in fourth place a chance to come out nearly even and ditto in fifth place. According to McMurphy's plan we think the amateur starts in on an uphill race and is virtually beaten before he begins. It don't take him long to see that he is being "played for a sucker," and he soon "jumps the game."

In regard to dropping for places, our experience during the last three years shows that with our system of cash average money for each day, and then for the three days, has done away with it so far as the better shots are concerned. The fact is, no good shooter can afford to throw away the chance to win our prizes of \$45, \$36, \$21, \$17, \$20 and \$6 in cash for the three days, and the result has been very gratifying to the management, and a pleasure to attending shooters at our tournaments.

Right here I beg to differ with Mr. Hough in his scathing remarks in regard to the shooting of the country. His experience at tournaments has been in sections of the country where such disgraceful conduct is permitted, but the writer has yet to witness such proceedings at any tournament held in the southern section of the country, and we here with invite Brother Hough to attend our tournament in May, when we will show him an entirely different state of affairs and guarantee that when he writes us up he will have no use for the strong language used in his article.

## SAVE YOUR TROPHIES.

## Kennel Special.

Advertisements under KENNEL SPECIAL head, set in uniform display, 25 cents a line first time, 15 cents a line each time after. Count seven words to a line. Cash must accompany order.

MOUNT PLEASANT GORDON KENNELS ARE offering for sale a number of strictly first class Gordon setter puppies from first prize field and bench sires and dams. Pedigreed and registered. Address with stamp, C. T. BROWNELL, P.O. Box 335, New Bedford, Mass.

My kennel of mastiffs is conceded to be the best in America. Have won at all the large shows. Won all 1st and 2d prizes in mastiffs late Chicago show. Dogs at stud and for sale. A few choice pups for sale. Send stamp for list and mention this paper. CHAS. E. BUNN, Peoria, Ill.

CROWDED AND MUST MAKE ROOM FOR COMING young stock, consequently will sell for half value some well trained pointers of excellent breeding as well as some very choice young stock. Address for prices and particulars, RICHWOODS KENNELS, 230 S. Washington st., Peoria, Ill.

BEAGLES.—HAVE PUPPIES BY CH. FRANK Forest and ch. Roy K. out of crack bitches. Young stock, unbroken and several certain show winners. I will sell for very moderate prices. Don't write for catalogue, but state what you want. H. L. KREUDER, Nanuet, N. Y.

GORDON SETTER PUPS, BY RANGER B. 1ST special (10) N. E. Field Trials; 1893, and Belle Lorraine, first, puppy class, Ohio Field trials, 1892. Bench show record furnished on application. These are the best field trial Gordon puppies ever offered in this country. W. L. ALEXANDER, Canton, Ohio.

FOR SALE.—YOUNG LIVER, WHITE and ticked pointer dog, whelped June 27, 1893, from registered stock. Healthy, kind, quick, and partly trained. Price \$50. JOHN E. HOWARD, 47 E. 10th st., New York.

FOR SALE.—SEVERAL WELL BROKEN POINTERS and setters. These are dogs that have had large experience on game and I will guarantee that they will prove satisfactory. W. B. STAFFORD, Trenton, Tenn.

COCKER SPANIELS.—A FEW CHOICE COCKERS for sale. Stud dogs and brood bitches—prize winners. Send for list. EDWIN W. FISKE, Mount Vernon, N. Y.

WINNERS.—IRISH SETTER, FEMALE, CADIZZ, 3d New York, \$40. Cadim, male, 2d, \$50. Cadie, brother of above, \$20. All fine condition and good fielders. Send for list. Frank Thomas, Catskill, N. Y.

FOR SALE.—LITTER ENGLISH POINTER PUPPIES, 3mos. old, Rip Rap, King of Kent, Hops, Lonnie Bijou, Croxteth, Prairie Belle, Meteor blood. Rip Rap, Jr. in the stud. Jas. McAleer, Emsworth, Pa.

A WINNER.—THE BEAGLE BITCH THASMO Joy, winner V.H.C., New York. Nice black, tan and white, perfect condition. Train \$35. FRANK THOMAS, Catskill, N. Y.

Trained fox and rabbit hounds at a bargain. All day stayer. C. F. KENT, Monticello, N. Y.

ITALIAN GREYHOUNDS (EXCLUSIVELY). FRANK H. HOYT, Sharon, Pa.

FOR SALE.—English setters, 7mos. For description please write JAMES WRINKLE, Lee, Mass.

Some fine Irish setter pups, dogs and bitches. REDSTONE KENNELS, Huntington, N. Y.

FOR SALE.—SPORTING DOGS. GEO. W. LOVELL, Middleboro, Mass.

Irish Terriers.—Of choice breeding. Puppies for sale by HUGHENOT KENNELS, New Rochelle, N. Y.

ITALIAN GREYHOUNDS AND FINE ENGLISH pugs from imported, registered and prize-winning stock. In Stud—Prize pug stud dog Cricket, weight 10 lbs. HENRY C. BURDICK 15 Wellesley street, Springfield, Mass.

FOR SALE.—Large handsome St. Bernard dog, 3yrs. old. Fine companion and a thorough watch dog. Is a grandson of ch. Victor Joseph. Price \$60. Ad. "Jeweler," Lock Box 383, Suspension Bridge, N. Y.

WANTED.—A young pointer stud dog of approved breeding and winnings. Price must suit the times. LIBERTY KENNELS, Hyattsville, Ohio.

IRISH SETTER FOR SALE.—1½yrs. old, strong and active. Fine points. Good nose, etc. Address Chelmsford Kennels, P.O. Box 63, Flatbush, L. I.

FOXHOUSES, RABBIT HOUNDS, COON HOUNDS FOR SALE, FULLY TRAINED. F. H. HAYES, Dexter, Me.

FOR SALE.—FOUR FINE POINTERS, TWO OF them winners. All nice fielders. Send for list. FRANK THOMAS, Catskill, N. Y.

Two handsome greyhound bitches, full sisters, thoroughly house and street broken. Grand couragers; \$50 for them. Frank Thomas, Catskill, N. Y.

DOGS TRAINED FOR PRIVATE SHOOTING ON partridge, quail and woodcock, by C. F. ROBBINS, Sutton avenue, Oxford, Mass. Close to depot.

English setter pups, blood of Paul Gladstone and Virena Llewellyn. E. A. Carrier, Westchester, Ct.

FOX-TERRIERS FOR SALE. W. F. PORTER, Sharon, Pa.

### The Kennel.

**BUCHAN'S**  
CARBOLIC SOAP No. 11 is the best DOG SOAP in the world. Sure death to Fleas and a cure for all skin diseases.

Buchanan's Dog Wash will cure every case of MANGE, kills Fleas and keeps the dog in a healthy condition, makes the hair soft and silky and does not stain. It is also the best disinfectant for the kennel. Ask your druggists for it.

CARBOLIC SOAP CO. Manufacturers and Proprietors, 230 Pearl st., New York

### A PREMIUM ON CRIME.

THE killing of ten buffalo in the National Park by a skin hunter from Cooke City and his capture by the Government scout is announced in another column. The news comes to us by telegraph from a staff correspondent now on the ground, and while for the present full details are lacking, the capture is unquestionably the most important that has ever been made in the National Park.

The occurrence calls public attention again and most forcibly to the criminal negligence of which Congress has been guilty for all these years in failing to provide any form of government for the Park, or to establish any process of law by which crimes against the public committed within its borders can be punished. The result is that, although misdemeanors and crimes of many different grades have been perpetrated in the Park, only in exceptional cases has any punishment been meted out to the offenders. Practically the only punishment that can be visited on the criminal is to lock him up in the guard-house. In other words, a man while in the National Park is not subject to the law of the land; within its borders he may without fear of punishment do those things which are forbidden in all other parts of the country.

Such a condition is not only an anomaly under our form of government, but a disgrace to every American citizen. Every citizen shares with all the others the ownership in the wonders of our National pleasure ground, and when its natural features are defaced, its forests destroyed, and its game butchered, each one is injured by being robbed of so much that belongs to him.

There is at present no remedy. Representatives elected by the people to guard their interests have steadily refused to enact bills brought before Congress for the protection of the National Park, or if willing to enact them have insisted on nullifying the good that they might do by coupling with the good provisions, others wholly bad and menacing the Park and all that it contains. A measure which should merely protect the National Park has in it nothing to excite the enthusiasm of the politician; there is the hope neither of gain nor of political preferment—nothing but the public good—and the average politician is not looking about him to see how he can benefit the public. His ambitions are more modest. He is quite satisfied if he can benefit himself.

The man Howell, who has just been arrested, has destroyed property belonging to the Government—that is, to the people—which was worth from \$2,500 to \$5,000; yet if we may judge the future by the past, he will be allowed to go on his way practically without punishment. If he had committed a similar act anywhere else—if he had destroyed Government horses or mules or grain or supplies of any sort to this extent—he would have served a long time in prison. So long as these lewd fellows of the baser sort, who lack only daring to be horse thieves and rustlers, know that they will not be punished for their invasions of the Park, ten regiments of troops could not protect it against their raids, but let it once be known that punishment will follow swiftly on the heels of capture, and they will give the Park a wide berth. As things stand at present, they laugh at the troops.

Behind the miserable scoundrels who commit the depredations are the still more cowardly wretches, who by offering high prices for skins and heads, tempt the poachers. These men are more contemptible than their tools, for they have not the courage to face the cold and snows of the mountains, the fatigues of the chase or the chances of capture. They merely buy the spoils. They are the "fences."

In the Yellowstone Park the buffalo—remnant of a continent—have increased year by year, until now they number perhaps 500; the most curious ornaments, the rarest of the living wonders of our American Wonderland. But Congress, by its continued neglect, encourages the evil-minded to believe that they may penetrate even here and destroy this last remnant of a race long nearly extinct. It puts a premium on this crime.

A year ago this winter several buffalo were killed; last spring and the spring before, a number of calves were captured; this winter ten buffalo have been slaughtered at a single killing. At this rate it will not be long before the last shall have been shot down. It is for the people to say whether or no they desire this.

### FROM THE COURTS.

#### Unlawful Nets as Nuisances.

WE printed last week the full text of the finding of the Supreme Court of the United States, sustaining the constitutionality of the New York law which provides that fishing nets used unlawfully are public nuisances, and as such may be summarily abated. This case has excited wide interest, and the decision has been received with satisfaction. Incidentally the Supreme Court has delivered much sound doctrine on the subject of fish and game protection. The document is worthy of careful study. The cause of protection is more firmly established than before. Indeed, the trend of the courts is in that direction. The fish and game laws are in principle so reasonable that appeals to the higher courts only demonstrate anew their strength.

#### Responsibility for Bear Traps.

The Maine Supreme Court has just rendered a decision affecting the legal responsibility of bear trappers who set their traps in wild or abandoned lands. Marshall P. Whitney set a bear trap on abandoned land at Byron, and in it caught Freeland D. Abbott's thoroughbred colt. Abbott sued and recovered \$733 damages.

#### Game Sold in Close Season.

The Supreme Court of Ohio has given a decision in the case of Roth vs. The State, the point involved being the right to sell imported game in the close season. Mr. E. N. Roth, proprietor of the St. Nicholas Hotel, in Cincinnati, having served quail to a guest after the open season had closed, was prosecuted and fined in the lower courts, and appealed the case, contending that the statute did not apply. The agreed statement of the facts was as follows:

The defendant is the proprietor of the St. Nicholas Hotel, of Cincinnati, Ohio, and a citizen of said city; on the 21st day of October, 1891, he had in his possession for the purpose of sale (not in the original package) to his guests in said hotel in the city of Cincinnati, and State of Ohio, six quails, which quails were by him purchased in the State of New York and shipped to him for the purposes aforesaid. That he did sell one of said quails (not in the original package) to —, for the sum of seventy cents, to be eaten by her as a guest in said hotel, on the 21st day of October, 1891, in the said city of Cincinnati, and State of Ohio. Said quail having been killed in the State of New York at a time when the killing and selling thereof was not prohibited by law.

Mr. Roth's counsel claimed that the law was not intended to apply to these birds which had been imported from New York; and that if it was so intended it was unconstitutional, since it sought to regulate inter-state commerce and interfered with property rights. This contention was overruled by the Circuit Court, and the Supreme Court has just affirmed the decision. This is in line with the decision in Phelps vs. Racey, in New York, Magner vs. the people, in Illinois, and numerous other precedents. We see it stated that Mr. Roth will appeal to the Supreme Court of the United States.

#### A California Deer Skin Case.

The great problem in certain districts of California is to put an end to the killing of deer for their skins. The hide-hunter or skin-butcher is the most destructive agent; if he were suppressed, in some counties there would hardly be need of any deer protection at all. California game laws are now for the most part county ordinances; and that of Humboldt county prescribes.

Every person who in the county of Humboldt shall buy, sell or offer for sale, transport or carry, or have in his possession any deer or deer skins, or any hide or pelt from which the evidence of sex has been removed, or any of the aforesaid game at a time when it is unlawful to kill the same, shall be guilty of a misdemeanor.

Two men convicted under this section came on *habeas corpus* before Judge Hunter of the Supreme Court of Humboldt county. Their counsel claimed that this provision of the law was intended to apply only to persons who had in possession deer skins at a time when it was unlawful to kill deer; and that such skins were only those from which the evidence of sex was removed. But the Court dissented from this view, and concluded its opinion in these words:

The object of the law undoubtedly was to prohibit entirely the traffic in deer skins and in that manner to prevent the killing of deer when it was unlawful to do so.

It is for the Legislature or the Board of Supervisors to say what the law shall be. With the policy of the law the courts have nothing to do. Its plain duty is to declare the law as it finds it.

I am satisfied that I have given the proper construction to the law, and the deer under the provisions of this ordinance are so hedged in that it is only possible for a person to kill male deer for three months of the year, and then only for his own use. He cannot sell the hides. He may utilize them for any purpose he wishes to during that time. For the rest of the time he cannot buy the skins or transport them or be found in their possession and he cannot be found in the possession of skins from which the evidence of sex has been removed at any time.

#### Reared Fish in Public Waters.

Fish Commissioner Richard E. Follett of Connecticut, has become involved in lawsuits in Massachusetts over netting some trout which he claims were his own fish in his own waters, but which the authorities contend could not be classed as any other than wild fish in public waters. In addition to his duties as Fish Commissioner of Connecticut, Mr. Follett is superintendent of a private fish hatchery maintained by Mr. C. W. Barnum on a farm leased for the purpose. Lee Brook, an outlet of the hatchery ponds, is a stream several miles in length, and Mr. Barnum also has under lease, but not inclosed, portions of this stream. Last year there were in one of the hatchery ponds, which was between 200 and 300 feet long by 75 to 100 feet in width, some 1,500 brown trout, which had been bought in Rhode Island. In June it was noticed that these brown trout were afflicted with fungus, that bane of fishculture establishments. After trying in vain to rid them of this by salt water baths, Superintendent Follett decided to turn them out from the pond into Lee Brook, and to take his chances of recovering them. They were set free in the stream but were fed with liver by the hatchery employees through the summer and were regarded as still belonging to the establishment. In September, when spawning time came, Superintendent Follett and one of his employees netted out some of these fish from Lee Brook, carried them back into the hatchery pond, took their spawn and finally returned the fish to the brook. For this prosecution was instituted under three counts—unlawfully taking 300 trout out of season, unlawfully taking them with a net, and having them in possession not alive. Trial was had on the second count.

Superintendent Follett set up for a defense that he had acted under license of that section of the Massachusetts fish law which provides:

SEC. 28. Fishes artificially propagated or maintained shall be the property of the person propagating or maintaining them; and a person legally engaged in their culture and maintenance may take them in his own waters at pleasure, and may have them in his possession for purposes properly connected with said culture and maintenance, and may at all times sell them for these purposes, but shall not sell them for food at seasons when their capture is prohibited by law.

He claimed that the portion of Lee Brook into which the fish had been put, inasmuch as it was leased by Mr. Barnum, was a part of the hatchery waters, and that the trout put into it and fed there came within the classification of "fishes artificially propagated or maintained." It does not appear that the leased portion of Lee Brook was cut off from the rest of the stream, so that the trout might not come and go; the only contention was that these were hatchery trout, given leave of absence from the hatchery for their health, fed by the hatchery, recaptured by hatchery employees, and taken back to the hatchery.

Assuming that the only fish recovered by Mr. Follett were brown trout, which he had put into the stream, the netting of them was in itself an act hardly coming within the category of those robberies of public waters by netters, which the statute is intended to punish. On the other hand, whatever may have been the merits of this particular case, there appears to be no question that it was a technical violation of the statute forbidding netting of trout, and we do not see how the trial could have resulted otherwise than as it did, in a conviction. For while the fish in Mr. Follett's ponds were within his control to do with them as Sec. 28 permits, the moment he turned them out into Lee Brook, a public water within the meaning of the law, he surrendered his special proprietary rights in them, and thenceforward could recapture them only with hook and line and in open season. The occupation of the defendant as a trout culturist and his purpose in taking the fish could not count for anything, in an interpretation of the statute, when as a matter of fact he was taking fish from a public stream. Whether the trout were intended for breeding purposes or for frying had no bearing on the case. They were fish in public waters, captured in a mode plainly contrary to the statute; and to the lay mind it will appear that Mr. Follett has acted upon an ingenious misconception of the principles governing the case, which is not altogether to the credit of one holding the office of State Commissioner of Fisheries.

The decision of the case, rendered by Judge Sanford, was as follows, an appeal from it having been taken:

The statutes have surrounded with many restrictions the taking of trout in this Commonwealth, and the more recent legislation upon

this subject has tended to increase rather than reduce such restrictions.

In Berkshire and its sister counties of Hampshire and Franklin the time within which trout can be legally caught is still further limited and restricted, and with justice, for among the hills of these three western counties are to be found the best trout streams in the Commonwealth.

Of the three counts alleged in the complaint, the Commonwealth has presented evidence sustaining the second count, viz., the taking of trout from the Lee Brook with a net, and claims that such taking is contrary to Section 51, Chapter 91, of the Public Statutes, which provides that whoever takes a trout with a net at any season of the year shall forfeit not less than five dollars nor more than twenty dollars for each fish so taken, as modified by the statutes of 1884 and 1890.

The defendants, conducting a trout hatchery near said brook, and controlling by lease lands for a considerable distance bordering upon said brook, claim that, under the provisions of Sections 25 and 26, Chapter 91 of the Public Statutes, which provide that a riparian proprietor may, within the limits of his own premises, inclose the water of a stream not navigable for the cultivation of useful fishes, provided he furnish a suitable passage for migratory fishes frequenting such waters, and that fishes artificially propagated or maintained shall be the property of the person propagating or maintaining them, and a person legally engaged in their culture or maintenance may take them in his own waters at pleasure, and may have them in his possession for purposes properly connected with said culture and maintenance, etc., he has a right to take trout for certain purposes, and justifies such taking under the sections named.

The defendant acknowledges the taking of a number of trout, to wit 150, from the Lee Brook, with a net, on his own premises, and claims that the said trout are a portion of a large number of trout placed by him in said brook some three months previous to the time of taking, and that he has a right to take said trout for purposes of pisciculture.

Presuming the facts stated by the defendant to be uncontroverted, and that the trout placed in the Lee Brook were defendant's property originally, and that he fed the fish in certain portions of the Lee Brook every day, it seems to the court that the law was intended to give the defendant no such latitude as is claimed by him in the right to take such trout with a net at pleasure. The ownership in trout exists only while they are in the absolute possession or control of the party who may be engaged in their culture or maintenance, and the fact that certain trout were fed each day by the defendant, as in the present case, would not be maintaining them as intended by the statute. The Lee Brook is a trout stream several miles in length, and trout placed in it without furnishing inclosures for their control are placed at the owner's risk and cannot be considered as under his control. The question as to whether trout running for the length of time testified to in a brook can be identified as tame or domestic trout is one of considerable doubt, and is one of secondary importance in this case. The court finds the defendant Follett guilty on the second count of netting 150 trout contrary to the statute and orders him to pay a fine of \$150, and finds the defendant McDonough guilty on the same count and orders him to pay a fine of \$10.

## The Sportsman Tourist.

### HOW 'RAS FOOLS THE DIVERS.

ONE pleasant morning the writer sauntered out on the Biloxi wharf to await the departure of the supply boat for Ship Island, twelve miles distant, where he hoped to bag a few snipe, as well as to enjoy the delightful trip across the sound.

This wharf is the landing and favorite lounging place of oystermen, fishermen, sailormen; in short, all sorts and conditions of men of aquatic or semi-aquatic tendencies. The reason for this preference is sufficiently obvious when it is understood that the outer end of the structure terminates in deep water, while at the shore end there is liquid of another kind—for here is found the only bar-room on the beach.

The occupants this morning were a couple of dagos, as all Italians, Sicilians, Spanish, Portuguese and Austrians are indiscriminately called hereabouts, who were dozing in the sunshine, while on the opposite side of the wharf sat a sour-visaged old negro, his throat gashed from ear to ear with a fringe of white whisker, a pair of huge silver-mounted spectacles astride his nose, and armed with about ten feet of the business end of a heavy cane fishing-pole, to which was attached an uncommonly robust-looking line bearing a large float, on which a gaze of gloomy expectancy was fixed as it bobbed gently on the surface of the water.

Seated near him, on a pile of lumber, were four young negro oystermen, one of whom was dramatically describing, to the intense interest and amusement of the others, a court trial of a colored man for larceny, which he had recently witnessed. I seated myself, quietly listening, and was astonished at the talent displayed by 'Ras, for so the speaker was addressed, in his recital. The inimitable manner in which he portrayed the pompous gravity and deliberate utterance of the judge, the eagerness of the lawyers and their squabbles over points of law and evidence, together with the sly cunning of the culprit, veiled under an affectation of simplicity, would make the fortune of any sketch artist on the stage who could master the dialect, sense of humor, and above all, the unctious of the narrator and his evident enjoyment of his own tale. Frequent bursts of laughter, ki-yahs and eager questions showed how absorbed were his listeners. I noticed, however, that the patriarch of the pole did not seem to share the general hilarity, and every now and then would wag his head contemptuously in the direction of the group and grumble something apparently not of a complimentary nature. 'Ras and another called 'Dolphus, the two talkers of the party, were evidently in his black-book, to judge from his glances and mutterings.

The conversation about the trial having flagged, I slipped a nitro shell into my gun and dropped a gull flying by—rather a longish shot. The darkies were amazed at the slight report and at the distance as well, and, as it is not etiquette in the South for them to enter, unbidden, into a conversation with a white "gemman," they followed, in this instance, their usual custom of talking at him among themselves.

"Sho," said 'Ras to his associates, "wha' kin' o' powdah's dat? No noise an' no smoke, but m'ity wicked kill-in'. Des a lill poppy noise—soun' like Unc' Joe dere scratchin' a match on deseat o' he pants."

"Den hits pooty pow'ful match Unc' Joe got," rejoined 'Dolphus, "ter fotch down dat gull so fur off." Uncle Joe cast a baleful glare at the party and kept on mumbling with added bitterness. "Did ye see dat gun, 'Ras?" asked 'Dolphus, "Dat's one o' dem 'douten no hammahs on her,"

"Dat's fac'," replied 'Ras, "haint got no hawns 'tall—des look like one dese yere mooley cows. Wot gits me 's dat lill snappy noise like w'en she shoots. Now ef I'd cut loose heah wif my ole smokestack 'tw'ud shake dis yer whawf off'n its laigs an' tum'l Unc' Joe in de brine, specs an' all, fo' bait fo' de gars. Dey done sho got pizened dough ef dey got bite o' him."

These allusions to Uncle Joe were by no means well received by that worthy. The two wags knowing his infirmity of temper had doubtless been baiting him before my arrival. Their last shot was too much for him, and with a stern look he opened on them: "Ef yo' 'Ras an' yo' 'Dolphus would wag dem oyster tongs o' your'n ha'f so fas' like yo' wag yo' jaws, yo'd a each lifted two bits wof' o' oysters by dis time o' mawn. I never see sich lazy, shif'les, no 'count niggahs. Stan'n roun' talkin' fool talk an' grinnin' like 'gaters at dere own foolishness, 'sturbun' 'spect'bl' people an' keepin' dem f'm dey wof'."

But 'Ras and 'Dolphus were absorbed in my gun, and, beyond exchanging a wink, gave little heed to the old man's scolding. It is astonishing all through the South to note the affectionate and almost reverent regard the negroes have for a modern gun. Rarely do they possess even the most primitive breechloader, and wherever I have been my gun has excited among them a most respectful admiration, part of which seems to be extended even to the owner of so wonderful a weapon. Nearly every ducky has a love for hunting, and it would be difficult to imagine anything more dangerous and grotesque than the assortment of junk-shop cripples that pass with them for guns. Old army muskets and carbines, No. 8 singlebarreled shotguns, reminding one of the old-fashioned blunderbuss, single and double discarded Creole shotguns, with barrels 36 to 40 in. long, all muzzleloaders—in short, every description of firearm that can be possibly made to shoot—most of them in the last stages of rust and general decrepitude, the barrels holding to the crazy stocks by dint of wrapping with twine, wire and even leather straps. These they load, by guess, with a handful of the cheapest black powder, usually 5 to 10 lbs., with shot in proportion, the peril of the discharge being about equally divided between the game and the shooter—to say nothing of any unfortunate bystander.

With a view of drawing out the boys, I showed them my gun, explaining its mechanism, and 'Ras, who had taken a glimpse through the barrels, broke out, astounded: "Golly, Dolph, take er squint froo dat bar'l; 'nuff to put yo' eye out; she shine like one dese yer tellus-copes. Ef ye look froo my gun ye tink yo' lookin' up er chimney." "Da's so," assented the other, "an' yo' bar'l's mos' twice's long as dis, even 'lowin' fo' de piece off'n de muzzle; look like some ole hoss cum along an' chawed off de end."

"Well," said 'Ras confidentially, with a side glance at the old fisherman, "I done spec de way de end o' dat bar'l got frazzled off was dat Unc' Joe happen along some time an' done took a bite off'n de muzzle wif dat one toof o' his'n."

The laughter which followed this personal allusion was too much for Uncle Joe, and he retorted savagely: "I done tell yo' two low down niggahs youse common as hawg tracks; you bin spoilt in de cradle; yu' parents aint done dere dooty by ye; you aint had no bringin' up, yo' aint. Ole brack snake 's de only med'cin' fo' yo' sort. Ef yo' 'b long ten me I'd des naterally w'r ye out, I wud, if I hatter cut ye inter shoestrin's fust."

"Wow," said 'Ras, "ef ole Unc' Joe make sech bitin' remarks wif on'y one toof, w'at he do ef he got whole set?"

"I tell you w'at, 'Ras Kent," said the old man, now thoroughly aroused, "You aint gwine ter lose none o' yo' teef f'm ole age—gum tree or tellumgraf pole do yo' biznis sho', fo' you git much oldah. You git 'vited to er dance some dese days wha' yo' aint got no lady padnah, but dey give yo' a necktie fo' dat party, an' m'ity snug fit, too; dat's wha' 'tis. Dah's wha' you'll en—dancin' on nuffin', an' sarve ye right, too," he added vindictively, "ye mis'ble swamp niggah."

The boys were delighted with the burst of ire on the part of the old man and would have continued to pester him, but I called 'Ras's attention to a couple of divers just out of gun shot from the wharf, and asked him if they were good to eat.

"Yas'r, Yas'r, fines' kin' o' eatin' if ye know how to cook 'em. But dey's mitey hard to shoot, dey is. Dey's mitey cute an' quick, an' dey know heap 'bout er gun, an' dey des dive at de flash, dey aint waitin' fer no shot to git dar. But," he went on, "I cud tell ye how to git 'em, sah, on'y I aint got no see-gyah to show you wif—got to have see-gyah, or pipe, or sump'n to gi' ye de propah idee."

The cigar was produced, and while 'Ras was lighting up the old man delivered himself in a stage aside, in tones of deepest disgust: "J'ebber heah de likes o' dat impercence. He mout des' well ax de gemman right out fer a see-gah—dahs wer' he shows his bringin' up. He aint got no man'ehs mor'n one o' dese yer ole he billy-goats, he aint. Dat's de kin' o' t'ing make me feel like I lib too long."

'Ras, never heeding him, commenced: "You des light up yo' see-gyah like dis, sah, an' paddle yo' skiff clost up to de divah. He aint gwine ter fly cos he knows ye git him den, dead sho'. No sah, no t'ynin' fo' him. W'en ye git clost up he des dive, an' byme-by he come an' cock he eye roun' at ye, den sah, ye des go so at im: *Pouf!* [here he emitted a prodigious volume of smoke] an' *Blip!* down go Mr. Divah! He tink dat pouf smoke he seen, de smoke f'm er gun. Byme-by up he pop agin, an' you go like dis agin: *Pouf!* [another cloud] an' *Blap!* down he go agin. Now sah, git yo' gun ready. De trid time he come up, yo' go *Pouf* agin, like dis, wif de see-gyah smoke, but ole Mr. Divah, he bin fooled twif an' he des set still an' waggle he tail an' laff. Den you up an' tu'n loose wif dat snappy powdah o' yo'n an' Mr. Divah he des tu'n up he toes to de sky. Yah, yah, dat fetch em eberty time. An'," he added with a side grin, "eny time sah you shoot mo' divah like y' wan' ter eat, Unc' Joe heah be mitey glad ter git a nice fat young un ter put dat toof in—cos Unc' Joe he ver' nice ole gemman—onot ye git ter unstan' in. He r'ar good deal, an' talk pooty wicked—but bress de Lawd, he doan' mean noffin' by dat—dat's des his way. He mitey fon' o' me too, Unc' Joe is. He do anything fo' me, lub me better'n one his own chill'n, he do. But heah cum de cap'n o' de boat, sah, an' dey'll start off in er munit. I'll tote yo' traps aboa'd sah," and taking my gun and shooting coat, the dusky humorist led the way to the boat, followed by an unspeakable glance from the old black fisherman.

### HODGE PODGE.

As the snake question seems to be having another inning, and several of your worthy contributors have been "to the bat" as it were, I'd like to "strike out" in one way or another, in this and other fields suggested by articles in the last number of FOREST AND STREAM, and would remark in the first place thirty-fourthly that I support, in the main, "Coahoma's" position. I don't know why he should be wholly incredulous, though, as to the "Garden of Eden myth," as he calls it, for part of it is true, as he must confess, viz.: "On thy belly shalt thou go," etc., but as to the latter part of the curse, "and dust shalt thou eat all the days of thy life," I am a little shaky myself, though we don't know positively that the snake addressed didn't die of want of nourishment. I don't pretend to be thoroughly grounded in the faith that the curse was intended as to diet, to extend to all future generations of snakes; that is, considering dust as we know it to-day. It would be a mighty unsatisfactory and unsatisfying as well as monotonous course of diet, and I don't believe we should have snakes to worry about and scare the life out of women now, if snakes had been thus limited. But maybe, some brother will say, that the dust business was figurative. Well, I believe it was myself; it has to be; but if that part was figurative, what about—Oh! Well, say we drop it. Deep water. I might say, though, in wading out, that I'm aware that there are more than one kinds of dust, and that we all, snakes and people, eat dust in one form or another. I don't believe in killing snakes indiscriminately. If a snake attacks me I kill it in self-defense, not otherwise, unless it is a rattler or moccasin. I sometimes think that it was the cobra that was cursed. He was down that way.

I don't know what right I have to kill a snake that is harmless to me or any one else any more than I have to kill a young robin. But "Hermie" says he is troubled in his mind because snakes eat birds. Did he ever see a robin in spring or some other time cock his head on one side and suddenly pounce down with his cruel beak on a poor innocent worm that was browsing around under cover of the grass after something to eat, and brace back on his hindlegs and pull and jerk and kick until he had the defenseless writhing worm before him, and then gobble it down, or perchance, after jabbing it with his beak until it was limp and lifeless, leave it and hop off after another, because forsooth it wasn't in good condition?

Which has done most good in this world, robins or worms?

There are lots of people in this world crueler and more venomous than snakes. Mr. Beal says, "Against the vice which the snakes catch and eat must be set the birds' eggs, etc." as if it were a virtuous and highly praiseworthy act in the snake to kill mice. What harm do field mice do? Of course, when mice play games in the partition about 2 A. M., why, that's another thing; but that's *Mus domesticus*. *Rusticus* isn't guilty, and he's the one the snake affects. I always had a liking for mice. They are such cute little beasties, and since the "Singing Mouse" of Mr. Hough has set poetry to music in the wonderfully sweet and tender melody of "Lake Belle Marie," I shall always have a tender spot beneath my jacket for mouse. It's many a long day since anything in that vein has so played on my sensibilities. No mauling, prowling, sleep-dispelling house mouse ever sung like that. No, it was the field mouse who lives among the soothing, kindly influences of nature, who hears the morning stars sing together, and the evening breeze in dying cadences, as it lulls the fields to sleep, while the silver sickle hangs in the darkening vault, who sniffs the fresh fragrance of the morning, sees the liquid diamonds as they tremble on leaf and flower, listens to the thrilling carol of birds and the dashing music or gentle lullaby of the stream.

Yes, it was a lovely song. The "Singing Mouse" may sing and sing, but it will hardly waken our emotions in another as deliciously tender song as that. I thank Mr. Hough for it. He has afforded us much pleasure, for he always writes well, but in my estimation he has done nothing else quite so good as that.

But to return to snakes. Some years ago, in writing of my experiences in Florida for FOREST AND STREAM, I told of finding a moccasin near the banks of the St. John in much the same position as that of Mr. Kephart. It was about two feet from the bottom of a smooth-barked hickory tree eight or ten inches in diameter, head downward, position a little out of vertical, not much. The snake lay perfectly straight, motionless, and I stood a few feet away and watched it some time, when on being touched with a stick it slid down the tree slowly and crawled away. The tree was almost perpendicular, not enough lean to it as apparently to afford any support for the snake. I thought it quite remarkable and so remarked about it, but there was no comment on it, probably because your readers thought it a snake story or because times were not ripe for consideration of such subjects. For one, I am in condition, you see, to believe Mr. K's story. I think we all should feel very much obliged to Capt. Gallup for explaining how certain snakes can totally ignore the laws of gravity and climb a tree both ways quite the same as legged creatures. But this thing shouldn't have been hidden in a corner since 1832, or anyway since FOREST AND STREAM was born. People should tell what they know right away when they know it, especially about snakes. Those automatic dogs, or clutches, are great, but I couldn't help thinking that s'posin' they should accidentally get set when a snake was pulling out for home under great stress, why he'd go right out of his skin. Maybe after all that's what these clutches are for principally, and so the manner in which a snake sheds its skin is solved.

It is common now, as it always has been, to discredit experiences which are not one's own. This is wrong. Because I, a thousand miles away, didn't witness that Kekoskee bullhead eruption, or because you at a like distance didn't see the man kill a puma with a club, proves nothing. Truth is stranger than anything a man can invent. Happenings are bobbing up every day that never bobbed before. Time wasn't ripe, that's all.

My friend Judge Greene, who writes so entertainingly and seductively about Green Lake and the Molalla, said recently that a friend of his had lost all the brightness and gayety out of him, had in fact become a pessimist of the most pessim type, and held an undying grudge against the man who killed the puma because he (the Judge)

L. J. M.

jokingly remarked that the killer could draw the long bow very effectively. Supposing he could. We can all do a good many things we won't.

The Judge asked his friend if cougars went paddling round in the water like muskrats. Why, nobody expects they do regularly. That one didn't but once. The serpent didn't tempt Eve but once. Romulus and Remus were the only boys who ever suckled a wolf so far as we know. And then the Judge wanted to know if it wasn't a little strange that the man should find a nicely-fashioned handspike, etc., etc. As I remember the story it wasn't a nice affair at all, just a plain every day old battered spike providentially washed up with the drift. And to further weaken the man's trust, the Judge asked him what he thought about the papa cougar wading in and taking his baby out of the wet. Any cougar who would see his own offspring drown when he could save it ought to be killed with a more ignominious weapon than a handspike. I'm mighty sorry about all this, for I think we should each try to inspire confidence in our fellow man.

But speaking of the Judge, what a cinch he and Mr. Mead have on the Green Lake canvasback business, haven't they? When I read of that camp and surroundings, and the sport they have, I get so worked up I have to take two or three tours around the block to cool off. That boat, and ferry, and Mike, and cabin, and coziness and comfort, and old barn with the hay in it, and ducks galore, and good fellowship are just "gorjus." We can't all enjoy the good things, but if the Judge will tell us all about it we'll get along the best we can.

Speaking of spelling reminds me of a word Mr. Hough used and no doubt spelled correctly in his last letter. He mentioned the Aransas Pass R.R., and the "intelligent" compositor, who knew more and better geography than Mr. Hough, set it up Arkansas Pass. Once or twice elsewhere lately I have seen the same mistake made, and I want it stopped right here. It won't probably make any difference in the amount of lead the ducks take in for ballast down that way, but the spell must be broke.

I verily believe that Mr. McCarthy has struck bed rock in the matter of fighting qualities of the ouan, or oue, or oui—why no, I had it right the first time, ouaniche. While correspondents have been somewhat at loggerheads about the matter, they have entirely overlooked the fact that an athlete can knock out a dude, that a fish trained amid the dashing foam of a rock-strewn stream will out-fight a pampered brother that eats and dawdles his life away in the deep waters of a lake. Stands to reason. He has to rustle.

I meant to have told you how much I enjoyed that sketch. "How the Sleepers Got Egg Nogg," in your Feb. 10. It was just a daisy. The man who wrote it lives down South, "I reckon." There is only now and then a writer who can hit off the darky dialect pat, and the writers are seldom who can tell a story so well.

Finally, I am with you on the "Platform Plank."

O. O. S.

## NORTH CAROLINA MOUNTAINS.

Editor Forest and Stream:

I wonder if all of our brethren of the rod and reel experience the same feeling that comes over me on any bright, warm day after Jan. 1, when, it does not matter how engaged my time may be, little transient visions of "likely" places on some romantic trout stream will flash before my vision. For years it has been thus with me, and my good wife, who does not take much stock in my pilgrimages to "The Land of the Sky," has learned the signs of the fever so thoroughly that I am forced into many a hearty laugh when deeply buried in my thoughts, by her laconic remark, "Fishing again!"

Of course the FOREST AND STREAM in its weekly visits has much to do with aggravating the fever, and has much to answer for to long-suffering wives who do not think as does your correspondent Mrs. Tomlin. How I wish they all did; then a fellow would not have to look so foolish when he saw that strange little doubting twitch in the corner of his wife's mouth when he is trying to entertain her with some of his grand exploits among the trout. "Seeing" alone "is believing," has, unfortunately, come to stay, as connected with the statements of an angler.

Through the columns of the FOREST AND STREAM we are constantly being invited to join (second hand) the joys of life round the well-equipped camp in the West and North, and to assist in the capture of some monster of a landlocked salmon, ouaniche or great lake trout, and I regret to say that that is as near as we in the South ever get to the reality, for nature in her throes, long ages ago, broke down the rock barriers that formed the "predamite" lakes of the Blue Ridge and has left in their places smiling valleys or "coves," as they are locally termed. As far as I have been able to find out in my wide wanderings in the mountain region of western North Carolina, not a single lake exists.

No well appointed club house, with cook and steward, awaits the weary angler after a hard day's fishing, but all the same we have our good times as well as our more favored brethren round the Northern lakes; and this is about the way we have it. In the first place we have several hundreds of square miles of mountain land forty to fifty miles "away from the madding crowd" that haunts the track of the iron horse, and through these mountains rush and dash and dance dozens of noble streams, chuck full of as fine mountain trout as any pot-hunter or angler might desire. The very absence of the luxurious club houses betokens the total absence of any clubs, with their restrictions and surly keepers to warn you off of a tempting piece of fishing. Too far from the railroad to tempt for market-fishing, the native kills what he can eat, consequently the supply for the angler is never impaired. The proverbial kindness and hospitality of a rather poor people furnishes you with a rough, but hearty, welcome.

The short courses of the torrents from their sources, 4,000ft. above sea level, to the sluggish rivers in the lowlands naturally have developed strength and rare fighting powers in the denizens of the waters, and though I have killed trout in many parts of the world I have yet to find any that can excel those of the "Old North State" in gamy properties. But we are not entirely debarred from the pleasure of the capture of nobler game fish, for through the enterprise of your occasional correspondent Mr. Henry Stewart the stream which takes its rise on his property and rushes madly down some 2,000ft. in a short ten miles has become literally alive with thousands of rainbow trout. Well, I never caught an ouaniche, but if there is anything to beat, for his size, a 2½-pound

rainbow trout fighting for dear life at the end of 50ft. of line, while you grasp the butt of a 6oz. fly-rod and steer him clear of the sharp volcanic rocks that seem to reach out for your line, why I would like to tackle it. It is a fight to a finish with them, and they are finished by the time you have them in your creel, and from the aching of your right arm you fell that you are about finished too.

To enjoy all this you have to put your "tenderfeet" in your pocket and fraternize with the hardy mountaineer and go camping. And we do camp sometimes, but not in the approved style of some of your correspondents, with living tent and cook tent, with cooks and guides and half a carload of "duffle." I believe there is one tent in these mountains that an enterprising livery stable man bought from a party of dudes who had been chased out of it near Highlands by a shower of rain. But we go it in the original way, by selecting a nice dry fissure in the face of cliff, called by courtesy a cave, and with plenty of hemlock twigs for bedding, and an endless supply of dry driftwood washed high and dry by the winter floods for fuel, we fish, eat, smoke and sleep, with nothing to worry us greater than the anxiety of returning in good order the coffee-pot and fry-pan we have borrowed from some kindly neighbors. What glorious times these are! The mild climate of our Southland makes it a matter of indifference if the fire does go out at night, and if the eddying smoke from the camp-fire, as it curls around the corners of our rock house, does make you start from a sweet sleep with your lungs pretty well smoke dried, you are more than recompensed by the first breath of pure mountain air laden with the perfume of the white azalia, that greets you at the entrance.

But with all this, there is one great drawback for the true sportsman. There are too few anglers who go into these fastnesses to enjoy your triumphs and condole with you for the loss of that monster. Very few have found their way in, and while an occasional party can be scraped together to enjoy with you the luxuries of our "rock house" and smoke, yet often your fishing is severely by yourself, and it becomes uninteresting to relate your exploits to a native who coincides with all you say, and is supremely oblivious when you throw down the gauntlet for an argument. "It's an ill wind that blows nobody good," so I am in hopes that the "hard times" that everyone feels, more or less, may tempt some of my brethren into this "angler's paradise," as it costs you about as much per week there as you have been in the habit of paying for one day's boats and guides. There's lots of room and lots of trout, so come on, and be able, when you return home, to say that there is something good in the South.

B.

## CAPTAIN, COLONEL AND MAJOR.

### The Captain's Story.

"It has always seemed strange to me that history has not done justice to the shot tower of the Confederate Army. I built it. Without shot towers, bacon ruled supreme. With shot towers, it abdicated in favor of the Virginia partridge. Before the war my uncle brought me from London a very fine shotgun made by Purdy and costing forty guineas. I carried it into the struggle, but the Confederacy soon got out of bird shot and if I had not constructed my shot tower it would have become useless long before it escaped from Richmond. But one day I procured a piece of 2in. plank, 4in. wide and 2ft. long, and whittled one end of it down to a handle and bored a 2in. hole in the other end. Then with a saw I cut a slit lengthwise of the board, and through the hole. In this saw kerf a piece of cardboard was placed after having been perforated with numerous holes of a size suitable for bird shot. Between the handle and the improvised ladle at the other end a series of transverse notches were made. The shot tower was complete. One Confederate would hold the shot tower over a pan of water while another poured melted lead into the hole and upon the perforated cardboard, while I, with a short stick, would scrape up and down the notches causing the melted lead to "jump" on the cardboard and leak through into the water in the form of shot. Selah!"

### The Colonel's Story.

"If horses had the gift of human speech, I am sure that a thrilling history of the war could be told from the equine standpoint. They had much to do with every part of the conflict. In one of the most exciting incidents of my part of it, they had it all to do.

"We were at B, on a scouting expedition and, although we expected an attack, it was so fierce and furious when it came that almost the whole attachment was captured without a struggle. Before we knew the Yanks were upon us, they came galloping into town from all directions. Our men in charge of the horses turned them loose and stampeded them, and down the street they came in a panic-stricken rush that nothing could have stopped. A moment before I had jumped on my own horse in front of headquarters thinking to do a little stampeding myself down that very street, but had given it up on seeing a squad of bluecoats approach. I knew they would never stop those horses, though, and the instant they passed me I dug in my spurs and took their dust and followed. I was well past the Yanks before they discovered that there was a 'Johnny Reb' on the side of one of the horses and opened fire. They missed me but hit old Joe, although he kept bravely on. Ahead of us was a bayon which the flying herd skirted, but which Joe and I plunged into as our only refuge. We were nearly over when he began to falter, and as our pursuers were clattering down the road behind us, I slipped off my side arms and slid off into the water and struck out for shore, and was just able to scramble up the bank and throw myself flat in the bushes and swamp grass before the Yanks came in sight. Poor Joe made an heroic effort to follow me and succeeded in getting his fore feet on the bank, where he hung for a moment with his noble face so close to me that we looked into each other's souls. After a moment, he sank back into the water."

### The Major's Story.

"Yes, it's the Grand Passion. The powder burning passion. We burn it in firecrackers and toy cannons long before we are able to carry a gun, and when we can no longer burn it in a gun we lie down and die.

"One afternoon, in our firecracker period, Jim and I borrowed father's powder horn and went down to the 'quarters' to our 'nigger mammy's' cabin and climbed up on the roof where we could reach the top of the mud

chimney and overhear what was going on inside. Aunt Liza's husband was on his knees, evidently, at the fire-side, for we could hear him praying. From the other side of the fireplace Aunt Liza offered up another kind of incense. We could distinctly smell sausage cooking, and, in the pauses of his prayer, we could hear old Uncle Isaac's supper sputtering in the pan. He was a very religious man, and we were not at all surprised to find him at the Throne of Grace. It was a very fervent supplication, and between our ears and our noses we concluded that he must have been making a raid on the smoke house.

"Directly he got through with his own sins, and in a feeling of general amnesty he prayed:

"'Oh Lawd, bress de white folks.'" And just then we slightly tipped the powder horn. There was a quick fizzle in the fire and Uncle Isaac stopped short.

"'Wha' dat? Wha' mek dat spit en de fire?'"

"'Wha what? Yo brack nigger; dat's jes de way de fire allas spit when hit gwinter snow.'"

"As soon as he settled down to the white folks again we gave the horn another tilt.

"'Dar 'tis again, Aunt Lize, don't twell me dat's case hit's gwinter snow; dem's sperrits.'"

"'G'way! Yo superstitiouser old nigger yo! Yo so deep in yo sins yo wa'r out dat ha'thstone on yo knees wif one eye on yo Maker and de yether eye tu'n roun' to feah some one grab yo. I twell yo hit gwinter snow, w'en de fire spit dat away.'"

"And somehow the old horn got away from us and went down the chimney, and the next it seemed as though the whole cabin shot past us. We slid down and out for the house and got behind the kitchen just as the two worst scared darkies I ever saw met my father at the door.

"'What's all this running about?' he demanded as they hurled themselves upon him.

"'Oh, Marse John, de devil's down en de quarters.'"

"'Nonsense.'"

"'Fo de Lawd, I'se fryin' sasses, an Unc' Isaac he offerin' up he evenin' pra'r 'n de debil jump down de chimbley en grab de sasses en hit me over de head wif de pan 'n hook Unc' Isaac en de side wif he ho'n en bruk hit off en he side, en *hjar de ho'n*.'" GEORGE KENNEDY.

## WOMAN IN THE WILDS.

Editor Forest and Stream:

Let me second the advice given by "Podgers" in his recent article relative to ladies enjoying out of door sports. When the summer sun is high in the zenith and its rays fall almost perpendicularly upon our heads, a man will exclaim, "Oh, this unbearable heat," and forthwith pack a grip and hie himself away to the cooling mountain breezes. Now, "Why should not the wife go also?"

Women need little urging to take to horseback riding, shooting, fishing, rowing and camp life; and what is better or more exhilarating, or will send the blood coursing faster, or sooner bring roses to pale cheeks and luster to tired eyes than a good canter, the excitement of a shot at game, a row on the placid waters of a lake, or tempting the wary trout with a bogus fly?

I speak from experience. I have known the heat of the city, the burning pavements and the sultry air, and until I began an out-door life thought them uncomfortable necessities; but now to pen me up in the city during the hot summer months would be like confining the wild bird of the forest in a gilded cage.

I go with my husband everywhere. No bush is too thick, no stream too deep, no forest too dark, no hill is so high that I cannot follow him, and the best part is that he enjoys having me go with him. With the gun, porcupines are my pet game. After work is done in the morning and the others have all gone their respective ways, I shoulder my little .25-20 Maynard, and start out, and fine fun it is to bring a porcupine tumbling down from the tree he is destroying (by peeling off the bark). Sometimes I vary the sport in favor of camp meat—mountain grouse, sage grouse or antelope. Fly-fishing and boating are more pet pleasures, but I do like the gun and hope soon to try my hand with my rifle on big game. A hammock swung to the breeze enhances the enjoyment at camp, while the occasional shower only serves to brighten nature and make her more pleasing. Then the glorious sunrises, the golden sunsets, and the pale silvery rays of Luna as she slowly appears from behind a snow-capped mountain would make every fiber of a nature-loving person's being quicken with a new sense of appreciation of all that is grand and good.

Yes, ladies, take "Podgers's" advice, and for a Christmas present accept the rod and gun, and when your husband's grip is packed for the next summer's outing just remark quietly, "What time did you say our train left, dear? I will be ready at any hour you mention," and be ready, and he will take you gladly. Then enjoy yourself. Don't mind torn dresses, worn out boots, and scratched and sunburnt hands and face; take such things as they come, and you will find health and new pleasures, pleasures which cannot become blasé, and then you free yourself from the duties of society for a while, and drink in the life-giving oxygen which nature provides so bountifully but which would be denied you in your city home.

Mrs. D

## What the Kingfishers Would Have Done.

CINCINNATI, O., March 15.—Editor Forest and Stream: After reading Chapter XXIV. of the incomparable character sketches and home life of the "Danvis Folks" I was moved to exclaim, "Poor Sam Lovel," and in the same breath to anathematize that smooth, oily tongued rascal Bascom. I think brother Robinson made a mistake in letting him get away without giving Sam a chance to take a flying shot at him with the old "ore bed." Even now (only it is too late) it would afford me—and a few hundreds of other readers as I am convinced—a "power o' comfort" if brother Robinson could put old Drive and Sam on the trail, run him to earth, smoke him out and bring back his hide as a trophy of the best hunt of his life, this "figgeratively speakin'" and for a satisfactory round-up to the whole story. KINGFISHER.

## A NEW-SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$3).

## Natural History.

### TREE-CLIMBING SNAKES.

A Call for the Previous Question.

Editor Forest and Stream:

Even after my last statement, the vials of wrath continue flowing until one would suppose, by implication, that I had been running around through the woods killing everything I saw, out of sheer wantonness. Very well, gentlemen, have it so. If it will do the woods-folk any good, or inculcate a truer sportsmanship, to make me pose as an awful example of what I never was, and always did detest, why just crack away.

I killed a snake; not because he was a snake, nor because I was afraid of him, nor because he might be after birds, nor in the interest of science, nor to try my pistol, nor yet out of mere deviltry. I killed him because he had invaded the precincts sacred to women and children, and had frightened a peaceable housewife so that she seized her basket and ran to the station crying: "To think that I was passing back and forth under that horrid thing all day! I will never come near the woods again in all my life."

The woman was from a great city, where the air is poisoned with sulphur and befouled with soot. Her holidays, I judged, were few. She had an instinctive and unconquerable repugnance to the reptile, and a fear of it which was not altogether fanciful. One glance at the powerful muscles of a 5 ft. blacksnake, one thought of toddling children who knew no better than to play with it—that was enough for her.

Now which had a better right on the premises, the woman or the snake?

You say that it was all ignorant prejudice on her part. Very well; but was she to blame for it? Read your Bible.

But that Garden of Eden story is all a myth? Certainly; and shows how the instinctive loathing of serpent forms has always been part and parcel of our human nature, not a proof of malignity or idiocy in some one individual.

Why didn't I teach her better? Well, I have been several kinds of a fool in my day, but I haven't sent missionaries to uninhabited islands, and am not thinking of doing so at present. You can teach men to respect snakes—that is to stay, some men, a very select few. But woman? Well, there is Miss Hoply; I mention her in profound respect; she is one in just about five hundred million woman, so far as the snake question is concerned; and I don't feel called upon to preach at the rest of them for the sake of a thing that I have no special fondness for myself. I would rather speed my energies on something that gives some promise of tangible result.

If that misguided snake had been sunning himself on the bluff that backs the picnic grounds, a mere matter of 50 yds. away, or anywhere else in the woods where I had been giving the household-defender its annual targeting, he would be alive to-day for all of me. But he came where he was not wanted, frightened a good old lady half out of her shoes, and I killed him. Consequently I am a brute and a barbarian. All right; I will not quarrel over a definition.

And now let us see if we can't get back to the point from which this discussion started. My only object in writing was to report a fact about blacksnakes, which I had not seen previously mentioned, namely, that they sometimes descend a nearly vertical and comparatively smooth surface in a straight line. I made no comment on their ability to climb trees, taking it for granted that everybody knew as much. Perhaps everybody knows, too, that they can execute the seemingly contradictory feat that I witnessed at Crève-Cœur; but if so, then everybody has a provoking way of keeping such knowledge quiet.

Before writing my letter of June 27 I had examined such works on herpetology and animal locomotion as our library affords, but found no mention of snakes ascending or descending trees in a straight line. I ordered Miss Hoply's treatise, but it has not yet arrived from London. Most authorities are content to simply say that the *Columbidae* are nimble climbers. DeKay says of the blacksnake: "It climbs trees with great ease, by coiling itself round the trunk in a spiral manner, in search of eggs and young birds" (Nat. Hist. of N. Y., Zool. iii., 36). This statement about coiling round the trunk is repeated by others, but my research ended in finding nothing about vertical ascent or descent, and so I wrote to FOREST AND STREAM for information.

Meanwhile I have been hunting diligently through our sets of periodicals for some light on the subject, and at last have found an article bearing directly upon the matter, and from which I take the liberty of quoting.

In Science for Dec. 16, 1892 (vol. xx., pp. 338-9), there is a most interesting report by Waldo Dennis of "Watching a Snake for an Hour," in which he says: "One bright morning in July I was walking in the woods when a snake crossed my path only a few feet in front of me. It was about two feet long and its dark blotches made it resemble a water snake. It had not been disturbed by my presence, as it moved very slowly, and this slow movement led me to watch it.

"It scarcely crossed the path before it began to ascend a medium-sized dogwood tree (*Cornus florida*). This to me was a coveted opportunity. The story of an eye witness as to how a blacksnake had climbed the naked corner of a house to a height of ten feet had left me curious to see something of the kind myself.

"The dogwood tree, near the ground, was about seven inches in diameter, and was a rather smooth-barked one. The tree leaned but slightly for about ten feet of its height, but then it curved sharply to a horizontal, making the highest part of the body about fifteen feet from the ground. The snake started up on the under side of the slant, and apparently found no more trouble going up the tree than it had in going over the ground. It made no effort to wind itself around the tree nor to hug the tree by winding back and forth, as the blacksnake had been reported to do on the corner of the house. It went straight up without crook or turn." \* \* \*

The entire article is very instructive reading, but I can only quote a little here and there.

"When such a protuberance as a knot came in its way, it seemed to care very little for its advantage, and left it to one side. After getting up four or five feet it stopped;

being anxious that it should go on up, and fearing it would come down, I touched it with a stick, whereupon it moved faster, gliding quickly out of my reach, showing thus that it had been going so slowly from choice and not from any difficulty in going faster. \* \* \* It occurred to me to wonder how it would manage its descent, so I left off experimenting in this line and retired to watch. \* \* \*

"After a sun bath of nearly half an hour, the snake began slowly to descend. His course was as straight coming down as it had been going up; but, now being on the top of the trunk, he naturally kept to the outside of the bend. His progress was interrupted with frequent pauses, and at times it was so slow that I could scarcely detect any movement."

This tallies closely with the conduct of my blacksnake, which, after it was shot, descended in a perfectly straight line, very slowly, as though the tree trunk were smeared with molasses and the stiffened snake was passive, letting gravity pull him down, while the sticky fluid sufficed to let him down easily. The following paragraph from Mr. Dennis's article is worthy of notice in this connection, but I draw no inferences at present:

"Not finding his game in this instance, however, his highness stiffened himself and withdrew. But, as if loath to give up the treat he had promised himself, he lingered quite a while at the spot and busied himself in a way which probably accounted for his moving so slowly before, but which from my distance had been unnoticed. He seemed to be using his tongue as a tactile organ on the bark, playing it back and forth from his mouth like a little brush, running it way out, or dropping it down close to his chin, according to the nearness of the piece of bark under inspection. It finally turned up the tree again, carefully sampling the bark as it went. It seemed in quest of something, but what could it find with its tongue? when so evidently, to the eye, there was nothing for a snake to eat. After going for a little ways, he again turned down. But all the way, from here down, it kept up that use of its tongue on the bark."

I observed a similar action of the tongue on the part of my snake, but supposed that it was because he was wounded, and so made no comment.

I am very much obliged to Capt. Gallup for his interesting answer to my query, and would like to hear more about those needle-like spines or "claws." How long are they? Are they stiff like a needle, or flexible like a hair? Are you sure, Captain, that they do not slough off after the snake has cast its skin?

After reading "Coahoma's" valiant defense of snakes in general, I felt more kindly toward a class which I had always been told were the foes of birds, and toward which I had cherished some resentment accordingly. But Mr. Beal, "Hermit," and Capt. Gallup give us pretty strong evidence that the blacksnake is a bandit who deserves no quarter. I love birds; I wish justice to snakes; but between birds and snakes, if a choice must be made, there is no question whatever from my point of view.

In conclusion, Mr. Editor, let me reiterate once for all that I wish harm to no creature. I may be mistaken in estimating the relative value of species, but the humblest reptile is an object of curious interest to me, even if I cannot love it, and I kill nothing without what seems good reason. At the same time I have no use for a hysterical sentimentalism, which, carried to its logical conclusion, would destroy gun and rod, and make vegetarians of us all.

HORACE KEPHART.

St. Louis, March 10.

Editor Forest and Stream:

I have taken much pleasure in reading the snake articles that have appeared in FOREST AND STREAM lately, and before the controversy ends would like to add my mite.

I have always believed the blacksnake to be one of the greatest foes that the nesting birds in this part of the country have to contend with; not from what I have read, but from what I have seen with my own eyes. "Kelpie" says he believes snakes have the power to charm birds and other small animals, but I doubt it, for I have lived for twenty-five years where snakes are common, and although I have always been on the lookout for such an occurrence, it has never been my good fortune to verify this general belief.

Four years ago I came upon two catbirds that were much excited about something, and on examination I found a blacksnake coiled around a limb of a small tree, not far from the nest of the birds. The two catbirds would flutter almost into the face of the snake, and then with a quick dart strike his body with a vicious peck. The snake was immovable most of the time, but once in a while struck at the birds, who were always too quick for him. In fifteen minutes the birds were exhausted and rested on a branch three feet or so away. Finally the snake decided he had other business to attend to, and started to glide down his branch, but in an instant the two plucky birds were at him again. The snake was evidently afraid to retreat while the battle was on, for he at once became quiet and stood fifteen minutes more buffeting, when suddenly he wildly untwisted himself and dropped to the ground. Before he had crawled ten feet I killed him with a stick, and found that his body was literally covered with tiny marks made by the beaks of the birds. If I had followed the impulse to dispatch him at once I would probably have been a believer in snake charming, for those birds were fluttering right into his face just as I have always read they did. It is possible this particular snake was cross-eyed, or had some other ocular defect which interfered with his charming powers, but at any rate he was the worst licked snake I ever saw. And the catbirds, oh! didn't they have a rejoicing around the nest of young birds that they had so bravely fought for.

Last summer I found two song sparrows and one Wilson thrush nest in a hedge. I saw these nests when they were under construction, when they contained eggs and after the eggs were hatched. One day the nests of the song sparrows were empty, which I wondered at, for the birds were only four or five days old. Later in the day I heard the two old thrushes making a tremendous fuss, and on walking carefully toward them I found a large blacksnake in the act of swallowing the last of that little family. I have no doubt that he was the rascal who destroyed the homes of the song sparrows, too, and in my wrath I tried to end his career, but a friendly hole was his salvation.

A few days later I was attracted by a large gathering of

birds around a bush that I knew contained a nest of young catbirds. On looking I found this nest was not empty, for a blacksnake had coiled as much of his ugly body in it as possible, and was evidently wondering what the poor parent birds were making such a fuss about.

I have witnessed many other sights of the kind, and a blacksnake was always the thief, so can you wonder that I consider him my enemy and try to kill him? Mr. F. E. L. Beale spoke words of wisdom when he said he did not believe the snakes in this country occupy a position of great importance from either an economic or aesthetic point of view. I for one am open to conviction, and if FOREST AND STREAM can convince me that the blacksnake has other good qualities that overbalance his bird-killing proclivities, he shall always be spared by me.

The bird arrivals in this neighborhood so far this season are: March 3, bluebirds; March 8, robins and starlings (male only); March 13, pewees. PERCIVAL CHRYSTIE.

Hier Bridge, N. J., March 16.

### An Albino Weasel.

TOLEDO, O., March 12.—Editor Forest and Stream: My hired man killed a weasel the other day which was entirely white, with the exception of about one-half inch at the end of the tail, which was black. It is the first weasel of the kind I ever saw and would ask if white weasels are common. This weasel was domiciled under a rotten log, and his lair contained partially devoured portions of two quail, two chipmunks and some small animal with a gray skin, probably a field rat. AUTOKEE.

### An Albino Hawk.

ANNISTON, Ala.—I see in your columns occasionally a reference to albinos. We have in Anniston a hawk which, while not an albino altogether, is white. It is of perfect shape but its eyes are black. It has very few feathers but what are pure white—some three or four in its wings and tail. It was caught near this place in a trap. P. F. A.

## Game Bag and Gun.

### IN DIXIE LAND.—III.

[From a Staff Correspondent.]

#### The Plot Thickens.

WHEN I first determined upon my trip into Dixie Land, there were a number of my friends who expressed the wish and determination to go with me. As usual, this number grew less as the time for departure grew near, and when it came to actually getting on the train, I found that I was quite alone, with a journey of a few thousand miles, more or less, to be taken in that condition. It had happened, however, that my friend, Dick Merrill, of Milwaukee, had talked over the prospects of the trip with me while he was over in Chicago taking in a few more prizes in the dog show with his well-known setter Paul Bo. He persuaded Dick that Paul's health would be benefited by a winter journey South, and we both concluded offensive and defensive alliance for the purpose of having more fun in one month than anybody ever did have before. At the last moment Dick wired that he was detained by business, but that he would meet me in Little Rock on such and such a morning. "That's the last I'll ever see of him," I thought; and when a telegram came on that morning instead of the sender of it, I was the more ready to back that belief, though all the telegram said was that he would be at Little Rock two days later. At any rate, I was perfectly comfortable and happy at Little Rock, the more so as Mr. Irwin and myself had good promise of getting Mrs. Irwin to relent about that Welsh rarebit, and as I felt that I should not easily find a part of the country where I would have better opportunity to get into subjection an appetite which was really becoming alarming. Therefore, reasoned I, why not let the world wag a couple of days, and wait for Dick, whether he is going to come or not?

So we let the world go right on, and on the morning when Dick was billed to appear as per his last schedule, I sauntered down to the depot with the calmness that can only come to the philosophical man who is sure of three meals a day, and may be more.

Much to my surprise and delight, Dick did really come this time. I saw him down the platform, his young, blonde face at some altitude above the average of the crowd, his long limbs incased in an elegant pair of those trousers whose creases are the despair of the Milwaukee bloods, his Fedora hat creased with equal accuracy, his necktie tied small at the bottom of the knot, and a fresh flower in the lapel of his coat. On the whole, he was quite a wholesome-looking boy, and I was glad to see him. If the audience will keep its eyes upon the creases of those trousers, I will later on lay a legal foundation for introducing them in evidence.

"Well, what kind of shooting have you been having?" asked Dick, the first thing. Of course he did. He didn't care whether or not everybody was well, or how the country was getting along. In the enthusiasm of youth the only thing of importance was the shooting. The three meals a day, or the Welsh rarebit, of which I was about to tell him, made no figure in his mind.

"Oh, we killed a buggy load of birds or so yesterday," said I, nonchalantly, as if we could do it any time we wanted to.

"Where? Whereabouts? How far out did you go? Can we get out again to-day?" And so on. To all of which I answered suitably, and begged him to be calm, and to come on up and enjoy his breakfast, as became a wise young man.

Meantime approached a very dirty and ragged nigger, with the query, "Is them all yo' dawgs, boss, n' does you want 'em fotted up town, sah?"

"Oh, yes, the dogs," said Dick. "You know I told you I would bring Paul Bo and a pointer along for the trip. Well, I concluded it wasn't best to bring Paul the way he was feeling, and my pointer cut his leg on a piece of glass, so I brought along two pointers that belong to a friend of mine. He says they are fair, and will be helped by more field work than he can give them, so he wanted me to, bring them along."

#### Decent Baggage-men.

We found the pointers to be a pair of opposites, Nip, a gaunt Colossus, about 6 ft. long, not fat and alleged to be

unfattenable; Gyp, a short and stocky one, of much the converse description, since it seemed nothing could reduce her solid flesh. Dick had them in a good roomy crate.

"It's a good deal of a nuisance to take dogs along usually," said he, "and I've often dreaded a trip over the Western railroads, the baggagemen rob and bother you so much; but the Iron Mountain men treated me the nicest I ever was treated when I had dogs along. Mr. Townsend, the general passenger agent, saw that I got a permit for the dogs, there was a man at the Union Depot to help me with them from the Alton train on to the Iron Mountain at St. Louis, and the baggageman coming down was so nice about I just gave him a tip anyhow. These men down in this country don't seem to act like the fellows I've met in the West and North." Which latter reflection my friend repeated many times before our journey ended.

In short, we were now in another land, a land less harsh in climate and in customs, a land where men have time enough to live, and kindness enough to want others to live also. We were out of the snow, and among the quail, and away from work, and what more could one ask? As one reflected on all this one experienced a large, generous, comfortable feeling in the cardiac region, a glow of warmth extending quite about the neck (a Northern man usually feels cold to the touch under the ears), and a buoyancy of step such as was ample repayment for the trip, if it ended right there and had no further plans.

#### Side Trips for Quail.

We didn't take Dick right out after quail as soon as breakfast was over, neither do I wish any to think that we could find quail in the hotel yard. We explained to him, as I would like to explain to others, that the birds were not to be found right in the edge of town at Little Rock, any more than at any other town of its size. The negro shooters and other owners of cheap sporting gear keep the crop cut down pretty close, out for a few miles, say four or five miles, or walking distance—though I imagine that even within that radius the shooting would seem good to a Northerner. It is the custom of the Little Rock shooters to drive out ten to fifteen miles, or else to make a railroad trip to some point twenty to forty miles distant. By taking the Ft. Smith road out for even short distances one gets to little way stations in the heart of a purely rural country, and a widely scattered population, where the great plantations are dotted only by occasional negro cabins, and where the birds breed practically undisturbed by the residents from one end of the year to the other.

If one could get good accommodations in any of these little villages it might do to stop there, although I do not think the residents would look kindly on any party who stayed for a long time and killed a great many birds. The best way to do, and a remarkably convenient way, is to make Little Rock the headquarters, where one can be admirably quartered and have at hand everything he needs, ammunition, good quarters for his dogs, etc., and then to use the railway trains instead of horse and wagon. The trains leave very early in the morning, so that one is landed on his shooting grounds earlier than if he had gone the usual driving distance by team, and they come in late in the evening, so that one can close his day's shooting comfortably and take the train home as he would his wagon, with the difference that the train is the more comfortable. Or, if one objects to the early morning departure, he can take an evening train out of the city and drop off, say, at 8 to 10 o'clock in the evening at the small town where he intends shooting, taking his chances on getting hotel accommodations there for the night. There are dozens of good shooting points thus available, the accommodating quality of the railroad trains being dependent on the fact that Little Rock is a central and important railroad point, and hence entitled to have its trains arrive and depart in the morning and evening, as all good big cities do. There might be some who would object to this, and say that they "would rather be right on the shooting grounds." A trip would teach them wisdom as to that, unless they had invitations to stop with some of the planters. That, however, is not the question. No shooter who is in the least a gentlemanly shooter ought to expect or to wish to go down into that country and shoot every day in the week, for that would mean simply a butchery of birds. In a country where fifty birds to the gun daily is no herculean task no sportsman can wish to shoot every day of the week, nor more than half the days of the week. Therefore, this city offers inducements of the most remarkable sort. One can here be absolutely sure of one or two "good days"—days when he sees hundreds of birds, and bags dozens of them; he can also be sure of comfort when he is not shooting.

#### Arkansas Vox Populi.

I have no use for a man who is not satisfied with one or two actual "good days." If any man wants more than one or two such days to the week, and if he wants to shoot every day, and kill every bird he can every day, then I certainly don't want him ever to go down into this country; probably he'll wish he hadn't if he does. The men of the State Association make the laws, so far as the sportsmen are concerned. They say the law absolutely prevents shipment of game out of the State, but does not prohibit gentlemanly shooting by non-residents. Any shooting of ungentelemanly sort would very soon have visited upon it a practical stigma from the source to which all laws ultimately revert. Don't run against any of the Arkansas *vox populi*. Be a gentleman in your shooting there. Indeed, you have my permission and advice to be a gentleman no matter where you may be shooting. If you are a gentleman, you can't beat Little Rock country very badly for game, not in America, and not to-day. Thus, at Plummerville, one of the little way-stations referred to, one Little Rock shooter bagged 52 birds to his own gun in a little over half a day, the week before my visit. Two guns had bagged over 150 there. A party of several had bagged—I do not know how many, but much in that proportion. I heard many stories of large bags, and saw much to prove their truth, so much that my memory does not carry them all, yet I think it can be substantiated that two years ago two guns in one day up the road, bagged nearly 200 birds. I am sure it was over 175, and have a vague recollection it was 197. One party of three guns came in with 88 birds, the result of one day's shooting. My own experience at Mr. Pemberton's place would show the uselessness of further figures. It is easy to see what the shooting in this favored country is, and how easy it would be to abuse it. It simply must not be abused by any Northern man who

goes in there, for that would be poor return for the treatment he would be certain to receive.

Well, it may readily be imagined that, as Mr. Irwin and I got Dick into a corner—I by this time being quite a settler in the country—and related all these things to Dick, we had the poor boy about wild, for it must be remembered that we had had our shoot and he hadn't had his. Mr. Irwin, of course, had his business to look after and a reputation as a citizen as well as a shooter to maintain, but when he saw how nervous Dick was getting he relented and said:

"I did think I couldn't go out again for a while, but seeing it's you, and you want to go so bad, we'll just take one more trip. We'll go up the road to Morrillton and shoot in the Arkansas Valley bottoms." And this, if readers will pardon so personal a story, is what we did. I cross my heart, there's plenty of blood in this story, so it's worth reading.

We took the evening train up the road after having eaten a comfortable dinner, which, be sure, I was in no mood to overlook. It was between 10 and 11 at night when we tumbled into the little hotel at Morrillton, perhaps fifty miles from the city. We couldn't get anything to eat then, at which I rebelled. But I got even in the morning. The waiters actually looked at me with trepidation.

We expected to meet at Morrillton Mr. Percy Stout, a friend of Mr. Irwin and the best hunter of the neighborhood. Unfortunately, Mr. Stout was out of town, being across the river on a deer hunt. Mr. Irwin was, however, well acquainted with the country we were to shoot over, so in the early morning we acquired a good double rig and a poor nigger driver, and sallied forth before the mists were cleared away from the "mountain" at the edge of town—a hill which will be a mountain some day, or which anyhow is laid out all right for one.

Over the mountain, we crossed a creek, along whose bottomlands the fog still hung white and heavy. Here the dogs began to work, but we called them in, as our drive was to be six to eight miles out in all. We had along two brace, Mr. Irwin's pointers and those brought from the North by Dick. One of the latter, the long one, Nip, showed the speed and nearly the size of a lightning palace train, and we allowed he wouldn't last till night if he kept that up. Ham, or Jack, as Mr. Irwin alternately called his stub and twist little pepper and salt fellow, was also out and away. This dog never would ride in any sort of a vehicle, and seemed to be practically tireless. The two canine ladies were more dignified, and were content to stay in the wagon and crawl all over the occupants.

#### The First Bevy.

The sun was just beginning to roll up the fog into sheets and pillow cases, when we pulled up on top of a high ridge which skirted the bottomlands over which we were to shoot. We cast down a little cottonfield, Mr. Irwin working to the right and Dick taking his brace to the left. It was a lovely scenting morning and the cover was certainly promising.

"Well, here surely is a good cover for a bevy," said Dick, as we followed a hedge row down into a little weedy hollow by the cottonfield. His prophecy was good, for Nip made game, though being of limited experience on birds he could not hit it off right at first. The other, Gyp, was of wider field experience and very quickly knew what to do. She made a rapid cast and was just at point when Nip, with fire in his eye, came clattering through the tall weeds looking for something he had lost. The noise in the weeds put the birds up wild and they went off at a great pace.

Meantime we heard Mr. Irwin's gun, and working on over after our bevy found that his birds were marked down on practically the same piece of ground as ours, a heavy and tangled thicket near some tall young timber. Here the dogs got plenty of work, and we began to pick up a few birds. I very quickly saw that I was out with a couple of hot-class ones that day. Mr. Irwin I had seen shoot before in the field, but though I had seen Dick Merrill often at the traps and knew he was a clinker there, I had never shot in the field with him. He didn't do anything but kill a double the first thing—which he did a good many times later in the day—and then he and Mr. Irwin began to get them all kinds of ways. We had lots of fun in this little corner. I suppose I ought to remember just how many birds we took out of our pockets when we reached the wagon, but I don't. It was quite a handsome little bunch of them, though.

#### Delectable Country.

And now before us, further than we could see in the early morning, there stretched as pretty a bit of country as every made scene for the sport of shooters. Let us say two miles wide and four or five long, and flat as a floor, lay the bottom land, covered with corn, cotton, grass, weeds and burrs—as good a country for quail as ever lay out of doors, no matter what the climate. This, our guide informed us, was a strip of country on which he had made some of his heaviest bags in earlier seasons.

We spread out and started in at the upper end of the flat, and before we were fairly started in Dick's dogs had a bevy nailed, and he got a double. Mr. Irwin, getting a shot at one of the bevy as it came in over him, killed it very handsomely. And the ball was on.

From that time on I need not describe the fun. In fact, I can't. Again there was too much of it, too many birds, too much good shooting, to work into the description of a shooting day. We all had good guns—cylinder right barrels and open lefts—for the sport, our loads were perfect, the dogs were lovely, the day was pleasant and the birds were there. No ingredient therefore, was missing.

During the day we put up twenty-odd bevs, and had we worked on down more rapidly to the further end of the plot, where we found so many birds in the evening, we should have seen yet more, for we learned that Percy Stout had been among the bevs when we first started in, which meant a perceptible thinning down, the same Percy being a bad man with a shotgun. As it was, we did most of our work early and most of our shooting late. I don't know how many birds we killed in all, but I know I kept track up to 75 and think we had somewhere between that and 100, probably 89 or 77, or something like that. Those two men surely did make me walk and shoot.

Somebody or other, or may be more than that, lately found fault with me for telling how to skin quail. Said it was no good way to fix quail, because quail ought to be picked. Of course they ought, of course. If a fellow hasn't got anything but time, he can sit around and pick

quail, and it isn't against the law to do that, so far as I know. I have eaten picked quail in a country where there weren't any quail. Likewise, I have eaten skinned quail, in a country where there were quail. It's this way: Down East, they count quail and pick them. Down South, they don't count 'em and don't pick 'em. Bless my heart, if I had to pick all the quail I could kill in Arkansas in a day, I never would go shooting. Quail are like oysters; you can skin and eat 30 or 40 of them, without wasting any time, and not feel any the worse for it. At least, that is the way I felt along toward evening. Dick felt the same way. In fact, our hotel, in revenge for the breakfast I had eaten, had composed for us three adult men a lunch consisting of four biscuit, two small parti-colored apples and a piece of sponge cake. But here let us draw a veil.

#### Plenty of Game.

During the day we startled from their feeding grounds in the corn a great gang of Canada geese, and saw them come out again from the river later in the day. We heard a great many geese honking out on the bars of the river, and it seemed that if one were prepared for it and cared to take the trouble, he could have gotten a goose without much trouble, as the flyway was easily located.

Dick's dogs went fairly wild in their hunting for a while, for they had never seen so many birds in their lives, but after a time they steadied down and showed the making of a very good pair of bird dogs. The short, fat one stood the day better than the long, lean one. The latter lost a lot of his exuberance along in the evening, for the weather was quite warm, and he was just recovering from the grip. Nancy and Jack, Mr. Irwin's brace, behaved like a perfect lady and gentleman. Poor Jack, since then I learn that he has gone over the range, a sudden malady having cut short his merry and sturdy young life, as I have elsewhere stated.

And so, we saw quail, quail, quail, all day long, until their scent no longer excited the green dogs, and until their whirring flight no longer disturbed our nerves. One bevy would go down into the cover, and we would put up another bevy while we were looking for it. Once, in the evening, Dick and I put up three bevs at the same time, and Mr. Irwin was at that moment shooting in another not 150 yds. to our right. Out of that rise, singularly enough, Dick knocked down three birds and never got one of them. He laid down his hat to help mark, and lost his hat for quite a while. The dogs got rattled and went to pointing singles, and Dick had to give up his birds. We left part of these scattered birds on a bit of level ragweed cover when the wagon came up, for we already had a bag big enough for anybody, and both dogs and men were tired and hungry.

#### Percy Stout Had Results.

In the North you go hunting, and you get plenty of air and sunshine and walking and poetry, but you don't get anything else. You have to go home to your wife—if you have any—and explain all about it, and tell how it happened, and what a good time you had. In short, you have to bring back explanations and not results. Now, it's results that count in this sinful world. The fellow who has results doesn't have to make many explanations. In the South you bring back results and not explanations when you come from your hunt. As see below.

On our way in we overtook a horseman who was plodding along on muleback, if a horseman can be doing that—anyhow he was. Him Mr. Irwin recognized to be Mr. Percy Stout, the missing friend who was out hunting. After salutations and introductions, the first question was: "What luck?"

"Oh, we've got three deer coming along in the wagon behind," said Mr. Stout carelessly. "We ought to have had more, but we had a pleasant hunt. We chased a big buck right across your quail ground here once to-day. Of course we got a lot of squirrels and things. We've been camped out on the bluff over there, across the river, three or four days, and we had a lot of good runs with the dogs, though some of our men didn't understand their business very well. There's a good deal of sign over in there, and plenty of deer, too." It was evident then that Mr. Stout had more results than the single fox squirrel we saw dangling at his saddle.

At this stage of the game Dick wanted to stop the wagon and get right out and go deer hunting. Mr. Stout smiled gravely and assured him that it was "no trouble to get a deer." Later on, Mr. Stout called at our hotel in the village, that evening, and we had a long talk with him over the game question. He reported quail and squirrels unending and a few turkeys. Traveling much all over the section he knows the game supply as thoroughly as any man of the State, perhaps. He told us that in the Nations one could still get quail, chickens, deer and turkey on the same hunt, and further stated that he thought he could get a deer or so by going about forty miles from where we were.

"If you gentlemen could only stay here a little longer," said he, "we'd get a wagon and go up country thirty or forty miles on a camp hunt into a wilder part of the State. We would surely show you bear, deer and turkey, and would jolt you up a bit on some of the rough roads. Or, if you can't stay now, and can get down in here next fall, we'll go then. You'll be down next fall, won't you?"

To this question I could only shake my head in doubt. Dick, however, who has fewer cares to restrain him than most folks, perhaps, practically concluded on a trip for next fall with Mr. Stout after deer, turkey and bear. Some or all of these they will get if they go, for there is no better posted hunter of that section than Mr. Stout, and as we have seen, he brings in results and not explanations.

#### To be Continued.

We sat late that night talking, and after parting with our friend for the night, we bribed the singularly and uniquely worthless nigger who officiated as porter to give us an early call for the 4 A. M. train in to Little Rock. He didn't do it. If he had, it might have been different with the creases in Dick's trousers.

But I presume it will add interest to the next section of this story if I postponed till then the account of what happened to Dick's trousers and the creases thereof. This I promise to be of thrilling interest. You know, it was all dark in the early morning, and the train had whistled, and we were all hurrying as fast as we could.—But there, this is to be continued, and there's plenty of time about it.

E. HOUGH.

## TRANSPANTING QUAIL.

MUCH activity has been shown this year by clubs and individuals in stocking the covers with quail. The birds are procured in the West and the South, most of those of the West being shipped from Kansas, whose peculiar law is commented on in our editorial columns.

## Pennsylvania.

In reply to an inquiry from this office, Alderman David L. Deen, of Lancaster, Pa., wrote us under date of Feb. 26: "About the 12th of January, 1894, we received from Chas. Payne, of Wichita, Kan., 115 dozen quail. They came to us in first-class condition, healthy and strong, only nine having died in shipping. They were immediately distributed among the members, every member taking care of his own birds. They are doing very well, the most of the birds being kept in coops. We feed wheat, screenings, buckwheat and millet, giving plenty of water, gravel and greens, such as cabbage, lettuce and water cress. We will liberate our birds in pairs about the middle of March if the weather is good. We expect to have good shooting in this county next fall. It is an experiment with us. We had plenty of quail here until last winter, when the snow destroyed nearly all. We have placed another order with Mr. Payne for quail, which we expect in a few days. DAVID L. DEEN, "Sec'y Lancaster County Game Protective Association."

The Game and Fish Protective Association of Pottsville was less successful in its importation of birds from Tennessee. The Pottsville *Journal* of Feb. 5 reported that of the 180 quail received from Tennessee some were very lively, but about 46 of them must have been handled very lively by the railroad crews. One agent at Cincinnati wrote the word "dead" on several crates, and when the birds got here they were so dead that even a benevolent looking pointer owned by Frank Seltzer turned away with disgust. One crate contained only one live bird. The other birds were dead. It is believed that a number of the birds were dead when shipped.

The Roxborough Gun Club adopted a novel scheme for raising funds for quail. They held an all-day shoot at clay targets for valuable prizes on Christmas Day on the grounds at Shawmont, the proceeds of the tournament being applied to purchasing quail to stock the woods along the Wissahickon Creek. A considerable sum was also donated by the members and their friends for the purpose.

## Connecticut.

Mr. A. C. Collins, President of the Colt Hammerless Gun Club, of Hartford, writes that the club "subscribed \$50, and its members \$80 more for the purchase of live quail for stocking grounds not posted in towns adjacent to Hartford. Some of the sportsmen (not all of them) in this city 'chipped in' some funds, and we have ordered thirty-five dozen live quail. We have received already twenty-five dozen. These birds are to be kept by persons interested until spring, when we propose to liberate the quail in pairs."

## Rhode Island.

Several lots of birds have been put out in Rhode Island by the State Association, though with doubtful success. A writer in the Providence *Evening Bulletin* wrote the other day:

It is stated that the 150 Southern quail which were liberated on Prudence Island in December last, none have been seen since the heavy fall of snow which occurred two weeks ago, and it is feared that they have all perished. It is also stated that a bevy of twenty Southern quail, which were liberated in another section of the State, were found dead in the snow. So it seems that we cannot depend on Southern birds for restocking, unless they can be kept in captivity during the winter and liberated in the spring. Our native quail are much more hardy than those from the South, and can endure any degree of cold if their supply of nourishment is sufficient.

In placing food for them, which may consist of rye, corn, buckwheat, oats or hayseed, it should be put in or near their known haunts on a southern exposure, where the snow soon melts, or a place cleared of snow and covered with evergreens, raised about a foot from the ground, which will prevent the food from being covered by subsequent falls of snow and furnish a shelter from storms and birds of prey. Another excellent place is around spring holes, where the snow always melts as rapidly as it falls. It is to be hoped our farmers will do all they can to help the quail survive the winter, and there is no doubt their sportsmen friends will remunerate them for any food which they may supply, and the pleasant note of Bob White will cheer them in their labors next summer.

Our correspondent "Tode" wrote us of a lot of quail put out in the Blackstone Valley that the farmers on whose land they were put have offered to feed them if the association would pay for the grain.

Not all Rhode Island farmers, however, appear to believe in fostering the game supply. Something of the animus of one class, at least, may be inferred from what "Warwick Farmer" writes in the Providence *Journal*:

I have noticed several articles in the *Journal* upon stocking the State with quail and their poor success, which is not altogether owing to our severe winters, for, while the farmers like to have their quail around and to hear them whistle, they do not like to have their farms overrun in the fall by a mass of apparently lawless hunters with their dogs, which generally do more or less damage before they leave, and no farmer dare leave his farm to go to church on a Sunday or any other day for fear of a visit from this class of marauders. Nine-tenths of the damage done to sheep by dogs has been from the red setters, as they do not bark to give warning of their presence. The farmers in general in this section will do all they can to prevent the multiplication of game of all sorts for this reason, for extermination is our only resort, for the aggressors are generally worthless, irresponsible parties, their sole capital being invested in a gun and dog, and don't own ground enough to be buried upon. I would suggest that parties who wish to raise quail or other game purchase some of our abandoned farms and stock them with game; then they can do all the hunting they please upon their own ground and nobody can object. Much more could be written upon this subject, showing how young quail are shot and sold in the markets that would not weigh 40z., and how flocks that have been brought up in our own barnyards have been exterminated by gunners that had no more right to them than to our hens and turkeys. Suffice it to say that you cannot raise quail on somebody else's land.

A correspondent who sends us this well remarks: "I enjoy an occasional day in the woods and endeavor to injure no man's property upon whose land I go. There are, of course, two sides to this question, but it seems to me that destroying the game, of which there is now little enough, is not a very manly way to settle it. The same parties would probably take fruit or anything else they wanted if the game was all killed off, and no sportsman worthy of the name would willfully injure any man's property."

## Tennessee.

Some time ago a few of our interested citizens, including Tate L. Earnest, J. M. Fink, J. B. Simpson and others, says the Jonesboro *Herald*, raised a sum to be used in the purchase of quail to stock some of the farms in this county. So far about five or six dozen have been received

and turned out on some of the farms selected as suitable localities. It is hoped that the people in the neighborhoods in which the birds have been liberated will take sufficient interest in the matter to see that they are afforded legal protection, and if needed given some food, although the latter will not likely be necessary. The move is one that is creditable to the gentlemen concerned, and should meet with appreciation from all.

## West Virginia.

THE Parkersburg (W.Va.) Gun Club have received twenty-three dozen quail from Memphis, Tenn., which will be distributed throughout the county to replace the birds which had become almost extinct in that neighborhood.

W. EDWARD WICK.

## Nebraska.

CHADRON, Neb., March 9.—*Editor Forest and Stream*: Noticing in your issue of Oct. 28, 1893, an inquiry as to the practical results of quail-stocking enterprises, I am pleased to report gratifying success in this (Dawes) county. In the spring of 1885 Mr. T. J. Wilson, locally known as "Happy" Wilson, brought from Missouri two pairs of quail and turned them loose at his homestead east of this city. These quail seemed to do well from the start. On July 4, 1890, while attending a picnic in the vicinity I was surprised to hear the familiar note of Bob White in this strange land. Suffice it to say that Bowery dancing, red lemonade and frontier oratory lost their charm, while I made a still-hunt for Bob, and watched him a long time, totally unknown to him, until my admiration drew me too close and frightened him away. In the winter of 1892 I found coveys on Beaver and Chadron creeks about twenty miles apart, and this winter on White River. Local sentiment has been the only protection afforded these birds, and they are now becoming sufficiently plentiful to afford fine sport. Our open winters seem to be especially favorable for their increase. L. A. C.

## A GEORGIA BIRD HUNT.

In the spring of 1893 I wrote you a short letter on "Turkey Hunting in Middle Georgia." You expressed the desire to have me write again. In these hard times (for Georgia has not escaped the general depression) we look about us to see where we may economize, but find it hard to give up the weekly issue of *FOREST AND STREAM*. Has it not truly become a necessity? Well, it seems so, at least to me, as I find myself looking forward to each Monday for several days prior to its coming. I have been getting the paper of late from a local book dealer. For years I was a constant subscriber, and after a lapse of several years I find I enjoy it as well as ever. It was a standing joke with the "Madame" when I told any game story, fish yarn or big snake item, to remark, "That came from the *FOREST AND STREAM*, didn't it?" I never enjoyed the insinuation, as it reflected on *FOREST AND STREAM*, for why should not the majority of the interesting articles be true? I believe most of the articles, but some I read *cum grano salis*, and suppose most readers do. It is with delight that I follow a true sportsman in his roamings, as I find myself praising one for his good shots and blaming him for his bad ones. I am free to confess I love the paper, as it always brings brightness and is refreshing to my mind when I read it. It was my purpose to write you of a Christmas hunt, but I am wandering from my subject, though I trust my slight praise of your worthy self will excuse my digression.

As to the hunt. It was Christmas of 1893. I felt a disposition to ride over my old familiar hunting ground, more for the sake of old associations, as I did not expect to kill many birds. My mind took me back several years when I could find eight or ten bevs of birds there in a day's shoot, and when I generally killed from fifteen to twenty-five birds; where I shot over my handsome black pointer Pete, sired by Pete, Jr., and he by Strong's Pete, of Dedham, Mass. Many a time has he pointed when I had to stop and admire his style and beauty, longing for an artist to give me his picture. But he has passed away and his like I fear I will not own soon. There too I killed many birds over a setter—cross from Elcho Irish and Laverack, and who, when in his prime, would find as many birds as any dog I ever shot over. Over these two dogs I made a score one winter of twenty-five birds out of thirty-seven shots, and the next season over the same ground the same score—quite a coincidence.

I find myself living over the past and this calls to mind a hunt I took there with two ministerial friends and brethren. Both were fair shots and we bagged thirty-five birds. We had found a covey of birds, and after flushing them mounted our horses to follow, when I observed that one of my dogs had pointed a single. I rode forward, followed by the others, and had gone but a short distance when I heard a noise, and turning back discovered the Professor turning a somersault over his horse's head, which had stepped into a rotten stump hole. He was soon up and unhurt, while I had to laugh at the amusing figure he cut. I could but remark that I had often heard of ministerial acrobats, but had never before seen one in the performance of the very act. I have laughed over it many a time since then.

Well, after breakfast I took my gun and dog, made my way, saddled my old horse, crossed the Ocmulgee close by and at nine o'clock departed for the old grounds four miles away. I soon reached the fields and found at once a small bevy in few yards of where I had so often found them before. My pointer was wild and going with the wind, ran amuck the covey and flushed them. I soon dismounted and followed them, walking along some small pines, flushed a bird, took snap shot and scored a miss. Soon I got up two more, got one shot, bag it, locate the fourth bird that flushed, follow it, flush unexpectedly but grass him easily. I go back and soon three more get up; with my right I make a beautiful shot, hit the left hard but to my surprise he does not fall. I follow close on and Max soon pins him down, and as I approach he moves on and gathers in the dead bird. One more flush, another bird is bagged and I leave the remnant for future breeding. I mount my horse, move forward and a quarter mile on my dog gets scent of small batch of birds, and after faithful and long working locates them in an open field, having passed near them twice. I saw one on the ground, flushed it, "knocked it into pie," quickly wheeling fired at another but scored a miss. I followed, and going into a thick place Max points—the bird flushed and I was delighted to see him fall, as I made one of the seeming impossibles, as it had to be killed by shooting through a

thick haw bush. Soon another point and equally satisfactory kill. Surely, I thought, "I am in my shooting jacket to-day."

I went a half mile further on before I found another bevy, and it, too, had been depleted; got only one shot on the rise, which I bagged. Two more shots, both hit, but I failed to bag. I covered quite a large territory before I found the next batch. Spent about fifteen minutes to lunch before locating these, however, and felt much refreshed. Failed to down my first shot but bagged the second. Following on Max soon pointed and there was my first bird stone dead. A snap shot and a miss after much hunting. Four more were found, only one shot and another bird is bagged. I soon found one of these, and seeing it on the edge of a thicket in a small gully, I went between it and the bushes hoping to force it into the open, but it was too smart for me and whipped around the pines. I took a snap shot but scored a miss. I soon flushed another and my little 16 hammerless has sent him to grass as limp as a rag.

I mount and hasten over old familiar ground. Soon Max gives unmistakable evidence of birds; he hunts hard but fails to locate. I then pass the home of my farmer friend, Mr. Edwards, who has so often invited me to shoot on his place, and there I see a merry party of young people enjoying the Christmas holiday. Soon I pass over ground where I remember having killed nine birds out of a bevy, my companion bagging only one. Soon I find a batch of four birds and on the rise I got nothing. Soon I get a rise and bag a long shot. Looking up a bird which I had badly wounded, Max finds five or six more. I killed with my right, having made a very poor shot with my left barrel. I located only one bird, the rest having flown over a hill where I could not find them. I soon had a beautiful left-quartering shot, and at the crack of the little hammerless he "tumbled to the racket."

I had not gone more than a quarter of a mile before Max showed signs of birds. I dismounted as he worked through hedge, fearing he would flush, and soon found him on a point. The birds got up badly, and I got only one shot, which I failed to bag. I marked one down and thought the covey had pitched in a beautiful place, but found the only bird that lingered was running and feared I would miss him, but put him to grass in good style. The rest had flown. Two hundred yards further on and Max soon had one pointed. I killed this one, scored a miss, bagged one, badly wounded the next, but lost it, as I wheeled quickly to my right to send another to grass. Would have gotten the wounded bird could I have marked it down. I was content with that covey, and left a few "for seed."

Moving on toward home, I was surprised to see Max show signs of birds, having passed about out of the grounds. Dismounting and tying my horse, I follow the dog, who soon locates them. They rise badly. I score a miss with first barrel, but kill a long shot with second. I mark two nearly down, and follow them with the last shells I have in my gun. Coming suddenly upon one which takes wing, I score a miss. A long shot is made, immediately the bird soars high in the air, and I know he is mine. He soon pitches forward, and I bag my twenty-first bird with thirty-seven shots, only four to five miles from the city, and I am back before sunset, having had a delightful day, with the exception of the lonesomeness of hunting alone.

Thus ended my Christmas hunt, and greatly to my surprise I had found so many birds. I thought they had all been killed in that neighborhood. OLD SUBSCRIBER.

## GEORGIA.

## KNOWING ONE'S GUN.

*Editor Forest and Stream*:

Every practical, experienced and intelligent huntsman knows that to obtain the best service from a dog, and to fully appreciate and enjoy its work, we must, first of all, make ourselves familiar with its individual qualities and disposition. Quite the same rule applies to the shotgun. With the very best barrel material, the most improved machinery and tools, and the highest skilled labor at his command, it is impossible for a gunmaker to produce two guns, yes, even two barrels of the same gun, with precisely similar shooting qualities, and why? Because the conditions governing these qualities are only partly known to him and within his control.

The momentum of elasticity or expansion, for instance, which plays quite an important factor in regard to the shooting quality of a shotgun, is beyond the control of the gunmaker; and yet this very feature of the barrel material accounts, to a great extent, for the well-known phenomenon that some guns will not shoot one particular propelling agent nearly so well as another. The various powders develop their gases under different conditions, and whenever these conditions are in close harmony with the expansive qualities of the barrel, we may, as a rule, look for good and uniform results and *vice versa*.

It is nothing exceptional to find that a gun will shoot a load less satisfactorily at one time than at another and under different climatical conditions. We know that even the bullet of a rifle, owing to the effect of the influence of temperature upon the powder, will describe a different curve in its flight in winter from that during summer, and yet the rifle is much less capricious in its behavior than the shotgun.

For several reasons a particular gun or barrel will do the best service with a certain size and load of shot, and a slight increase or decrease of the powder charge frequently has a great bearing upon a gun's shooting qualities. Only quite recently I repeatedly experienced and established the fact that even such a slight difference as that existing between shot No. 7 and 7½ has a bearing upon the behavior of a gun.

Strange as it appears, some guns will actually put a smaller number of pellets No. 7½ into the 30in. circle than No. 7, some guns again will shoot No. 6 shot better than No. 3 or 4. The relations between the cartridge chamber and the soul of the barrel are often such as to render a gun particularly susceptible to the wadding material both in point of elasticity and diameter.

It can hardly be expected from the gunmaker that he should establish for every gun he puts out the best suited load. Even if he did, the gunner would be very little benefited by such work unless he would employ some load as found to suit the gun best. The shooter must determine the proper load himself or have this done by others. When the sportsman carries out such a test, he should bear in mind that a good pattern deserves only to

## STOP THE SALE OF GAME.

A PLATFORM PLANK.—The sale of game should be forbidden at all times.—FOREST AND STREAM, Feb. 10.

BOSTON, Mass., March 14.—*Editor Forest and Stream:* While approving of your new "platform plank" prohibiting marketing of game, I am not so sure that it is not so radical a departure that it will fail to receive the support of many who might be led to favor a less stringent measure. Would it not be better to start off with a plank of no marketing or possession of game in close season?

This would clean out the cold storage warehouses, that in this vicinity are filled up in January and February with game and carried over until open season in the fall. For instance, pinnated grouse are exposed the day season opens in Quincy Market (and I doubt not elsewhere in the country), that have lain in cold storage since the deep snow of the previous winter. Clammy, slimy, water-soaked pieces of flesh that will become putrid in a few hours' time if not cooked, are palmed off on the misinformed public as "the first of the season." Anyone can easily distinguish them from season birds, as they are exposed for sale denuded of feathers ready for the cook; and good reason why, as it requires but a stroke or two of the hand when feathers and skin readily slip off the body, being in first stage of putridity. And again they are offered all prepared for cooking at from 50 to 75 cents per pair less than fresh unpicked and undrawn birds.

Further, to-day in Quincy Market, in Market street commission houses and throughout the city, grouse, quail and venison are more plenty than at any time for the past year. Why? Simply because the trappers and market-hunters, aided by the deep snows, are getting in their work. Boston for years has been the dumping ground for illegally-killed game. Great efforts have been made in times past to regulate the traffic, but the parties who sell grass seed when grouse are out of season, in fact are ready to sell anything for a commission, backed by capital which carries legislative influence, have thus far been enabled to carry their point. Their interests are now carefully looked after every election by men who are known to be in sympathy, and I understand they now are fortified by having one of their choice on the legislative committee upon fisheries and game. The society supposed to have special care of game, the Massachusetts Fish and Game Protective Association, have never seemingly dared to take positive and aggressive grounds against the Market street dealers, and the consequence is that for the past few years those who wish to see the fast disappearing game saved from total annihilation are compelled to keep quiet, no protest to the Fish and Game Commissioners would avail, as their time was taken up by the exacting duties of junket trips on the Ocean Gem. See Boston newspaper reports of legislative action regarding repair of said State pleasure yacht.

My idea for the preservation of fish and game is to energetically carry out the practice followed in Maine—with possibly some slight variation, and which has proven to be of so much value to that State, because it has been faithfully executed, and is as follows:

Make any common carrier punishable by a fine of not less than \$500 who transports game out of the State in close season.

Make it a criminal offense to kill, sell or have in possession game in close season with a fine of not less than \$25 for first offense, double that for second, and imprisonment for not less than six months or more than two years for third or succeeding offenses.

Pass these two laws and then tax every gun \$2 per year, this fund to be used by game commissioners to carry the law into effect. This will enable them to employ competent officers to detect and bring offenders to punishment.

Finally, let the commissioners of game be men who have the ability, are competent and interested in the preservation of game, making the office one of responsibility rather than of ornament.

My judgment is that if these laws were passed and proper officers selected to execute them, the crying necessity which prompted this new "plank" will be largely done away with. The killing with a gun is not what has destroyed the game, it is the trap and snare, and in close season during heavy snow—and the modern cold storage warehousing of the game. Regulate the season when it may be killed, allow none to be had in possession at any other time, and faithfully execute the law; this will do more to save our game than anything else, with all due respect. Mr. Editor, you and I both know that it is possible to make laws which cannot be executed, and in many States the statutes are now cumbered with such; let us then rather make what we can execute and call upon all good citizens to aid us.

With an experience of twenty-five years, I may send you some ideas on planting of game birds, particularly in New England. W. W. CASTLE,

DANVILLE, N. Y., March.—*Editor Forest and Stream:* The consensus of opinion of a majority of your correspondents seems to be along the line of prohibiting the sale of game, and after a careful reading of what they have to say I am forced to the conclusion that the motive of their protests is a purely selfish one. I am neither a market-shooter nor have among my friends any who practice that line of business, but I fail to see where there is anything disreputable or wrong in it. I can readily understand how a man might have the genuine sporting instinct in his heart and yet through lack of means be unable to gratify it unless he resorted to the crime (?) of disposing of a part of it for money. No one certainly would question his right to do so; in fact, I think lovers of the field would be glad that an impetuous fellow sportsman was able to gratify his sporting instincts so easily.

A market-shooter wastes no game; he goes out with no crowd of enthusiasts into some distant well-stocked region, far away from points where game cannot be given away, much less sold, and in the excitement of pursuit allow himself to destroy that which will only be wasted. On the contrary, he looks to it that the shipping facilities are the best and is careful that every head arrives in market as sweet as a nut, where it goes to minister to the comfort of those who enjoy wild food yet lack the skill or opportunity of securing it in the field. If it is to be illegal to sell game it must also be illegal to give it away. There is a law that liquor can neither be sold or given away without a license, and the same rule should apply to game. If the law says to A, "You must

not shoot game for the market any more," it must also say to B, "You must only shoot enough for your own use and not do as you have been in the habit of doing. That is, bring home a couple of barrels of ducks that you couldn't use and distribute among your friends."

This utter selfishness on the part of your correspondents is very sad to me. I read between the lines that if a law prohibiting the sale of game can be passed that the market-shooter will be crowded out and the game that would naturally fall before his gun and be eaten by the people in general, would find its way instead into the pockets of the favored sportsman and be eaten by his family and friends. What logic! Isn't it patent to every thinking mind that our game, provided by an all-wise Providence, has a mission in the economy of life other than to delight the killing instinct of the wealthy gunner, who shoots for the same reason that he takes a hand at draw poker or drives a fast horse—for the excitement of the thing? Game was made not only to delight man in the taking, but to eat. The gun cracks, the little puff of feathers announcing the dead shot delights the sportsman's eye. The grouse falls, is retrieved by the setter, fondled by the shooter and put in the game pocket. Now what? Why cooked and eaten, of course. The eating must follow the shooting just as certainly as the report follows the pressure of the trigger.

It is rank nonsense to say that one man can shoot, kill and eat game and another can't shoot, kill and sell game that somebody else eats. The advocates of this measure are on the wrong tack; they don't consider how un-American and petty such a law would appear on our statute books. There is game enough for all if sportsmen will bend their energies toward conserving it by looking to the passage and maintenance of wise laws. Both sportsmen and market-shooters can do their part by acting in unison, instead of trying to deprive one another of rights that are legitimate and honest. Taxing guns and saying "you shan't" to market-hunters won't bring about the desired result, but restocking and honest, concerted action will. There is a growing sentiment to-day among farmers looking toward the preservation of game, and as they are the hope of the sportsmen their feelings and ideas should be considered on all game measures. Get the farmer boys interested, not by telling them that if they bring a grouse or a couple of squirrels to town for sale they will be arrested, but by teaching them how valuable the game on the farm is and asking them to wage war on the destroyers of partridge and quail eggs, get them to feed the birds in winter when the cruel crust and icy coverings on the buds cut off their natural food supply. Don't mind the market-shooter, brother sportsmen, he is with you, and will stay by you until the desired good is obtained. H. W. D. L.

DANVERS, Mass.—*Editor Forest and Stream:* The best game law I know of is to prohibit the sale of game altogether. Such a law undoubtedly would make a howl of much extent from the market-shooters and marketmen, but it would do the work as never done before. The market is what exterminates our game, from the buffalo to reed birds, and I think in due time such action will be taken. J. W. B.

ITHACA, N. Y.—That's a good platform; one that will, if carried into practical execution, replenish the game supply and vouchsafe to us and those who are to come after us, a perennial period of good shooting. Tompkins county is cursed with the presence of the market-shooter, more's the pity. Cut this individual's chief source of income short and I verily believe the game supply problem is solved. Keep up the fight, and drive the market-shooter into other pursuits. It can be done, and FOREST AND STREAM is the paper to do it. M. C. H.

ROCHESTER, N. Y.—*Editor Forest and Stream:* I am acquainted with the planks of many platforms, and of them all I should choose to stand on "The sale of game should be forbidden at all times." O. S. B.

## A Mudhen Tournament.

LOS ANGELES, Cal., March 11.—*Editor Forest and Stream:* On the preserve of the Long Beach Gun Club, the mudhens have become so numerous as to prove a nuisance. They consume a great amount of food, which otherwise the ducks would have, and in return they afford no sport. In view of the above facts, the members of the club have decided to hold a grand "mudhen tournament," one week from to-day, the weather permitting.

The programme is about as follows:

At the invitation of the club, the sportsmen will assemble on the grounds, and will be assigned to their positions, when the shooting will commence, at 9 A. M. and last until about 5 P. M. No questions asked as to how you bag your mudhens, take them as you can, "pot shots" and all.

There is a medal, with an appropriate inscription and a mudhen engraved thereon, to be given to the man bringing in the largest number of heads. There are also various other prizes donated by the merchants of this city, such as loaded shells, cigars, etc.

There will be a "barbecue" in connection with the shoot, where the sportsmen will be treated to "barbecue bull's heads à la Mexicano," and "chile con carne" ad libitum.

The affair is gotten up solely for the purpose of exterminating the mudhens, or at least to decrease their numbers, and incidentally to have a good time. Truly this will be a novel shoot. I will inform you as to the result. CULPEPER.

## American Testing Institution.

THE names of the following gentlemen have been added to the membership list: C. Howard Slater, Jersey City; James N. Dupuy, president I. G. C., Ironton, O.; Chas. L. Horner, Greensboro, N. C.; W. H. Gibbs, Saratoga Springs, N. Y.; Geo. W. Coulston, New York city; Peter Gibson, attorney at law, Cincinnati, O.; Edward E. Fox, secretary Cicero Gun Club, Oak Park, Ill.; Percy F. Stone, secretary Horicon Shooting Club, Chicago, Ill.; J. Henry Kerr, attorney at law, Auburn, N. Y.; C. L. Wilcox, secretary Andover Rifle Club, West Williamsfield, O.; Erwin M. Beale, attorney at law, Lewisburgh, Pa.; O. D. Delano, manager LeRoy Shot and Lead Works, New York city; Edward L. Travis, attorney at law, Halifax, N. C.; J. R. Beam, New York city. ARMIN TENNER, Supt.

be called so in case the corresponding velocity or striking force reaches the standard value. This last-named question is much more difficult to solve than many imagine. In the first place a distinction must be made between the penetrative facilities and striking force of the pellets. These pellets, which are propelled by a very high velocity, *i. e.*, imparted with a comparatively great striking force, cannot and will not penetrate a paper pad or any other object so deep as the pellets of a shot cloud propelled by a lower velocity.

In view of this fact all tests carried out by means of a paper or card board pad are generally based on false premises and lead to erroneous conclusions. The results of such tests are worthless and misleading.

A certain class of shooters, again, are guided in their choice for ammunition by the high scores made by others with a certain load; they do not consider that a load which may do good service in one gun is likely to behave properly in another, and that they not only act foolishly in employing the same ammunition, but assume a great risk in doing so.

A 3in. shell, for instance, can be forced into a gun barrel chambered for a 2½in. shell, it can readily be exploded too, but what the result may be is another question. Under favorable circumstances the gunner employing such a shell not suited for his gun may only experience a "kick," creating an impression as though his gun had suddenly been transformed into a hind leg of a mule, but he may also see his gun go to pieces.

There is no occasion for going to such extremes in the way of a powder charge and shot load to kill a pigeon as some gunners do. To boil a potato, boiling water is required, but as soon as the water has reached the boiling point no amount of extra fuel will facilitate the process much further. To kill a pigeon, a certain sum of striking force is required, not quite as high as that necessary to kill an elephant. The penetrative force of pellets is governed by a maximum, whenever this is reached, no extra powder charge will serve to increase it still further. The chances of hitting a bird with a gun of a certain caliber and size shot, too, are subject to certain laws, and these laws will not give away to any artificial enforcement.

As a rule, the gunner employing a gun of 12-bore cannot increase his killing chances much by enlarging his shot load beyond 1½oz. of shot No. 7. I know that this assertion will not meet the views of many trap-shooters, but I make it all the same, and stand ready to admit my mistake as soon as they prove to me that I am wrong. I cannot, however, yield to any superstitious belief—I want facts, indisputable facts, as I shall here name them in regard to the relations of the striking force between a load consisting of 1½oz. of shot and 3drs. of Schultze, and 3drs. of the same powder and 1½oz. of shot No. 7, both loads to be employed for a 12-bore gun. It is claimed for the heavy load that it will kill further than the light one. Now, let us see what the facts in the premises are: At 50yds. from the muzzle the standard or light load will show a velocity of 770ft., and the velocity of the heavier load at the same point is 760ft., or 10ft. less than that of the former. The muzzle velocity of both loads is about the same, or only 2ft. higher with the heavier load. What has the gunner employing the load gained? He has succeeded in increasing the recoil about 25, the bursting strain or pressure in the gun barrel about 35 per cent., that's all.

I have recently been called upon to determine for a number of shotguns the most suitable loads. From 16 guns tested eight proved to shoot Schultze powder better than any other. In nearly all cases the wadding material had to be chosen with due regard of the relation between cartridge chamber and soul of barrel. Four guns made the best showing with Walsrode powder, and two with E. C. and American wood powder respectively.

A Purdy gun produced with Schultze powder, wadded in a certain manner, and 1½oz. No. 7 shot, an average pattern in the 30-inch circle at 40yds.—right barrel 234, left barrel 244 pellets. A Scott gun produced with Walsrode powder an average pattern—right barrel 232, left barrel 245 pellets. One gun, a Francotte, did best with Schultze powder in the right, E. C. powder in the left barrel.

In one case fully 300 shots were fired before the proper load was established for the left barrel of a gun which proved very stubborn and would not put more than 190 pellets in the 30-inch circle. The same barrel finally produced an average pattern of 230 pellets.

The pellets found in the 30-inch circle must be judged also in point of distribution. If a gun is patterned for pigeon shooting, a skeleton of a pigeon is placed in the center of the target; if for ducks, that of a duck is substituted. By counting the pellets found in the skeleton, and considering the force at impact of each pellet, a pretty fair conclusion can be drawn as to the chances of hitting and killing for every load employed. ARMIN TENNER.

## TEXAS GAME INTERESTS.

SAN ANTONIO, Tex.—In May, 1890, a State sportsmen's convention was called in the city of Waco, which was attended by over fifty gentlemen, who began at once a "campaign of education" in the State. Later on Mr. John Gilbert, of Houston, organized the Harris County Game Protective Association, and in connection with Mr. Guessaz, of San Antonio, prepared a game bill, which was presented to the legislative body at Austin at the last meeting. The bill was iron-clad in every respect, making possession of game *prima facie* evidence of guilt and providing fat fines for any violation of any of its provisions. It passed the Senate but was killed in the House by only seven votes. That is the situation in a nutshell.

But this is not all. This great State, with its boundless territory, at one time overrun with the nimble-legged deer, has a Governor who at present is under bond for violating the game law in Nacogdoches county. In February, over a month deep into the chase season, this man, who should have set the example as a sportsman, as the foremost citizen of the State, hid himself to the wilds of Nacogdoches county, kills a deer when the law forbids it and when he is spoken to for a statement by a representative of the press, replies that he thought that "Nacogdoches county was exempt from the application of the law." A great excuse for a sportsman to make, isn't it? Of course Mr. Hogg is so benighted that he does not know that even if the good law on the books of Texas does not apply, there is an unwritten law which is engraved on the innermost lining of a true sportsman's soul, which reads: "Thou shalt not kill at seasons set aside by nature as mating time."

## CHICAGO AND THE WEST.

[From our Staff Correspondent.]

## A Woolly Bear Country.

At the World's Fair, as I have earlier mentioned, I met a Western newspaper man and former government scout, Mr. J. W. Redington, who told me about some good bear country, the best, in his opinion, now left in the West. Asking Mr. Redington for such details as he could add, he writes me as below. The unique letter head of the *Puyallup Commerce* is worth fac-simile reproduction, and the copy of the paper which Mr. Redington adds is as startling all the way through as the letter is at its start. I am satisfied that Mr. Redington's bear story is due to have won on it, and know his friend is the right sort, but some way I can't escape the idea that no bear hunt out in that section will be quite complete unless Mr. Redington is along. Mr. Redington's full name is J. Watermelon Redheadington, as his card implies. The letter follows:

DEPARTMENT OF BEAR HUNTING AND BIG YARNS—DICTATED.

THE GREAT PUYALLUP VALLEY IS THE HOTBED OF THE  
HOP-VINE AND THE FRUIT-TREE.

Puyallup, Wash., Jan. 8, '94

To E. Hough,  
Forest and Stream  
Chicago

In answer to your elegant  
epistle of last fall.

DEAR SIR—Referring again to our conversation at World's Fair about a good bear country, etc., I think that the man you want to arrange with is Capt. S. G. Fisher, present address Blackfoot, Idaho. When I was scout and war correspondent in '77, I served under him, and he is a man to tie to. You can read what Gen. Howard says of him in his book "Chief Joseph; His Pursuit and Capture," page 231. Capt. Fisher and his nephew have some quartz mines in the Salmon River region, and they are complete pack and hunting outfits, and they know every part of the wild region. Blackfoot is quite a town on the Utah Northern R.R., about twenty miles from Pocatello, Idaho, on the U. P. R.R. Anywhere near there would be a good point to start on a hunt. And Capt. Fisher knows just where to go to get game. When I went into the bear country I went from this side. But come to figure on it now, I see that the best starting point now would be from near Blackfoot or else from near the end of the Wood River branch of the U. P. R. R. Capt. Fisher is an intelligent gentleman, who has been post trader and agent on the Bannock and Shoshone reservation for about twenty years. He resigned last spring to superintend development work on his fisher mine in the Salmon River region. My last letter from him is from Blackfoot, Idaho, where he moved his family when he left the agency at Ross Fork, Idaho. When I was there last he had quite a collection of Indian curios, etc.

If you or any other Chicago gentlemen think of going after big game, drop a line to Capt. Fisher, and if you can get him to rig up an outfit and go you will never regret it. He is a man among men.

Hoping to meet you at the No-Winter Fair, and that '94 will be prosperous to you and FOREST AND STREAM, I am, very respectfully, etc.,  
J. W. REDINGTON.

## Hoodooos.

There are such things as hoodooos. We had one in Texas. It was a decoy duck with a broken nose. The fellow who found that decoy in his fleet always had poor luck, and was fortunate if he got back home without getting wet. We tested this so often that no room remained for doubt.

## A Horned Doe.

There are such things as horned does (Virginia deer), at least there is one head of a horned doe at old man Dorch's place at San Antonio, Texas. The head only remains, but the testimony is direct and not to be doubted.

## Expensive Head.

At San Antonio is Albert Friedrich's 78 points head, which was illustrated in FOREST AND STREAM. This head cost in traveling expenses and all about \$600. It could not be bought for \$1,000.

## All Hens.

When the bluewing teal first appear in Texas from the North in their migratory flight, they are all hens. You will see no white bars on the head.

## To Load Buckshot.

To load buckshot so they will shoot close and even, put in a loose layer, then separate the shot from each other, by rolling up little spills of stiffish paper, letting these stick up clear out of the top of the shell. Then put in the next layer of shot, which will be identical in arrangement with the layer below. After all the layers are in, clip off the tops of the paper rolls even with the top of the shell, put in the wad and crimp. The shot will not jam or scatter wildly, and this method of loading is better than the use of bran, cornmeal or tallow. Percy Stout, of Morrilton, Texas, devised this way.

E. HOUGH.

## Buffalo Poachers in the Yellowstone.

FORT YELLOWSTONE Wyo., March 17.—[Special to Forest and Stream:] Capt. Scott, in charge scouting party, reports from the Lake to Captain Anderson that Park Scout Burgess has captured Howell, the notorious Cooke City poacher with ten fresh buffalo skins, on Astrating Creek, near Pelican. The prisoner has been ordered brought in. This is the most important arrest ever made in the park.

E. HOUGH.

## "The Beautiful Flower Garden."

READERS OF FOREST AND STREAM interested in gardening will appreciate "The Beautiful Flower Garden," from the press of W. Atlee Burpee & Co., Philadelphia. The book is written by an artist, F. Schuyler Mathews, in collaboration with a professional grower, and is illustrated by over 200 drawings and reproductions from photographs.

A bright idea was that of the author to show how plants of different varieties appear just after they have sprouted through the ground. All amateur gardeners know how extremely difficult it is to tell the little seedlings from weeds. With these sketches, made direct from nature, any one can tell what would be a poppy and what would be a rag weed.

All the works previously published on this subject are expensive, treating of great estates and parks; this book is for the million. The subject matter is drawn from the best in the artistic world of gardening, showing the influence of the formal English style, the Italian renaissance and the art of the Japanese upon gardening. An important part is that devoted to descriptions of flowers easily procured and grown from seeds, bulbs and cuttings, with bright sketches showing their forms of growth. The prevailing idea in the book is to teach harmony in the arrangement of flowers and plants. The price is 50 cents, postpaid.

## Camp-Fire Glickerings.

"That reminds me."

WHILE on a visit to a friend about a month ago, at Montreal, the conversation turned upon the subject of rats, which my friend stated were very troublesome in his house, and so cunning as to defy all attempts to catch them.

I mentioned a case where a rat had been troubling me in my office, finally making his headquarters in one of the drawers of my desk. I set a trap one Saturday night, and was rewarded by finding it on Sunday morning, part of a rat's fore leg. On Tuesday night, hearing a noise in the drawer, I called assistance and routed out the rat, which we finally killed, and we found that the injured member had been neatly gnawed off at the "elbow" joint, and was already perfectly healed.

"Oh!" said my friend, "you can't expect much from country rats. If that had been a Montreal rat, now, he'd have stolen one of your pen handles and made himself a wooden leg."

Major X., a retired English officer, who lived some months ago in the Credit Valley district, Ontario, used to tell the following story of a wonderful pointer owned by him:

"I went out fishing one day, accompanied as usual by my dog. Our route lay along the bank of the river, which was at the time remarkably clean. Suddenly the dog wheeled around and pointed stiffly at the water, and following the direction of his point I could dimly perceive a large fish, though why the dog should point a fish, I could not at the moment imagine. However, I adjusted my tackle, put a minnow on the hook, cast my line, and in less time than it takes to tell it, I had a fine pike on the bank.

"As the dog still continued to point him, my curiosity was aroused, and taking out my knife, I cut open the fish, when the mystery was solved—there was a snipe in the pike's belly."

## Sea and River Fishing.

## VON BEHR OR BROWN TROUT.

AMONG the "distinguished immigrants" from foreign waters the European brook trout is now nearly as well known in the United States as our own *fontinalis*. The active history of its introduction dates back only eleven years, and yet the fish is now thoroughly acclimated in Colorado, Maryland, Michigan, Missouri, Nebraska, New York, Pennsylvania, Wisconsin and other States.

In some waters, notably in New York, there is a difference of opinion about the wisdom of its introduction, and this was foreseen by the late Prof. Baird, who devised and set in motion the machinery of exchanges of fish eggs with foreign countries. It may prove interesting to readers of FOREST AND STREAM to know how the eggs of the trout were first obtained, especially as the request for them was sent from the office of this journal by Mr. Fred Mather. The letter follows herewith:

OFFICE OF FOREST AND STREAM PUBLISHING CO., Nos. 39 and 40 Park Row, New York, Dec. 23, 1883.—My Dear Professor: We think it desirable to introduce both the European brook trout (*Salmo fario*) and the grayling at the new hatchery at Cold Spring. Should you have an offer of any from your foreign correspondents we will be glad to receive and care for them. Very truly yours, F. MATHER.

On the next day the Commissioner replied to Mr.

VON BEHR OR BROWN TROUT.

Mather, and we extract the portion relating to foreign eggs desired at Cold Spring:

U. S. COMMISSION OF FISH AND FISHERIES, Washington, D. C., Dec. 23, 1883.—I note what you say about eggs of European trout and grayling. I am offered plenty of trout eggs, but have hitherto declined them; will, however, ask Von Behr to send some. Yours truly, S. F. BAIRD.

On Dec. 29, 1882, Prof. Baird wrote to Herr von Behr announcing his intention to ship 500,000 whitefish eggs, 100,000 lake trout eggs and 25,000 eggs of the brook trout. He had already sent eggs of various kinds, including California salmon. His letter concluded as follows:

U. S. COMMISSION OF FISH AND FISHERIES, Washington, D. C., Dec. 29, 1882.—Dear Mr. von Behr: Mr. Mather is about starting a new hatchery on Long Island, near New York, in which he will do a great deal of work for the United States. He thinks he would like to have some eggs of the European trout. Can you send him some? Very truly yours, S. F. BAIRD.

The eggs were received in due time, and on March 20, 1883, Mr. Mather wrote to Prof. Baird concerning them:

COLD SPRING HARBOR, N. Y., March 20, 1883.—My Dear Professor: Mr. Blackford asked me about those German trout eggs. I told him that I received them through you, and we decided that the State had no claim on them, although we sent Mr. Green 12,000. If you have any orders concerning them we will be pleased to receive them. They are hatching rapidly, and as Frank Clark has asked for some we will send him a lot without waiting for further orders, as they cannot be delayed long. Hoping that this will meet your views, I remain, Very truly yours, F. MATHER.

The introduction of the Von Behr trout is, therefore, due to the suggestion of Mr. Mather; but it was effected by Professor Baird, whose friendship for and cooperation with Herr von Behr begun many years before the exchange in question was broached. The first streams to receive the young trout were a branch of the Pere Marquette River in northern Michigan and a brook at Caledonia, N. Y. It is not unusual at present to collect 250,000 eggs of this species at a station in one season.

The Von Behr is a large trout, much larger than the brook trout, and should never be planted in waters in which the latter fish is native, unless the risk of exterminating the smaller fish is first fully considered. The Von Behr, under favorable conditions, reaches the weight of 30 lbs. as, for example, in Finland where a fish of that size was caught last year by Mr. Thesleff, as described recently in these columns. A wild specimen, 7 years old, taken in the United States, weighed about 11 lbs.

The trout thrives in clear, cold, rapid streams and at the mouths of streams tributary to lakes. In its movements it is swift and it leaps over obstructions like the salmon. It feeds usually in the morning and evening, is more active during evening and night, and often lies quietly in deep pools or in the shadow of overhanging branches and trees for hours at a time. It feeds upon insects and their larvae, worms, mollusks and small fishes, and, like the rainbow, it is fond of the eggs of fishes. In Europe it is described as rising eagerly to the surface in pursuit of gnats and is said to grow most rapidly when fed upon insects.

It begins to spawn at the age of two years in America, the season extending from October to January. The eggs are from one-sixth to one-fifth of an inch in diameter and yellowish or reddish in color. They are deposited at intervals during a period of many days in crevices between stones, under projecting roots of trees, and sometimes in nests excavated by the parents. The eggs are covered by the fish to some extent with gravel. They hatch in from 40 to 70 days, according to temperature of the water. The young thrive in water about fifty degrees Fahrenheit. Sterility is common in females, and breeders have been known to cease reproduction when 8 years old.

The trout is in its prime from May to the end of September. Its flesh is very digestible and nutritious, and deeper red than that of the salmon when suitable food is provided; the flavor and color, however, vary with food and locality. Insect food produces the most rapid growth and best condition.

T. H. B.

## ANGLING NOTES.

## Will American Saibling Rise to the Fly?

My friend, Frederick Bryton, the actor, came to see me last year after a brief visit to Sunapee Lake, New Hampshire, where he had failed to take a single Sunapee saibling on the artificial fly. Mr. Bryton is a fly-fisherman pure and simple, and if the fish that he seeks will not take a fly he never catches them, for he will fish with no other lure. Knowing that I had been to Sunapee Lake several years in succession, he asked me in substance: Will the American saibling or Alpine charr of Sunapee Lake, rise to the fly? I was obliged to say: Honest Injun! I do not know that any one has taken this fish with the fly.

My visits to Sunapee have been made in June, latter part; July and August, when the saibling are found only in deep water, and therefore I have not even tried to catch them with the fly. In fact, I do not know that any one except Mr. Bryton has tried them with the fly, and during the time of two visits that he made the fish were in deep water, where they could not see a fly on the surface. What I do know is that the saibling affects the small Skinner spoons throughout May and early June, and on the spawning beds in late October, when hundreds are taken for the State hatchery for breeding purposes.

These are the only times when the fish is at or near the surface, and possibly the right fly has not been offered at the right time and in the right place; for there is no known reason why they should not take a fly if it is presented to their notice. The ouananiche early fishing at Sunapee is casting or sinking a live smelt, the natural food of the saibling; no one apparently has tried the fly so successful with the brook trout and the ouananiche. I further know that next May Dr. Quackenbos proposes to

devote considerable time to casting the fly for this charr, and he has promised me the record of his experience when I join him at the lake in June. In the meantime I can give an extract from a letter relating to the experience of an English angler fortunate enough to enjoy a day's charr fishing in a Lapland lake; it was the opposite of Mr. Bryton's. Although informed that this rüding or red trout would take neither fly nor metallic bait, but could be caught only in nets. Piscator equipped with flies and spoon baits made his way to the birch-bordered water, with alpine environment, the home of the coveted charr. Attaching a silver spoon with red lining to his line, he soon felt a heavy tug, and thus describes the battle that followed:

"Down to the bottom went the something, and there sulked in 60 ft. of water. But the tackle was strong and we soon made him show himself—a sight never to be forgotten. A splendid slaty-blue fish, shaped like a plump mackerel, pearly spots along the broad sides, belly gleaming a vivid pink, fins dyed like the fingers of rosy morn to an almost crimson hue, and the edge of each fin outlined by a pencil mark of silver.

"No sooner did he show himself than he jumped fully 2 ft. out of the water. We had no gaff, and netting in our small and flimsy boat seemed a ticklish proceeding, so we made for the shore, where, after a dozen splendid rushes into deep water, C. netted him. He was in the pink of condition and weighed 2 lbs. 8 oz."

This describes to perfection a spring battle with a Sunapee saibling, whose colors, however, affect the cream with the same pearl spots and white ribboned fins.

Dr. Quackenbos has told me that one May he hooked on a cast smelt a 4 lbs. saibling which made for each pound of its weight a magnificent 2 ft. leap into the air. Our Lapland angler later tried the fly: "I cast well out into the lake, keeping myself as far back from the water as

possible. A bar of pink and silver flashed through the waves, and a grand fish threw himself bodily out of the water on to my Scotch fly. I knew that he was well hooked and at once gave him the butt and led him into the depths of the lake. C. netted him for me after twenty minutes of hard fighting. His weight was 3lbs. 10z., and on my fly tackle his fighting qualities appeared to far better advantage than had been the case with the victim of the spoon."

Similar tactics brought other specimens of *Salmo alpinus* to book. May we not expect that the saibling of Sunapee will also take the fly, soon after the ice goes out in the month of May? No one has made a study of this at Sunapee, for all are content to capture the fish with live results, and whisper it in the bushes, worms. I verily believe the American *alpinus* will do as his Lapp congener when feathers and silk to his liking are deftly offered.

#### Fingerling Fishermen.

On the back of an old letter which relates the capture of undersized brook trout, and the disgust of the writer at such unsportsmanlike conduct on the part of the "fingerling butchers," a friend of mine wrote:

"Oh the depravity!  
Dig a big cavity,  
And in all gravity,  
Tincture with brevity  
Lives of such men."

#### A Baby Tarpon.

Mr. Alfred C. Harmsworth, an English gentleman at present in this country for the fishing, writes me from Marco, Florida: "Between constant traveling and fishing our correspondence is sadly in arrears. Following the advice of Dr. Trowbridge, which you sent me, I came to Punta Gorda. Although they did exceptionally well in January, no tarpon had been taken for three weeks. Yesterday I had a big day at Naples, where we are staying. About forty pounds of 'trout,' lady fish (very game this), red snapper, etc., and one tarpon—a baby tarpon of 10lbs., nevertheless the first this year at Naples."

"To-day I have come down here, the most southerly inhabited spot on the Gulf of Mexico side of the State, and am writing this in a very wabbling small boat while patiently waiting for silver king No. 2. Florida (this part of it, indeed) is undoubtedly the best place for all-round fishing in the world."

"Just now a big shark gave me three-fourths of an hour's hard work. I reeled him in, and while getting my revolver from my pocket he jumped almost into the boat, and—crack! My No. 18 bass wire was snapped. Shark is fairly game. The best small game fish in Florida is the ladyfish (local name probably). One jumped fourteen times yesterday, and fought very much like a salmon of twice its size. I find a good sprinkling of English over here for the fishing this year. Will write anon of my sport. Am having an immense time and well fixed generally."

There is a family of ladyfishes (*Albulidae*), and the fish that Mr. Harmsworth refers to is *Albula vulpes*, commonly called ladyfish or bonefish, game on the hook, but not highly regarded for the table.

#### Spawning of Rainbow Trout.

A correspondent, writing from Jackson, Mich., under date of March 6, says: "I saw, at Allegan, Mich., to-day what was called by the fish warden of that place a rainbow trout. It was caught in a net by men who said they were fishing for suckers, and who turned it over to the fish warden. It was taken at the foot or lower side of a dam, and was a female fish, full of spawn as large as double B shot. It measured 22in. from tip to tip, 4½in. wide, and weighed 4½lbs. I always supposed that trout of all kinds were fall spawning fish. Will you state in your notes in FOREST AND STREAM whether the rainbow trout and landlocked salmon are spring or fall spawners?"

Landlocked salmon spawn in the fall, October and November, and rainbow trout spawn in the spring. In the McCloud River, California, where the spawning of the rainbow trout has been closely observed, they have been known to spawn as early as Jan. 10 and as late as May. Stone has said that it was reported to him that the rainbow trout was spawning somewhere in the State of California every month in the year. This is owing to variations in elevation, latitude and temperature. In New York State, in confinement, the rainbow trout spawns from March to May, but eggs of this fish have been received in New York during the first few days of March that were taken from the trout in Michigan, therefore they must have spawned in Michigan in February. Further, the spawning season of the rainbow trout and our common brook trout, *fontinalis*, have become so nearly identical in New York in some instances that the two species have been crossed. This was accomplished by bringing together late-spawning *fontinalis* and early-spawning *irideus*. Temperature may advance or retard the spawning of either species.

#### Smelt in Rivers.

A gentleman in New Hampshire writes me: "I am obliged for the letters you have written in FOREST AND STREAM about smelt eggs. I have in mind one of the rivers in southern New Hampshire which I think needs some sort of food for the fish now in it. There are five dams on the stream in a distance of five miles, and rapids or falls at each dam. I have doubts if I should plant either adult smelt or the eggs, whether the fish would find their way to the sea, over the dams or through the sluices, and be lost, or if they would run up stream still further. If they will do the latter that is what I wish, but as it is a public stream I do not wish to go to the expense of planting smelt only to lose them."

The smelt is not a stream fish, they enter streams from the sea, or tributaries of lakes, if they are landlocked, only for the purpose of spawning. They run up the streams at night, spawn, and return to the sea or lake before morning. It would be a waste of fish, money and time to attempt to stock a stream containing five dams or to establish them permanently in any stream. As soon as the smelts are hatched they run down into the water, sea or lake, into which the stream empties. I have seen thousands of little smelt at the mouths of the streams in which they were hatched, and their size gave the best evidence that they lost no time in leaving the nursery stream.

My correspondent does not say what species of fish he wishes to feed. If trout, the best food for planting the

stream is fresh-water shrimp; if black bass are to be fed, plant crawfish. Both of these crustaceans are easily and cheaply obtained, and they are very prolific.

#### To Preserve Salmon Eggs.

A correspondent in Portland, Oregon, wishes a formula published in FOREST AND STREAM, which he may use for preserving salmon eggs. I think I can say, after due deliberation, that the gray hairs in my head are due, in part, to experiments in this direction which ended, as a rule, in failure. But at this moment I have eggs and fry of brook trout, brown trout, Loch Leven trout and salmon (*salar*), that were taken and hatched more than two years ago, and they retain their color perfectly, so that the eggs look as if they were just spawned and the fry look as if they were just hatched. They are preserved in equal parts, in bulk, of glycerine, water and alcohol. The formula was given to me by Mr. Mather, of the New York Fish Commission.

In the impregnated eggs the embryo is to be seen as perfectly and clearly as if they had never come in contact with anything but pure water. The eggs and fry are in bottles, and a year ago I used them to illustrate a lecture upon fishculture, when they were poured out into open glass vessels, and for the time the preserving fluid became slightly cloudy, owing, as I afterward thought, to the cold, but they are now perfectly clear again except for the sediment in the bottles containing the fry—the eggs have no sediment. Alcohol and water, eighty per cent. of the former, and twenty per cent. of the latter, will preserve the eggs, but it will turn them white and they become opaque instead of semi-transparent as in nature.

A. N. CHENEY.

#### FISHING WITH A BARE HOOK.

WHEN I was a boy we used to consider the act of fishing with a bare hook as the very acme of pleasureless and profitless follies. Indeed we often used the phrase, as descriptive of any enterprise that afforded neither present enjoyment nor prospective advantage; and I might have gone on forever in the same way of thinking, if chance had not brought me to the good city of Oswego, on the south shore of Lake Ontario, where the art is practiced to very great advantage.

The Oswego River, a large and powerful stream, bears the annual tribute to Ontario, of an extensive chain of lakes in the interior of the State of New York. Near its mouth the river is about 500ft. wide, 'and 8 or 10ft. deep, and it flows rapidly in a rocky bed. It divides the city of Oswego into two nearly equal parts, and furnishes abundant water-power for its numerous mills and factories. But it is not of these that I intend to speak.

Every spring, beginning about the middle of April, the river is visited by a prodigious number of fish of the genus *Catostomus*, commonly called suckers. Doubtless they are inspired by a tribal tradition, transmitted from their remotest ancestors, to the effect that the Oswego River is an admirable place to set up housekeeping and bring up a large and interesting family. They seem to ignore the fact that the river in reality is polluted by factory waste, and obstructed by mill-dams surmountable only by the aid of absurdly impossible fish-ladders.

The fish enter the river from Lake Ontario, and work their way slowly up stream against the strong current.

SUCKER FISHING.

They swim close to the bottom, and often lie motionless for long periods in the shelter of some stone, their heads pointing up stream; or they may cling to the smooth surface of the rock by their sucker-like mouths. They appear to have no disposition to feed, and steadfastly refuse the most tempting lures. The river water is turbid from the spring freshets, so the fish are concealed from view and therefore can not be reached with the spear. The laws of the State, and the swift current for that matter, forbid the use of nets and seines. So it would seem that the fish were in a fair way to avoid capture.

The young men and boys, however, have discovered a way to circumvent them, and provided with an apparatus which I shall presently describe, they eagerly await their coming. A cynical writer has summarized the gentle craft of angling as "a stick and a string with a worm at one end and a fool at the other;" and to make use of this definition, without in any way indorsing it, I will begin at the worm end of the arrangement to describe the tackle.

Three large fish-hooks are first fastened together back to back, so as to form a grapple. Two of these grapples are generally used, and are hung about eight or ten inches apart from the ends of a wire spreader. This last is simply a piece of wire about a foot in length, bent in such a way as to form an eye at each end and one in the middle. To the middle of the spreader a strong line with a heavy sinker is attached, and this with a long and very stiff bamboo pole completes the outfit.

There are two bridges across the river at Oswego about

a furlong apart, and between them a stone wall has been built right in the middle of the river, parallel to the current, so that the river is divided and the water flows on each side of the wall. This wall is about 6ft. wide on top and stands 2 or 3ft. above the level of the water, which here has a depth of 10 or 12ft. This forms the fishing ground, and here upon every pleasant day, as long as the season lasts, dozens of men and boys can be seen, engaged from morning till night in active pursuit of the fish. The operation is exceedingly simple. The angler casts his line upstream, allows the sinker to carry the grapples to the bottom, and then by a motion of the pole draws them gently down with the current. If the hook touches a fish he gives a smart jerk to fix it firmly, and at once lands his fluttering victim on the top of the wall. When one looks at the size of the river, the chance of lowering a hook down into it and pulling it up with a fish on it seems infinitely less than that of drawing the grand prize in the lottery. In fact, it is like discharging a fowling piece in the direction of a forest in the hope of bringing down some game. But owing to the abundance of the fish, to the great crowds and shoals of them that are forcing their way up the river, large numbers are caught. Indeed, it is not an uncommon thing to pull up two at a time.

The fish thus caught consist of two or three different varieties of suckers. They are of good size, averaging 2 or 3lbs. in weight, and much larger ones are sometimes taken. Occasionally a fisherman hooks on to a 100lbs. sturgeon. Then there is a lively contest, as a result of which the sturgeon sometimes departs with the tackle.

Locally these suckers are called "shad," "mullet" and other delectable names, but it would require more than this to make them really desirable for the table. They certainly have a sad lack of flavor and an undoubted surplus of small bones.

They eat them, though! Oh, yes! Perhaps the best that could be said of them would be a remark once made to me by an old hunter when we were reduced to living on porcupines: "They are a long ways ahead of nothing."

CAPT. DAN C. KINGMAN, U. S. A.

#### BOSTON NOTES.

SOMEHOW the weather has played the smelt fishermen "fast and loose" this spring. At least the smelt fishermen who usually so much enjoy smelt dipping with their hands in Parker River, and at other rivers along the North Shore, have had no success worth mentioning this spring. The fashion is to go with lantern strapped to the waist or the forehead, wading with rubber hip boots up the stream to where the spawning smelt are struggling to reach the swiftly-running fresh water. The smelt are seen by help of the lantern's rays, when, with a quick dip of the fisherman's hand he is in the basket. On spring nights in former seasons it has not been more than fun for a single fisherman to dip out 20 to 30lbs. of smelt in a few hours. But this spring no good hauls have been made. Mr. Claude H. Tarbox, an authority on Parker River smelt, had made one or two smelting excursions up to the end of the open season last week, but with poor success. He thinks that the unusually early spring has demoralized the time of smelt spawning some way. On Tuesday evening he did succeed in getting twenty-eight, however, and the twenty-eight weighed 5lbs.

The tackle dealers say that there is a good deal of interest being manifested among the trout fishermen, and the lines and rods are being put in readiness for the first of April. Perhaps it is the early coming of the robins that has set the fishermen to thinking. On St. Patrick's Day these beautiful harbingers of spring were singing merrily in the suburbs of Boston. Reports from the Maine woods and waters also indicate an early spring. Mr. C. Stevens has advices from Andover which say that the snow is going fast, and that the water in Richardson Lake is rising rapidly, with every prospect of early departure of the ice from the Rangeleys. He predicts that the ice will be out of these lakes as early as April 25, provided the weather holds fine. He is making further improvements on Camp Vive Vale, in the Narrows of Richardson Lake. On the other hand, Capt. Fred C. Barker is of the opinion that the ice will be late about going out, for the ice is always very slow about leaving the lakes when there is a good deal of snow, and consequently snow-ice on top of the clear blue ice. The snow-ice stops the action of the sun's rays, and the blue or solid ice melts away only very slowly.

Mr. Harry Dutton is at home from his winter trip to Florida. I learn that he has built a camp at Borie Beach, Big Richardson Pond, and that one of the Soules will have charge of it. Doubtless they have already torn down the old Borie Camp, that has sheltered so many hunters in days gone by. It was there that Herbert Kempton, of the Boston Herald staff, caught the tame bear (?) last year, and exhibited him, with a string to his leg, to the rest Camp Stewart party. He played trained bear in the evening, with Mr. W. T. Farley as manager, and came very near getting put out of the camp, to sleep among the hedgehogs, to which class of animals the bear caught at Camp Borie really belonged. A man who will go deliberately to work to make the ladies believe that a porcupine is really a bear, deserves to be put out of camp.

SPECIAL.

#### Potomac River Fish Protection.

By recent Congressional legislation, the shad and herring of the Potomac River will be protected on their spawning beds, a bill having been passed to continue in force the provisions of the act approved March 2, 1885, entitled "An act to protect fish in the Potomac River in the District of Columbia, and to provide a spawning ground for shad and herring in the said Potomac River."

It would be well if the protection contemplated in this act could be extended to the black bass in the vicinity of Quantico and Potomac City, which have been caught by hundreds in seines, and are doubtless still being taken by the same means. We have this statement from an eye witness, an enthusiastic bass fisherman whose feelings were outraged by the shameless destruction of the fine fish recently introduced by the Government.

#### Robin and Trout Tackle.

PITTSBURGH, Pa., March 15.—To-day I saw the first robin of the season in the Twentieth Ward of this city. He was lively, looked large and fat, and made me feel like going fishing.

J. W. HAGUE.

### Mortality Among Barracudas in California.

BARRACUDA put in an appearance one month earlier than ever before. They came in immense quantities and something happened to them. Thousands came ashore dead, while the water was full of fish that seemed dazed, swimming about with their heads out of water. Among them were some halibut, yellowtails and some other fish, but they were principally barracuda. All kinds of theories have been advanced, one that fishermen had used dynamite bombs, another that it was caused by volcanic disturbances from the bottom, another that the fish coming from tropical waters become chilled; then another, that the newspapers put forth much to the disadvantage of fishermen and fish dealers, that it was disease, and there has been a great falling off in the consumption of fish in consequence. The disease theory cannot be correct, for decomposition does not set in any sooner than if the fish were taken from the sea in the natural way. (From letter of John L. Griffin, dated Los Angeles, Cal., March 2, 1894, to the U. S. Fish Commission.)

This will recall the accounts of fish mortality in the Gulf of Mexico and the almost total extinction of the tilefish off the northern coast, due in all probability to sudden changes of temperature. This may have caused the destruction of the barracuda above mentioned. The subject, however, is one which has provoked endless speculation and diverse theorizing, and will doubtless continue to excite the imagination of persons who see the results of causes which appear, to them, deeply mysterious. The explanation of such phenomena is to be found, not by guessing, but by the known methods of scientific research. One good thermometer is worth more than a thousand conjectures in the solution of such problems.

### Pennsylvania Association.

A LARGELY attended meeting of the Pennsylvania Fish Protective Association was held at the rooms, 1020 Arch street, Philadelphia, on Saturday evening, March 10. Communications conveying intelligence of infractions of the fishery laws in different localities were read and thoroughly discussed, and prompt action was taken to secure the correction of same.

The association has been the favored recipient of Thaddeus Norris's original manuscript of the "American Angler," which valuable gift was highly appreciated and a vote of thanks tendered to its donor, Dr. Howard Kingsbury, of Philadelphia.

### Adirondack League Club.

THE annual meeting of the Adirondack League Club was held last week in this city. The following trustees were elected to serve for three years: Mills W. Barie, D. L. Snyder, Harry E. Howland, Robert C. Alexander and Spencer Aldrich. The hold-over trustees are Warner Miller, A. G. Mills, Warren Higley, Henry S. Harper, Wm. H. Boardman, Rev. Dr. S. J. Nicolls, Frederick G. Burnham, Dr. B. G. Fernow, Alexander R. Harper and Wm. G. DeWitt. At a meeting of the Board of Trustees the following officers were elected: President, A. G. Mills; Vice-President, Warren Higley; Treasurer, Henry S. Harper; Secretary, Robert C. Alexander.

### Scioto River "Salmon."

CIRCLEVILLE, O., March 15.—*Editor Forest and Stream:* I have taken FOREST AND STREAM six or seven years; I get it at our news stand; and permit me to thank you for publishing so readable and interesting a paper. Our local fishermen have caught several salmon already this spring, near the city, at the State dam in the Scioto River. I am afraid, though, that they were not caught by legitimate means. Probably caught in dip nets. I saw quite a number exposed for sale, from 10 to 20 lbs. weight.

J. W. L.

## Fishculture and Fish Protection.

### Landlocked Salmon Planting.

DIXFIELD, Me.—*Editor Forest and Stream:* In a late issue of your paper was an article from the pen of A. N. Cheney in regard to the habits of the landlocked salmon, a query whether, if the eggs were taken from fish that spawned in the outlet of a lake, the progeny of those fish in Maine with these fish. We had thousands of eggs from Sebago which were taken from Crooked River (an inlet), also from Grand Lake stream (an outlet). I have observed their habits carefully. I think that if everything is favorable they prefer the inlets; but I have not the least doubt but what they select what is the best ground to propagate their species, without any regard to whether it be an inlet or an outlet.

Neither will they always return to the stream in which they are hatched and bred. The first salmon eggs we had for distribution in Maine of any amount came from Sebago Lake. Some 2,000 of them I put in Weld Pond, part in the outlet and a part in a tributary. Some four years after they appeared at both places. About that time we established a hatchery there, and hatched quite a large number of eggs from both Sebago and Grand Lake. Flowing into this pond are six large streams, all excellent trout streams and spawning grounds, to which they have free access for miles. On one of these we had our hatching house. In all of these streams we put thousands of salmon fry, yet never a single salmon came into these streams to spawn. They all go into the first stream they were placed in and the outlet, the larger number in the stream. The pond is now one of the best fishing grounds in Maine for trout and salmon. Why they will not come into all the brooks to spawn is a conundrum to me. My judgment would be that the streams they discard would be the best, being larger, with pure water, plenty of shade and deep pools. The young fry will stay there till one to two years old, when they go to the lake and never return. There are many strange things about fish. I presume they know why they do so, I don't. I can only guess. I may be right, but don't feel at all sure. Am sure I don't know it all.

H. O. STANLEY.

### Salmon Disease—Correction.

EAST POLAND, Me., March 16.—*Editor Forest and Stream:* In my communication on "Disease of Embryo Salmon," published in your issue of March 17, I used the term "infectious" where contagious would have more correctly expressed my meaning. The sentence where the term occurs should read: "In 1890 it (the disease) attacked only certain lots, not appearing to be contagious, but running in families."

C. G. ATKINS.

### Iowa Fish Commission.

FISH COMMISSIONER T. J. GRIGGS has sent to Governor Boies his report for the years 1892 and 1893. The work of rescuing and distributing fish from overflowed areas so energetically begun by a former commissioner, was carried on by Mr. Griggs with untiring industry and excellent results. Nearly a million and a quarter of crappie, black bass, pike-perch, yellow perch, pickerel and catfish were deposited in the waters of the State, and two and a half millions of good fish were planted in Spirit and Okoboji lakes from sloughs in their vicinity. Carp were sent to 127 applicants, and the owners of 166 private ponds were supplied with such kinds of fish as they deemed suitable.

Iowa is richly provided with beautiful lakes and streams, and many famous summer resorts owe their charms mainly to their advantages for lovers of the line and reel. "Spirit and Okoboji lakes with their tributaries have a shore line of 50 miles, Clear Lake 20 miles, Storm Lake 15 miles, Wall Lake 12 miles, Twin Lakes 15 miles, Iowa Lake 8 miles, Lake Park or Silver Lake 6 miles, besides many other lakes all fairly well supplied with fish, and thousands of pleasure-seekers visit their shores every year for fishing and recreation. Spirit and Okoboji lakes are, beyond question, the most popular summer resorts in the Northwest."

The law relating to fishways is found defective because it can be interpreted to mean that fishway outlets should be flush with the top of the dam, which construction does not afford an opportunity for fish to pass over the obstruction. It is defective, too, in compelling the Commissioner to prosecute offenders before a justice of the peace, from whom there lies no appeal to a higher court. One of the evil results of this law is seen in the existence of 116 dams in various parts of the State, which are still unprovided with fishways.

Commissioner Griggs has prosecuted over 600 offenders against the fish laws, and has secured 500 convictions, which yielded to the credit of the school fund an amount nearly equal to the appropriation for the Fish Commission. He

T. J. GRIGGS,  
Iowa Fish Commissioner.

would, however, divert a portion of these fines to the compensation of deputy fish and game wardens, and the balance to the State treasury, to assist in maintaining the Fish Commission.

The Commissioner received about 200 letters last year informing him of the slaughter of game out of season, but as he had no jurisdiction over such cases, he could do nothing. Spearing through the ice in winter and seining upon the spawning grounds and in the approaches to spawning grounds are among the common offenses against fish protection. Mr. Griggs recommends that the laws be so changed as to make the ownership of a seine *prima facie* evidence of guilt, and to require the owner to furnish proof that such unlawful device was not used by himself or by others while in his possession to catch fish.

For the purpose of protecting Iowa fish over boundary lines he recommends the enactment of the Minnesota law which provides that the possession of any bird, animal or fish shall be *prima facie* evidence that it was the property of this State, and that it was caught in this State, to disprove which it shall be necessary to show by the testimony of the party who actually caught the same, that it was not the property of this State, or that it was caught outside of this State. Whenever it shall appear that any bird, animal or fish was caught outside of this State, it shall be *prima facie* evidence that it was the property of the State in which it was caught, and that it was caught at a time, in a manner and for a purpose prohibited by the laws of the State, and shipped in violation of the laws thereof, to disprove which it shall be necessary to show by what direct and positive evidence that it was not the property of the State, or that it was killed at a time, in a manner and for a purpose permitted by the law of the State, and that it was not shipped in defiance of any law.

The appendix to the Commissioner's report contains chapters on the fishes of Iowa extracted from Dr. Bean's work on the Fishes of Pennsylvania, and concludes with the fish laws of Iowa, approved April 1, 1890.

### Smelt Eggs.

DIXFIELD, Me.—*Editor Forest and Stream:* I notice in the last issue of your paper an article from Mr. A. N. Cheney in regard to smelts and where their eggs can be obtained. In the last two years I have gathered the eggs from the bottom of the brooks in Maine, where the smelt run up to spawn about the time the ice goes out in the spring; and I have transported them successfully to stock other ponds and lakes in our State. Many of our ponds are well stocked with the fresh-water smelt; in fact, all or nearly all that are the natural habitat of the landlocked salmon have them.

The smelt deposit their eggs on the grass, moss, sticks and stones on the bottoms of brooks. They stick to whatever they touch, and can be easily gathered by thousands. I have packed them in damp moss or sphagnum, and had no trouble in transporting them where they would not be more than a

day or two on the route. Of course many are poor, but I should judge that 40 to 50 per cent. hatched. They should be handled carefully and placed in running water in some stream that flows into the pond you wish to stock. This can be done much cheaper, and I think it a surer way, than to undertake to transport the live fish. The eggs could be sent by express, and would need no one to accompany them. I doubt if one would get any benefit from the live fish the first year, as they would be very likely to get rid of their eggs before reaching their destination; and one could gather ten times the amount of eggs in the same time as to catch live fish; also transport eggs much cheaper and in smaller package. If the parties who desire them will write me, I think I could procure them a box of eggs well packed and delivered at express office for about \$10. This would have to be done about the 1st of May. I could not warrant them to reach their destination in good condition, but I think the chances would be that a fair percentage would be good. They hatch in about two weeks after the eggs are deposited, and go to the lake at once.

The fresh-water smelt in Maine vary very much in size in our different ponds. In some they never attain a length of over 3 or 4 in., while in others they grow to 12 or 14 in., running larger than they do in salt water. All our ponds that contain smelts are so nearly connected with the sea that they might have originally come from that source. I consider it very necessary to have them in ponds where it is desired to stock with salmon, as they are their natural food. All the waters in Maine which are the original home of the salmon contain the smelt.

HENRY O. STANLEY, Com. of Fisheries.

### Nets in Inland Waters.

HERE is some sound reasoning from the pen of Gen. D. H. Bruce, of Syracuse, who writes the "Easy Chair" column of the *Sunday Standard* of that city. Gen. Bruce is president of the State Association for the Protection of Fish and Game, and has given much study to the subject of the food fish supply.

"The subject of increasing and cheapening fish food is constantly awakening new interest throughout the State, the public having become convinced of its importance. Men who are leading in such direction are beginning to be looked upon as philanthropists rather than enthusiastic sportsmen with selfish purposes to attain. Nothing is more certain than unless protection is given to the waters of the State they will very soon become barren of fish food. No convincing argument can be made, it would seem, in favor of opening the inland waters to a few men making it their vocation to supply Eastern markets to the exclusion of thousands of people who would enjoy the recreation of a day now and then in a legitimate way of taking fish. If it shall be said that net fishermen should be allowed to supply our inland markets the answer is, that inland markets would be neglected for the better Eastern markets. At Brewerton alone the shipments during forty-three months, scattered over the five years—1874, '75, '76, '77, '78—amounted to 8,359 barrels, or 1,757,849 lbs. Nobody can now tell the quantity shipped during the same period from Cleveland, Bernhard's Bay, Constantia, Lakeport, Bridgeport, South Bay and other places. It is a well known fact that the grand swoop which was made, almost wholly removed fish from the lake. There was profit in it to a few fishermen, but what benefit did the people at large receive? This record would be repeated everywhere if nets were again to be allowed in the fresh waters of the State. The public is beginning to understand this fact and to give proper support to protective work. The need of it is manifest to every thinking, intelligent person, and somebody must perform it if fish food is to be saved to the people."

### Where to Find Game.

Where to find game is oftentimes a perplexing question. The sportsman who strikes a good spot generally keeps the information as close as possible, in order to enjoy exclusive privileges.

Along the line of the Baltimore & Ohio Railroad in Virginia and West Virginia, such places are numerous, and it is remarkable how little they are known. The mountain streams abound in game fish. The South Branch of the Potomac is considered the best black bass fishing stream in America, the Cheat, Youghiogheny, Potomac and Monongahela Rivers are all excellent fishing streams. The hills and valleys adjacent are fairly alive with game—partridge, wild turkey, grouse, pheasant, wild pigeon, quail, rabbit and squirrel are plentiful, and in the back country thirty or forty miles from the railroad, deer and bear can be found.

Good hotels are convenient, and horses and guides can be secured at reasonable rates.

For circular showing fishing and gunning resorts reached by the B. & O. R. R. address Chas. O. Scull, Gen'l Pass. Agent, B. & O. R. R., Baltimore, Md.—*Adv.*

## The Kennel.

All those who love a dog because it is a dog, and not merely a medium for the accumulation of dollars and cents, are invited by the editor to consider this department as one in which they can discuss amicably any subject that is of interest to the canine fancy, without fear of their communications being subjected to personal comment or ridicule.

### FIXTURES.

#### "DOG SHOWS."

March 27-30.—Philadelphia Kennel Club, at Philadelphia, Pa., Dr. D. B. Darby, Sec'y. Entries close March 16.  
April 17 to 20.—New England Kennel Club, at Boston, Mass. D. E. Loveland, Sec'y. Entries close March 31.  
April 18 to 21.—Southern California Kennel Club, at Los Angeles, Cal. C. A. Sumner, Sec'y.  
May 1 to 4.—Special show of St. Bernard, Collie, Spaniel and Fox-terrier clubs, in connection with the Hempstead Farm show, Madison Square Garden.  
Sept. 10 to 14.—Toronto Industrial Exhibition Association, at Toronto. C. A. Stone, Sec'y.

#### FIELD TRIALS.

Sept. 5.—Manitoba Field Trials Club, at Morris, Man. R. J. Gallaugher, Winnipeg, Sec'y.  
Nov. 6.—International Field Trials, at Chatham, Ont. W. B. Wells, Sec'y.

### POINTS AND FLUSHES.

[By a Staff Correspondent.]

CAPT. C. M. MCMURDO writes me as follows: "Mr. Brailsford is to send me out Dogwood shortly. I have not his breeding yet, but know the dog well, as he was with Mr. Johnson's dogs last fall, in Manitoba, in charge of S. Hallam. We worked our dogs a great deal together, owing to the kindness of Mr. Johnson in giving us kennel room, etc. You will remember that he was first in the Derby at Morris, Man., last year, where he showed himself to be a very high-class dog. Mr. Davidson (who was one of the judges) writes me that he did better afterward at Chatham, though he lacked experience on quail."

With Capt. McMurdo's continued interest in the pointer, progressive improvement in that breed is certain.

B. WATERS.

900 SECURITY BUILDING, Chicago.

# CHICAGO DOG SHOW.

March 13 to 16. Entries, 773. Dogs benched, 691.

THE Windy City has scored again. There may be no other city in this wide country that can stand three dog shows in thirteen months and crowd the aisles of each one, but we doubt it. Chicago people love dogs, there is no doubt about this, and this adoration is not restricted to class, the Ward McAllisters joggling elbows with those who have to work hard for their bread and butter. Hard times may be a good subject to talk about, but the dog shows this season have so far more than held their own—New York with its one dollar admission probably holds the record, Columbus and Detroit both did well, and Chicago with fifty cents admission was a fitting climax to the Western circuit, and we only hope Philadelphia and Boston may do as well. Afternoon and evening the aisles in both buildings during the Mascoutah Club's fifth annual gathering were crowded, uncomfortably so at times. The arrangement of the benches and rings was much superior to former years. In Battery D were placed the six rings arranged as at New York and most of the large dogs. The rest, about 400 dogs, were benched in the adjoining Second Army building. Here the light was not very good, gas having to be burned during the day. There was some delay in getting the benching up here on Monday night, the management not being able to get in till 10:30 P. M., everything, however, was ready to put up, and early Tuesday morning the benching was ready for the dogs. This occasioned some little inconvenience among the early comers on Monday, but could not be helped.

Judging commenced promptly at 10:20 A. M., and soon all the judges were in full swing, dealing joy or sorrow as occasion served. Mr. Payson, Mr. Woodward, and other members of the club acted as stewards, and rings were well served when one takes into consideration the fact that the dogs were as a rule benched without much consideration in regard to rotation. This is wrong, and the good example set at New York should have been carried through. Judging was completed, with the exception of a few of Mr. Mortimer's specials, the first day, and his work was done by noon Wednesday.

The different members of the committee worked with a will, but especial praise should be given to Mr. Bryson, the president, who was here, there and everywhere, early and late the whole week, attending to the varied interests of the show. In this he was ably seconded by Mr. Walter C. Gunn, the treasurer, who was active in making everything go smoothly. Mr. S. C. Payson I also noticed was always near when wanted, in fact the committee is such in fact as well as name. Dr. Withers attended to the veterinary part, and was a second Glover for being in evidence when wanted. With such willing workers it is little wonder that John Read's duties as superintendent were considerably lightened and the show worked smoothly from beginning to end. The Mascoutah Club has demonstrated that it could give a show when required without any catchpenny devices to swell the entries.

The quality of the dogs entered could scarcely be excelled, as the prize list will show, many of the best dogs from New York having taken in the circuit. The valuable prize list demanded such recognition. Prizes were paid promptly on Friday, and from what we could gather the club must have a balance to the good, although the expense for hall rents was higher than formerly. The buildings are rather low and with little ventilation it was a difficult matter to clear the atmosphere of offensive odors, but "Sanitas" did as well for it as anything could do. Spratts Company benched and fed, and this year there was no grumbling on their account in regard to benching. Joe Locke attended to the press duties, and his work was apparent in the space afforded the daily papers, though several paragraphs leaked in in regard to one of the judges that good taste might well have forsworn, as there was really no cause for such "sectional" remarks. A number of well-known dog men were to be seen during the week, in fact, most of the principal owners in the West and many men interested in field trials were present.

The catalogue was well and tastefully arranged on the model of that of the W. K. C., interspersed with sketches from the *A. K. C. Gazette*. There were no objectionable features, such as litters of puppies, mock auctions and such devices, that tend to lower the tone of any show. All things considered, the Mascoutah Club scored a distinct success, and we are glad of it.

**MASTIFFS** (*James Mortimer, Judge*).—Chicago shows for some time past have been notable for the excellent quality of the mastiff classes, but this time the quality excelled any former year, and the open dog class brought out such a gathering of good mastiffs as we have not seen in many years. Nearly all the best dogs we have were there, and between the three first there is little to choose. There were no challenge dogs; in bitches, Lady Colens, looking as well as she probably ever will do, scored over Sinaloa, so much in substance, size, massiveness of head and body that the issue was scarcely in doubt. In open dogs, a grand class, first went to the Detroit winner, Prince Cola, who beats the second, an old acquaintance, Melrose Prince, in volume of skull and body. Emperor William, third, loses in volume of skull, but has a better muzzle; shown a bit leggy, too. Melrose is lower to the ground and deeper-bodied. Leamington, whom we spoke so well of at the West Side show, has since then been very sick and has not been improved thereby, his muzzle becoming somewhat pinched and wedge-shaped; his immense skull makes this more apparent; his ears are also faulty, otherwise he is a very good dog. Emperor Maximilian loses in size and body to the others. Cube, vhc., has a fair-shaped head, but is small. Alarm is another nice dog, by Ormonde, standing on good legs, should have more rib. Marquis, vhc., looked tucked up and light in body; in fact, most of Mr. Bunn's dogs showed the effects of the sickness that prevailed in his kennel the past three or four months. Rossington and Baby Bunn well deserved their letters; the former is too high in brow, and a very short head gives him a "bully" expression. Baby Bunn is a light-eared dog, lacking in expression, faulty in back; head should be deeper and squarer. The bitch class was not so large, but the entries were choice. The well-known Lady Diana was considered the best, followed by Minna Minting, a reversal of the Detroit decision the week before. Rowena, a good-sized bitch, light in markings, came third; her head has scarcely breadth enough, and she needs more rib and body. Cerene, well known, deserved her place. Fortuna, vhc., is a little flat-faced, and muzzle should be deeper, forelegs and elbow are not quite truly formed, nice body and hind parts. Persia, hc., was lucky; her face is long and a bit flat, eye light, is light in body, too. Vistula II. I liked better; better in head and body. In the absence of Frederick the Great, Druid walked over in puppy dogs; he is faulty in ear carriage, otherwise a rather promising sort of youngster. First went to Campania in bitches, and Gyda might well have had a second, though other prizes were withheld. In novice class first to Rowena, who should in our estimation have given place to Leamington, whose massive head, better bone, depth and shape of body, and greater character would seem to fully entitle him to the place. Beaufort Prince, well known, came in for third. Tiger, a correctly colored sort of dog, mean expression, was given c.; head of fair shape, bad tail. The kennel prize fell to the Peoria kennel.

**ST. BERNARDS** (*Miss A. H. Whitney, Judge*).—As in mastiffs, Chicago can always be counted on for a good show of his breed, and especially so in home-bred ones. The entry this time compared more than favorably with New York.

Challenge rough dogs brought out Sir Bedivere, Aristocrat and Fernwood Bruce, the first named looking better even than at Detroit, and won easily; but between Bruce and Aristocrat the struggle was keener. Bruce loses in head, slightly in body and bone, but is better on his legs all round, and gets it a bit in length of body. To was the only representative of her class. Open dogs (5) cannot be considered a very happy effort on the judge's part. Safford, first, is a dog brim full of quality, with perfect markings, and needs only a little more stop to boast a good head, nice body and legs, in fact, a well-made dog all round, showing lots of type and quality. Second to Captain Nedep, a son of Lord Melrose, a wide jump in type, for he has absolutely nothing but his size and flat coat to recommend him for the place. He is devoid of markings or white on face or collar, a big, upstanding, light-ribbed dog, washy in color, wretched hocks, very weak head of fair shape, a dog very far from the winner in type and quality, although of the same blood. Tramp, third, is rightly named, he needs grooming and "culturing"; a bit; he has great bone, a fair stamp of head, though a trifle long, good head markings, no collar, shows quality. Lord Dante, fourth, should have come second; he is an all round, well-made little dog, who would be improved with dark shadings. Alton III. is a dog standing on excellent legs, muzzle should be deeper and squarer, good color, bone and body especially, a dog of excellent quality that might well have been nearer the top. Mauprat, vhc., deserved his letters and no more in this class. Complete was lucky, a dog showing too much white, fair head, but narrow, shown too fat, and has little character. American Caesar, vhc., is the best headed one in the class, and taking all into consideration, type, size, bone and general characteristics, he should have won, though he was shown thin he was in good healthy condition. Caesar first, Lord Dante second, Safford third and Alton III. fourth, would have suited better. There were half a dozen in the class superior to Captain Nedep. Lord of Richmond is another nice sort of dog, with immense bone, should be broader in chest and deeper and longer and squarer in muzzle, excellent coat and legs, body should be longer, but it has good depth and ribs. Boris, hc., has a wedgy muzzle, but good skull, feet turn out a little and his body should be longer. Melrose Rex loses in muzzle, coat curly in places.

In judging such a class as this where there were so many dogs that had no earthly chance to win, it would be better if Miss Whitney would clear a lot of the worst out of the ring instead of keeping them there all the time, where they take up much desirable space that is required to move and properly examine the good ones. The bitch class (15) furnished material for careful judging, too, as several good ones were near the top. First went rightly to the beautiful-headed Rustic Beauty, who only loses in fatness of coat. The well known Alta Berna claimed second; she was well shown, and so was Lady Adelaide II., whom we have not seen for some time; both should be deeper and squarer in muzzle, and Adelaide have more stop. Sunray, fourth, I preferred for second place, taking body, legs and head into consideration, although she perhaps does not show quite so much face quality as Adelaide, she beats Alta in head and front. Arline, reserve, should be deeper in stop. Lady Glady's, of the mentioned ones, is quite a fair sort, faulty in muzzle. A lot of hc. cards were given but some did not deserve so much consideration; such was Karenina, too curly-coated, fat, and nearly all white. Maudina, hc., should have more stop and ribs. Fernwood Rose II. well deserved her letters; she is a little scooped out before the stop, shows too much stop, but was well shown and might have had another letter. Tot was shown too fat; would be improved with more stop; good legs and body. A good-looking pup in Columbus won in dog pups (6); he was in New York; bit flat-faced but head is fairly well-shaped, is narrow-chested at present; good coat and body. Easter Cyclone is but a weak-headed one, in fact outside the winner there was little to attract attention. In bitch puppies (4) first went to Aristocrate, a nicely-grown youngster, that could be much improved in head if stop were more defined. Flora, second, loses considerably in head, which will never be a good one, too light in muzzle and straight-faced. Sadie Lassie, third, has rather a nice head but small, shows intense quality but turns her forefoot out. The novice class (14) for roughs was a mixed lot and the winners have been described in open classes, where they occupied the same positions, Uarda, described last week, getting reserve; all but four numbers were carried on from the open class and therefore required little judging.

Smooth challenge dogs had two entries, Melrose and Alton II., the former loses in massiveness of head what he gains slightly in expression and markings, is improving in head, broadening out; both are well made dogs, showing lots of quality. There were no entries in the corresponding bitch class. In open dogs (5) first went to Lawrence Garza, a well made, typical little dog; second to Argyle Alpha, a bit plain in coloring, lacking shadings, hocks might be stronger, fair short square head, excellent bone, a bit back in pasterns, nice coat, will improve. St. Augustine, third, was hardly treated, his fine head, size, quality, body, in spite of being in light flesh, good color and general type, should have placed him well first, as he was at Detroit; Patrician, fourth, has a nice, well-shaped, short head, but not enough of it, in fact, is bitch-headed, dips a trifle in back, a well grown youngster that with time will do much better. Victor Anton, c., loses much to the others, in poor condition. In open bitches (7) the Argyle Kennels furnished another winner with Judith's Rachel, faulty in ears, a long cast bitch, light in body, good legs, fair shaped head, muzzle should be deeper, too much white but shows a good deal of quality in head; Sunol, second, was at Detroit; Fernwood Queen, third, was lucky; she has a poor, shallow head, not stop enough, good legs and body; Valkyrie, fourth, is also plain faced, not deep enough, good body, trifle straight behind, rich body color, but more face shadings would improve her, a true smooth; Pratt's Belle, reserve, I thought harshly treated; she might have been at least second or third. Columbian Queen, vhc., I could not find. In dog puppies (2) Argyle Alpha was again placed over Patrician, and the same order was maintained in the novice class, Argyle Kennels with a very even lot won both kennel prizes, and as their dogs were benched together made an interesting display.

**GREAT DANES** (*James Mortimer, Judge*).—The interest in the exhibit of these dogs was considerably dampened by the fact that Kennel Lawrence's dogs were not present, although entered. Major McKinley, looking very well, walked over for his challenge prize. In open dogs Stanley, second at Detroit last week, won nicely from Anderson's Sandor, also well-known, getting broad in skull. Leo Waldeman is too pinched in muzzle, straight behind, but, barring hindlegs beats Hero R., fourth, in type; he was shown thin, good forelegs and bone. Hero is very throaty, big eye, cheeky, good bone and legs. Lady Hanno, the winner in bitches (formerly Minca) beats Flora in body, the latter being too flat in loin, muzzle too short, skull fair; in fact, is better all round in type and quality. Ruth, third, is a rather common, short-headed sort, not very straight in front. Neverzell did not arrive till the third day and was, of course, too late for competition. Jessie, first in puppies, has a plain, snipy head and is very throaty; there is little to choose between her and Nord for the position. In novices Major D. won; head too coarse and too much stop; I liked the second winner, a harlequin of much sprightlier type. Juno R. is of the plain, common, coarse type, a black. With the Kennel Lawrence eleven entries the exhibit would have been a good one; as it was it was disappointing for Chicago.

**NEWFOUNDLANDS** (*Miss A. H. Whitney, Judge*).—A poor turnout. One dog from whom first was withheld; too long in head, good size, faulty in coat, too open. Flora I., first

in bitches, is small, long, narrow head little stop, shown fat, fair coat.

**RUSSIAN WOLFHOUNDS** (*Roger D. Williams, Judge*).—This exhibit was merely a repetition of Detroit, with the exception that Vinga's unlucky accident allowed Jerry an easy win, especially as Svodka in jumping off the bench, slipped on the floor and was quite lame in the ring. In open dogs Col. Dietz again beat Odroski, who is looking a bit light all through. Cedric II., third, loses considerably to both in front and size and coat. In bitches, Riga and Irmina again took the blue and red ribbons, this putting the former in the challenge class now. Gypsy Queen was given third over Lady Dietz, who has gone all to pieces. In puppies, however, her quality pulled her through, and she beat the same lot from Mr. Gould's kennel that she faced at New York. These dogs need conditioning and fattening up; they are very much in the rough. Marlboro Kennels rightfully took the kennel prize, having a better conditioned and more even lot.

**DEERHOUNDS** (*Roger D. Williams, Judge*).—Olga was the only challenge representative. In open dogs (3), Bruar II. won nicely from Strebor, whose light bone, faulty feet and straight second thigh keep him back, fair coat. Rob, third, loses in size and substance to the others. Lassie, the winning bitch, I think is inferior in size, head, bone and coat to the second, Madge. Bruar II. and Olga took the specials.

**GREYHOUNDS** (*Roger D. Williams, Judge*).—Gem of the Season easily won again, while Master Rich this time was placed over Pious Pembroke on account of condition, though thin himself. Pious Pembroke, poor fellow, will not need any further attention. In challenge bitches Southern Beauty was rightly placed over the dainty Bestwood Daisy, both nicely shown. In open dogs (4) first went to a rather coarse dog, Glenkirk, especially so in neck and plain behind, good front for his age, ten years. This dog has sired puppies that are winning stakes in England this year. Yorkshire Lad, second, is heavy in shoulders, lacks quality, though a fairly well built dog. Dick W., third, is too broad in front, does not stand over enough ground, wide in skull and ears too large. Black Cloud, fourth, has a nicely turned body, good front, and I almost preferred him for third place. In bitches Mr. Williams made the only break we have ever seen him guilty of, by placing Hasty Pudding, a pretty enough little bitch, but not straight in front and heavy in shoulders, over Yorkshire Lass, a capably made one all through, perhaps a bit coarse, but little fault can be found with such a strong symmetrically built animal; Hasty Pudding's capital hard condition was no doubt some cause for her placing, but should not outweigh the other's good points. Jennie Glendyne, third, is much of the same build as Lass, but heavier in shoulders, skull too round and wide and would do with more rib. Grae O'Mally, fourth, is a smart little one, a bit light throughout and is too short in body and falls away in quarters too much. Idlewild, reserve, is a little wide in front and is hardly true at elbow and would do with more swell of rib. A. W. Purbeck took the kennel prize, his exhibits showing very much more quality than the rest.

**SPANIELS** (*J. F. Kirk, Judge*).—It is some time since we saw this veteran judge in the ring, but nevertheless he has not forgotten a spaniel, and though we could scarcely follow him in some of his decisions, on the whole he judged acceptably.

In Irish water spaniels many of the entries were at Detroit, so it is not necessary to write about them so fully. The winner in dogs, O'Clery, has a rather short, plain head, coat long and little curl. Patsy B., second, was shown last week, and so was Garry Owen, third. Sport, c., is too smooth in coat. In bitches, Biddy Malone was again placed over Kitty of Cork, as at Detroit. Mallard Duck, third, has a rather good head, topknot and ear, good eye, but lacks proper curl of coat. Erin was absent.

There were no Clumbers shown. Field spaniels showed up well and were almost a repetition of New York as regards the principal winners. In challenge dogs, Newton Abbot Torso this time beat Newton Abbot Farmer, but the latter is lower on the leg, better in head and bone. In the corresponding bitch class the well-known Sussex Bridford Ruby was placed over Rosedale Bess, both from the Keasbey Kennels. In open black dogs (5), the well-known Echo again scored, beating Sport in muzzle, which is too long and plain-shaped, is down in quarters, good coat and ear. Third went to Dan, who also loses in depth and squareness of muzzle, coat and front. Dash White has a rather good head, but his coat should be flatter. Bitches had three entries, and Daisy Dean and Dorothy were both placed over the Detroit winner, Rose, being better in shape of muzzle and having more and better coat. The well-known liver, Queen, was alone in the next class for her color, and Joe won again in puppies.

Cocker challenge dogs had an entry of seven veterans of the fancy, and Black Duke repeated his Detroit victory. Brantford Red Jacket came next, with Red Roland reserve, Jay Kay, Othello, Red Doc and champion Middy being lookers on, the latter's lack of flesh being responsible for his unnoticed position, as really he is up to the winner's form when in shape. Miss Waggles, though looking ragged and out of coat, had no difficulty in beating I Say, who was well shown. Jessie C., also looking well, came next.

In open black dogs (7) there was strong competition and first went rightly to the well made Pickpania, who excels Woodlawn Prince in head, shorter and deeper, and in other parts he is just as good. Brantford Jet was lucky, his faulty front and heavy skull should have placed him behind Black Duke Jr., who beats him in head and only requires a little deeper, better furnished body. Douglas, reserve, is a bit too short in body and elbows turn out a little, a cocky sort, head too strong for his size. Wildfire and King Kole, hc., have been mentioned before. In bitches (14) it took the judge some time to single out the winner, but in putting Dart ahead of such a strong class there is room for disagreement; good head she has but her body is a bit long and light and her front is not true enough; Cora II. is better in body and front. La Dina, third, must depend on her body more than head for such recognition. Woodlawn Jude, fourth, should be shorter in head. Fashion, vhc., is too high in skull but good otherwise. Topsy S. in the same division seemed hardly treated, her head, front and body are good if the latter is a trifle long, she should have been well in the money. Nellie S. and Corktown Olio have been spoken of before. Any other color dogs, five faced the judge and most of them won at Detroit. Red Prince was chosen for the blue followed by Brantford Rufus; the winner is nice type all through, a little full in skull yet but good fault at his age; Rufus won at Detroit. Woodlawn Jim, third, should be a little cleaner in skull and straighter in front, his body should be a little shorter, otherwise a nice sort; St. Lawrence Prince, the winner at Detroit, should have been higher up, though his head would do with fining down a little, was well shown and is better than average in front; Dandy S., c., is poor in expression and too much stop, well built otherwise. In bitches (5) two being absent, first went to Tonita, a nicely made one, compact, built on good working lines, good front, if feet did not turn out a little. Red Rose, second, had all she could do to beat Woodlawn Polly, which she does merely in muzzle. Brantford Beauty, fourth, loses in front, coat and head to the others; Ruth S. should be stronger before the eye, nice body and legs, should have been reserve. Red Prince won in puppies with Black Duke Jr. second. Swiss Mountain Kennels took the brace and kennel prizes, while Black Duke scored over everything for the cup for best sporting spaniel, though close pushed by Miss Waggles, his condition pulled him through, though beaten in action by the bitch.

**COLLIES** (*J. A. Long, Judge*).—Probably a stronger entry than Chicago has ever seen before, being in great part a repetition of New York with only the Hempstead Farm Kennels

not showing. Wellesbourne Charlie and Roslyn Wilkes and Flurry III. and Jaky Dean in challenge classes was once more the order, and probably for the last time, as open class winners Sefton Hero and Charlton Phyllis will now have something to say. Open dogs had thirteen entries, Bendigo absent, though on the bench. Sefton Hero and Christopher occupied their accustomed positions, and the latter will now have an easier time of it. Chesterford Hero, looking very much better than ever before, came in for third; it is a pity he is not a larger dog. Toronto Wonder, fourth, still retaining his mane and frill, has lost some of his body coat. Scotsman, reserve, has too much stop, too full and round in skull, lots of coat, but not dense enough; a fine, up-standing dog, with scarcely the quality of the winners. Blizzard, vhc., was at Detroit; Douglas is a bit plain, and hardly shows the quality we look for from this kennel; needs more coat. Rhoderick Dhout deserved his letters. Charlton Phyllis won again in bitches, second going to Chesterford Hattie, who looked well, with dense coat, though scarcely long enough. Blossom, third, shows intense quality; is small, but well made, with a dense coat; a daughter of Christopher and the winner at the last December show. Donna, fourth, is a bit full and round in skull back of this she is a showy, nice bitch. Fanny Kay, reserve, is down-eared, plain in head, brown too full; for this place I thought Gypsey II. well in; head well shaped, but lack of white makes it a bit plain, nice body, but short of coat, gets her tail up too gaily at times. Lady Christopher and Lady Fidget are well known; they are out of coat. Grange Nellie has gone all out of form, coarse and fat. In puppies, the handsome little dog Orme won well from Hereward the Wake, whose lack of coat and wall-eye are against him. Puppies change so much it is little use commenting particularly upon them. Piper is a good-coated one, a little cheeky and strong in skull. Willowdale Pride, the puppy bitch class winner, I did not see. Elphin, second, has a rather coarse head and heavy ear, good coat. Cragston Kennels took the kennel prize, but were closely pushed by Chestnut Hill, coat, condition and all things considered. Novice class winners have been commented upon.

**POODLES (James Mortimer, Judge).**—The principal winners have been described so repeatedly lately it is not necessary to enter into a repetition. In the absence of Milo and Chloe, Dinah, from the same kennels, was the only challenge representative. In corded open dogs Bismarck rightly won, beating Parisian so much in cords and condition. Czarina, the only entry in the other class, was absent. In open black curly-coated dogs Rajah won again, with Lais, a smart-looking fellow, not so good in curl or head, second. Sidi, well known, took third. Dahomey, fourth, is plain in loin and quarters. Clicquot, reserve, is a smart stamp but coat is brushed out and a bit woolly. Moughlow is slack in back, good coat, but head rather short and coarse. Yankee, second last week, could get no higher than he; he looked tucked up and leggy, though a smart stamp of poodle. Diablo had wasted to a shadow, being very light in loin, or would have done better. Bess, Cybele and Miss furnished the corresponding class winners. Miss is soft in coat with little curl. In any other color a sort of a first cousin to a bobtail was given first, a white dog with little character and rough coat.

**BULLDOGS (James Mortimer, Judge).**—The entries here were all of well known animals, Leonidas and The Graven Image taking the challenge prizes respectively, which Leonidas further supplemented by taking the special for best in show. Romance and Sally Brass II. had each a walkover in their classes for 45lbs. and over; the former improves all the time; Sally is too high on leg and flat-faced, not broken up enough nor depth. In light-weight dogs Wal Hampton had little difficulty in beating the terrier body and front of African Monarch.

**BULL-TERRIERS (James Mortimer, Judge).**—These terriers always show up well at Chicago, and competition was strong in the various classes and wins well placed on the whole. In challenge dogs (2) Streatham Monarch had no difficulty in beating Dufferin, grown altogether too thick and cloddy. In bitches (2) Attraction again vanquished her kennel mate Starlight. Open dogs, 30lbs. and over (8), saw Cardonna once more returned the winner, followed by Duke of Rochester, Topsparkle and Billy Bulger, all dogs I have commented on quite recently. Bellerby King, vhc., was also at Detroit. Croydon Monarch has a nice head but lacks substance and falls in front to the others. Vesper Bell won once more in the corresponding class; should be cleaner in cheek and longer in muzzle. Edgewood Topsy comes next and ran her very close with Countess of Dufferin, who keeps her head well and stands on good legs, not far behind either. White Gypsy is cheeky and heavy in shoulder and was not well shown. White Queen loses in length of head, neck and shoulders. Under 30lbs., dogs (2), Rookery Boy beat Principio, but I think the latter scores all over in head and front. The bitch class was a smart one, the winner the cleanly-made Lady Rochester, who excels Jeanne D'Arc in eye and front, but latter has good neck and body. Lowland Duchess, third, is well known, while Pearl Rochester pushes her close; better in head and front. Mermaid, vhc., has gone off very much. Tarquin beats Croydon Fay in shape and character of head, but loses to the other in body and legs. Rookery Boy, Bellerby King and White Queen was the order in the novice class. The special for best heavy weight went to Cardonna, but barring having a little the best of Streatham Monarch before the eye and coat, the latter excels to our mind.

In the Boston terriers Tony, winner in heavy dogs, is too long-faced, light in body and "bully" front. Ben, the winner in under 20lbs., has a fair head, light in body, out at shoulders. Hector, second, loses in head but has a better front.

**DACHSHUNDS (John Davidson, Judge).**—Challenge entry Fritz K. was absent. In open dogs (3) Nips took the blue, followed by Knirps; he is coarse and his tail tickles the back of his neck almost. Jay beats Knirps all over in type and character, and especially in head and ear, skin and length of body, but was shown out of shape. Pelythosaurus also is of better type than the others, in spite of too much wrinkle. Topsy, too high in skull, short ear, good length of body and loose skin. Tips Zur Horst was at Detroit. Fritz is coarse and full in skull. In bitches there was nothing to beat Jargonelle, whose sweet head and type easily beat the rather coarse Gypsey. Nellie S. was absent.

**FOX-TERRIERS (James Mortimer, Judge).**—Many of the entries here have been seen on the benches during the past weeks. The quality was good on the whole and would have been better if the Blemton entries had put in an appearance. In challenge dogs Raffle had another walkover, Blemton Victor II. being absent and Grouse II. filled her place in the corresponding class. Open dogs (9) saw the old familiar names of Warren Safeguard and Tip Top at the top, the latter loses in skull and muzzle to the former, who is as game a terrier as he is good looking, and that is also the opinion of the Detroit coon with whom he struck up such an intimate acquaintance. Arrondale Mixture, third, was at Detroit. Hillside Royal, vhc., loses in body and muzzle, while Poverino, who seems to be a puzzler to all catalogue compilers, is losing flesh, but should have had another letter. Sport and Toronto are ordinary. Warren Captious and Duty headed the list in the next class; they were at Detroit; so was Lady Roseberry, third. After them came Richmond Jessamine, whose head is of good length, but a weak jaw is against her, besides being on the leg. Maple Leaf was at Detroit. In dog puppies (6) there was nothing particularly noticeable, Audubon Stipend and Seacroft King being the only mentioned ones; the former is the best, a promising sort, though he turns his feet out. Warren Topy was absent. In bitches (3) first to Maple Leaf, second to Chip, whom I could not find. Hillside Royal and Seacroft King and

Crocus II. were the winners in the dog novices in the order named and do not require much mentioning. In bitches Richmond Jessamine, Glendon Dixie losing in head and front, but better in body, and Maple Leaf furnished the only successful candidates for the money. The wire division was represented by Ebor Larchmont and Jess Frost, who won in their respective classes; both were at Detroit. The kennel prize went of course to the Rutherford Kennels, and Warren Safeguard took the cup for best in show.

**IRISH TERRIERS (James Mortimer, Judge).**—Jack Briggs again succeeded in beating Jackanapes in challenge dogs, while Candor made a very acceptable entry for the corresponding class. Brickbat, Jr., walked over in open dogs, and the same owner's Blue Ribbon had a bloodless victory in her class. She was described last week.

**SCOTCH TERRIERS (James Mortimer, Judge).**—"Tiree and Kilroy were placed as before in challenge class, and Kilree again beat Wankie Tam; both looked well. Culbrian this time beat Wankie Daisy; better head, ears and general type. Merry Coll, reserve, loses in coat, front and head to the winners." This is the Detroit report, and the entries were identical here.

Dewr was the only "Welshman" on the bench. Bedlington terriers had only The Professor and Mount Vernon Tibbie, both at Detroit, and described there. Each walked over for its \$10.

**DANDIE DINMOTS (James Mortimer, Judge).**—Pretty much the same entries again, King o' the Heather and Ainstey Daisy being the challenge winners in the order named. Tweed, winner in open dogs, was lucky; he is a good sort of rough dog, has not the coat and type of the others.

**SKYE TERRIERS (James Mortimer, Judge).**—Endcliffe Maggie beat Barnaby Rudge in challenge class, the big dog is a bit coarse all round and loses in action to the other. In Stafford, reserve, lost in coat; it is time he was retired if he is going to be beaten. Elphinstone had no difficulty in beating Toodles in open dogs, better head, coat and bone. Queen of the Skyes and Princess May occupied their accustomed positions. Prairie Flower, third, and Lady Stafford fourth, all well known. Prairie Flower beat Lady Stafford again in novices as well as Belle Stafford, who loses in head and bone. Puppy prizes withheld. Elphinstone and Queen of Skyes were the winning brace and Barnaby beat Elphinstone in head and length for best dog, the competition between Queen of Skyes and Endcliffe Maggie was keen; Maggie having the stronger head, but in action, coat and general type Her Majesty should get it a little bit; Maggie was never shown better.

Mieke was the only Schipperke and won. **BLACK AND TAN TERRIERS (James Mortimer, Judge).**—The same old faces, but the judge did not view them the same way as usual. Broomfield Sultan and Prince Regent were placed equal in challenge dogs; the former I thought should have won, especially in Prince's present bare-headed condition. In bitches I could not follow Queen III. second to Gypsey Girl, who loses in head, make and shape of body, especially set on of stern, is a bit clearer in leg markings, but tan is washy comparatively, both were well shown. Louie came in for reserve; she can beat Girl both in markings and body. In open dogs the well made, but rather coarse Glenwood won easily over Rochelle Turk and Rochelle Oolah; better markings, body and head. Rochelle Mac, reserve, loses in head, neck and front. Rochelle Sultan has nice tan, but faulty head and front. Rosette beats Rochelle Sultana in head and markings. For the special for best I should think Sultan or Prince Regent a truer-shaped terrier than Gypsey, whose queer set on of stern and round rump and washy tan should place her back; she is whippet too. Queen III. not being a first winner is not mentioned in this criticism.

**YORKSHIRE TERRIERS (James Mortimer, Judge).**—Something better than we usually find. The well known Minnie York in nice coat was alone in challenge class. Fispool Gem simply smothered the others in open dogs in size and coat, being well shown. Charlie, second, is short of coat but of fine color. Joker II. I could not get a sight of. Prince Harry must have lost in length of body coat for his body color is good and so is his tan; Dick York, Jr., vhc., is too leggy and big, coat short and mixed. In bitches first went by default to Pinkey York, a beautifully-coated little thing of excellent type and rarely shown. Toy terriers were poor, the winner, Lotta, being quite large but with fair tan and markings.

**PUGS (Miss A. H. Whitney, Judge).**—This breed is usually strong here, and this show proved no exception, some of the best in the country being shown. Curtis and Eberhart's Cashier furnished the challenge winners in order named, the former beats in size, but his black face is against him. Vega was the only entry in challenge bitches. In open dogs, a strong class, Al Von caught the judge's eye for first, as at New York. Bobbie Mac came next, big, coarse ear and head, though fairly well shaped, but smutty, good wrinkle, body and curl. Patsy Bolivar loses in skull. Finsbury Duke, fourth, should have been higher up, although shown light; he is as good in type and build as any head to smutty in color. Uncle Bob has the spot on forehead to perfection. In body, curl and trace, needs a deeper stop and would then be a good one. Duke Howard, vhc., faulty in front and ears set on too high, well shaped muzzle, which should be shorter. Sir Douglas is well known, is a bit coarse, but well made, good curl, muzzle should be shorter. Tito, vhc., had retired, and Drummer was not for competition. In bitches (5) Haughty Madge of course won; traveling does not seem to hurt her at all. Lady Verne, second, loses in muzzle and skull, and was too fat. Miss Decima pressed her close. Sprake's Patti, fourth, has a fair head and body. Hooker, reserve, has a rather plain, flat face, nice ear and should be clearer in head color. Miss Robinson is supposed to be a black pug, its tail curls and it has a "pugly" head, though too long for the fawns, body light and long, a puppy yet. Some fair puppies were shown, the best of all being Queen Zitka, a very promising sort, if a little shorter in muzzle, but still is well shaped, deep and square. Rookery Kennels showed an even lot for kennel prize and won.

**TOY SPANIELS (Miss A. H. Whitney, Judge).**—An excellent lot of these pet dogs, and the Western breeders are evidently going to make their Eastern friends look to their laurels. Calumet Alice, looking fat and big and curly, was alone in challenge King Charles. In open dogs Little Duke won nicely; a capital-headed one, short-faced and deep, good earage and body, excellent feather, even to tail, and rich tan markings. Second went to Bentick; excellent skull and stop, coat should be flatter, tan should be brighter, nice feather. Calumet St. Cyr is smutty in tan, short of coat, excellent short face and high skull. This was a class very much above the average. In bitches American Beauty, by Royal Duke, won well; she has excellent tan, skull and short deep face, good fat coat and length of ear, but should have been in better shape. Lady of the Lake, her mother, has nice face tan, a better skull than muzzle, that should be a bit shorter, nice coat and feather, a trifle bowy in front. Special for best King Charles spaniel went to Calumet Alice, but either Little Duke or American Beauty can outpoint her in her present shape.

In Blenheim Rex, Jr., won in dogs, stop not deep enough, rather flat head and long, good legs. Miss Ruby, the bitch, had a walk-over, not very good in forelegs, but excellent head, body and coat; she also won the special. Prince Charles and Rubys brought out Ruby Pasha for first, who beats Taffy in skull, eye and a little in coat, but is not so cobby and well made in body as the latter. In bitches Fasia could scarcely be shorter in face or better in skull; coat curls a little in places, but she has plenty of it, and good body and legs—a very good one. Miss Wally is another of the same

stamp. Quite a nice little Jap, faulty in one ear, carries it out, and should be shorter-faced—won without competition. In toy spaniel puppies Young America is a most promising short-faced pup, winning nicely in squareness of muzzle, eye and tan from Duchess of Bellevue. Fasia easily took the special in the lot.

**ITALIAN GREYHOUNDS (Rogee D. Williams, Judge).**—Sprite and Spring in challenge classes and Taglioti in open dogs were the winners; the latter is down-eared, but has a good, long, clean head and is of nice, dainty size. Tinnie and Lady Lee in the bitch class were very much under the weather when shown and had bad coughs; they should be blanketed this changeable weather. Lottie won in this class; she is too much out before the eye but very nice size in body and shape. Jos. Lewis took the kennel prize.

**MISCELLANEOUS CLASS (John Davidson, Judge).**—In dogs (3) first went to the bobtail Hardman II. and second to the "Pom." Sheffield Lad, a moderate Dalmation getting third. In bitches Blue Belle the collie was probably the only true bred entry, the other, Slightly, I suppose is a Chihuahua, though liver and tan in color. H. W. Lacy.

**FOXHOUNDS (John Davidson, Judge).**—The exhibits of American foxhounds were far away above the average exhibit at dog shows, both in quality and numbers. Mr. Roger D. Williams owned nearly all of them. In the challenge class for dogs Commodore had no competition. He is a hound of exceptional muscular development and foxhound quality, although his head could be improved, particularly in muzzle. In the corresponding class for bitches Femur had a walkover. She is a bitch of a great deal of quality. The four dogs in the open class for them were owned by Mr. Roger Williams, as were also five out of the six bitches in their class. First in dogs went to Simple Simon, excellent in body, legs and feet; leather good and even, muscular development; muzzle he was somewhat light and too round. Second went to Topgallant, rather lanky and long cast, and his head was not clean cut. Dickens, fourth, is short in neck and a trifle heavy in shoulders, and light behind, his head is quite good. The Admiral, fourth, is throaty, ordinarily good head and good in body, legs and feet. Topsy, first in bitches, is remarkably sound, and she stands squarely on excellent legs and feet. The bitches, after first prize winner, did not rate in merit so high as the dogs. La Jora, second, is but a fairly good bitch, while Loopey, fourth, is a leggy bitch, coarse generally, lacking in symmetry and inferior in foxhound character to those placed below her. Flossy, fourth, has a good neck, a well ribbed body, plain head and awkward carriage of ears. The kennel of Mr. Williams was a sorry lot. In English foxhounds Denmark had no competition in the class for dogs, while the sterling bitch Rosemary easily beat Torment in the corresponding bitch class.

**POINTERS (Mr. Tim Donoghue, Judge).**—The exhibit was rather inferior both in number and the quality of the entries. It was quite a disappointment that the competition was so light. Duke of Dexter won over Tempest in the challenge class for heavy weights, while Woolton Game, notwithstanding her age, easily beats the younger bitch, Josie Bracket, in the heavy-weight bitch class. Dogs over 55lbs. had but three entries, of which Sandford Druid was easily first. He has been described recently. Molton Banner was drawn finer in flesh and did not appear so heavy in build to the eye as he really is. Third went to Dictator, recently described, while fourth went to Sport Viscount Edisto, ears set on too high, muzzle a bit light and pasterns too strong. He shows some throatiness and has a well-ribbed body. There were four entries in the heavy-weight bitches, of which Hempstead Pearl, good in body, legs and feet, fairly good head, shows some throatiness and somewhat on the cobby order, won first. Second was won by Brighton Leda, short in muzzle, throaty, well built, but of ordinary symmetry. Beppo's Girl, third, has ears set high, straight shoulders and is somewhat too wide in ribs, and is more symmetrical than the winner of third, and also is superior in neck, head and shoulders. In light-weight challenge dogs Duke of Hessen was first over Rush of Lad, while in the corresponding class Lady Gay Spanker was first, Miss Rumor was second and Wild Lily was the other competitor.

Seven competitors faced the judge in the light-weight dog class. Ridgeview Comet was first, though hard pushed by Ridgeview Tenny, both well known, as is also the third prize winner, Hempstead Duke, while fourth went to the well-known field trial winner Lad of Rush. While the latter is a tidily built dog, he can never compete successfully on the bench with the best pointers. Luck of Kent, vhc., is long cast and has a poor head, though he is upstanding and is somewhat leggy, good in neck and fair, general symmetry. The bitch class had five entries, first going to Hempstead Blossom, a fairly good bitch, while second went to Devonshire Pearl, of more than average symmetry. Third went to the well-known Fan Fan II. Mab of Kent, thick in shoulders, short muzzle, good legs and feet, won fourth. There were seven in the field trial class, Tempest, Walton Game, Sandford Druid, Duke of Hessen, Ridgeview Tenny, Lad of Rush and Hempstead Duke. Duke of Hessen and Sandford Druid were first and second, third going to Hempstead Duke, though there was a far better one in Ridgeview Tenny. The kennel prize was won by Mr. T. G. Davey over the Hempstead Farm's exhibit, though the latter were a sortier and more workmanlike lot.

**ENGLISH SETTERS (Major J. M. Taylor, Judge).**—The classes were quite well filled, particularly the open dog class, which had twenty competitors. Toledo Blade and Albert's Nellie were the winners in the challenge classes for dogs and bitches respectively, with Bohemian Girl second to Nellie. Paul Bo, shown in good condition, again took first honors in the open class; second going to Washtenaw Grouse, third to Matane, all well known dogs. Fourth went to Paul Hill, light in skull and bone, curl in stern, good shoulders, body and quarters and fair general symmetry. The reserve went to Netherwood Nymrod, shown thin in flesh. Six were given vhc., Piercy Hill, King Gladys, Tremont, Price, Chesterfield Surprise and Ben Hur of Riverview. The first mentioned is plain in head, light barrel, out at elbows. King Gladys is a trifle leggy and light in bone. Tremont has a fairly good head, is heavy in shoulders, not quite heavy enough in loin. Price is slack built and too high on legs. The rest of the class was somewhat better than ordinary. The bitch class had fifteen entries, of which Luna, light in muzzle and bone, was first, second going to Daisy of Riverview, light in muzzle and bone, a trifle leggy, good in body, shoulders and fair in symmetry. Nellie Breeze, third, is a bitch of average quality. Flight of Riverview, fourth, is narrow in skull and muzzle, light head, bone and body, and while she has fair symmetry, she just escapes being weedy. The reserve went to Liberty II., while of the three which received vhc., Tube Rose is plain in head, and was too high in flesh. Arline was but average in quality and Miss Shattuck has a good head, though narrow in skull and deficient in short ribs. The bitch class was inferior to the dog class in quality. There were two dogs in the puppy class. Count Bo is plain in head, a bit large in knees, good neck, shoulders and general symmetry. Second went to Pembroke Dick, a large puppy, plain in head and short in neck. There were four bitch puppies. Belle of Riverview, first, is light in build and fair in symmetry. Second went to Elise, and third to Pembroke Lill, light in muzzle and bone. In the field trial class, the winners were Cincinnati, Toledo Blade and Paul Bo, first, second and third. Paul Bo is better than Toledo Blade in symmetry, shoulders and body, the latter is carrying a good deal of lumber, and in my opinion was inferior to Paul Bo. The Riverview Kennels took the kennel special prize.

**IRISH SETTERS (Major J. M. Taylor, Judge).**—The classes were inferior in merit and small in entries. Kildare Glen

ker. Best exhibit of four, T. G. Davey.  
**ENGLISH SETTERS.**—Best field trial dog, Cincinnatus. Best kennel,  
 J. T. Williams.  
**IRISH SETTERS.**—Best exhibit of four, Oak Grove Kennels.  
**GORDON SETTERS.**—Best exhibit of four, Dr. S. G. Dixon.

**SPORTING SPANIELS.**—Best American bred, Black Duke.  
**IRISH WATER SPANIELS.**—Best brace, Ruddy Malone and Patsy B.  
**FIELD SPANIELS.**—Best brace, Bridford Ruby and Echo. Best exhibit of four, R. P. Kenney.  
**COCKER SPANIELS.**—Best brace, Miss Waggle and Dart. Best brace other than black, Jessie C. and Toniba. Best exhibit of four, Swiss Mountain Kennels.  
**COLLIES.**—Best bred by a member of the Collie Club, Christopher. Best in open classes owned in Chicago, Toronto Wonder (2). Collie Club's silver medals—Best dog in open class, Sefton Hero. Best bitch ditto, Charlton Phyllis. Best born in 1893, Orme. Best dog or bitch in challenge classes, Wellesbourne Charlie. Best dog or bitch in novice class, Chestford Hero. Best kennel, Cragston Kennels.  
**POODLES.**—Best dog in open class, Rajah. Best kennel, Meadowmere Kennels.  
**BULLDOGS.**—Bulldog Club medals—Best in show, Leonidas; Graven Image, reserve. Best American bred, Burlington Belle. Best owned in Western States, Geo. H. Russell's African Monarch. Best in show, Leonidas.  
**BULL TERRIERS.**—Best in show over 20 lbs. (2) Cordonna. Best under 20 lbs. Tarquin. Best in show, any weight, Cordonna. Best puppy, Tarquin.  
**BOSTON TERRIERS.**—Best dog or bitch, Tony. Club medal, best in show (2), Tony, also best dog.  
**BEAGLES.**—Best kennel, Middletown Kennels.  
**FOX TERRIERS.**—Smooth, best dog in open class, Warren Safeguard. Garfield cup for best in show, Warren Safeguard. Best kennel, L. & W. Rutherford. Best wire-haired, Jess Frost.  
**SKYE TERRIERS.**—Best pair, Elphinstone and Queen of the Skyes. Best dog, Barnaby Rudge. Best bitch, Queen of the Skyes.  
**BLACK AND TAN TERRIERS.**—Best in show, Gypsy Girl. Best kennel, Toon & Symonds.  
**YORKSHIRE TERRIERS.**—Best dog in show, Fishpool Gem. Best kennel, Dr. N. E. Oliver.  
**PUGS.**—Best kennel, Rookery Kennels.  
**TOY SPANIELS.**—Best King Charles, Calumet Alice. Best Blenheim, Miss Ruby. Best Prince Charles, Fasia.  
**ITALIAN GREYHOUNDS.**—Best kennel, Jos Lewis.

### Louisville Kennel Club.

The following is from Mr. St. Marc M. Mundy, secretary of the new organization hereinafter mentioned:

Suppose you have heard about the new Louisville Kennel Club. It has just been organized or rather incorporated under our State law with a capital of \$2,000. It is not completely organized yet in all details as to its working officers, there being two vacancies to be filled to-night in the bench show committee. Have delayed writing you about this until everything was in working order, but will give the present list of officers and send you names of those elected to fill vacancies as soon as possible, also will give you list of members or stockholders.

Dr. David W. Yandell, Louisville, President; Hon. Henry S. Tyler, Mayor of Louisville, First Vice-President; Col. C. P. Atmore, General Pass. Agent L. & N. R. R., Second Vice-President; Col. John B. Castleman, Chairman Park Commissioners, Louisville, Third Vice-President; Roger D. Williams, Lexington, Fourth Vice-President; Norvin T. Harris, Louisville, Fifth Vice-President; Morris B. Belknap, Belknap & Co., Louisville, Sixth Vice-President.

Board of Directors: Dr. D. W. Yandell, Col. J. B. Castleman, Morris B. Belknap, Marion E. Taylor, J. L. Adams, T. J. O'Bryan, Hon. H. S. Tyler, Roger D. Williams, John Barrett, Alex. L. Semple, Dan P. Ritchey, Harry Weissinger, Col. C. P. Atmore, Norvin T. Harris, Jas. S. Phelps, Jr., Dr. J. B. Alexander, A. F. German.

Secretary, St. Marc M. Mundy; Treasurer, James Clark, Jr. Bench Show Committee: Dan P. Ritchey, T. J. O'Bryan, A. F. German. Superintendent, George H. Hill.

Additional list of members or stockholders: Ex-Gov. Simon B. Buckner, Warren N. Henderson, J. M. Vaughn, E. Altsheier, Harry L. Means, Chas. L. Nelson, W. G. Barrett, S. Zorn, Oscar Fenely, Louis Hite, Jas. B. Thompson, F. J. Hogan, Bland Ballard, J. H. Mansir, St. John Boyle, Otho Graves, Stanley Adams, D. G. Rowland, Geo. Bowman, T. P. Watts, Wm. F. Johnson.

The list of members as a whole contains the names of some of the most prominent business men, in fact, all the stockholders are prominent men, and their influence will make the dog shows we will give social fads.

We have secured the Armory on Seventh near Chestnut for holding our show in. It is well located and of easy access from any part of the city by car lines—you know we have an excellent street-car system of transfers here; can go from most any part of the entire city to another for 5 cents by transferring.

Roger Williams says the hall is one of the best adapted for holding a dog show in he has ever seen and capable of benching over 600 dogs; it is 180ft. long on lower floor by 60ft. wide with no posts, has a wide gallery running around the two sides and back, well ventilated and lighted. Adjoining the south side of the building is a yard inclosed by a 10ft. board fence. This yard is 200ft. by 40ft. and will make a good place to exercise the dogs.

Have just written on to join the American Kennel Club and try to get May 9, 10, 11 and 12 as the dates for our first show.

If Washington, D. C., and Nashville are to give shows this year near ours, Col. Atmore will arrange to have through-cars from New York to Louisville via Washington at cheap rates for the Eastern handlers. He is also going to get all the roads running into Louisville to give a special passenger rate of one fare for the round trip during the show.

Our premium list is going to be quite liberal, the purses amounting to nearly if not \$2,000 with plenty of club specials, some of the latter to be offered in a new form, viz., for braces. Have written on to all the specialty clubs asking them to give prizes for their particular breeds.

### "Vicissitudes of the Judging Ring."

Editor Forest and Stream:

The inclosed letter, which comes to me unsolicited, covers the one that appeared in your paper this week under the above caption signed F. M. Thomas and requires no comment from me.

A. CLINTON WILMERDING.

SAUGERTIES, March 15.—Mr. A. Clinton Wilmerding: DEAR SIR—I received my FOREST AND STREAM this evening and was surprised to find what was contained therein under the heading "Vicissitudes of the Judging Ring." I never saw Mr. Thomas until he made application to me to take charge of and care for my dogs at the New York show, and his use of my name in connection with the above is entirely unauthorized, as is also an attempt to connect me, even inferentially, with a train of circumstances which are said to have occurred, but of which I know scarcely anything—of my own knowledge. It is news to me that Barefoot was sent out because you did not consider him of cocker type. Mr. Thomas is also in error in stating that he handled Barefoot in the special. Barefoot was only a puppy, eligible to the classes in which he was shown by a few days, and competing as he did against mature dogs he probably got all he was entitled to—from the judge's point of view. At all events, when there is any kicking to be done which interests me I would prefer to do it in my own ornate style. I appreciate the difficulties judges labor under in the placing of dogs consistently in the ring too well to make them a target for newspaper criticism unless there be some flagrant breach of fairness.

My experience in the use of cockers in this country has taught me that we must have a dog for use higher on the leg than seems to be preferred by most of the Spaniel Club—on the bench; but that is no reason to my mind why the advocates of the different types should pound each other in the newspapers. Life is too short. FRANK K. PIDGEON.

### Denver Show.

"LANDED both feet; all well. Entries, 180."

JARRETT & DOLE.

### Meeting of the U. S. F. T. C.

THE annual meeting of the club was held on the afternoon of Thursday, March 15, in the 2d Regiment Armory, Chicago. The meeting of the board of governors was held first. There were present Messrs. P. T. Madison, who presided, Richard Merrill and B. Waters. There were fifteen members represented by proxy. Charges had been preferred against Mr. J. M. Arent for misconduct at the club's trials at Bicknell last year. The offense consisted in publicly impugning the decisions of the judges and reflecting on their abilities in an unpleasant manner. The occurrence was most disagreeable and seriously offended several members at the time, but it was understood that the matter would be officially acted on by the club. For certain reasons it was thought best to defer action till the annual meeting. Charges were preferred against Mr. Arent and a copy mailed to him in ample time to comply with the by-laws, which require that at least ten days' notice in such cases shall be given. In the meantime the secretary received an apology of which the following is a copy:

HICKORY VALLEY, Tenn., March 5.—To the Officers and members of the U. S. F. T. C. Club: GENTLEMEN—I desire to apologize to the officers and members of the club and to the judges for my unthoughtful action at the Bicknell trials last November. What I did was done in the heat of passion, and caused by excitement by many present. I ask that you overlook the occurrence, assuring you that no one regrets the unpleasantness more than I do, and in the future, if I should run any dog in the club's trials, I will accept the decision of the judges without comment. Yours respectfully, J. M. ARENT.

The written apology of Mr. Arent, with many personal assurances of regret and acknowledgment of his offense, caused the members present to take a lenient turn and the apology was accepted.

Mr. Arent's protest, in respect to the Strideaway-Topsy's Rod heat, was disallowed, and the decision of the judges was sustained. The grounds of protest were that some person or persons unknown had tampered with Topsy's Rod on the night before the race for the purpose of insuring his defeat in the absolute heat. Mr. Arent could not name any one, nor even any one whom he suspected. The testimony offered were vague statements and inferences which amounted to nothing as evidence, hence the action of the club.

The board then adjourned and the club meeting began. There were present, in addition to those already mentioned, Messrs. Stafford, Arent and Rice. Mr. Stafford was elected chairman. Mr. Madison was secretary *pro tem*. The minutes of the previous meeting were read and approved. Mr. St. Marc M. Mundy, Louisville, Ky., and Mr. John Barker, of Racine, Wis., were elected to membership.

The treasurer's report showed the club to be in a healthy financial condition. There were 32 members in good standing. Trials A paid \$495.25 above expenses. Trials B paid \$405.20. The balance on hand was \$1,869.20, out of which \$100 was to be paid the winner of the Derby absolute heat last February.

Messrs. O. P. Weisburger and Dr. W. C. Duke are to have 30 days' notice in which to pay certain entry forfeits or be prohibited from entering in the club's trials hereafter. Mr. J. H. Trezevant, the same, except that he have 60 days' notice.

It was carried that the dues of 1893 and 1894 be passed, except that in respect to the dues of this year they be collected if the secretary found it necessary to do so for the benefit of the club.

It was resolved that the club's rules governing competitors shall be rigidly enforced at the club's future competitions, to the end that harmony and good fellowship prevail, and the judges be protected in the exercise of their duties.

The resignations of Messrs. R. P. Daggett, R. L. Shannon and J. N. Seale were accepted.

Following is the list of the Board of Governors elected: Dr. N. Rowe, J. M. Freeman, Wm. M. Kerr, Col. A. G. Sloo, H. Hulman, Jr., C. G. Stoddard, Norvin T. Harris, Richard Merrill, J. M. Arent, P. T. Madison, J. A. Balmer, J. L. Adams, W. B. Stafford, A. S. Person and B. Waters.

The new board then convened. It was carried that Trials A be held at Bicknell, Ind., commencing on the first Monday in November, and that Trials B be held in the South at some point to be selected later, commencing on the third Monday in January. Mr. Madison was appointed a committee on grounds with power to make necessary arrangements.

Four stakes were provided, namely, a Setter and Pointer Derby, and an All-Age Setter and Pointer Stake. The prizes in each Derby are \$575, divided into \$200 to first, \$150 to second, \$100 to third, \$75 to fourth and \$50 to fifth. Entrance \$30. Entries close Sept. 1 for Trials A, nomination \$10, second payment, \$10, Oct. 1.

The All-Age stakes have each \$500 divided into \$150, \$125, \$100, \$75 and \$50, first, second, third, fourth and fifth respectively. Entries close Oct. 1, \$10 to nominate and \$20 to start. Entries to the Derby, trials B, close Aug. 1, second payment, Oct. 1. All-Age entries close Nov. 1. Dr. N. Rowe and Mr. P. T. Madison were appointed a committee to engage judges. The secretary's salary was fixed at \$500 in such years as the club holds two trials. The clause in Rule 13, referring to bitches in season or unduly attracting the attention of any dog was repealed. The other officers were re-elected: Pres., Dr. N. Rowe; 1st Vice-Pres., C. G. Stoddard; 2d Vice-Pres., H. Hulman, Jr.; Sec.-Treas., P. T. Madison.

It was a grave mistake to elect Mr. Arent on the Board of Governors under existing circumstances. B. WATERS.

### Gordon Setter Club Meeting.

Editor Forest and Stream:

The adjourned annual meeting of the Gordon Setter Club, of America, was held at 988 Prospect avenue, New York City, Thursday evening, March 8, and the following members were present in person or proxy. Messrs. Jas. B. Blossom, L. A. Van Zandt, H. F. Ludlow, Noyes Billings, J. R. Oughton, Geo. Meister, A. W. Harrington, Jr. After the usual routine business the treasurer reported \$51.65 balance on hand and no indebtedness.

It was decided to donate \$10 to be competed for at the Philadelphia Kennel Club show, and \$5 at Louisville.

The subject of field trials was then discussed and as several large donations for that purpose were promised, it was resolved to hold entirely independent trials next fall.

The following officers were elected for the ensuing year: James B. Blossom, Pres.; J. R. Oughton, Vice-Pres.; L. A. Van Zandt, Sec.-Treas. Executive Com., W. S. Lee, Noyes Billings, H. F. Ludlow, Geo. Meister, together with the other officers. Five new members were elected and the meeting adjourned. L. A. VAN ZANDT, Sec'y.

### After Many Months.

A REMARKABLE incident in the way of the recovery of a stolen dog occurred at the Detroit dog show. A setter dog owned by Mr. Hamilton, of Detroit, was stolen last October. Mr. Paul Wenshoff bought the dog of some boys for \$5. Then came a peculiar chain of circumstances which fitted as well as if made purposely for the case. Mr. Wenshoff brought his dog to the show for some purpose. The real owner happened to be standing by and recognized the dog. An officer happened to be standing by, too. The matter was amicably settled by the payment of \$25 for the dog by Mr. Wenshoff. B. WATERS.

Mayor Stuart of Hamilton, Canada, has been presented with a kindly-worded testimonial by the members of the Toronto Kennel Club testifying to their admiration of him as a man and a fancier. We regret that lack of space prevents its publication this week.

### DOG CHAT.

Pomona Kennels lost by death last week a very promising young female collie, by champion The Squire out of Jane and a fine Prince Charles spaniel dog by Pomona Ben out of Trinket.

The following specials have been offered at the N. E. K. C. show: The club offers \$15 for the best couple of foxhounds and \$10 for the second best couple; \$5 for the best poodle in the open classes. A member of the Bull-Dog Club offers \$15 for the best American bred bulldog or bitch under 15 mos. of age. A friend of the Boston Terrier offers \$20 for best dog or bitch of that breed exhibited. The American Fox-Terrier Club offers their grand challenge cup, valued at \$800, for the best fox-terrier in the show. James L. Little, Esq., offers \$5 for the best exhibit of four or more Irish terriers and owned by one exhibitor. Arrangements have been made with the various railroads running into Boston as follows: The Boston and Maine and the Fitchburg will transport three dogs free with a ticket. The Old Colony system of the N. Y., N. H. & H. R. R., will carry two dogs free with each ticket. All in excess of that number must be turned over to the express companies unless crated, in which case they will be carried at excess rates. All New York lines will take two dogs free on chains, and any in crates at excess rates.

### Books on Non-Sporting Dogs.

Mr. Horace Cox announces for publication early in April the concluding volumes of "Modern Dogs of Great Britain," by Rawdon B. Lee. The early volume, which appeared in 1893, was confined to hounds and sporting dogs generally; now we are promised the "Non-Sporting Dogs" in one volume, "The Terriers" in another, the two appearing simultaneously. The illustrations will be by Arthur Wardle and R. H. Moore. From the numerous inquiries we have had lately for an up-to-date work on non-sporting dogs we anticipate a great demand for the two books. They will be for sale at this office.

Can any one supply the address of Mr. Hopfe, formerly owner of the Hospice Kennels?

An executive meeting of the Canadian Kennel Club will be held at the Queen's Hotel, Toronto, at 8:30 P. M., on Friday, March 30. The following is the business to come up: 1. Proposed agreement between the C. K. C. and the A. K. C. 2. Melac-Minerva's Fawn case. 3. Election of new members. 4. Miscellaneous business.

The Cragston Kennels are going in for bob-tails, and will show a team next year.

A dispatch from Minneapolis during the Chicago show stated that Mr. W. A. Locke, of New York, had arrived there in search of a St. Bernard owned by Mr. Geo. J. Gould, which was stolen from his kennels. A clew led to that city, where it is said the dog had been shipped after being dyed black!

The entries for the Maniche challenge cup for American-bred dachshunds, to be competed for at the Boston show, close March 31 with FOREST AND STREAM.

Sales were slack at Chicago this time, though a few good ones changed owners. The well-known Skye terrier Barnaby Rudge will now be shown for Dr. Eller, of Philadelphia, and will help to swell the strong interest in this breed that is already claimed for the Quaker City.

Seacroft Kennels disposed of a little surplus stock. Mr. E. P. Preston, of Chicago, bought the wolfhound Gypsy Queen. The fox-terrier Richmond Jessamine was also sold to a Chicago party.

Mr. Winslow presided at the Philadelphia Kennel Club's last monthly meeting at the Aldine Hotel March 13. Those present were Doctors G. D. B. Darby, G. G. Davis, Alexander Glass and Loder, Harry Sinnott, G. H. Thompson, T. Phelps, F. G. Taylor, J. C. Doban, H. S. Painter and S. D. Biddle. The names of W. H. Child and C. G. Thompson were added to the life membership list, and Messrs. Riddle, Doban, Painter and Dr. Karsner were admitted to membership. The club accepted the *Public Ledger* loving cup, which will be given to the best fox-terrier in the open classes. Ten dollars will be given to the best four wolfhounds, and two challenge and two open classes were made for curly black poodles. The special prize list promises to be a large one.

The Louisville Kennel Club was to have held a bench show committee meeting last Saturday evening, but as the committee was not quite ready to have the directors pass on their work the evening was passed in general talk. The club is endeavoring to persuade the Nashville people to run a show the week after their's and Mr. Seairight was to attend the meeting of the bench show committee to talk over the prospects. The judges have not yet been formally selected, but Major J. M. Taylor for sporting dogs and Mr. James Mortimer for the rest is the ticket at present, with probably another judge to take great Danes and beagles.

The cocker spaniel bitch Dame was found smothered in her box when it arrived by express at Chicago show. We must say that to ship several cockers in the long box which Mr. Fiske sent them in simply courted such a disaster, and was a cruelty to his pets. The box was built almost solid with four or five solid partitions, air being supplied merely through a few auger holes round the top. Better run the chances of coughs and colds than certain death by suffocation. When dogs must as at present be sent by express, special care should be exercised in their crating, as there is no telling where they may be placed during transit.

The St. Bernard bitches Rustic Beauty and Adelaide II. have been bred to Sir Bedivere and the results are anxiously awaited in the Little Rock kennels.

Messrs. McEwen & Gibson sold the reserve in open class dogs, Scotsman, by Edgbaston Excelsior out of Ryland Lady, to Mr. Ford of Cohoes, N. Y., during the Chicago show, and it is probable that the Piper will go to the Chestnut Hill Kennels. Mr. Gibson also sold their vnc. bitch Effie to a Chicago Lady.

George S. Thomas, of the firm of Toon & Toomas, won the special of \$100 at Chicago, for the handler showing the largest number of first and second prize winners and Ben Lewis took the second prize of \$25. There is a good deal of grumbling over the way in which these prizes are competed for and in fairness to all, some hard and fast rule should be set down to govern the competitions. As it is at present, handlers' names are attached to the entry blanks, who have nothing more to do with the dog at the show than a friendship to the owner implies. The prizes should be awarded to the handler who really has his dogs in charge, brings them to the show, and draws the prize money for their winnings.

Lovers of a good greyhound will regret to hear that Pious Pembroke, the well-known bench winner, was smothered in his crate the day after Chicago show. We heard the news as we were leaving that city for home, and were unable to gain any further particulars. The dog was not in good condition, but we cannot account for his being smothered, as the show

building was not at all warm. This kennel is unlucky, as at Washington last year Lilly of Gainsboro paid the penalty of a too close confinement.

P. K. C. Show.

Just before going to press we received the following wire from Philadelphia, dated March 20: "Run over 450 entries, cannot give exact number till to-night."—PHILADELPHIA KENNEL CLUB.

The Collie Club announces that in addition to the annual collie sweepstake, it has been decided to revive the futurity stakes. A sweepstake for litters of collie puppies born on or after Jan. 1, 1894. Entrance fee, fifty cents for each pup. The entire number of the litter born alive must be entered, and the entries must be made prior to the puppies attaining the age of six weeks. One or more of any litter entered may be selected to compete for the stake. A collie entered in this stake having changed ownership shall be eligible to compete, upon condition of the transfer being registered by the breeder with the secretary of the Collie Club. 50% of the stake shall go to the winner, 20% to the second, 10% to the third, and 20% to the breeder of the winner. To be competed for at the Westminster Kennel Club show of 1895. Entries after July 1, 1894, will be competed for at some dog show in the fall of 1895.

As some litters may have passed the limit of age, any such will be accepted prior to April 1, 1894. It being highly probable that the winners in this stake will also be winners in the regular sweepstakes it will be quite an object to enter both. Entry blanks will be furnished by the secretary, J. D. Shotwell, 82 Hillside ave., Orange, N. J.

It is well known that this journal does not interfere in politics except as they may affect game legislation and kindred matters, but some of our contemporaries in their efforts to involve Tammany even in a dog deal have pounced upon our announcement that Mayor Gilroy had purchased the great Dane Major McKinley. The man who had charge of Major McKinley at the New York show is responsible for the statement, but on inquiry at the Chicago show we find that the deal fell through on a disagreement about the price.

The dates claimed for Toronto, Canada, show are Sept. 10 to 14. C. A. Stone, secretary and superintendent.

Spaniels At New York.

Editor Forest and Stream:

Allow me space in your paper to thank "Solus" for his comments on the spaniel judging at the late New York show. Whosoever he may be he understands spaniels and merits the thanks of all spaniel breeders who wish to improve and establish a strain of spaniels that will breed to a type—his remarks I heartily indorse and would add: I was an exhibitor at this show, but never again will I enter or lead a spaniel before Mr. Wilmerding for an opinion of it, as he has amply demonstrated to me his inability to properly judge a good class of spaniels, as he has no fixed type that I can discover. He takes the position that size influenced some of his decisions. As "Solus" remarks, had the judge come out before entries closed and given exhibitors to understand he was to "lift them up" and weight was to cut such a figure in the awards, would there have been such a large entry? I assure your readers had such been known, nine entries that did go in would have been absent. I would like him or any other judge to explain wherein under the American Spaniel Club standards he finds any authority to place a single point to the credit of weight or size. The standard says from 18 to 28lbs. I claim no judge has any right to place a larger or a smaller specimen unless he can score a point or part of one more than the smaller. Personally I like a good size spaniel and breed to obtain it, but not at the sacrifice of other points. It is only by breeding and exhibiting and selecting the most perfect specimens, that we can improve our type and make that type a fixture. But no improvement must be expected from such decisions as placing Newton Abbot Farmer over Newton Abbot Torso; Colehill Rufus at the foot of his class; Middy, a dog that should have won in his class, left without a card; placing Donovan at the head in his class, were decisions that caused me to retire and take a seat, the better to observe the burlesque. That the judge wanted light, more light, further light, when he had spent a half hour rejudging some of them again in the novice class, was no surprise to me. J. P. WILEY.

Safety of the Columbus Show.

COLUMBUS, Ohio, March 12.—Editor Forest and Stream: Mr. Waters in his report of the Columbus show says: "Had there been a fire the fate of the dogs on the upper floors was easy to predict."

In this Mr. Waters does us a slight injustice, first because Mr. Waters surely must have noted how carefully we had prepared to guard against fire. Again, Columbus should not be continually harped upon because of her great misfortune of 1888. The past has gone and should be forgiven, if not entirely forgotten.

When I give your readers an outline of the protection we offered our exhibitors they will, I think, uphold me in my bold assertion, that "a fire was almost an impossibility in our show room."

The safety of our show was under the personal supervision of the chief of our city fire department and his able assistant, and at no time was it possible for a fire to spread to an extent to do the least harm. In addition to our own careful vigilance we had on each floor, under the care of a competent fireman, a fire extinguisher ready at all times to quench the least spark. No smoking was allowed in the show room, and how rigidly this rule was enforced our exhibitors can testify. Ben Lewis and Mr. Turner both stated to me that at no other show they ever attended was this rule enforced so strictly; two of our lady exhibitors also made the same statement. Our night watchmen received their instructions from our fire chief and were carefully instructed in the use of the electric calls placed in the show room. Taken all in all we thought the precautions taken were the best, and I hope you will pardon me for taking exceptions from the otherwise fine report of our show. H. A. BRIDGE.

Manitoba Dog Show.

The first annual dog show in connection with the Manitoba Poultry Association's Exhibition, opened at Winnipeg, on Tuesday, March 6, and continued until Thursday, March 8. The entries in all classes were large and valuable canines from all parts of the country participated. A noticeable feature was the abundance of the larger breeds which seem adapted to the rigid temperature of the Northwest. In fact, there was a splendid entry in both quality and numbers. Among the St. Bernards were found some excellent animals and the Newfoundland, deerhounds, wolfhounds and great Danes were well represented. Setters, pointers and retrievers were numerous and some old prize winners of the East were among the successful ones. Spaniels, terriers, collies and foxhounds were all of splendid quality and the few bulldogs on exhibition were excellent animals. The entries in the toy class were not very numerous; but there were some dainty little canines among them. The whole exhibition was most successful and promises to become one of the most important events of the winter season in Winnipeg. J.

Dog Protective Association.

Editor Forest and Stream:

The annual meeting of the Grand Rapids Dog Protective Association was held March 5, with a large attendance. The reports of the different officers for the year were made and that of the treasurer showed a good financial condition; and the secretary's disclosed a membership of just 100, interested in protecting their dogs and who are willing to pay any assessment their executive committee may levy for that purpose. The President reported that in one way and another about 25 dogs had been recovered and returned to their owners, some by law, some through the medium of a postal card to the members and some having been picked up on the streets, having strayed away.

One fact that was apparent to all was the moral influence our Association has had in the reduced number of dogs that have been run off, never to be heard of again, and although this is an unknown quantity still the members have felt just as much more secure in their membership as the dog thieves have felt alarmed at the prospect of the Association getting after them. We trust other associations will be formed in other cities to cooperate with us and each other, when, I can assure you, we will give the fraternity a lively race.

The following officers were elected for the ensuing year: President, C. H. Annin; Secretary, W. D. Pugh; Treasurer, Eber Rice; Executive Committee, R. C. Wharton, D. G. Henry, Francis Lilley and C. F. Road. W. D. PUGH. GRAND RAPIDS, Mich.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

NAMES CLAIMED.

Prepared Blanks sent free on application.

Lump II, Black Rascal, Maes'chen von Vento, Flossie and Witch. By Vento Farm Kennels, Black Lake, Quebec, for black and tan dachs, hunds, two dogs and three bitches, whelped Sept. 10, 1893, by imported Lump out of imported Hexe.

BRED.

Prepared Blanks sent free on application.

Lady Novice—Clyde. A. D. Fiske's (Worcester, Mass.) beagle bitch Lady Novice (The Rambler—Lady Vic) to B. S. Turpin's Clyde (Frank Forest—Sue Forest), Feb. 19.

WHELPS.

Prepared Blanks sent free on application.

Lass of Kippen. E. G. Duncklee's (Brockton, Mass.) pointer bitch Lass of Kippen (champion Nasso of Kippen—Juno II.), Jan. 7, thirteen (six dogs), by G. W. Lovell's Coronet (Greenfield—Lillian).

SALES.

Prepared Blanks sent free on application.

Rip Rap, Jr.—Prairie Belle whelp. Pointer dog, whelped July 12, 1893, by Jas. McAleer, Emsworth, Pa., to A. G. Lanks, Sheriff of Luce county, Mich.

Rip Rap, Jr.—Prairie Belle whelp. Black, white and ticked dog, whelped Nov. 25, 1893, by Jas. McAleer, Emsworth, Pa., to A. G. Lanks, Sheriff of Luce county, Mich.

Dixey—Blossom whelp. Black and tan Gordon setter dog, whelped Nov. 1, 1893, by C. T. Brownell, New Bedford, Mass., to B. A. Kelly, Carbondale, Pa.

Waterman's Spike. Bull-terrier dog, by Mr. Faversham, to M. M. Ehrlich, New York City.

Tube Rose. Black, white and tan English setter bitch, whelped June 20, 1893, by Count Noble out of Lit, by J. S. Hudson, Covington, Ky., to R. Merrill, Milwaukee, Wis.

Prairie Flower. Imported steel gray Skye terrier bitch, by champion Old Burgundy out of Lowland Maid, by C. H. Smith, St. Stephen, N. B., to P. & H. Smith, same place.

Islay. Imported steel gray Skye terrier bitch, by Fruachan out of Helen MacGregor, by C. H. Smith, St. Stephen, N. B., to P. & H. Smith, same place.

Barnaby Rudge. Imported steel gray Skye terrier dog, by Medace out of Nip, by C. H. Smith, St. Stephen, N. B., to P. & H. Smith, same place.

Don. Black and tan Gordon setter dog, whelped Jan. 21, 1893, by Dandy out of Maud, by C. T. Brownell, New Bedford, Mass., to Chas. Ashley, same place.

Murkland E. Black and tan Gordon setter dog, whelped Feb. 25, 1890, by Murkland Ranger out of Beaulah, by C. T. Brownell, New Bedford, Mass., to ex-Mayor Chas. L. Ashley, same place.

Lily L. Blue belton English setter bitch, whelped May 1, 1893, by Prince L. out of Sadie B., by A. J. Lewis, Central Falls, R. I., to J. W. Lawson, East Providence, R. I.

Bonnie Browine. White, tan head, tan patches fox-terrier bitch, whelped May 9, 1893, by Blenton Volunteer out of Bonnie Belle, by C. A. Sumner, Los Angeles, Cal., to W. V. Howard, same place.

Bonnie Betty. White, black and tan head, black patch fox terrier bitch, whelped May 1, 1893, by Blenton Volunteer out of Bonnie Buena, by C. A. Sumner, Los Angeles, Cal., to A. J. Griswold, Nogales, A. T.

Bonnie Beau. White, tan head, fox-terrier dog, whelped May 9, 1893, by Blenton Volunteer out of Bonnie Belle, by C. A. Sumner, Los Angeles, Cal., to Mrs. T. B. Shepherd, Ventura, Cal.

ANSWERS TO CORRESPONDENTS.

P. New Rochelle.—1. How often and what should a St. Bernard pup nine weeks old be fed? 2. Should he be washed? If so, how, and if not, in what way can his coat be kept clean? 3. Should his pen be kept warm or cold? Ans. 1. From three to four times a day. Sweet milk, mutton soup with vegetables and stale bread, oatmeal, etc.; also raw meat, chopped fine, every other day is good. 2. At his age washing is unnecessary, if the quarters are neat and clean, with plenty of clean bedding. 3. If he has plenty of clean bedding and the sleeping quarters are free from draughts, artificial heat is unnecessary.

C. E. S. Middletown, Conn.—1. I have two setter pups that I intend hunting together, one of which is a wide ranger, while the other hunts close but quarters his ground well. Which one is the proper dog to teach to retrieve, or would you teach them both? 2. What is the proper way to prevent them from chasing chickens? 3. Is it a good idea to work them on quail in field without gun? Ans. 1. The wider one has very little relation to the quality of a retriever. If you intend to keep the dogs for your own shooting teach the slowest one to retrieve. 2. Punish them every time you catch them chasing chickens. 3. Yes.

W. E. R. Reading, Pa.—The slime and blood may be the result of constipation or it may be due to disease of the rectum. Take the dog to veterinarian.

G. S. Boston.—1. It is probably a tumor and should be removed. 2. Feed on raw lean meat once a day.

Hunting and Coursing.

FIXTURES.

April 17.—South Dakota Coursing Club's inaugural meeting, at Mitchell, S. D. Entries close April 16. S. S. Batley, Sec'y; Fox Kenney, Judge; Joseph Dodd, Slipper.

Central Ohio Fox Hunters' Club.

The Central Ohio Fox Hunters' Club, of Coshocton, Wayne, Tuscarawas and Holmes counties held its fourth annual meeting at Millersburg, March 7. It was the largest and best attended of any ever held by the club, every county being well represented. The meeting was held in Agricultural Hall, and at 10:30 o'clock A. M. was called to order by the president, John A. Bucklew, of Warsaw. After hearing the reports of the committees and treasurer and secretary, Hon. E. L. Lybarger presented a resolution to change the name of the club to the Central Ohio Sportsman's Club. The resolution was unanimously adopted. This change was made in order to admit other sportsmen outside of fox hunters to membership.

On motion, E. L. Lybarger, L. F. Findley and Lake F. Jones were appointed a committee to draft new by-laws, after which an adjournment was taken until after dinner.

Immediately upon reassembling the committee reported the new by-laws which were adopted. Among them are the following:

This Association shall be known as the Central Ohio Sportsman's Association. Its objects shall be:

First—The encouragement of interest on the part of the people in the preservation of game and fish.

Second—Encouragement of gentlemanly sport, the assembling together from all parts of the district of gentlemen fond of sport, friendly enjoyment, mutual acquaintance and the recuperating of our physical powers by outdoor exercise.

Third—The membership shall consist in addition to those already enrolled, of such other persons as may apply and be enrolled by the secretary upon the payment of the membership fee of twenty-five cents.

Fourth—The officers of the association shall consist of a president, secretary and treasurer, and one vice-president from each county belonging to the association.

Fifth—The officers first chosen shall serve until the next annual meeting, and shall thereafter be chosen for a period of one year, or at each annual meeting.

Twelfth—It shall be the duty of all members of this association to assist each other in recovering lost or stolen dogs, and when any dog is lost or stolen, and any member knowing of its whereabouts, shall communicate said knowledge to the secretary of the association, at Millersburg, Ohio.

The following resolution was also adopted:

Resolved, That this association will aid and assist the legally constituted authorities in the enforcement of all laws made and provided for the protection of game and fish. That we discountenance fox hunting during the months of June and July, and that we pledge ourselves to abstain from fox hunting during these months.

The election of officers resulted as follows: President, John A. Bucklew; Vice-Presidents, Coshocton County, J. L. Moore; Wayne, Lake F. Jones; Tuscarawas, Wm. T. Zinkon; Holmes, Merriman Lisle; Secretary, L. G. Barton; Treasurer, Charles M. Williams.

Northwestern Beagle Club of America.

Editor Forest and Stream:

A meeting of the Northwestern Beagle Club was held at Battery D, Chicago, March 15. Members present, G. A. Buckstaff, E. H. Rummele, Jr., H. A. Dillingham, Chas. Niss, Jr., E. Bardoe Elliott and Louis Steffen. The meeting was called to order by the president, Mr. G. A. Buckstaff, at 2:30 P. M.

The minutes of the last meeting were read and approved. Letters from the National and New England Beagle clubs were read. It was decided to hold the coming field trials the week following the National Beagle Club's trials, beginning on Nov. 7.

The secretary was authorized to get some Eastern gentleman to represent the N. W. B. C. at the American Kennel Club meetings.

The arranging of classes for the field trials, also the adoption of the Beagle standard were laid over until the next meeting.

New members elected are: Edwin A. Woodward, Chicago; G. W. Werner, New London, Wis.; Oscar and R. Hintze and Frank Winneman, Milwaukee. Meeting adjourned.

MILWAUKEE, Wis.

HUNTING AND COURSING NOTES.

Mr. F. M. Whipple, the M. F. H. of the Brunswick Fur Club, contemplates settling in southern California. His departure will be a loss to fox hunting interests of New England. His favorite hounds, Ned and Spot, well known on the bench and in the field, will go with him.

Mr. A. B. F. Kinney, Worcester, Mass., has presented his interest in the celebrated Kinney—White pack of foxhounds to his friend and partner, Mr. John M. White, Millbury, Mass.

The interest in coursing at St. Louis, Mo., is increasing rapidly. Of late they have been holding local club meets at Brentwood Park, but they have now advanced to an open meeting to be held on March 26 to 28, open to all comers. Dr. George Irwin Royce will judge. Nearly all of the prominent greyhounds in the West will be in attendance to compete.

There will be coursing meetings at Oaks, S. D., April 3 to 5, Huron, S. D., April 10 to 12, and Mitchell, S. D., April 17 and following days.

Seawanhaka-Corinthian Y. C.

The preliminary programme of the Seawanhaka-Cor. Y. C. for 1893 will include: A naphtha launch and small class races on opening day, a special race for class I of sloops, the annual race on Saturday, June 23, special races to and from New London, June 25 to 30, a special race from Oyster Bay to Larchmont, July 3, a race for the Alfred Roosevelt memorial cup, a special race for a cup presented by Mr. George Bullock, an oyster boat race and the usual Saturday races. The complete programme will be issued later, detailing the courses and conditions for all races and announcing additional events. The special race for class I of sloops, contingent upon entries, will be sailed for

the prize offered at the annual meeting. The annual race on Saturday, June 23, will be open to all classes and visiting clubs, with the Leland Corinthian challenge cup open for competition in a special class. It is also intended to provide an entertainment at the club house, on the evening of Friday, June 22, of which due notice will be given by the House Committee.

The special races to New London and return, open to all classes and visiting clubs, will be provided, at the pleasure of yacht owners, for the purpose of attending the Yale-Harvard boat race. The general programme will include a reception at the club house and a race to New London covering two days. All yachts racing in cruising trim and in two classes: schooners and sloops; time to be cumulative for the two days; time allowance of the club with the wind factor of five-tenths, used in tables, varied proportionally to average wind velocity on each day. Prizes to be awarded to winning yachts. A reception will be held on board the flagship in New London Harbor. On Saturday, June 30, the day following the Yale-Harvard contest, or on Monday, July 2, in event of postponement, the fleet will race to the westward under conditions to be announced; finishing at Oyster Bay. Prizes to be awarded to winning yachts.

The special race to Larchmont is fixed for Tuesday, July 3, the conditions to be hereafter named, and in event of delay in returning from New London the start will be made from New Haven or Black Rock instead of Oyster Bay. The Alfred Roosevelt memorial cup race will be open to classes under 35ft., racing over the inside course unless otherwise specified. The special race for the cup presented by Mr. George Bullock will be for yachts of the smaller classes over the bell buoy triangular course unless otherwise specified. The oyster boat race and usual Saturday races will be sailed under conditions to be named; dates for the above to be announced in the final programme.

The race committee for the year are Messrs. Gordon Wendell, Chairman, 61 North street; R. A. Rutherford, Secretary, 19 W. 24th street; Walter C. Kerr, Valentine Mott and E. C. Weeks.

### St. Lawrence Y. C.

THE St. Lawrence Y. C., of Montreal, is preparing for what promises to be a prosperous and interesting season. Many changes and improvements are being made about the club quarters. Innumerable alterations to the fleet are under way, by the busy sound of the hammer and saw about the club storage sheds, the yacht that finished a weary third last season may keep her swifter sister closer company this summer. For the 30ft. class Mr. G. Herick Dugan is building a new flyer designed by himself, which no doubt will give a good report before the season is well advanced. Mr. C. E. Archibald has bought a 31-footer from the West, which proved herself very able and fast last season. Mr. H. M. Molson is getting on a Clapham Bouncer from

SQUINX—"DOUBLE CAT" CRUISER.

FOREST AND STREAM, Nov. 4, 1893.

Roslyn, while three other wonders of assorted sizes are positively coming to help on the racing interest.

The events arranged for the season are as follows: May 24, Squadron cruise; June 2, 18ft. class, first series; June 9, A, 30, 25, 21ft. classes, first series; June 15, 18ft. class, second series; June 16, A, 30, 25, 21ft. classes, second series; June 23, 18ft. class, third series; June 30, A, 30, 25, 21ft. classes, third series; July 2, A, M., A, 30, 25, 21ft. (all for Sir Donald A. Smith challenge cup on this day); P. M., steam yacht race, 18ft., fourth series; July 7, A, 30, 25, 21ft. classes, fourth series; July 14, A, 30, 25, 21ft. classes, fifth series.

Class A yachts measuring 30ft. corrected length; 30ft. class, yachts measuring 25ft. and under 30ft. corrected length; 25ft. class, yachts measuring 21ft. and under 25ft. corrected length; 21ft. class, yachts measuring 18ft. and under 21ft. corrected length; 18ft. class, yachts measuring 16ft. and under 18ft. corrected length.

Dinghy races and races for craft not within yacht classification will be arranged later on.

### YACHT NEWS NOTES.

The Jersey City Y. C. elected the following officers on March 1: Com., G. Van Horn; Vice-Com., A. Roe; Pres., J. Hilton; Sec'y, J. V. Wolcott; Treas., P. W. Figueroa; Meas., Dr. O. F. Coe. Directors: the above and C. H. Benson, H. C. Roome, Dr. W. J. Parker, F. W. Lyons, A. B. Reynolds. Executive Committee: C. F. Ockerhausen, O. F. Coe, Chas. Miller. Finance Committee: A. B. Reynolds, E. P. Buffet, F. W. Lyons. Regatta Committee: C. H. Benson, Dr. Parker, Dr. Coe. Entertainment Committee: A. Roe, J. V. Wolcott, E. P. Buffet. W. H. Hooker was elected an associate member. The regatta will be held in June.

Flying Cloud, yawl, mentioned in the report of the Biscayne Bay Y. C. last week was designed by Waterhouse & Chesebrough of Boston to meet the requirements of her owner, Mr. S. F. Moore. The yacht has turned out a complete success, being tried hard on the passage from Boston to Florida, and proving a good seaboat in some very bad weather, although of light draft. Her owner proposes to make a trip to the Bahamas before returning North.

Minneapolis, Minn., is taking up model yachting, having two clubs, the Minneapolis Model Yacht Racing Association, John Hadden, Secretary, and the Calhoun Model Y. C. organized last fall, Geo. Turner, No. 1,330 Fourth avenue, South, secretary.

Exile, the fast 21-footer designed and raced by J. F. Small, of Boston, has been sold to F. M. Randall of the Pavana Y. C. She is 30ft. over all, 21ft. l.w.l., 11ft. beam and 1ft. 6in. draft. She was built, like all of her class, as an open boat, but a light trunk cabin will be added to bring her into the class about New York.

Almost as a matter of course, Britannia has been successful in all the races in which she has started, her only antagonist being the old Valkyrie, 70ft. l.w.l., and the 40-rater Deerhound, now Oretta, of 60ft.

## Canoeing.

### FIXTURES.

SEPTEMBER.

3. Holyoke, Ann., Holyoke, Mass.

AS BEARING on the discussion now taking place in our columns, we commend to canoeists the proposed programme for the annual meet. While the usual events are provided for the racing machines, both paddling and sailing, it will be seen that the cruisers, ex-racers and general purpose canoes of all kinds are by no means neglected, as some of our correspondents have inferred, but that every possible provision is made for them.

In sailing, the record races are strictly limited to hoisting and lowering sails; and so far as is possible, the conditions are framed to encourage the all-around canoeist rather than the sailing specialist. For the exclusive benefit of the cruiser or retired racer, one event is arranged for which the committee has attempted to set no definite limit, but from which it proposes to exclude anything that is obviously

VICINITY OF CROTON POINT AND A. C. A. CAMP GROUND.

of the nature of a racing machine as distinguished from the older type of canoes such as Notus, Eclipse, Hornet and Vesper, in which some of the best racing of the Association has been done. The success of this race, and we feel safe in saying that it is very doubtful, depends on the men who are heard every year in an outcry against racing men and racing machines. It is clearly impossible to lay down exact limits in advance, but we have every confidence that the committee will fairly and intelligently discriminate to exclude canoes which in build or fitting may belong to the racing rather than the ex-racing class; it only remains to be seen how many canoes will present themselves.

WHILE this race is intended for one class of canoes which, according to a widespread idea, is entirely sacrificed to the racing class, event No. 13 is similarly intended for the wide canoes, canoe-yaws and other odd-sized craft which are the subject of a similar complaint of neglect. In this class, too, it is impossible to set limits until it is known what the entries may be, but the committee has shown an honest and earnest intention to remedy a complaint which, whether well or ill founded, is quite general; the result cannot fail to be instructive.

In the paddling classes a provision is made for the purely cruising and general purpose type, the 15x30 open Canadian canoe of serviceable build, a class which last year, in its very home, failed to fill.

The programme is, as stated, only provisional, and all members are at liberty to make suggestions to the committee, or through our columns, for its improvement.

ONE good feature of the new programme is the abandonment of the limit of 16x30 for the club fours, as recommended at various times by members. Although by chance this size of canoe has come into general use for the club fours, it is entirely unsuited for such work, being much too small. Just what size will prove best is a question, but the committee are in hopes that enough canoes of suitable dimensions and working build will be present to solve it. The intention is to favor the use of service canoes in this race rather than racing shells.

### THE A. C. A. MEET OF 1894.

Croton Point—July 13-27.

THE inquiries which reach us as to the location and date for the coming A. C. A. meet indicate the existence of considerable interest on the part of men who, while members, have not attended previous meets or kept posted on A. C. A. matters, but who now propose to avail themselves of the accessibility of the new camp site. The accompanying maps, for which we are indebted to Mr. J. K. Hand, show the immediate locality, as well as the adjoining points on the Hudson River, Peekskill and Sing Sing on the east, and Haverstraw on the west, all points of the great trunk lines and easily reached from New England, the North and West. The details of the secondary transportation between the camp and the railroad stations, are now being arranged in a way that promises immunity from the usual delay and expense on this stage of the journey. The following provisional programme has been arranged by the regatta committee:

#### A. C. A. Regatta Programme, 1894 Meet.

Event No. 1.—Record race, paddling and sailing combined, 1½ miles

alternately, total 3 miles. Time limit 1½ hours. Sails to be known as lowering sails.

Event No. 2.—Record race, paddling, ½ mile straightaway. Same canoe to be used as in event No. 1.

Event No. 3.—Record race, sailing, 4½ miles. Time limit 2 hours. Same canoe, sails, seat, etc., to be used as in event No. 1.

Note.—For record races see Rule 5, sailing regulations.

Event No. 4.—Trophy paddling, 1 mile straightaway.

Event No. 5.—Paddling, open canoes not under 50lbs. weight, ½ mile straightaway; single blade.

Event No. 6.—Unlimited sailing, 6 miles. Time limit 2½ hours. Starters in the trophy sailing race to be selected from this race. See Rule 5, sailing regulations.

Event No. 7.—Trophy sailing, 9 miles. Time limit 3½ hours. Starters to be selected as per Rule 5, sailing regulations.

Event No. 8.—Dolphin sailing trophy, 7½ miles. Time limit 3 hours. The canoe winning first place in Event No. 7 will not be allowed to compete in this event.

Note.—This race will not be called until event No. 7 has been sailed.

Event No. 9.—Novice sailing, 3 miles. Time limit 1½ hours. Open only to members who have not sailed a canoe prior to Sept. 1, 1893.

Event No. 10.—Club sailing, 4½ miles. Time limit 2 hours. First three members of any one club to count. No club can be represented unless it enters at least three men, all men entered must have become members of the club they represent before the first day of the 1894 A. C. A. Meet.

Event No. 11.—Passenger cruising sailing, 3 miles. Time limit 1½ hours. Canoes to enter this event must come within the regular classification, to have a well 16in. wide and at least 3ft. 6in. long, with a sleeping space of 6ft., of which at least 5ft. will be clear. Lowering sails must be used. No limit on seats. Canoes must carry a passenger weighing at least 110lbs.

Event No. 12.—Outclassed sailing, 3 miles. Time limit 1½ hours.

Note.—It is the intention to give this race for the outclassed canoes, without bath-tub wells, etc. Conditions will be posted when the committee see what class and number of boats there will be to enter this race.

Event No. 13.—Unclassified sailing, 4½ miles. Time limit 2 hours. Conditions to be posted.

Event No. 14.—Tandem paddling, ½ mile straightaway. Decked sailing canoes, double blades; open canoes single blades.

Event No. 15.—Club four paddling, ½ mile straightaway. Not limited to a 16x30.

Event No. 16.—Sailing upset and maneuvering. At signal throw paddle over stern and recover, second signal canoe to be heeled over until top of mast touches the water. Canoes to be righted and cross finish line under sail.

Event No. 17.—Paddling upset, ¼ mile. Usual conditions. No special appliances.

Event No. 18.—Hurry-scurry. Run, swim and paddle. Short distance.

Event No. 19.—Gymnastics.

Event No. 20.—War canoe, 1 mile. Conditions to be posted.

Note.—This race will be made a special feature if the committee receive enough entries.

The Dolphin sailing trophy is a silver cup presented to the A. C. A. by the Yonkers C. C. as a perpetual consolation cup for the trophy race.

### CANOE NEWS NOTES.

The Yonkers C. C. is making material improvements to its house. The old dressing room has been taken down and rebuilt with new racks in the front of the house, also a new dressing room with improved shower, etc. A new feature is a work shop with work bench, etc., and room to varnish canoes in. A new platform will be erected in front of the house, putting the float about 100ft. further out into the river. The Ko-ko-ko-ho is being overhauled and put in shape for the meet and the boys are getting to work already so that a very good year for canoeing is promised around Yonkers.

#### A. C. A. Membership.

ATLANTIC DIVISION: J. L. Held, Hoboken, N. J.; Frederick W. Donnelly, Trenton, N. J.

The A. C. A. and its Critics.

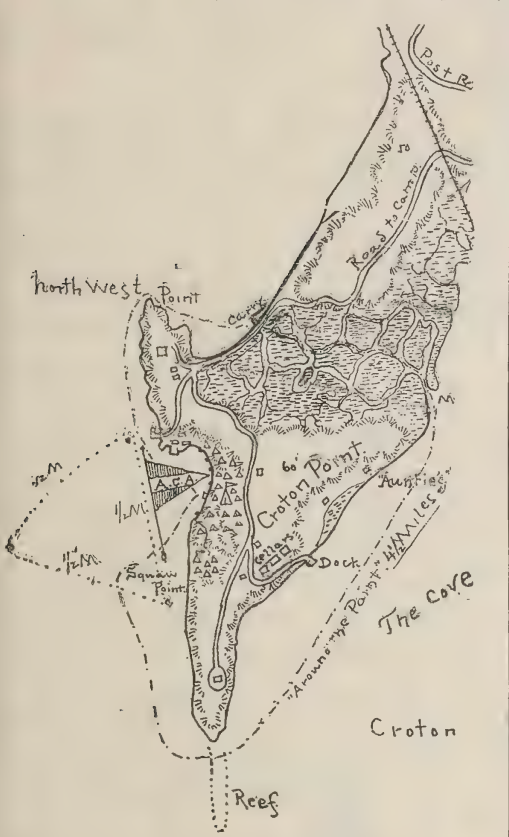

Editor Forest and Stream:

It was an evil moment when I allowed myself to be drawn into the discussion regarding reform in the A. C. A. I have been assured by friends who have read my letter that I am a fool; my language has been characterized as "beastly personal;" it has been said that my composition lacks style; I have been accused me of drawing odious comparisons in favor of the Hoboken Club, and Hoboken men have complained of my doing the reverse. I have even heard it remarked that my letter was humorous (and Mr. Holden will bear me out when I say that this reform is too serious a matter for levity). These and more would I willingly bear, but to have Mr. Holden turn on me! Aye, there's the rub! As A. Ward would say, "It's a mite!"

But Mr. Holden misunderstands my letter and my attitude on the reform question. I believe, with him, that there is a great deal to be desired in that direction. (I have attended a few of the meets.) The prominent men in canoeing circles to-day are those who are skillful with the sails or mighty with the paddle. Those who seek enjoyment in cruising only are seldom heard of, even when they cruise 400 or 500 miles. I compared the Hoboken and Ianthe clubs merely to exemplify this difference. To my mind the Hoboken men are the better canoeists. The Ianthe men are "graduates" of the cruising class and would enjoy their regattas and racing just as well if they were yacht races, boat races or tub races.

But how are we going to help it? I do not think that publishing a regular newspaper would effect much of a change. As Mr. Cartwright says, the Association has about a thousand members. If you could get 100 subscribers out of this number you would do well. Each club would get one copy and the members would take turns reading it. If we must have a paper here would be my plan. Require every club purser to forward to the Association commodore or some other competent man, all matters of news and information coming to his attention. The commodore would then issue this in the shape of a "Bulletin" to the clubs, and it could be tacked on the door where the men could read it. This would not be expensive. The printer could take the various communications and arrange them to suit himself, and the expense could be assessed on the clubs subscribing to the "Bulletin."

Now Mr. Holden, a word with you. You say that but for the wide circulation given my letter in these columns you would ignore my screed. I gather from this that had I written direct to you, you would have thrown my letter in the waste basket. How perfectly

A. C. A. CAMP GROUND—CROTON POINT.

dreafed of you! As to my not being posted, you, of course, are a competent judge. But tell me, have you not achieved fame under the nom de plume of "Cycle-Oar" in your local paper at Rutherford, New Jersey? Who has not heard the story of the "Purser and his Chum" who sailed the billowy Passaic one summer afternoon? Did not the gentle zephyrs blow on that occasion, and was it not the purser's boast that he would rather upset than luff, and didn't he upset? forgetting that (with apologies to the autograph album),

"It were better to have luffed and lost Than never to have luffed at all."

And who has not read the thrilling adventures of the "Captain and Mate and the three tugs?" And are you not an authority on Indian names? Well, I guess! Didn't you build two canoes with a jack-knife and a few rude tools, and didn't you name one of them the "Sew-Ga," which when translated, you said, meant "Big Man." And some of the boys, however, upon searching the Indian archives, discover that, read backward, it meant "Big Girl!"

Now a word to Mr. Cartwright. You take Mr. Holden too seriously. The only person in the Atlantic Division who takes Mr. Holden seriously, is Mr. Holden himself. I don't believe him to be bent so much on overturning the existing order of things as he is of seeing his full name at the bottom of a printed letter. We, of the Atlantic Division, who know him well, appreciate his wide experience as a canoeist and newspaper correspondent, and we love him. He owns three or four canvas canoes, and has cruised the entire distance from Rutherford to Newark several times, and it must certainly be four or five miles. And it was on only one occasion that the trip was too much for him and he had to be brought home on a lumber barge. Only one.

He avers that I have slurred a gentleman whose only offense was that he came from Rutherford. Now that was really no offense at all! If he had remained there! Ah! that would have been different! However, I am sorry for having slurred him and hasten to apologize, and I hope that during the meet next summer he will come from Rutherford again and bring his reform ideas with him.

I admit that it would be courteous toward Mr. H. for me to contribute these few stickles over my own name. But then a man of Mr. Holden's perspicacity (hold on! where's my dictionary?) and thorough knowledge of A. C. A. meets and matters must know "Pulex." If he does not I would suggest his visiting at least one meet, when he would have his eyes opened not only to "flex" but to "Pulex" as well. And while "flex" seems to insinuate that Mr. H. would be signally fortunate in having his eyes opened to "flex," it would really be nothing to the honor conferred on Mr. H., by having his eyes opened to

PULEX.

racer? I can produce evidence to show that I have won no races, and have not even made serious attempts at doing so—on the other hand my boat is an excellent one, adding, every once in a while, and when the wind is fair she carries canvas to the extent of about 50ft. If a few trips, of a few hundred miles or so, over waters unknown to most canoeists, makes a cruiser, then I must plead guilty and enrol myself under the banner of that great army whose prestige is maintained by Mr. J. T. Holden aforesaid.

If "intimation is the sincerest of flattery," I have flattered Mr. Holden by following his example in two particulars; I offered a humble suggestion as to how the condition of the A. C. might be bettered; and signed my own name. Would that "Pulex" had done likewise, rather than to shoot the arrows of sarcasm from behind the protection of a nom de plume.

"Flex" answers Mr. Holden on one or two points, and both he and "Pulex" write very pretty letters; but what have they to offer for the good of the Association? If the text of "Pulex's" letter means anything it means that there is something wrong in the Association which needs righting, but I am afraid his vision is without a moral, and that the text is lost sight of before he reaches "in conclusion."

There is something wrong with the A. C. A.; it does not advance with those rapid strides that its supporters would wish to see; but is there any society or institution that will not stand reforming? Be it the citizens of the United States are not a unit in regard to its administration, and half of them leave, or advance, foreigners not to come in, that they will get nothing for their dollar? No, they do their level best to get into office and run the show on a better plan; they write away to their friends to come and help them, and say, "America, with all thy faults I love thee still."

If a cruising meet is going to right this wrong, then let us have one by all means; if State divisions are the panacea, then let us cut the Association up into little pieces; if the publication of a monthly sheet devoted to the interests of cruisers will bring that abused class relief, then by all means let us publish, provided an editor can be secured; if "Pulex" has anything to suggest let him set it forth, but before experimenting on these lines let us have a few more ideas, and while we are about it we might as well have some practical ones.

Here is one. Do away with the general mess at the meet. Take the responsibility of the executive and divide it among the members who attend. Give the man who makes his own camp kit a chance to glory in his efficiency, and when the racing man comes to the tent of the cruiser and sues for a meal, won't the cruiser have a chance to heap coals of fire on the head of the said racing man.

In this connection it is worthy of note that the 1893 secretary had some inquiries before camp as to how to reach there, what the grub would be like, whether there would be men on the ground ready to do all the work of pitching tents, etc., etc. The questions were not asked by racing men.

For "Pulex's" information I may say that Mr. Holden did not receive a request to secure advertisements for the Year Book. That request was sent only to the officers and members of the executive committee. Their names appear in the Year Book. Some of them live in New York. I wonder if "Pulex" secured any of the very few ads. sent in response to this request.

Will "Pulex" in return give me some information? How is it that the Ianthe men, who spend all their time holding down chairs and swapping fishy stories, keep in condition to race? Why do not the Hoboken men, with muscles hardened by constant exercise, with skill made perfect by steady practice, rise in their might and sweep into eternal oblivion this club who race—and sit in balconies? It would be a service to all canoeists.

R. EASTON BURNS.

Rifle Range and Gallery.

Rifle at San Antonio.

The regular practice shoot of the San Antonio Rifle Club took place on the afternoon of the 11th inst. The attendance was good and the shooting excellent, as will be seen by the scores below.

On the 15th, almost the entire membership of this club will attend the annual prize shoot of the Vogel's Valley Rifle Club. This is the prize event of the season, and a full report of same will appear in these columns.

Conditions: 300yds., muzzle rest, open sights, 10 shots per score:

O. G.

Rifleman vs. Bowlers.

Some weeks ago the Greenville Rifle Club received a challenge from the Linden Bowling Club, of Greenville, to bowl a match and shoot a match. The challenge was accepted by the Greenville Club. In the bowling match the Linden team won by some eighty odd points, but in the contest with the rifle, which came off on the Greenville Club ranges on Wednesday last week, the bowlers found that the bullseye was a sort of head-pin game that was new to them, and the consequence was that the Greenville team buried them under a margin of 485 points. The scores are appended, distance 82ft.:

Conlin's Shooting Gallery.

The latest novelty in shooting is a shot pistol. Mr. Albert A. Cohn has had one made similar to the one gotten up by the Renettes of Paris. It seems to be quite effective at 15yds, and I have no doubt that Mr. Cohn will do well with it at the traps. It is .38cal., everlasting shell, 23, long, using nitro powders, S. S. No. 9 shot.

Mr. Wm. E. Carlin has been making some good scores with the revolver at 25yds. Major D. Crockett has made several good scores with open sight rifle, 12ft.

I am making experiments with different kinds of nitro powders for revolver shooting as soon as I decide on one giving satisfactory results I will send the particulars to the FOREST AND STREAM.

Thursday evenings are set apart for revolver practice, and Saturday for rifle shooting. All are invited to give us a call.

J. S. C.

Jerseymen at the Targets.

THERE was the usual contingent of riflemen in Armbruster's Park, Greenville, N. J., on Saturday afternoon of last week. Fine weather and good form on the part of some of the shooters brought forth some remarkably good scores.

Michael Dorrier gave another exhibition of his remarkable shooting abilities. L. P. Hansen of the Excelsior Club, was present, and started out to shoot a 100-shot race with Dorrier for a small stake, but the afternoon was so far advanced before the match was opened that Hansen was compelled to retire on the completion of his eighth score. Dorrier shot his final shots when the last rays of daylight were fading away. He got a 15 on his 97th and a 9 on his 100th shot, reducing his total on the remarkably fine score of 2359. Last week he made a total of 2,246, and the week before 2,231. His two last scores (200 shots) are ahead of all other previous records. Hansen's shooting was first-class. He made a total of 1,791 in 80 shots, an average of 223.8 per 10-shot score. Plaisted, Boyce, Boag, Chavant, Hill and Scheeline were present and participated in the afternoon's sport. Hill's and Scheeline's scores were mislaid owing to the darkness in the shooting house at the close of the shoot; we are therefore unable to publish them with the others. C. H. Chavant had the misfortune to disable his rifle and was unable to shoot out his scores. On next Saturday, March 24, it is expected that there will be a number of New York riflemen present in the park to participate with the local riflemen. Scores:

M Dorrier, 100 shots	24 25 24 23 25 24 23 20 22 21—233

H. M. POPE, Secretary.

Revolver Top Notch in Canada.

AGINCOURT, March 15.—Editor Forest and Stream: The accompanying five consecutive scores, which we believe to be the best hitherto made with the revolver in Canada, were made by Dr. H. McLaren, sergeant Queen's Own Rifles, Toronto, over the range of the Scarborough Rifle Club at Agincourt, March 1, range 25yds., off-hand, S. & W. revolver, 7in. barrel:

Dr H McLaren	7 5 4 6 5 6 7—41
	6 4 6 6 6 6 7—41
	5 7 7 5 6 6 6—43
	7 6 7 6 7 6 7—46
	6 6 7 6 6 6 6—43

The target is the standard revolver target—one-half actual size—as used by the military and police organizations in Canada.

D. A. CLARK, M.D.

New York Rifle Club.

THE New York Rifle Club held its regular weekly shoot at Zettler's gallery, 12 St. Mark's Place, on the 17th inst. The members present and their scores were:

Young	246	241	Crocker	233	233
Chadbourne	244	242	Barker	237	233
Gench	240	240	Dannefelser	235	223

E. R. CHADBOURNE, Sec'y.

Heidenreich Rifle Club.

NEW YORK, March 18.—Scores shot at a distance of 100ft.: Horn 245, Steckel 240, Enders 237, Roberts 234, Ratz 227, May 225, Napier 220, Heidenreich 218, Kellner 204, Goodman 223.

WM. MAY, Sec'y.

## Dominion Off Hand Rifle Association.

PARRY SOUND.—Scores made by the several teams of the Dominion Off Hand Rifle Association, at their monthly match on March 2 and 3. The match was shot over the ranges of the several affiliated clubs:

## Zettler Rifle Club.

ELEVEN members of the Zettler Club were present on Tuesday night to compete for the club prizes and the champion medal. Henry Holges was in good form, he won the medal on his first entry on the score of 243, it proved to be the best score of the night's practice. Scores: Championship target: Holges 249, Busse 246, Walther 244, Brown 241, C. G. Zettler 241, Muller 234, Flack 246, Ross 245, Engel 242, B. Zettler 241, Hartmann 238.

Best 10 shot score, 5 entries: Holges 249, Flack 247, Busse 247, C. G. Zettler 245, B. Zettler 242, Ross 245, Engel 247, Brown 245, Muller 243, Walther 245, Hartmann 238.

## Greenville Rifle Club.

TWENTY-THREE members of the Greenville Rifle Club were present on March 16 to participate in the competition for the class prizes. The four ranges were kept in continuous use until midnight. Scheeline was high with 242. Purkess and Collins tied for second place with 239 each. Scores: Scheeline 242, Purkess 239, Holzappel 250, Charles 237, Graef 244, Collins 239, Barr 235, Chavart 234, Dodds 230, Spahn 234, Plaisted 235, Agnew 234, Hill 221, Robidoux 233, J. Boag 234, F. Wuestner 230, Huelsen 216, Lutz 229, Becker 214, Daniels 219, E. Wuestner 198, Lembeck 235, Gotthardt 232.

## Another Challenge for Youngsters.

CHICAGO, March 12.—*Editor Forest and Stream:* As my former challenges, published over two months ago, have not been taken up, I will let my son Alfred shoot against any boy under 12 years of age in the United States 100 shots, in series of 10 shots each inside of 15 seconds at a target 200 yds. to count outside of said time, and 5 points added to each score for every second of reduction in time. Conditions: Range 50 to 150 ft., to the option of party accepting challenge; open sights, off-hand, German ring target, reduced according to range.

## Lady Miller Rifle Club.

THE weekly shoot of the Lady Miller Rifle Club, at its headquarters, on Monday night, has been a grand success. The medal winners were Mrs. Meyns in first class, Mrs. Ahrent in second class and Mrs. Stein third class. Scores: Mrs. Ahrent 232, Mrs. Boardman 224, Mrs. Meyns 223, Mrs. Stein 218, Miss M. Miller 220, Miss Begerow 217, Mrs. Volk 211, Mrs. Fisher 210, Miss Saunders 208, Mrs. D. Miller 210, Mrs. Stadler 208, Miss Yureman 205, Miss Gehardt 204.

## Palisade Rifle Club.

ELEVEN members of the Palisade Rifle Club were present at headquarters March 11 to participate in the competition for class medals. Fred Grobatsch won the first class medal, George Dorr the second and Fred Ward the third. Scores: F. Grobatsch 239, George Dorr 238, F. Asprey 224, F. Ward 225, W. Ahles 223, C. Hemberger 221, R. Glaser 218, A. Aufderheide 210, H. Rose 217, A. Ahles 213, August Ahles 210.

## Excelsior Rifle Club.

ONLY four members of the Excelsior Club participated in the weekly shoot on March 13. Scores: Charles Thomas 238, L. Ryer 235, Charles Reers 234, J. Binns 221.

## RIFLE NOTES.

WE received samples of the Leonard powder last week for trial in the rifle. A few shots were tried in the 38-55 Ballard, using 25grs. This powder gives an extremely high velocity to the bullet, so much so that we were compelled, after firing a dozen shots, to postpone further shooting on account of the leading of the barrel. With a patched bullet or lubricated bullet of a hardness sufficient to withstand the friction, this powder will no doubt give good results. It burns clean, and so far as we could judge, gave no extraordinary chamber pressure. Next week we hope to try a series of shots from the machine rest with this and other powders. The want of a suitable primer for the rifle shell is a great obstacle to the use of nitro in the rifle thus far. The new Winchester No. 3 V. primer, if made of harder metal, would give more satisfactory results than it does now. As it is made at the present time it has a disagreeable way of working in and around the firing pin. Dissolving as it were, and when next heard from is playing high jinks in the lock action. This is a matter that is interesting our manufacturers at the present time, and later on we may hope to see a primer in the market that will meet the wants of our riflemen.

Messrs. Walther, Hayes and Krauss, the shooting masters of the new National Bund, have just won the prize program for the festival of 1895. The general committee (delegates) of the societies composing the Bund will meet early next month, when it is expected that a programme for the festival will be formulated and prospectus printed and issued to the public by May 1. The feeling of harmony which seems to have settled upon the various interests constituting this new Bund augurs well for its future success. In Wm. V. Weber, the president, the Bund has an executive whose magnetic qualities will prove a tower of strength in keeping the various elements in the Bund in harmonious union. Where to hold the festival is a question that is seriously agitating the minds of the delegates at the present time. Union Hill, N. J., was the scene of the last festival held in this vicinity, which was in 1878. The vicinity of Morris Park is said to have great attractions as a park for a Bundes Fest. New Jersey, as the spot for the festival, has not much favor with the New York and Brooklyn delegates. May 1 will probably see the whole matter settled.

The summer of 1894 is going to be a busy one among our local rifle societies. The coming festival in '95 will be the stimulus that will add vigor and strength to many of our societies. Riflemen who had laid aside the rifle as one of the pleasures of a past experience will feel compelled to return to their old love. New affiliations and the modern rifle will make some of the old veterans as frisky as a colt, and when 1895 rolls around they will be found in line with the younger generation contesting for honors at the target.

Michael Dorrler, who is on the shady side of forty, and who shoots with glasses, never shot so well in his life as he is doing at the present time. A year ago he was going to retire; sell off his guns; nothing in it any more. The prospects now are that he will delay the sale until next season.

A proper backing for targets in the target houses of our city ranges will be a serious question to our park proprietors when nitro powders come generally into use. Wooden backs and brick walls will have to give way to some other mode of catching and holding the bullets. Some of our base ball catchers may be in position to give us a pointer.

A team match between teams from the Our Own Club of Newark and the Hudsons of Marion, is on for Thursday of this week. It will take place on the Marion ranges.

The team match between the Excelsior and the Greenville clubs came off on the Greenville Club ranges on Wednesday night. A full report will appear in next week's issue.

## Trap-Shooting.

All ties divided unless otherwise reported.

If you want your shoot to be announced here send in notice like the following:

## FIXTURES.

March 21.—Union Gun Club, 25 live bird shoot, \$30 entry, at Springfield, N. J.

March 22.—New Jersey Trap-Shooters' League team shoot, combined with all-day tournament at Dexter Park, Long Island.

March 23.—"Dutchy" Smith vs. Aaron Woodruff, 100 live birds each, \$100 a side, at Marion.

March 26.—Acme Gun Club, open shoot at Dexter Park, targets and birds.

March 26.—Acme Gun Club tournament, at Miller's Dexter Park, Long Island. Targets and birds.

March 26.—Acme Gun Club, target tournament, Twenty-seventh street and Lehigh avenue, Philadelphia.

Nov. 28.—Central New York Trap-Shooters' League, eighth tournament, at Syracuse.

March 25.—Central New York Trap-Shooters' League, first tournament, at Auburn.

April 4.—Interstate Manufacturers' and Dealers' Association's grand annual handicap at Dexter Park, Long Island.

April 4.—Texas State Sportsmen's Association eighteenth annual meeting, at Austin, Texas. Wallace Miller, Sec'y.

April 4.—California State Sportsmen's Association tournament, at San Francisco.

April 11.—Baltimore (Md.) Gun Club, tenth annual tournament, at Grason's Park, two days targets, third day live birds.

April 11.—Baltimore (Md.) Gun Club, annual tournament, under management of H. A. Penrose and E. D. Miller.

April 18.—Interstate Manufacturers' and Dealers' Association tournament, at Pittsburgh, Pa. Pittsburgh Gun Club will add \$200.

April 24.—Central City Gun Club's tournament, Central City, Neb.

April 25.—Central New York Trap-Shooters' League, second tournament, at Rochester.

May 1.—Peekskill (N. Y.) Gun Club, spring tournament; two days targets, last day live birds.

May 1.—Arkansas State Sportsmen's Association's tournament, at Fort Smith, Arkansas.

May 2.—Interstate Manufacturers' and Dealers' Association tournament, at Springfield, O. Springfield Gun Club will add \$300.

May 2.—Texas State Sportsmen's Association's fourth annual tournament and meeting, at Ft. Smith, Ark. \$1,000 added money; professionals and experts will be handicapped. Address Joseph P. Matthews, Ft. Smith, or John J. Sumpter, Jr., Sec'y, Hot Springs, Ark.

May 8.—Ohio Trap-Shooter's League annual meeting and tournament, at Columbus, O. Ed. Taylor, Sec'y, Cincinnati, O.

May 15.—Second annual tournament of the Atlantic Trap-Shooting Association, Lynn, Mass. Sec'y, F. Brown, Sec'y.

May 17.—West Newburg (N. Y.) Gun and Rifle Association's spring tournament.

May 17.—The Interstate Manufacturers' and Dealers' Association's fourth tournament, under the auspices of the Prairie Gun Club, at Garfield Park race track, Chicago, Ill. The Prairie Gun Club adds \$500 to the purse.

May 22.—Knoxville (Tenn.) Gun Club's thirteenth annual tournament; first days, targets, \$1,000 added money, known traps, unknown angles; last day, live pigeons. Open to the world. No handicap. R. Van Gilder, Sec'y.

May 30.—Eastern New York League tournament, at Canajoharie, N. Y., under the direction of the Canajoharie Gun Club. Charles Weiss, Sec'y.

May 30.—Central New York Trap-Shooters' League, third tournament, at Utica.

May 30.—Interstate Manufacturers' and Dealers' Association fifth tournament, and second annual tournament of the Michigan Trap-Shooter's League, under the auspices of the Valley City Gun Club. \$300 added money.

June 4.—Illinois State Sportsmen's Association tournament, at Chicago. W. L. Shepard, Sec'y.

June 5.—Kansas State Sportsmen's Association's fifth annual tournament, Topeka, Kansas. J. C. Clark, Sec'y.

June 11.—New York State Sportsmen's Association for the Protection of Fish and Game, thirty-sixth annual tournament, at Utica, N. Y., under auspices of Onondaga County Sportsmen's Association.

June 12.—Atlantic City Rod and Gun Club, three days' tournament. Address R. C. Griscorn, Sec'y, Atlantic City, N. J.

June 14.—Sportsmen's Association of the Northwest, annual tournament, at Tacoma, Wash.

June 19.—Chamberlin Cartridge and Target Company's first annual tournament, at Cleveland, Ohio. \$1,000 added money.

June 27.—Interstate Manufacturers' and Dealers' Association's sixth tournament, under the auspices of the Elwood Gun Club, at Elwood, Ind. Elwood Gun Club will add \$300.

July 13.—Interstate Manufacturers' and Dealers' Association's seventh tournament, under the auspices of the Kentucky Gun Club, at Louisville, Ky. The Kentucky Gun Club will add from \$200 to \$300.

July 25.—Central New York Trap-Shooters' League, fourth tournament, at Syracuse.

Aug. 21.—Pennsylvania State Sportsmen's Association annual tournament, under auspices of Altoona Rod and Gun Club, at Wopsonburg, Pa. Altoona.

Aug. 29.—Central New York Trap-Shooters' League, fifth tournament, at Auburn.

Sept. 26.—Central New York Trap-Shooters' League, sixth tournament, at Rochester.

Oct. 4.—West Newburg (N. Y.) Gun and Rifle Association's fall tournament.

Oct. 24.—Central New York Trap-Shooters' League, seventh tournament, at

Entries to the Grand American handicap of the Interstate Manufacturers' and Dealers' Association have been received from Florida, Massachusetts, Connecticut, Pennsylvania and New York, which argue well for the success of the tournament. Shooters who contemplate entering this event should not forget that regular entries close March 31.—ELMER E. SHANER, Manager I. M. and D. A.

At a recent meeting of the Pennix Gun Club of Port Dover, Ont., the following officers were duly elected: J. B. Fick, President; S. L. Butler, Vice-President; E. Taylor, Treasurer; J. W. Lawrie, Secretary; Managing Committee, H. Barrett, John Horn; Auditors, J. R. Davis, H. Holden. This club is in a flourishing condition and hopes soon to have permanent shooting grounds and protection from weather.

Don't forget that in order to enter the grand American handicap for \$25 entry with a forfeit of \$10 must be received on or before March 31 by Justus Von Lengerke, 8 Murray street, New York, or Elmer E. Shaner, 122 Diamond Market, Pittsburg, Pa. After the above date and up to and including the firing of the last shot in the second round of the handicap, it will cost \$35 to enter.

BINGHAMTON, N. Y., March 17.—We have organized a gun club here of about 40 active members. Following are the officers: President, G. A. Kendall; Secretary-Treasurer, H. S. Vance; Executive Committee, N. W. Waldron, H. S. Vance and H. W. Brown. We shall erect a new club house and shall put in a new set of expert traps fitted with Paul North's electric pulps. Probably the bluecock target will be adopted.—WINDFIELD.

The Textile Gun Club, of Gloucester City, N. J., has elected the following officers: President, James Hutchinson; Vice-President, Joseph Cheeseman; Secretary, Harry Williams; Treasurer, William Gray; Directors, James McQuaide, Stephen Hommedieu, Frank McQuaide, George Daisey, Lawrence Moran, S. Smith and Frank Cones.

Frank Class, of Morristown, is anxious to match his trapper, Scott Davenport, to trap more birds without stopping or to trap 300 birds in quicker time than any man in the world, the stake to be \$100 a side. Class would like to have the match decided at Dexter Park during the interstate shoot.

At the March badge shoot of the Wawaset Gun Club of Wilmington, Del., J. White carried off the honors with a score of 24 breaks out of a possible 25. Other scores were E. Mason 16, C. Buckmaster 22, L. Mauldin 22, O. Springer 20, J. Huber 15, J. Springs 12, I. Elliott 23, T. Wright 21, R. Miller 21, E. Melchoir 21, H. Donaldson 11, F. Martin 11, W. Buckmaster 10.

A 4-man team race at 25 targets per man, took place on the Pansy Gun Club grounds on March 10, the being the officers: President, W. S. Smith (Parker) 20, C. Hume (Smith) 16, J. R. Kenyon (Lefever) 12, W. Weston (Webley) 8; total 56. J. Schaffer (Parker) 17, H. Myer (Lefever) 16, J. Cable (Lefever) 14, C. V. Hester (Lefever) 8; total 55.

Rollo Heikes, the handsome blonde expert from Dayton, O., is spending a little time in and about the Metropolis. "Rollo" looks to be in splendid health and says he is fit to shoot for his life. He will be one of the contestants in the grand American handicap and will show what can be done with the new Winchester repeater.

The Fitchburg (Mass.) Rifle and Gun Club, at its annual meeting, elected the following officers: President, Chas. H. Brown, Vice-President, Dr. C. W. Ebbury; Secretary-Treasurer, E. B. Twilchell; Board of Directors—H. L. Wallace, H. E. Houghton, C. L. Tenney, E. W. Lewis, David Salmon, F. S. Washburn.

The Braddock (Pa.) Gun Club has re-organized for the season of 1894. George Nimon, Pres.; Alex. Durant, Vice-Pres.; W. J. Vance, Sec'y-Treas. Directors—John Gelm and Mike Connolly. W. J. Vance and John Gelm are a committee on grounds, which are expected to be secured on the other side of the river.

At the shoot of the Standard Gun Club of Baltimore, on March 12, Lopus broke 88 targets out of 90. Clements 37, Ducker 34, Hankins 33, King 31, Martell 31, Johns 31, Camdy 31, Johnson 29, Price 29, Peters 29, Starr 28, Franklin 27, Buckbee 26 and Sanders 22.

Fred'k Marsden, of Wissahickon, shot a 50-bird match for \$100 a side at the Penn Square Driving Park, on March 14, against Frank Hoagland, of the Roxborough Gun Club. 24yds. rise, 30yds. boundary, under Long Island rules; Marsden killed 86 to Hoagland's 45.

Rollo Heikes, of Dayton, Ohio, recently performed a phenomenal feat in the way of rapid firing, breaking 500 target in 37m. 16s., thus beating the previous record (his own) of 40m. 40s. He used three Smith hammerless ejectors.

Have you sent in your entry for the grand American handicap? If not, why not? Send your entry now to Justus Von Lengerke, 8 Murray street, New York, or Elmer E. Shaner, 122 Diamond Market, Pittsburg, Pa.

The New Utrecht Rod and Gun Club has leased Woodlawn Park L. I., for five years, beginning May 1. The club has put nearly \$1,000 worth of improvements on the grounds and will hold them for their own exclusive use.

The initial shoot of the Central New York Trappers' League will be held at Auburn on Wednesday of next week, and the chances are that a big crowd of shooters will be on hand other than those who shoot on the teams.

The live bird and target tournament of the Aeme Gun Club, to be held at Dexter Park on Monday, will attract a big crowd of shooters from New York as well as from the Island.

B. H. Barnett, of Jacksonville, is the new target champion of Florida, having won that title at the Orlando tournament. Mr. Barnett lays it all to his Parker gun.

Massachusetts State Tournament.

LYNN, Mass., March 14.—The sixth tournament of the Massachusetts State Shooting Association took place here yesterday, under the auspices of the Atlantic Trap-Shooting Association, situated at Lynnhurst. It was a beautiful spring day and the sweet songs of the sparrows, robins and bluebirds made everything seem like unto a sportsman's paradise. A harmonious wind blow across the traps and slightly reinforced the targets in their speedy flight; yet with such dextrous and agile experts as John Mascroft, W. L. Davis, E. T. Smith, A. W. Walls and A. B. F. Kinney, of Worcester; H. W. Eager, of Marlboro; Messrs. Sawyer, Wheeler, Winn, Gore, Sanborn and Warren, of Boston; Messrs. Pray, Rodgers and Marvel, of Marblehead, very few targets escaped the unerring and deadly aim of such crack.

The Atlantic Club tendered the Massachusetts boys a rousing reception, and visiting sportsmen will long remember the courtesy extended them at this meeting. With grounds located at the beautiful suburb, Lynnhurst, where grand and picturesque scenery abounds, surrounding the shooting grounds on all sides, the Atlantic Trap-Shooting Association can boast of one of the finest clubs in eastern Massachusetts. Its fixtures are none but the finest and its members are a most generous and sociable community, and its club house is always open to every lover of the trap and gun.

We present a good likeness of Mr. W. A. Wetherbee, of Stoneham, president of the Atlantic Trap-Shooting Association. Sportsmen will recognize Mr. Wetherbee as one of the most agreeable sportsmen in the fraternity, an expert field and trap-shooter. He was elected president of the Atlantic Club in June, 1893, and is a great enthusiast.

W. F. Brown, of whom we note below, secretary and organizer of the Atlantic Trap-Shooting Association, is undoubtedly known to every lover of trap-shooting in New England. He is an enthusiastic trap-shooter and won the Massachusetts individual championship in November, 1892.

G. L. BAXTER.  
Captain Atlantic Trap-Shooting Association.

ber, 1892. Mr. Brown is very entertaining, and sportsmen will receive the most courteous treatment at his hands.

G. L. Baxter, captain of the Atlantic Club, is one of the most successful fowl shooters in the United States, as well as a good trap-shooter. He is always willing to shoot and a great lover of the sport. It was 10 o'clock when President Wetherbee called the first event to order. Mr. John L. Skinner, representing the Foreham Arms Co. of Chicago, was present with a grand display of gun mechanism and shot throughout the tournament in good form. The State championship events were well fought, W. G. Pray, under the nom de plume of Yarp, winning the standard event with 18. The team championship was a tie between the Massachusetts Rifle Association and the Boston Shooting Association. A very palatable lunch was served free by the club and everyone, spectator and competitor, enjoyed a grand occasion. The events follow:

No. 1, 10 targets, expert rules:				
Winn	9	Shot	9	
Eager	2	Sawyer	5

Flemington Gun Club.

FLEMINGTON, N. J., March 15.—Inclosed find scores made at the last two weekly shoots of the Flemington Gun Club, March 9 and 16. All shooting was at Empire targets, from three traps, unknown angles. Under American Shooting Association rules, one man up, and as all shooters use 12-gauge guns the shooting was from the 16yds. mark. Lott, Schaffer, Reading and Moore shot American E. C. powder, Cass shot black, and Chamberlin shot Walsrode. The way Lott "snuffed 'em out" was the feature of to-day's shoot, although the work of Schaffer was nice and clean. Scores follow:

March 9.—No. 1, 10 Empires: Chamberlin 7, Lott 6, Moore 6, Cass 6, Sutphin 9.			
No. 2, 15 Empires:			
Chamberlin	10	111111101101	12
Lott	10	111010110110	10
Sutphin	11	111011100011	10
Moore	10	101110111111	11
No. 3, 10 Empires:			
Chamberlin	10	1110111111	8
Lott	10	1110111111	7
Sutphin	10	1110111111	9
Moore	10	10010111	6
March 16.—No. 1, 10 Empires: Chamberlin 7, Reading 6, Lott 8, Moore 8, Cass 6, Schaffer 7.			
No. 2, 15 Empires:			
Chamberlin	10	111011100011	10
Reading	10	111011100111	9
Lott	10	111011101111	11
Schaffer	10	111011101111	11
No. 3, 10 Empires: Schaffer 8, Lott 3, Cass 6, Moore 3, Chamberlin 9.			

Shooting in the Nutmeg State.

BAYPORT, Conn., March 15.—The regular monthly shoot of the Big Rag Gun Club, held on the 17th inst. New grounds have been selected, and while they are much more convenient than the old ones the shooting is much harder, all targets being thrown over the water. Messrs. G. E. Horton and J. D. Ayres presented the club with three prizes to be shot for during the day. Each contestant shot at 100 keystones:

S Chard	10101110100011111101011010100100010111011
E T Lockwood	01101111110111011001000010010110100010111—60
G P Foote	111011101001010101101101010101010101000010—54
O E Peck	11101110101010101010101010101010101010101—50
G M Kalb	111011101000101111111010111100000101111001—57
W Peck	111011101001010101010101010101010101010101—65
W I Sanger	1110111000010000101011111110100011101001111—67

First prize was won by W. I. Sanger, second by G. M. Kalb and third S. Chard. The prizes were: First, silver cake basket; second, silver butter dish; third, silver pickle dish 999

Waverly Gun Club.

Eight members of the Waverly Gun Club participated in the monthly shoot at Miller's Dexter Park, on Tuesday of last week.

Club event, 10 targets:			
Hillmer	100111111-8	Mohrman	01010101-4
Van Staden	101101101-7	Fehleisen	00001000-1
Grace	00101101-6	Schuster	00100000-1
Helmstead	111001001-6	Rugen	00000100-1
Sweepstakes, 6 targets:			
Hillmer	100111-4	Van Staden	000100-1
Schulz	010101-3	Helmstead	000100-1
Grau	001010-2	Fehleisen	000000-0
Mohrman	100100-2	Schuster	000000-0
Rugen	010100-2		

Central Gun Club.

DULUTH, Minn.—The local tournament of the Central Gun Club, which was arranged for Washington's Birthday, in which a gold watch was to be competed for and which has been from time to time postponed owing to unfavorable weather, was shot off March 11. The day was all that could be desired and some good work was done, showing that everybody taking part was after the "dicker," which was captured by Jos. Dodge by an average of 86 per cent., with several very close followers.

All events were known angles and traps, rapid firing system. In the team shoot of 9 singles and 3 pairs some very clever work was done on the doubles. Following is the score by events:

Team shoot: Dodge's Team—Dodge, Nelson 12, Pastorek 10, McClure 9, Greene, Bonehill 8; total 59. Pearson's Team—Day, Metcalf 9, Pearson 8, Little, Haskins 5, Gunderson 3; total 30.

No. 2, 10 singles: Pastorek, Dodge, Nelson, Bonehill, Pearson 8, Day 7, Greene, D. Day 6, A. Pearson, Metcalf 5, Gunderson; Little 4.

W. F. BROWN.  
Secretary Atlantic Trap-Shooting Association.

No. 3, 10 singles: Dodge, Pearson, Greene 9, Pastorek, Bonehill, McClure 8, Nelson 7, Little, Metcalf 6, Day 5, Haskins 4, Gunderson 2.

No. 4, 10 singles: Metcalf 7, Day 6, Peterson 5, Haskins 4.

No. 5, 15 singles: Dodge, Nelson 11, 1101111111—14. Peterson 10, 1000010000100—4. Pastorek 11, 111000101110—10. Bonehill 10, 10101001010100—8. Metcalf 10, 01111000010110—9. Day 10, 10101001010101—7. Pearson 10, 1000010110101—8. Nelson 10, 11111110110110—12. Greene 10, 111011101101—12. McClure 10, 10111111111111—14. R. Little 10, 111010010000—8. J. Greene 10, 101111111111—14.

The annual meeting of the Central Gun Club of Duluth, Minn., was held at their rooms on March 7, and elected the following list of officers for the ensuing year: John W. Nelson, President; Dr. D. H. Day, Vice-President; H. L. Heister, Secretary; L. M. Gunderson, Treasurer; T. H. Little, Field Captain; Robt. Moore, Lieutenant. The report of the treasurer shows the financial department of the club to be in good shape. Several committees were appointed, among them a committee to arrange for our second annual tournament which will be held July 4, 5 and 6, 1894. An elaborate programme, one which will suit everybody, is assured. The club has recently ordered a complete set of five expert traps with electric pulps, which will reach here soon, and with these the attendance at local and tournament shoots will be large. Several names were added to the roll of the club, which numbers about fifty. The club is to be divided into three shooting classes, and two additional medals have been ordered.

Philmont Rod and Gun Club.

PHILMONT, N. Y., March 17.—Inclosed find scores made at our club shoot yesterday, 20 targets per man:

Ames	100101110110010001—11	Dingman	101011000011101101—12
Vanderb'h	1101110101011110—15	Baker	011110101101000100—11
Vedder	10101100000100110—8	Powell	0100111111101010—13
Howland	1011001101111111—14	Ferguson	1001111011111111—16
Blundell	01101101111000101—12	Richards	101001100110110111—13

W. A. WETHERBEE.  
President Atlantic Trap-Shooting Association.

Bellefonte, Pa., has a gun club with a dozen members, of which Frank Warfield is president, Geo. B. Jackson secretary and John Furst treasurer.

T. W. Morley and C. F. Lenone recently shot a 15-bird match, old Long Island rules governing, for \$25 a side, Morley killing 13 to Lenone's 4.

The Chamberlin Cartridge and Target Company are having a big call for their handsome catalogue and programme of the June tournament.

The Pansy Gun Club, of Kingston, N. Y., has 30 active and 6 honorary members. This comprises about all the shooters in the town.

The Beaver Falls (Pa.) Gun Club are about to purchase club grounds when they will remove their house from Geneva Park.

Several shooters from up the Hudson have signified their intention of attending the Knoxville shoot.

The April tournament of the Baltimore Gun Club will be held at Grason's Park.

Louis Miller intends to put out a "corking" lot of birds for the American handicap.

The Pansy Gun Club, of Kingston, N. Y., is about to erect a club house.

Save your odd pennies for the Knoxville shoot. C. H. TOWNSEND.

Sloppy Weather Gun Club.

A NEW gun club known as the Sloppy Weather Gun Club, was organized last week at 121 East Fourth street, New York, and held its initial shoot at Dexter Park on Friday, March 16. Gus Nowak, one of the Emerald Gun Club heavy weights, is president. Scores:

J Mess	30020230—4	J Wagner	010000102—3
Gus Nowak	13021121—7	C Heckler	20010112—5
H Bailor	1112012—7	F Eisel	01011011—5

### New Utrecht Gun Club.

Equalization of Shooters Solved.

**Editor Forest and Stream:**  
The problem of how to equalize the shooters of a club has in my humble judgment been solved, and is now in successful practice at all the meetings of the Knoxville Gun Club.  
This question has agitated the minds of the shooters for a long time, and systems have been evolved by enthusiastic sportsmen from time to time, but only partially practical in their results.  
To equalize a 60% member of a club with the 75, 80, 85, 88 and 92% members seems impossible, and practically has been so considered, yet with this system the club has no trouble, and the problem is solved and simply works like a charm.  
The great difficulty on this problem was the key to the starting point or basis to begin work on. Find this average basis, then let merit of one's own shooting ability win. Experience at all our shoots and other tournaments demonstrates that 92% will win or tie. Now, to obtain this base you cannot use 10 or 15 target base, because they are too short to determine a shooter's average ability. Neither will 20 targets get 92%, as 18 out of 20 = 90% and 19 out of 20 = 95%, hence we go one step higher and find that 25 targets is not too long to tire a shooter and the base 92% = 23 out of 25, which will win or tie more than the average.  
A shooter may make 15 out of 15 = 100%, but let him shoot 20 and he makes 19 out of 20 = 95%, or 25 = 23 or 92%, the tie or win, as a shooter will by his record show from the club scores his average on 25 targets will not go beyond 23 out of 25 or 92%. Now, let merit step in and beat the average base 23 if it can do so and the shooter feels proud of his win on 25 or 25 straight.  
Hence having determined the base or starting point for equalization in all club contests (briefly stated, shoot at 25 targets, necessary average to win or tie = 23 out of 25 = 92%) we can begin to easily classify the members of a club.  
There are always in a club two or more members who can shoot 88 to 92% on an average = 22 to 23 out of 25. They will constitute class A, and are only entitled to what they can break out of 25 without any allowance. The next class will be those who can shoot 80 to 88%, and class C who shoot 60 to 80%, as follows:  
Class A = 88 to 92% = 23 out of 25 = no allowance made.  
Class B = 80 to 88% = 20 out of 25, equalized to basis of 23 out of 25.  
Class C = 60 to 80% = 12 out of 25, equalized to basis of 23 out of 25.  
As follows:  

Must make 16 out of 1st 20 or 80%, doing so allowed 2 targets = 18 or 90%	Class B.
Making 17 " " 20 " 85%, " " 1 " = 18 or 90%	
" 18 " " 20 " 90%, " " 0 " = 18 or 90%	

Making 12 out of 1st 20 or 60%, doing so allowed 7 targets = 19 or 95%	Class A.
" 13 " " 20 " 65%, " " 6 " = 19 or 95%	
" etc., " etc., " etc., " " = 19 or 95%	

  
Class B must make 16 to be entitled to the benefit of class allowance, and then if they break their last 5 targets straight, by merit, they come in for tie or win on 25 or 92%. If they fail to make 16 out of 20 then their score counts for only what they make without allowance, and hence come in on same basis as class A that fail to make their supposed basis, 23 out of 25 or 92%.  
The same rule will apply to class C, who must make their class percentage, 12 out of first 20, to be entitled to their class privileges or 19, and breaking their per cent. basis = 3 to 2 out of 5, or places them on a possible win at 24, but a probable win at 23 or 92%, as they will only average 4 out of 5, hence breaking say 12-7, their allowance = 19-4 out of last 5 shot at = 23 out of 25 = 92% tie or win by merit of the possible win.  
If the clubs of the country will try this system of classification, and in connection with it use our "certificate trophy challenge scheme," they will find renewed interest taken by the old members.  
Our club is absolutely revived, as we now have out nine certificates, and each holder of same wants another, and the consequence is great rivalry to win and "rub it on a fellow."  
Now, a word about nitro loads, shell, wads, etc. Above and beyond all considerations, let each member of a club get the best shooting qualities of his own gun by practical tests and not theoretical demonstration. We have been surfeited by certain theoretical tabulated statements, that so far as they concern the individual merits of the shooter's gun are practically of no value.  
I believe in theory, but I must say when combined with practical, painstaking work, experimenting with shooting loads of different powders, wadded differently in different length shells of different kinds is the only way, for each individual can determine the best results for his own gun. This is absolutely necessary to become an expert with his gun, which may fit him perfectly, but he shoots a certain load that some one recommends with no good results, simply because he did not try it before he used it at the match which he lost.  
Now, two guns will shoot alike near, but they may seem to be bored. A small percentage of powder added will give different results in one from the other; also make a change in length of shell for long or short crimp and different wadding, and your results will be surprising.  
The average target is broken 30-35yds., and the load must be targeted at the proper distance each individual kills it. If you target at 40yds. and you kill your target at 30 you are certainly handicapped by a surprising target if you will only test the question. This point, proper distance to target for open even results, is what every shooter should bear in mind when ordering a gun and have it bored that way. The quicker the load or greater the shot velocity the nearer you can hold on a target and consequently the better chances to kill, as you eliminate the per cent. holding so and so. Hence practically and not theoretically determine the load for your gun will give best regular results, and when found stick to it, even if Mr. A. who shoots something entirely different that fits his gun, says: "Why, try some of my shells and I am sure you will do better." Confidence in your load by practical trial and sticking to it will improve any shooter's score, even if he does make a few bad scores, as he absolutely knows it is himself at fault and not the gun or load. The sooner the vacillating shooters find this out the better and quicker will it be to their own good and improvement as a trap shoot.  
I have been all along this whole line, and doubt not many others also who read the records, and by practical hard work I have found out that my Smith ejector No. 12 will give the best results for open, even distribution (pull the load out from center, the great fault of all guns) after trying all sorts and kinds of powder, shells and wadding as follows: Climax 5in. shell, primed with 3grs. FFG Hazard Kentucky rifle, 45grs. (trap) E. C. American made, one trap wad No. 11 1/2, one white felt 3/8 No. 11 1/2 (all U.M.C.) one black edge No. 12 (Winchester), 14oz. No. 7 1/2 chilled shot and their Keystone trap shot wad.  
All the wads put down solid not to mash the grain of E. C., but to prevent also the hard grain priming from getting displaced. Let some one try E. C. loaded this way and I will guarantee he will not have a "torture to a pigeon" if he "holds on" with his gun.  
The best cheap killing load for targets I find to be as follows and next best for even work: Climax or Rival 2 1/2 primer as above and 41grs. (trap) E. C., one trap or field wad, one black edge 1/4in. (all U. M. C.), then 13oz. full No. 7 1/2 chilled shot and thin shot wad (all the time). This load gives a full 1/4in. crimp which is absolutely necessary with any nitro powder for even and regular results.  
I prefer to use the 3/8 white wad because it will in 100 birds give more regular results and relieves the recoil of the gun at the small

additional cost. Also the new No. 3 W. Rival 2 1/2 primed 1gr. and 41grs. E. C., with trap wad 1 1/4 black edge No. 11 1/2 and one common 12; then 14oz. chilled No. 7 1/2. This load is a killer and is used by some of the Knoxville Gun Club with great success.  
If the shooters of the country will now in friendly criticism "tear out the thread of my narration" for my modest claims, and by such discussion advance the cause of shooting, my object will have been accomplished.  
R. VAN GILDER, Sec'y Knoxville Gun Club.  
KNOXVILLE, TENN.

**Trap At San Antonio.**  
The trap shooting season of 1894 was officially ushered into being by the two clubs of this city on the 11th inst. The attendance at West End and Lakeview was large for the first shoot of the season, and the interest shown bespeaks well for a successful year at the trap.  
At West End, the Powder Hill Gun Club regular media shoot took place. The new medal for 1894 is the prettiest ever contested for in this region and is the result of Mr. A. B. Critzer's good taste. This club has departed from the stereotyped rapid firing system and is now shooting from five unknown traps. Thirty singles and five pairs constitute the regular medal contest. The medal to become the personal property of any member winning the same three consecutive times. The medal was won by Mr. A. B. Critzer on the modest score of 32, and the scores of all the members are a clear indication of what 90 per cent. men at the rapid firing system will do when they face unknown traps without practice. Score:  

	Singles	Doubles	Total
Critzer	24	8	32
Texas Field	30	7	37
Glockner	18	6	24
Dress Jr.	18	7	25
George	30	8	38
Olmesorge	30	7	37
Arthur	19	6	25

  
At the Lakeview grounds the members of the San Antonio Gun Club were treated to a merchandise prize shoot at 20 singles and 5 pairs, known traps, unknown angles, with the following result:  
First class: Black 23, Briesbach 22, Exp 23, Kelley 23, McCormack 19, Vernon 26, Chabot 22, France 17, McKiver 19, Paris 21, Thiele 20, Rothwell 23, Veith 18, Adams 21.  
Second class: Shields 20, Learn 16, Wittchell 17, Riely 16, Fay 15, Tendick 18, Wagenfuh 20, Hice 17, Phillips 22, Barber 15, Vollbrecht 19, Grossmann 11, Frank 18, Smith 10.  
The prizes were distributed in the following order: First class: Silver flask, water, wad, Verber, lathe by Nord, A. B. Critzer on the modest third, won by Rothwell; hat, fourth, won by Chabot; pocket knife, fifth, won by Paris. For second class: Silk umbrella, first prize, won by Phillips; Shields won second prize, a shell case; Vollbrecht won third, a pair hunting shoes; Vendick won fourth, gold pen; Wittchell won fifth, jointed fishing rod.  
No. 2, 15 singles: Adams 13, France 10, Barber 5, Samuels 12, Chabot 11, McCormack 13, Vollbrecht 9, Paris 9, Hice 11, Rothwell 14, Shields 11, Learn 10, Tendick 13, Riely 11, Kelley 13, Wagenfuh 14, Fay 8, Veith 12, Briesbach 14, Vernon 14, Hice 10.  
No. 2, 10 singles and 2 pair: France 11, Learn 4, Shields 7, Vollbrecht 10, Adams 10, Tendick 9, Paris 9, McCormack 9, Black 10, Hice 6, Samuels 10, Chabot 8, Phillips 9, Briesbach 10, Rothwell 10.  
No. 4, 15 singles: France 13, Adams 13, Riely 11, Barber 6, Rothwell 9, Tendick 13, Grossmann 10, Paris 6, McCormack 7, Samuels 13, Black 13, Frank 11, Chabot 12, Briesbach 11.  
O. G.

**Parkway Rod and Gun Club.**  
The monthly shoot of the Parkway Rod and Gun Club at Dexter Park on Wednesday of last week brought together the average attendance of members and the usual crowd of spectators. The day was a typical March day, the weather pleasant with a strong northwest wind blowing across the grounds. As we have had previous occasion to remark, the Parkway's day at Dexter Park brings extra preparations on the part of mine host Miller, for the Parkway's are active and numerous, circulation normal and their digestive organs generally in good order. Mr. Miller's preparations on Wednesday were of the order that brings satisfaction to both the patron and host. The birds that went into the traps were mostly good, strong flyers, and made it difficult for the gunners to put up clean scores. In fact, only one of the fifteen men engaged in the club event at 7 birds killed all of his birds. This honor fell to Henry Bramwell, one of the Class B men. He was later in the day decorated by President Bookman with the club trophy. The three prizes donated by the club for the best score in each class on this occasion consisted of three sets of knives and forks (silver). The prize for Class A was won by Jim Bennett, who killed 6 of his 7 birds. Lew Helgans was second with 5. The Class B prize went to Henry Bramwell, along with the club trophy on the score of 7 kills; Jas. Link was second with 6.

Answers to Correspondents.

No notice taken of anonymous communications

C. M., Winchester, England.—I am a constant reader of FOREST AND STREAM, and seeing what you say Feb. 24 about the quantity of wildcats in Massachusetts, I should like very much to know whether they are to be hunted with hounds like a fox, or would they tree at once? Ans. They would tree.  
F. C. A., Auburn, N. Y.—Will you kindly inform if spring duck shooting is prohibited on Cayuga Lake and Seneca River? There has been shooting there this spring, and if it is legal I want my share. Ans. The law closes the season March 1 everywhere in the State except on Long Island. See *Game Laws in Brief*.  
I. W. F., Roscoe.—Will you please inform me when the open season on trout begins? Is there any local law affecting the trout season in the counties of Sullivan, Delaware and Ulster? There are various opinions expressed by the local fishermen here. It requires watchfulness to keep posted on the game and fish laws, owing to the constant "tinkering" of our representatives at Albany. Ans. By the general law the trout season will open on Long Island on April 1, elsewhere in the State on April 15. County supervisors' laws extend the opening date to May 1 in Columbia and Madison.  
R. S., Madison, Wis.—Will you kindly inform me through your columns whether 32in. barrels give better penetration when using black powder than 30in. barrels on a 12-bore gun. Ans. For all practical purposes the difference in length mentioned would have very little effect on the shooting. Many 30in. 12-bores will surpass 30in. guns. With ordinary loads the penetration is about equal. The longer barrels, however, would have the advantage when increased loads were used.

SAVE YOUR TROPHIES.

For Seasons  
for all Fish and Game

and other points of Fish and Game laws consult the *Game Laws in Brief*, which is sold by all dealers or sent by Forest and Stream Pub. Co. Price 25 cents. Covers the whole country. Is reliable and has 25 half-tone pictures.

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where we get back a good deal more than the cost of catalogue and postage.

ABBEY & IMBRIE,  
18 VESEY STREET, NEW YORK CITY

## Notice to Fishermen! Cut Prices for 1894.

I am with you again with lower prices for Fishing Tackle. I find by experience that putting down the prices and not decreasing the quality, it increases my business every year.

One lot of Split Bamboo Fly and Bass Rods will be sold at \$1.58 until all are sold. Rods are all nickel mounted, solid reel seats, silk wound, complete in wood form and will give satisfaction. Length and weight of the Fly Rods are: 9ft., 6oz.; 9½ft., 6½oz.; 10ft., 7oz.; 10½ft., 7½oz.; 11ft., 8oz. Reel seats below hand. Length and weight of the bass rods are: 8ft., 9oz.; 9ft., 10oz.; 9½ft., 11oz.; 10ft., 12oz.; 10½ft., 14oz. Reel seats above hand. A special lot of Hard Rubber and Nickel, Raised Pillar, Multiplying Reels with Balance Handle and Side Spring Click, 40yds., 90 cts.; 60yds., \$1.00; 80yds., \$1.10; 100yds., \$1.20. Any of the above reels sent by mail for price and 10 cts. extra for postage. Brass Click Reels, 40, 60, 80 or 100yds., 28 cts. each; 5 cts. extra for postage. One lot of Multiplying Raised Pillar Reels with Balance Handles and Lifting Drag: 40yds., 38 cts.; 60yds., 48 cts.; 80yds., 58 cts.; 100yds., 68 cts.; 150 yds., 78 cts. A special lot of Trout Flies at 30 cents per dozen assorted, sent by mail 1 cent per dozen extra for postage. A special lot of Bass and Pickerel Spoon at 5 cents each sent by mail, 1 cent extra for postage. All kinds of Hollow Point best quality Hooks snelled to single gut 10 cts. doz.; double gut, 15cts. doz.; treble, 20 cts. doz.; four ply, 25 cts. doz. 1 cent extra per dozen for postage. 300ft. Braided Linen Reel Line on Block, 41 cts.; 300ft. of Hand-Made Linen Reel Lines on Block, 9 thread, 38 cts., sent by mail 5 cts. extra for postage. Brass Box Swivels, all sizes No. 1 to No. 12, 15 cts. per dozen, sent by mail 1 cent per dozen extra for postage. Single Gut Leaders, 3ft., 4 cts., 45 cts. per dozen. Double Gut Leaders, 40in., 5 cts. each. Treble Gut Leaders, 32in., 7 cts. each. Four-ply Leaders, 32in., 8 cts. Special lot of best quality 100ft. Linen Reel Lines, 8 cts., 200ft., 15 cts.; 300ft., 22 cts.; 3 cts. extra for postage. Send 2-cent stamp for Illustrated Catalogue.

Open Evenings until 8 o'clock.  
Saturday Evenings 11 o'clock.

## Favorite Flies and their Histories.

By MARY ORVIS MARBURY.

Mrs. MARBURY is thoroughly enthusiastic over her subject, and after an introductory essay on "Insects, Natural and Artificial," etc., she gives the history of the various favorite flies, accompanied by letters from anglers relating to their use. Two or three years were spent in collecting information in this way. The kind interest shown by fellow-fishermen in cordial replies giving their knowledge and opinions was both surprising and delightful, and awakened warmest gratitude. These letters are records of actual experiences, and conclusions deduced from the same; and they cannot fail to be of great assistance to any one who may wish suggestions regarding new waters. The colored plates depict 17 hackles, 18 salmon flies, 48 lake flies, 185 trout flies and 58 bass flies, the comprehensive character of the collection, and the value of the detailed comments on each of its 291 flies, will be more apparent. "It is destined to remain for generations to come," says *Forest and Stream*, "a prominent landmark in angling literature. The fly-fisherman of to-day who does not possess it lives below his privileges."

Square octavo, 522 pages, 32 colored plates, 6 engravings and 8 reproductions of photographs. Price \$5.00, postpaid.

## Kennel Special.

Advertisements under KENNEL SPECIAL head, set in uniform  
display, 25 cents a line first time, 15 cents a line each time after.  
Count seven words to a line. Cash must accompany order.

**MOUNT PLEASANT GORDON KENNELS** ARE  
offering for sale a number of strictly first class  
Gordon setter puppies from first prize field and  
bench sires and dams. Pedigreed and registered.  
Address with stamp,  
C. T. BROWNELL, P.O. Box 325, New Bedford, Mass.

My kennel of mastiffs is conceded to be the best in  
America. Have won at all the large shows. Won  
all 1st and 2d prizes in mastiffs late Chicago show.  
Dogs at stud and for sale. A few choice pups for  
sale. Send stamp for list and mention this paper.  
CHAS. E. BUNN, Peoria, Ill.

**CROWDED AND MUST MAKE ROOM FOR COM-**  
ing young stock, consequently will sell for half  
value some well trained pointers of excellent breed-  
ing as well as some very choice young stock. Ad-  
dress for prices and particulars, **RICHWOODS KEN-**  
**NELS**, 230 S. Washington st., Peoria, Ill.

**BEAGLES.—HAVE PUPPIES BY CH. FRANK**  
Forester and ch. Roy E. out of crack bitches.  
Young stock unbroken and several certain show  
winners that I will sell for very moderate prices.  
Don't write for catalogue, but state what you  
want.  
H. L. KREUDER, Nanuet, N. Y.

**GORDON SETTER PUPS, BY RANGER B. 1ST**  
special (110) N. E. Field Trials; 18-2, and Belle-  
Lorraine, first, puppy class, Ohio Field Trials, 1893.  
Bench show record furnished on application. These  
are the best field trial Gordon puppies ever offered  
in this country.  
W. L. ALEXANDER, Canton, Ohio.

**WANTED TO BUY.—GORDON SETTER DOG.**  
Must be thoroughly trained for field work  
and good retriever for ducks. Price must be low.  
Address  
W. H. HARRISON, Adrian, Mich.

**FOR SALE.—YOUNG LIVER, WHITE AND**  
black pointer dog, whelped June 27, 1893, from  
registered stock. Healthy, kind, quick, and partly  
trained. Price \$50.  
JOHN R. HOWARD, 47 E. 10th st., New York.

**FOR SALE.—SEVERAL WELL BROKEN POIN-**  
ters and setters. These are dogs that have had  
large experience on game and I will guarantee that  
they will prove satisfactory.  
W. B. STAFFORD, Trenton, Tenn.

## "A PLATFORM PLANK."

WE have reprinted, as a folder for an envelope, "A Platform Plank," from our issue of Feb. 3, and "Absolute Prohibition of Game Traffic," from issue of Feb. 10; and should be glad to supply them in any desired numbers, without cost.

## DANGERS OF SEGREGATION.

It was in March, 1872, that Congress set aside the Yellowstone National Park as a public park or pleasuring ground for the benefit and enjoyment of the people, and during all this time it has been preserved and used by the people for the purposes for which it was established. Its integrity has many times been threatened. The speculators and money getters, who are constantly watching their opportunity to get from the United States Government something for nothing, have made efforts to seize the whole Park, to cut away portions of it and to secure strips of its territory for private purposes, but none of these things have ever been done. None of the Park's area has been taken from it.

Now it is threatened again, and in several directions. Of these dangers the most imminent is the project for the segregation of the northeast corner. This project is the successor of a plan set on foot years ago by a small number of speculators to obtain a right of way for a railroad running down Soda Butte Creek, the East Fork and the Yellowstone River from Cooke City to Cinnabar. This right of way project having been several times defeated on the ground that no railway should be allowed in the Park, the same speculators are now trying to have the northeast corner of the Park and a large portion of the forest reserve cut off, and to have the Yellowstone River made the northern boundary of the reservation.

If this change should be made it would in practice open the whole northeast corner of the Park to the skin-hunters, and would vastly increase the difficulties of protecting it.

As the boundaries stand at present, there are really but two entrances to the Park on the northeast. One of these is by way of Cinnabar, up the Yellowstone, the other is by way of Clark's Fork and down Soda Butte Creek. Everywhere else the reservation is walled in by mountains so high and so rugged as to be quite impassable. But if the boundaries were altered as proposed, the north bank of the Yellowstone River would at once become a legalized resort for the horde of lawless characters, who constantly hover on the borders of the Park, and it would be easy for them to slip across the river and to commit their depredations. All the game in the country proposed to be thrown open—a few buffalo, two fine herds of mountain sheep, and the only antelope to be found in the Park—would at once be destroyed and the existence of the game actually ranging south of the river would be gravely imperilled. Fires would be started along the river, and the forests, now green and flourishing, would soon be burned off so that the water supply of the Yellowstone, which is

of such vast importance to thousands of farmers on the plains below, would be made irregular and seriously lessened.

The facts of the case are thoroughly understood in Montana. The segregation project had its origin in the mountain towns of that State, and it is earnestly opposed by the towns on the plains, whose chief industry is agriculture and stock raising. These dwellers on the plains comprehend very well that the segregation bill threatens their very existence, for it endangers their water supply, and without water they cannot grow their crops nor sustain their herds. The whole cry for segregation is confined to a few speculators in Livingston, Cooke City and Helena, the last named town furnishing the money for the movement, since the means of Livingston were long ago exhausted, and Cooke City never had any. These speculators, however, have succeeded in persuading certain Montana papers to take up their cry, and have endeavored to make up for the smallness of their numbers by the great tumult they create. The facts are, however, that the newspapers of all the plains towns, such as Stillwater, Red Lodge, Billings and others, reflect the strong sentiment which exists in their sections and are opposed to segregation, and this for the most excellent and practical reason that it will mean ruin of their farmers and the practical depopulation of their territory.

In FOREST AND STREAM of last week we announced exclusively the capture, red-handed, of a poacher with the spoils of eleven buffalo, slain in the National Park. This man had entered the reservation from Cooke, quietly slipped by the soldiers at Soda Butte and had erected his lodge and was hunting in the Pelican Creek Valley, where he was taken in the act of skinning one of five buffalo that he had just killed. Since the publication of this dispatch a general press telegram has been sent out, which states that extensive depredations of this nature are going on in and about the Park. Such destruction of the public property will continue so long as no law exists by which those who violate the regulations can be punished.

If the segregation bill should be passed, the natural barrier which now protects the Park on the north and east will be thrown down, and nothing will take its place to keep out intruders save a narrow river which can easily be crossed. When this shall have become the Park boundary, neither laws nor patrols will keep out the poachers, and the game will disappear before the horde of poachers like snow beneath the warm spring rain.

It were better that a thousand elk should be killed than a single buffalo, but it is just the buffalo that most attract the skin-hunter, and so are most in danger from his gun. It is these few survivors of all the myriads that once thronged this continent that most need protection. This protection they should have, not because they are game, but because they are the last relics of America's greatest land animal.

## NO WORDS WASTED.

MR. ALEX. STARBUCK sends us the full text of the decision of the Supreme Court of Ohio in the case of Edward N. Roth vs. The State of Ohio, referred to in these columns last week. Here is the decision, all of it:

3736.  
Edward N. Roth }  
vs. } Error to Circuit Court of Hamilton County.  
The State of Ohio. }  
By the Court:

It is an offense under Sec. 6964, of the Revised Statutes, to sell quail in this State, except between the 10th day of November and the 15th day of December, though such quail were killed outside of this State, and where it was lawful to kill the same. The section is constitutional.

Terse and to the point. But if the Court had written its decision as Mr. Starbuck writes of his fishing trips to the North Shore, for "quail" we should have had "the speckled beauty of the dewy stubble," or some other interjection of the poetry of the field into the court records.

We neglected to say last week that to the Cuvier Club of Cincinnati belongs the credit of establishing this point of Ohio law. The club engaged the detective to secure the evidence, retained Judge J. P. Murphy as counsel—and a very able and masterly counsel he proved to be; supplied the sinews of war; and fought the case through from magistrate to Supreme Court. The result is a decision which will materially assist in the protection of game in Ohio; and for this the people of the State have to thank the public-spirited members of the Cuvier Club.

## SNAP SHOTS.

The Massachusetts Association, in making determined opposition to the Gilbert trout bill, have prepared an effective document reviewing the legislation of the Commonwealth for the protection of its wild trout. We print this review elsewhere. The strongest factor of the society's opposition to the proposed measure is found in the actual experience of the past. When the statute permitted the sale in close time of trout "killed outside of the Commonwealth," it was impossible to distinguish between native fish and foreign fish; and there was absolutely no way to shut off the market supply of trout from Massachusetts brooks. The first trout protective law quoted by the committee was the work of Daniel Webster, who once said of it:

It has so happened that all the public services that I have rendered in the world in my day and generation have been connected with the general government. I think I ought to make an exception. I was ten days a member of the Massachusetts Legislature and I turned my thoughts to the search of some good object in which I could be useful in that position, and after much reflection I introduced a bill which, with the consent of both houses of the Legislature, passed into a law and is now a law of the State, which enacts that no man in the State shall catch trout in any manner than in the old way, with an ordinary hook and line.

If Webster were living to-day how he would sweep away the fallacious pleas and pretensions of the advocates of marketing brook trout in close season.

In our game columns will be found some extracts from the third annual report of the Minnesota Game and Fish Commission. This is one of the most level-headed, intelligent and efficient commissions in the country; and in their executive officer, Mr. W. P. Andrus, they have a level-headed, intelligent and efficient agent. We have put these extracts under the head "Stop the Sale of Game" for the reason that the report dwells with such emphasis upon the cold storage establishments and the markets as factors in the problem of preserving to Minnesota its game stock. If any one is in doubt about where our game is going to, let him reflect on the figures given in this report—4,000 carcasses of venison shipped to outside markets, and 480,000 birds; and these the work of a single season. One of these days the people will wake up. Then the FOREST AND STREAM plank will mean something.

Massachusetts will try the year's close season plan on quail again, a law just having been adopted making it illegal to kill quail in 1894. But there is another bill in the Legislature which should be not only scotched, but killed, for it is thoroughly bad, permitting the possession and sale of quail by dealers and cold storage establishments from Oct. 15 to May 1; and of other game at all seasons. Massachusetts can never accomplish protection with concurrent close killing season and open market season.

The New York Assembly last week rejected a bill making lawful the Sunday fishing, which is done in the waters about New York city. The prohibition of Sunday fishing is a part of the penal code. We believe that there is now another bill in the legislature to amend the penal code in this respect.

It appears that we erred when we said last week that the fish which Fish Commissioner Follett had netted out of public waters were brown trout; they were brook trout. This point is immaterial. It was just as much a breach of the law to take one species as to take the other.

Mr. W. H. Rogers, inventor of the Rogers fishway, died at his home in Amherst, Nova Scotia, last week, aged seventy-one years. Mr. Rogers was widely known in connection with his fishway, a contrivance in which he had abiding faith.

The New York Legislature is considering a bill which requires Canadians to pay a license fee of \$25 for shooting and fishing. It is a game of tit for tat.

When you come to think of it, a legislative deadlock is not without its compensation, for so long as it lasts the fish and game laws cannot be tinkered.

Something like 565,000 acres of Adirondack lands are in the possession of individuals and clubs for private preserves, from which the public is excluded.

## The Sportsman Tourist.

### ON THE NORTH SHORE OF LAKE SUPERIOR.

"Should you lure,  
From his dark haunt beneath the tangled roots  
Of pendent trees, the monarch of the brook,  
Behooves you then to ply your finest art."

THE angler who voyages to the North Shore of Lake Superior for the ever beautiful trout of radiant dyes has revealed to him a region of primitive wildness and picturesque beauty that is without a parallel on this continent. The lake itself, the largest body of fresh water in the world, alone impresses him far beyond his most sanguine expectations. Imagine a vast reservoir of the purest, clearest and most wholesome water, having for its dimensions a length of 380 miles, a breadth of 160 at its widest part, and a shore-line of rough and ragged walls of 1,500 miles, with a depth varying from 500 to 1,000 ft. This is not all, for in addition to its having a waterway of 2,100 miles from the source of the St. Louis emptying at its head to the mouth of the St. Lawrence, it receives the waters of 200 rivers and contains 25,000 islands and islets. Its very purity and coolness, never rising above 46° Fahrenheit, make it the most favored home for the matchless beauties who so proudly wear the celestial colors of the rainbow and the sunset.

From Gros Cap Island to the mouth of the famed Nipigon, and, in fact, along the entire coast line, they lie in quiet concealment in rocky chasms, under ledges and around big boulders. In the first mentioned boundary they are found to be more numerous and of more ample proportions, but always of that graceful symmetry and ideal iridescence which pre-eminently make them worthy the pen and pencil of both poet and painter.

For a number of years, in company with Mr. P. E. Roach, whom I have in other published serials called Ned, and will hereafter in this, I have sailed along the beetling cliffs and purple mountains of the North Shore, tempting, with alluring flies of shimmering tinsel and feathers gay, these scarlet-robed Hebes of the "gleaming stars" that in expectancy lie in their rocky lairs ever ready with blazing eyes and tiger-like savagery to spring upon their unsuspecting prey.

In the early part of last July, when the sun was pouring down a flood of bright golden light, and lovely clouds of crimson were serenely drifting in the empyrean blue, we started with very hopeful hearts and unflinching tenacity of purpose for the iron-bound coast in a Mackinac—a special name for that class of boats—well provisioned, and manned by two sturdy half-breed sailors. The water being as smooth as polished steel and the heat unduly intense, we took a tow from the "Soo" with the little tug Annie Clarke as far as Grindstone Point, where we "cast off" went ashore and camped. It being near 6 o'clock when we struck the beach, and having had nothing but a few crackers since early morn, we hustled things around quite lively, and soon saw the white wings of our tents arise amid a cluster of spruce and balsam, the provisions carefully stowed away, and then the long-wished-for supper prepared, to which we brought a plow boy's insatiable appetite. It was dispatched, I assure you, with alacrity, and without the formula of finger bowls or linen napkins. We were roughing it, and as a necessity, the dining-room auxiliaries of a first-class *menu* were omitted on this particular outing.

Camping, we will here remark, while incidentally touching upon the delightful recreation, is not for every one; it is not for those whose appetite fails them at a table less than three feet above grasshoppers and crickets; it is not for people of few resources, miserable when alone. It is for all who are in love with nature, who desire to know her in every mood—in storm, in the wilderness, in the night, and with Keats,

"Far, far away to leave  
All manner thoughts, and take a sweet reprieve  
From little cares;"

who, away from the shows of things, find clearer judgments sifting down between the leaves with the sunlight, and springing up with the grass blades, and who are willing to pay for all this the price of some sacrifice of ease and order and conventionality.

Ned and I always took this philosophic view of it, really the angler's view, and fully discussed it that evening over our "tea and toast," satisfied that no perfumed dandy of the gentle art with soft muscles and silk stocking affinities should ever seek this rock-bound and mountainous shore in pursuit of the tinted beauties. His Utopian ideas of the angle would soon go glimmering if he ever had the hardihood to attempt it.

Desiring, after the wholesome repast, to enjoy the fretted and dying fires that then filled the vault of heaven, we sought a convenient spot on some rocks overlooking the great lake, and there watched the regal loveliness of the west, as the clouds took on the scarlet of the sea-shell, and the far away hills the blue and tender gray of the departing day. Turning to the luminous gateway of the east, as twilight lost itself in the crimson hues, we were greeted with the silver face of the full moon in summer glow rising slowly o'er the rustling treetops into the amethystine sky.

Our cup of emotional pleasure was now filled to the very brim with this impressive scene of heavenly splendor where nature had massed her choicest colors like the threads of some delicate embroidery,

"Purpled and paled with dreamy mist,  
Shaken from breezy wafts that lie  
Calmed in their isles of amethyst."

A myriad of murmuring insects, as if to destroy our quiet contemplation of the bejeweled arch, had now risen on all sides of us, and those that blood alone would satisfy made such a ravenous attack upon us that the fly repellent which we were fortunate enough to bring along, was soon deluging our faces and hands. Ned bawled out in bitter agony at the savage onslaught of the bloody horde, which make life such a misery on these lonely shores, while I was not a bit behind in the use of that lurid language which seems to afford a pagan as much relief as tears do the gentler sex. The odoriferous liquid, however, soon began to display its subtle powers upon these little trumpeters of the woods, and then we became as gentle as sucking doves.

The night wore on apace in unclouded grandeur with

"the silver-footed queen" proudly advancing in her celestial pathway and flooding lake and land with shimmering beams and shifting shadows.

The silence which prevailed—deep as death itself—was only broken by the clamorous hoot of some far away owl, or the flutter of some hungry whippoorwill as he snapped up the tiny insects for his nocturnal meal. My piscatorial *camarade* was so deeply enthused with the ravishing beauty of the night and the luxury of a fragrant regalia, that nought but the leap of a trout or the bite of a *brûlot* would bring him back to things terrestrial. The latter, however, soon drew his blood, and then sentiment was in hurried retreat and he himself once more.

"The beastly pirates will never let up," was his awakening response to the insectivorous invaders, and then there was a free anointing once more with the powerful mixture.

The plans for the morning's sport being talked over and fully matured, we quietly retired to luxuriant beds of fragrant balsam leaves which soon wooed us to restful slumber and delightful dreams.

The early dawn, like a rose of joy, introduced a refulgent sun, accompanied with tinted clouds lazily floating in unnumbered battalions across the spangled dome of blue, and charmingly imprinting their delicate reflections o'er the far-reaching prospect.

The gentle breeze, a southwest one and always a delight to the gentle angler, came laden with a fragrance and exhilaration from the dense forests that made the eyes sparkle with the radiant glow of ruddy health. It was really the exquisite morning of a faultless summer day. Eager for the anticipated sport, the camp was at once aroused, breakfast hurriedly served, and then to the home of the Apollo of the dotted robes.

Our half-breeds, we will here particularize, were experienced and active boatmen, and in every way exceedingly meritorious, taking as much interest as ourselves in raids for the rose-colored leopards of the rocky reefs and pellucid pools. The chief boatman answered to the name of Peter, being the one who was with us on our trip of last year, while his "helper" responded to that of Kenosh. Though the latter was a "sub" on the trip, he was the best of the twain, and could give his boss many fine points in skillful navigation, and also discount him as *chef* of the frying pans. He was unusually daring with a boat, and would venture in storms that would make many a half-breed turn pale, if not his more civilized brother. He was a rare exception to his class, and so apparent was his superiority to that of his chief that that individual was constantly kept on the strain to prevent being entirely overshadowed. We were confident we had drawn a prize in Kenosh, and that he would prove superlatively satisfactory, and could fully be depended upon in time of threatened peril. Invariably he was the first to obey, and that morning had arisen unusually early, so there would be no delay in starting for the retreats of the golden fins. Ned was also another of the peep-o-day boys, for he was always up with the first coming of dawn, arranging his tackle, and particularly his flies, which so frequently had to have, in his opinion, an additional red feather or two, and doubtless a glass eye.

"All aboard!" was the cry immediately after breakfast, and into the shapely Mackinac we all tumbled with an alacrity that astonished ourselves. The prospective sport was undoubtedly the incentive for our unusual agility, and to have seen us hustling around that morning, like boys on the common, you would think we had been partaking of the waters which Ponce de Leon so long sought for, but never found.

My tackle had been ready long before the breakfast bell had tinkled. I had selected a silver-doctor for my dropper and a gray-hackle with a red body for my stretcher, having always found these very choice flies; and with my 7-ounce split bamboo with cork handle and aluminum reel, was satisfied, thus prepared, to secure my share of the quarry.

Ned had selected a couple of flies of his own creation, which might as well be termed the "red-headed-terror" and the "scarlet-avenger," as they were without any distinct nomenclature or of any specific class. Which was the dropper or which the stretcher I never ascertained, suffice it to say, he idolized them as if they were priceless pearls. It mattered not to him whether it was terror or avenger that took precedence on the leader—they went sailing all the same to the sun-kissed waters with as lurid a streak in their wake as a comet displays in its erratic course through the regions of unknown space.

After proceeding along the wood-crowned and serrated shore a short distance, we reached what we thought coveted waters, and then the work of earnest casting commenced. Ned sent his blood-red flies over some streaks of darkened waters, while I sought a victim around some huge boulders. Neither of us getting a response to our very industrious flogging, we passed on, casting as we went in every available spot that we thought harbored the beautifully mottled trout. Over ledges, chasms and debris of dismantled rocks our flies industriously fell, only to be lifted from the dimpled waters to go through the same *modus operandi* time and again, till our hearts grew sad and weary of the persistent work.

Flies were changed a dozen times or more, but it was futile work, as no red-jacket showed the least bit of inquisitiveness. It was "love's labor lost," and were it not for the radiance with its soft and balmy air, the rhythmic beat of the murmuring waves, the sapphire beauty and "the deep sunset of hope," which whispered promised pleasure, we would have turned the prow of our boat campward, satisfied that the trout were not there or else not rising to the most attractive or deftly thrown fly.

Ned suggested a move onward to the "big rocks," a mile or two ahead, and if they failed to yield us the tinted trophies, to return and break camp, either then or in the morning. Being in accord, a move to this haven of hope was ordered, and then two pairs of glistening blades swept through the mirrored green of the crystalline waters. Arriving at the rocks, we cast off our hob-nailed brogans and then encased our feet in tight-fitting slippers covered with rough-bottomed rubbers, that we might be enabled to clamber more readily over the ragged and inclined rocks without danger of a plunge into the icy waters below. I took the outer edge of a big block of granite, and sitting down for concealment, commenced casting. On the second throw I had a rise from one of the small fry, which I lamentably missed. Again the flies went out and fell like fluttering snowflakes, as I thought, upon the rippling water, and the same investigating trout—or one like it—struck at my silver-doctor,

and then was repenting of his hasty interview with a frantic frenzy that availed him but little. Though of less than half a pound, he fought gallantly, but for all that he was soon pressing the meshes of the net, being the first victim of the angler's allurements. Although he belonged to the infantile class, he was received with as royal a welcome as if his weight were in pounds. We were not just then elevating our proboscis at this size. Later on he would have been treated with an indignity that would have insured his contemptuous return to the element from which he had been purloined.

Once more my flies sailed out for others of the dotted tribe, and soon I impaled one a shade larger and more lovely in his silken coat of ravishing hues. My pride at these tom-tits in tints began to rise, vain man that I then was, and in a minute or two, as if to increase my triumph, had another racing around with my dropper—a red-tip coachman. This one completed a trinity of the rainbow beauties and led me to believe after all that the trout would yet be generous before the bright sun kissed his usual good-night to the breathing waters. I turned around to look at my associate, and there he was, poised on the apex of a slanting rock, casting and fluttering his flies with an industry and patience that alone belong to the accomplished angler.

"You have a boss place there," he said, as he noticed my observing eyes.

"Yes, for baby trout."

"Well, I am not too proud just now for even that class of *pisces*, I assure you," and then with the arm of an athlete and the eye of an eagle he silently resumed his casting with an expectant hope that indeed merited generous success.

The sun was at meridian and its lance-like rays quite ardent, yet the ardor of the angler still remained unquenched, though "the flesh pots of Egypt" were temptingly reposing in the lunch basket near by under the rustling branches of some clustered pines. Our appetite then was only for the radiant redcoats, and so we both kept up a steady flogging of the gleaming lake, expecting every moment to see some hungry or inquisitive trout break with wolfish snap for the quivering flies. Finally I received a savage response and this time it was from a foeman worthy of my steel. I felt the barbed hook sink into his trembling jaws as I gave the necessary twitch at the proper time and then there sang the tuneful rhythm so pleasing to the patient angler, as the bewildered trout, as I then thought it, dashed for deeper water and unlimited freedom.

Yard after yard of line spun out, and then, as I applied the pressure of the silver spool, he came to the surface and made an acrobatic leap-somersault, if you will; and much to my astonishment, as well as that of the entire party, who were now interested in the fight, revealed himself as a genuine bronze-backer, and a heavy-weight at that. Now it requires more time and patience I think to kill a small-mouth black bass, such as this was, with a trout rod, than it does a brook trout of equal weight under the same circumstances.

"Give him ample time," was the cautious cry of the originator of the lurid flies, and time it was, for I played him through all his savage dashes, his frantic leaps, his stubborn sulks and his crafty strategy, until I almost despaired of bringing him to the net. At last he comes to the surface, and then, as if harboring some grand *coup*, yields to the running thread as it is returned to the rhythmic reel. I well knew the bulldog fighter had another trump to play and that it would drop ere he involuntarily consented to be encircled in the fatal twine. Gently he approached, and as he rested a moment on his panting sides I saw the savage glare of his fierce eyes, too vital indeed for a complete surrender. "Ah! there he goes once more," but he was not the surprise party he had plotted for, as I had learned the tricks of these old bronze warriors too well in my many exploits around the picturesque islands of Lake Erie to be now taken at a disadvantage. "Run on, my frantic brave, for I opine it will be your last race ere your funeral dirge is sung. Tired and broken-hearted are you, and even the white flag goes up in token of surrender." Well, stand ready with the net. Ah! here you are; now lift him out gently and ascertain what his weight registers. "Three and a half pounds," say you? "All right, lay him carefully on the grass with the other symmetrical beauties, and there you have in the two species the realistic picture of the gamiest and handsomest fish that ever made the heart of an angler palpitate with pleasurable emotions. Now for lunch."

As it was quite warm we sought the grateful shade under some spreading maples in the deep woods, and there did ample justice to the contents of a well-filled lunch basket. It was probably not as fine as the Egyptian cookery, of which it is said the great Caesar grew fat with the feasting thereof, but our keen appetite rendered it so very palatable that we were not at all envious of the imperial gourmand.

After the tid-bits of the basket—really our dessert—had been disposed of, the half-breeds and my associate indulged in a smoke, while I, piscatorially inclined, took my rod and again sought the big rock in expectation of alluring another trout or bass to the feast of the flies. Through repeated castings I rose another black bass, with which I unfortunately failed to connect, and then, after the lapse of a few minutes, hung one of the bespotted beauties of a little less than half a pound, and that was all I could coax from the icy waters around this choice spot during an hour's constant casting.

The smokers having imbibed enough of the poisonous nicotine, now pronounced in favor of taking the boat and coasting along, in hopes of bettering our sport. Trying the experiment for fully an hour or more without the surface of the water being broken by the desirable fish, we concluded they were not in it at all, and then the prow of the Mackinac was turned to our far-away camp. On coming to what we considered choice places *en route*, we stopped and offered our flies as a temptation to *S. fontinalis*, but they were not to be uncoined with the fluttering feathers, and so we reeled up and went on our "winding way," content to take in the shifting panorama, always a source of great delight to the ardent lover of nature.

A glance at the distant and beautiful Bachawanaung Bay revealed the faint mist of blue, gently stealing o'er the wooded hills, until lost in the bright sunshine; to the west, where Aurora was fast coursing, streamed clouds in mantle of gold that scarcely moved; soft shadows fell o'er the valleys and the heights above; zephyr breezes laden with the fragrance of the balsamic forests caress your

cheeks; the water, cool and pure enough for a bath for Diana, rippled from the bow in rolls of silver, while as if to give completeness to the scene, an unseen warbler in a grove near by was breaking his heart as if he were

"The sweet and plaintive Sappho of the dell."

With these delightful auxiliaries it was a lovely row along the rugged shore. The steady dip of the flashing blades kept time to the carol of blithesome birds and the tinkling melody of murmuring waves against the gray and moss-grown rocks. Soon the fluttering folds of our tent were in view, and then the half-breeds, as if inspired with the sight, increased the speed of the craft till the foam in a rainfall of snowy sea roses dropped from her cutwater in graceful and spreading curvatures. In a few minutes we were at the desired haven, fully satisfied with the day's outing, though the vermilion-dyed victims were few, and small at that.

After we had partaken of supper, we had a conference and concluded to change our base on the morrow and sail for Bachewauang Bay, where we hoped to find the freckled beauties more plentiful and more eager to court the acquaintance of the flies artificial. Word, therefore, went out to the half-breeds for the breaking of camp at an early hour in the morning, and then after a luxuriant smoke and the usual pow-wow, which always followed a day's sport, we sought our comfortable beds and soon fell asleep to the hum of the industrious mosquitoes, who were in countless numbers around our netting, striving to find an aperture for a blood-sucking banquet. We awoke in the morning feeling exceedingly refreshed and reinvigorated, as our slumbers had been unusually sweet and sound.

The lake which panted at our feet was a picture of serene delight, every jutting crag, dome and pinnacle aglow with sparkling radiance; the southwest wind, balmy as if it had come from fields of flowers, rippled the water into twinkling crystals, while the sky developed a marvel of delicate tints "shot with silver and amber from the early sun."

Eager to take the morning breeze, the half-breeds went to work with a will, one preparing breakfast and the other dismantling the camp and arranging the packages of provisions, etc., for the boat. The meal, a hurried one, at which the bronze-backer, a victim of the previous day, formed part of the culinary, was soon partaken of, and then all hands aided in loading the floating craft. As the morning indicated a hot day, with the probability of its soon being a breezeless one, the boys were unusually eager to be afloat, and in about forty winks we were off with a favorable though uncertain wind. It was but a short time before we had zephyr lullabys that scarcely straightened the sails, and which necessitated a prompt resort to the ash blades long before we reached our destination, lovely Bachewauang Bay. The sun sent his silver lances with such a prostrating effect that the shore and shade were just then objective points of great interest. The half-breeds toiled manfully at the row locks, with the beads of perspiration dropping from their rigid faces at every dip of the oars. Anon, some *chanson* of a lively nature fell from their lips, and then our troubadour, the musical Ned, gave an *aria* so deliciously replete with melody that the tawny warblers feeling their inferiority in the musical rhythm so palpably, did not again venture upon vocalism when our minstrel of the lute-like voice was near by. Ned's *repertoire* of the sentimental and comic was literally, so to speak, inexhaustible, and when there was toil to lighten he was always to the front through the inspiration of the divine art.

About meridian we reached our destination and camped in a most charming spot commanding a full view of the magnificent bay. The mirror-like condition of the lake, as well as the intense heat, prevented trouting, so we passed the afternoon in cards, reading, converse and the like.

About meal time a grave and pale-faced girl from the lighthouse, having dark tresses, black eyes, pinched lips and mournful voice, indicative of a cheerless and solitary life, sold us two quarts of wild and luscious strawberries, and as I stood in need of a camp chair, which I had inadvertently omitted from our outfit, also purchased from her a small rocker, and was therefore made supremely happy, for during the trip I realized a world of solid comfort out of it. A camp chair in an outing is a jewel above price, but when you have a luxuriant rocker to sink into after a day's hard toil you feel thrice blessed.

The supper hour had come and gone, and the afternoon sun, which had been notably hot and had laid her bars of quivering gold with a lavish hand on sea and land, was now fast relaxing the fierceness of her burning rays, the shade being no longer sought for comfort. Bachewauang, flushed in its tempered glow, was a picture of incomparable loveliness, and though I have seen it time and again, written frequently of its charms and often angled around its wave-worn shores, I can still find new surprises that charm, new suggestions that fill with kindling emotions. Bathe it in sunshine, assail it in storm, give it autumnal haze or vernal bloom, sweep it with arctic blasts or tropic whisperings, it is always an object to excite the adoration of the true lover of nature. It is, and always will be, the paradise of Lake Superior's wild, rugged and imposing scenery.

"Nature here  
Wantoned as in her prime, and played at will  
Her virgin fancies, pouring forth more sweets,  
Wild above rule or art; enormous bliss,"

ALEX. STARBUCK.  
[TO BE CONTINUED.]

### Spring in the Northwest.

SILVERBALE, Wash., March 13.—Spring has come with us; ducks are beginning to go north, trees are leafing, grouse have commenced to hoot and skunk cabbage is "high enough for bear feed," so I guess the rainy season is about over.

About fifteen deer have been killed in the vicinity this winter, but the woods are full of them yet. My quail are doing nicely and are in good condition. I have noticed tracks of the possums several times, so they are all right too, I guess.

I got caught in a squall on the bay not long since and was blown high and dry on the beach, canoe and all, when the sea went down, but I reckon I'll paddle over to the post-office every Wednesday after FOREST AND STREAM just the same, blow or no blow; got to do it or break a king-bolt.

EL COMANCHO.

### ISIAH'S FIRST DEER.

"FINE haid, yes, seh, 'tis so; got antlers on it like a bresh heap.

"Yes, seh, dey is a mighty curiousness look 'bout de eyes, but, you see, de man what done stuffed de haid on'y had one pa'r ob eyes lef' in his shop, an' dey war'n't mates; one on 'em is yaller, 'n' turner one's brown. Dat's de haid ob my fust deer, seh, an' I'll never fergit de day when I shot him.

"'Twas 'bout de fifties—I disremember de yeah ezactly, 'n' we all was down in Maimphus, Tensersee, de ol' Marster, Marse Will 'n' me.

"De ol' Marster he wen' down de ribber to Jackson, 'n' leave Marse Will 'n' me to wait fo' him in Maimphus.

"De secon' day after de ol' Marster lef', Marse Will he say, 'Isiah, how you like to go up de kentry a bit an' do some deer shootin'?"

"You see, Marse Will he never did no shootin' at big game yit, 'n' I ain' nuther, so we was bofe kin'er anxious like to 'stinguish ourself's befoh de ol' Marster come back, so I 'low I like to go mighty well, so de nex' day we took de boat up de Mississip' to a place called Darnell up in Lake county, den 'cross de kentry in a buckboa'd to Reel-foot Lake.

"We had two fine houn's along, fo' in dem days people didn't think nothin' ob houn'n' deer. We got to de lake 'long to 'rds evenin' an' made camp on de upper en'. Den I tu'n to an' cook de supper, 'n' we sot up oveh de fiah fo' an hour or mo' befoh we tu'ed in.

"'Twas one ob dem still kin' o' nights, de skies was full o' big white stars an' dey shine in de lake twell hit look like dey was another sky layin' on de yearth.

"Jus' as fas was tu'n in Marster Will he say, 'Look yeah, Isiah, de fus' deer we fin' to-morrer 'longs to me 'n' I don' wan' you to eben shoot at it un'er any circums'tances whatsomever—if you do, I'm gwine fo' to cut de toughest switch I kin fin' 'n' I'll w'ar it out on yo' back,' 'n' I say. 'All right, Marse Will, I ain' gwine shoot twell you all tell me.' Wall, in de mo'nin' we fin' a good runaway, an' Marse Will he sot down on a log behin' a bush, an' I loosen de houn's. 'Twarn't long befoh de houn's 'gin to whimper, den ol' Yaller he soun' one long note 'n' off dey bofe went. I got back to de camp 'n' I was feelin' mighty miserable to think I couldn't git no chance at dat deer. Anyhow I put a cap on my ride, one ob dem ol' fashion' Kaintucky rifles, an' layin' it down clus at hand, I start in to clear up de breakfas' things.

"De houn's cry was a-growin' fainter and fainter, twell it soun' like de sof' music dem little black keys make down on de lower end ob de big pianner. Den bim-be-dey 'gin to come a little clusser, an' de clusser dey git, de mo' I 'gin to feel dat I was in fo' a good switchin'. Den I 'gin to sing so as I couldn't hear em, but dey got nearer 'n' nearer, twell jus' 'bout a quarter of a mile down de lake, a big buck come jumpin' out ob de un'erbrush an' wen' splashin' into de water. I drapped de skillet I was a scrapin', grab de gun an' start a-runnin' fo' de pint ob lan' de buck was a-haidin' fo'.

"I tried to keep out ob sight behin' de bushes, but de deer catch sight ob me, an' my lan's how he did make de water curl aroun' his neck!

"Twict I done trip myself up an' wen' sprawlin' out on my face; de thorns 'n' briars scratch my face an' han's twell dey was a-bleedin' in a dozen places; my shirt 'n' coat look like dey was nothin' but rags, an' every little while I had to wade in water up to my neck, hol'in' my gun up over my haid. Jus' as I got within 'bout a hun'rd yards ob de pint, de deer struck bottom, an' as he 'gin to wade up de slopin' beach, I drappen on one knee, an' was jus' a-takin' aim when I hear Marse Will a-shoutin':

"'Hol' on dere, you brack nigger, don' you shoot dat deer or I'll lick de hide clean offen you.'

"Den jus' you cut yo' switch, Marse Will,' I yells; an' jus' as de two sights come in line wid de deer's shoulder I pulled de trigger, he gave one or two jumps to 'rd de woods, den stop short 'n' drap all in a heap.

"Well, seh, all day long I was a-thinkin' 'bout dat switch, an' if it hadn' a been fo' a buck dat come Marster Will's way to 'rd sundown dey ain' de slightest doubt but I'd a caught an ungordly lickin'.

"When Marse Will come to camp dat evenin' I done cut a toler'ble good switch an' han' it to him; but he on'y laugh 'n' say, 'You brack debbil, you know well you 'serves it, but it was a mighty good shot, 'n' I'll leff you off dis time, fo' to tell de trufe, Isiah, when dat deer passed within twain'ty yards ob me I was a-shakin' so hard dat I jus' stood an' holler'd at him, an' never 'membered dat I had a gun twill he was gone.'"

THE GENERAL.

### DANVIS FOLKS.—XXVI.

#### In the Woods.

"THEY say the Widder Needham wants tu let her place on sheers," said Sam to his wife the next morning, when they, the baby and the hound were the only occupants of the kitchen. "An' I thought o' tryin' fer that, but I do know, I can't git a holt o' nothin'. I b'lieve I shall hafter go off int' de woods by myself a spell. The woods is allers my cure-all," and he cast a casual glance up at his gun that was gathering the dust of disuse. "Then agin, I kinder want tu look over aour mountain lot. That haint ben 'taiched, an' it seem's ough it might be turned tu some 'caout. The's a slew o' timber on 't, an' I c'd build us a turrible neat lawg haouse aouten them spruce."

"I allers thought a lawg haouse was jes' as cute as c'd be an' allers wanted tu live in one," Huldah said with enthusiasm.

"Mebby you'll git the chance. An' if I c'd hit de Forge folks on a coalin' job, I might make well on 't. If 't was cleared up, I s'pose we might git a livin' off on 't. It's consid'able uphill an' I don't s'pose the s'ile o' land is fust chop, but I guess it 'ould raise white beans an' buckwheat, an' both on 'em is fillin'."

"Good land, Sam, don't fer lan's sake say 'buckwheat' afore mother. She'd hev a conception fit an' hev aour ears all cracked off 'm aour heads afore the buckwheat was in blow."

"I don't set no gre't store by it myself," Sam conceded, "but it's better 'n a snow bank, an' high duck folks is gittin' tu think buckwheat pancakes is some punkins. But the can't no Green Maountain boy go agin beans. They was victuals an' drink tu the ol' settlers, an' ammerinition tew, fer I've heard Gran'ther Hill tell, haow 'at they shot Yorkers with 'em. I guess I'll go up an' look the lot over an' see! An' I s'pose I might as well take my gun along, an' Drive 'ould feel bad if I left him."

"No, you mustn't hurt Drive's feelin's," said Huldah, laughing as she roused the hound from the heavy sleep that linked one hunting bout with another.

"I allers feel better in the woods an' c'n think better in 'em an' mebbey c'n git my ideas straightened aout."

Huldah had great faith in Sam's sovereign balm for all his ills of body and mind, having seen it work many cures of both; and offered no objection to a trial of it now. As he stepped forward to take down his gun his father came in with some husks in a basket to sort for braiding. With surprise, but no reproach, he said:

"Why, Sammy, seem's ough you was takin' a late start a-huntin' fer you."

"Wal, father, I'm goin' more tu see about the wood lot. Seem's ough we c'd get somethin' aout o' that," Sam explained and went out, Drive careering about him in clumsy expression of joy at the unexpected outing. Sam's heart felt a fresh pang as he passed the shop window and thought of the anxiety his credulity had brought upon his two old friends.

As Huldah fondly watched her husband out of sight she sighed to see how wearily he walked with downcast eyes as one whose thoughts were far from sport or pastime. Yet his dulled senses were alert enough to feel keenly how his mood was mocked by the Indian summer day that seemed to have caught all the year's serenity in its misty web of gold and purple.

The breeze touched him softly as the breath of June, nor scarcely stirred the drifted windrows of fallen leaves, nor tossed a-lee the gray ashes of the golden rod's burned-out flame, nor bore from the veiled mountain the low song of its evergreens. The tranquil babble of the unswollen brooks rose and fell with the light wafts, the bluebird's carol floated down through the haze that was spun from sky to earth, the meadow-larks sang their long-drawn summer songs and the lazy caw of lingering crows came from their latest woodland camp among the evergreens, and a partridge's April drum-call throbbled through the filmy copes. It was as if nature were solacing herself in this autumnal truce for all turbulence of her forces, past or henceforth possible.

With scarcely a thought of his course, Sam entered the woods and heard as in a dream the old hound's rustling footsteps as he ranged about him. Nor did he scarcely notice more, the impatient whine that told of a puzzling scent, half-exhaled since reynard fared homeward from his early mousing, nor yet the first clear note that announced a more exhilarating savor with assured direction. But when the melody became exultant and continuous with competing echoes he awoke to a realization that the fox was afoot, and he instinctively made for a favorite runway.

It was at the crest of a ledge that wrinkled the mountain side lengthwise, where the starved trees, beggarly with patches of lichen and rags of moss stood far apart among the rocks and gave eye and gun a range of several rods. Sam stood listening till the hound's voice with its attendant clamor of screaming jays had faded out of hearing, leaving the woods about him as silent as if he was their only tenant.

He sat down on a fallen trunk and his thoughts went wearily back to a confused consideration of plans for the future that came and went like a procession of fog wreaths and would take no more definite form.

The bugle notes rose faintly again in the distance, and rolled nearer and nearer, but if heard were not heeded, till a sudden burst close at hand recalled with a start his wandering thoughts and he got quickly to his feet. There was a rustling of the dry leaves in the hollow at his left, and he caught fleeting glimpses of the fox running at top speed in evident alarm at a sight or scent of the hunter. With one motion the cocked gun was at Sam's shoulder, sighted a foot ahead the flying target and the trigger pulled, and in that moment, his mind all on the game now, he was aware with a pang of vexation that a tree trunk had intervened. He heaved a sigh of disappointment.

"By the gre't horn spoon! Jewed by a skeezucks and fooled by a fox! I wonder what's a-comin' next?"

ROWLAND E. ROBINSON.

## Natural History.

### Are Mongolian Pheasants Desirable?

LEWISTON, Me., March 19.—*Editor Forest and Stream:* I notice from time to time in your columns letters from different sections of the country in regard to the introduction and propagation of the ring-neck or Mongolian pheasant. The introduction of foreign game birds is a question of great interest to every sportsman and one that should be carefully considered. We are well aware of the disastrous results which followed the introduction of the house sparrow, better known as the English sparrow. These "rats of the air" were imported to check the ravages of insects from the foliage of trees. Instead of this, they themselves have proved more destructive than the pests they were intended to destroy.

The Mongolian pheasant is a magnificent game bird, handsome, hardy and prolific, and is termed the king of the forest; and for this reason alone we should give much careful thought and study before introducing them here.

Evidence is given where in California and Oregon these birds destroy whole broods of young of the dusky or sooty grouse. Can we afford to take the chances with any birds that are antagonistic to our ruffed grouse, one of the best and noblest game birds of the world? There is a great question in my mind whether the increase of pheasants would compensate us for the decrease of grouse.

There are many well-behaved species of game birds that would be a welcome addition to our forests; but I think we should carefully consider before taking a too hasty step in the introduction of the Mongolian pheasant.

E. G. GAY.

### Albino Blackbird.

PORTLAND, Conn., March 19.—Your correspondent, F. B. Magill, inquires about albino red-winged blackbirds. I have in my collection a specimen that was shot here Sept. 10, 1877. It is white above, and a light straw or cream color below, from throat to vent. The red on the bend of the wings shows distinctly. Eyes pink.

JNO. H. SAGE.

## EUROPEAN SONG BIRDS IN AMERICA.

Editor Forest and Stream:

At different times and in various sections of this country numerous species of European singing birds have been liberated for the purpose of acclimatization. The most extensive and probably the most systematic attempt in this direction was carried out under the auspices of the Cincinnati Acclimatization Society about twenty years ago. In my capacity as secretary of the organization named, I made a trip to Europe for the purpose of gathering there a large number of birds presumably adapted to our climates. To carry out my mission properly, I found it necessary to have the birds trapped for the purpose, since females are rarely kept alive and in captivity. The birds thus collected, over three thousand in number, and made up of over forty different species, arrived in good condition at Cincinnati in the latter part of December. They were comfortably quartered in the upper story of the old Burnett mansion, in Burnett Woods Park. A small portion of them were acquired by Mr. Carl Dänzer, the well-known German editor, at St. Louis, Mo., and in due season were liberated by him near St. Louis. The rest and mass of them were set free in Burnett Woods Park the following spring. Some of the birds immediately started for parts unknown, others left the next days and weeks, but quite a number were seen all summer in Burnett Woods, Spring Grove Cemetery, and other suburban points. When the autumn and the migratory season came, all of those which had remained near Cincinnati until then departed never to return again; only the skylarks came back the next and every subsequent spring and multiplied. Their acclimatization was accomplished.

Now what has become of the other birds? This has ever since been a much discussed question, and no definite explanation could thus far be advanced. Some were and still are of the opinion that the birds had been shot by pot-hunters or devoured by birds of prey, others cherished the belief that the more tender species had fallen victims to our changeable and rough climate during the winter, and others held that the birds probably had sought and found suitable quarters in various distant parts of the country, where they have attracted no particular attention and are not recognized as foreigners. All these theories are justly open to question, none of them have been proved conclusively or convincingly. Only one thing appears to be certain, the birds are lost, apparently lost for good, the same as those liberated for a similar purpose previously and subsequently.

A short time ago Heinrich Gätkke's work, "Die Vogelwarte Helgoland" (The Ornithological Observatory of Heligoland), made its appearance in Germany, which offers us an entirely new explanation for the probable fate of the lost birds. Gätkke has lived fifty-three years on the island in the North Sea and has devoted a lifetime to the study of the migration of birds. He is a thorough ornithologist, a lover of nature in general and birds in particular, a scientist and sportsman. He has carefully watched the movements and life of the birds as they inhabit Heligoland and as they pass by millions every spring and autumn over the rocky little island. Never before has the nomadic life of the feathered wanderers been so exhaustively and interestingly pictured and described as in Gätkke's work.

During the migrating seasons, in especially dark nights or on stormy days, Heligoland is found literally covered with millions of different species of wandering birds. Millions and millions pass the island unnoticed and unseen because, as Gätkke has established, most birds rise, when they migrate, to very high regions of the air, from 10,000 to 15,000ft. above ground, probably for the reason that thus they meet with less resistance of the air and their flight is thereby facilitated. He also proves very conclusively that the young birds never depend on their parents to guide them on their first travel to distant parts of the world. The young commence the journey from one to two weeks in advance of the old birds and return about as much later again in the spring. The old male birds are the last to leave their summer abodes, the first to return.

According to Gätkke's observations, all the birds generally make their journey in the spring in a course south to north, but they do not travel in a direction north to south in the autumn. In the latter event the majority of birds proceed first in a westerly direction. The birds, for instance, inhabiting in the summer the northern part of Germany, Russia as far as Asia, Norway and Sweden, migrate westward, cross the Baltic or North Sea bound for England and Ireland, from where they make a sharp turn by way of Gibraltar to Africa. Very few of them stay over winter on British soil.

Gätkke has paid considerable attention to the speed of flight of migrating birds. His figures in the premises are partly based upon direct observation, partly upon calculations. He gives the speed of flight of crows, when traveling across the North Sea, at 135 miles an hour. The northern blue-breasted robin, a bird of the size of our common bluebird, makes the journey from central Africa to Heligoland in one single night, requiring a speed of travel at the rate of 225 miles per hour. But even this remarkable speed is surpassed by a species of the plover family, which inhabits Labrador in summer and takes up its winter quarters in Brazil. This bird crosses the Atlantic Ocean without stopping on its way on any of the islands found on its route of travel.

Instinct evidently plays a very important role in the migration of birds. Let us take the northern blue-breasted robin as an example. The young bird rises at sunset for its distant journey. It continues its travel all night and approaches and touches the ground again in the morning. In one night it has crossed Germany, the Alps, and at daybreak it finds itself in southern Italy. Here it rests during the day and when the sun sets again, the journey is resumed. On the second morning it has reached its destination, never known or seen before, the bird has arrived in central Africa and takes its second breakfast among a forest of palm trees.

Now, returning to the lost European birds as liberated in this country, we will, as we justly may, suppose that these birds were influenced with the same natural instinct which governs their migration at home. In searching for warm climates in winter they would take the same westerly course as if they had begun the journey in their native lands. They very likely have chosen the route to Africa via England and Ireland. To reach these countries they would have to cross the North Sea

Their instinct teaches them this. Arriving at the Pacific coast they would likely and naturally take the ocean before them to be the North Sea. They start to cross this sea. They fly hundreds of miles and find no sign of land. They become bewildered, but they continue the journey as long as their power holds out. But this power is not equal to the emergency. They cannot reach the land on the other side. Completely exhausted and no longer able to fly they drop one by one into the water of the Pacific Ocean. They are drowned, lost. No one has witnessed their last struggle. No one can chronicle their fate from actual observation. Thousands of birds perish annually in a similar way on their way to Africa, principally such as the European quail and other poor flyers.

May be that this new explanation for the fate of the imported birds too narrows down to a vague theory, but it certainly is based on a pretty fair possibility, and those who can study Gätkke's work, and digest his observations and conclusions, will, I think, agree with me, that we have some reason to suppose that the European birds are buried in the waters of the Pacific Ocean.

ARMIN TENNER.

## SEA SERPENT, SO-CALLED.

Editor Forest and Stream:

In your issue of Feb. 3, under the heading, "Exit the Sea Serpent," I see that A. N. Cheney denies the probability of the existence of the sea serpent, and also quotes from an article by Dr. Jordan, in a California newspaper, the following: "Although there have been many reports of sea serpents, there is not, at present, the slightest positive evidence that such a creature now inhabits the sea. It is not within the realm of probability that any marine reptile of large size, other than sea turtles, now exists. The sea has been as fully explored as the land; the fishes of the sea, from the surface to the depth of five miles, are as well known as the animals of similar size on any of the Continents, except Europe. The larger animals, which swim near the surface in the open ocean, are for the most part well known, and have been known ever since oceanic navigation began. Probably not half a dozen marine animals reaching a length of 15ft. have been discovered in our century; most of those now known were known to the ancients."

In order that both sides of the question may have a fair chance, and that the sea serpent may not be included in the modern slaughter of animal life, I present the following criticism on Dr. Jordan's article, and also some of the evidence that leads me to believe that some sort of a sea serpent exists.

Dr. Jordan is right when he says there have been many reports of the sea serpent. Here are a few of them:

Capt. the Hon. George Hope states that when in H. M. S. Fly, in the Gulf of California, the sea being perfectly calm, he saw at the bottom a large marine animal with the head and general form of an alligator, except that the neck was much longer, and that instead of legs, the creature had four large flappers, somewhat like those of a turtle, the anterior pair being larger than the posterior; the creature was distinctly visible, and all its movements could be observed with ease; it appeared to be pursuing its prey at the bottom of the sea. Its movements were somewhat serpentine, and an appearance of annulations, or ring-like divisions of the body, was distinctly perceptible.

Capt. Hope was not acquainted with the fossil remains of *Ichthyosaurus* and *Plesiosauri*, the forms of which were very similar to the creature he saw. Again, we have the following from Holder's "Marvels of Animal Life":

LYNN, Mass., June 26, 1881.—Mr. C. F. Holder, Dear Sir: Yours of the 24th inst. came duly to hand, and in reply to that part of it relating to the account given by myself of a strange fish, serpent, or some other marine animal, called a sea serpent, I have to say that I saw him on a pleasant, calm summer morning of August, 1819, from Long Beach Lynn, now Nahant. At this time he was about a quarter of a mile away; but the water was so smooth, that I could plainly see his head and the motions of his body; but not distinctly enough to give a good description of him. Later in the day I saw him again off Dead Rock; he then passed along about 100ft. from where I stood, with head about 2ft. out of the water, and his speed was about the ordinary of a common steamer. What I saw of his length was from 50 to 60ft. It was very difficult to count the bunches, or humps (not fins) upon his back, as by the undulatory motion they did not all appear at once. This accounts in part for the varied descriptions given of him by different parties. His appearance on the surface of the water was occasional and but for a short time; the color of his skin was dark, differing but little from the water, or the back of any common fish. This is the best description I can give of him from my own observation, and I saw the monster just as truly, although not quite so clearly as I ever saw anything. This matter has been treated by many as a hoax, fish story, or a sea-side phenomenon, to bring trade to the watering places; but notwithstanding all this, there is no doubt in my mind that some kind of an uncommon rover in the form of a snake, or serpent, called an ichthyosaurus, plesiosaurus, or some other long-named marine animal, has been seen by hundreds of men and boys in our own, if not in other waters; and five persons besides myself, Amos Lawrence, Samuel Cabot and James Prince of Boston, Benjamin F. Newhall of Bangs, and John Marston of Swampscott, bore public testimony of seeing him at the time. Yours truly, NATHAN D. CHASE.

James Prince says he saw the sea serpent off Nahant Beach, and that a great crowd of people was present and saw the animal; he says that he counted thirteen bunches on its back, although his family thought there were fifteen. He drove along the beach following the creature and watching him with his glass.

Another example of what might be called expert testimony is furnished by the crew of the bark Pauline, of London. Their testimony was taken before the stipendiary magistrate of the Liverpool Court as follows:

"Borough of Liverpool, in the county of Palatine of Lancaster, to wit: We, the undersigned captain, officers and crew of the bark Pauline, of London, of Liverpool, in the county of Lancaster, in the United Kingdom of Great Britain and Ireland, do voluntarily and sincerely declare that on July 8, 1875, in latitude 5° 13' S., longitude 35° W., we observed three large sperm whales, and one of them was gripped around the body with two turns of what appeared to be a huge serpent. The head and tail appeared to have a length beyond the coils of about 30ft. and its girth about 8 or 9ft. The serpent whirled its victim round and round for about fifteen minutes and then suddenly dragged the whale to the bottom head first. [Signed] George Drevar, master; Horatio Thompson, John Henderson Landells, Owen Baker, William Lewaren."

How any one can pronounce these reports false is more than I can understand; if they are not positive evidence they are very near to it, too near to be thrown out as false. The time has come for such reports from men of good character to be received with respect and serious consideration. That it is "within the realm of probability that any marine reptile other than sea turtles now exists" the following evidence will show:

Take the squid, for instance. The stories of a squid large enough to capsize a boat, or pull a man out of one, were formerly all set down as false. How is it now? In the Peabody Museum of Yale College can be seen a model of a squid about 40ft. long, made by Prof. Verrill after actual parts which he was able to procure. Individuals have been taken over 60ft. long, and they are known to have attacked the natives of the Indian Seas, when out in their canoes.

The tile fish was unknown to either fishermen, or science up to 1879; its discovery was entirely accidental. Captain Kirby, of the schooner Wm. V. Hutchings, while trawling for cod, southward of Nantucket, took 5,000lbs. of a species of fish which we had never seen before. This fish was found by Prof. Verrill to inhabit a strip of water having a temperature of 48° F., and lying on the border of the Gulf Stream slope; sandwiched between the Arctic current on the one hand, and the cold depths of the sea on the other.

In the months of March and April, 1883, vessels crossing this belt of water, reported seeing the sea covered for miles with dead fish, which afterward proved to be the tile fish. Captain Collins, of the schooner Navarino, plowed through 150 miles of water, dotted as far as the eye could reach with these fish; he made a careful computation and found that their numbers must have exceeded the number of one million. The fish were probably killed by a change in the temperature of the water they inhabited.

Here, then, are two recent discoveries; one of a large creature and the other of a smaller, but very numerous one, that escaped our attention until a short time ago. Many more such could be cited. They seem to me to be good evidence that a creature such as the sea serpent could exist until the present date, without being also captured.

Newman says that "Negative evidence alone is an unsafe basis for argument against the existence of unknown animals," as the following will show: During the deep sea dredgings of H. M. S. Lightning, Porcupine and Challenger, many new species of mollusca and others which had been supposed to have been extinct ever since the chalk, were brought to light, and by deep sea trawlings of the last-mentioned ship there have been brought up from great depths fishes of unknown species and which could not exist near the surface owing to the rupture of their air bladders when removed from the pressure of deep waters.

Gosse mentions that the ship in which he made the voyage to Jamaica was surrounded in the north Atlantic for seventeen continuous hours by a troop of whales of large size, of an undescribed species, which on no other occasion had fallen under scientific observation. Unique specimens of other cetaceans are also recorded.

Bartlett directs our attention to the fact that even on land there exists one of the largest mammals, probably in a thousand, of which only one individual has been brought to notice, viz., the hairy-eared, two-horned rhinoceros (*R. lasiotis*), now in the Zoological Gardens, London. It was captured in 1869 at Chittagong, India, where for years collectors and naturalists have worked and published lists of animals met with, and yet no knowledge of this great beast had ever before been obtained, nor is there any portion of one in any museum. Newman arrives at the conclusion that to assume that naturalists have perfect cognizance of every existing marine animal of large size, would be quite unwarrantable. He says: "It appears to me more than probable that many marine animals unknown to science, and some of them of gigantic size, may have their ordinary habitat in the sea and only occasionally come to the surface; and I think that it is not impossible that among them may be marine snakes of greater dimensions than we are aware of, and even a creature having close affinities with the old sea reptiles whose fossil skeletons tell of their magnitude and abundance in past ages." Newman's opinion is that the closest affinities of the sea serpent would be found to be the Enaliosaurans, or marine lizards, whose fossil remains are abundant in the Oolite and the Lias; and on this point Gosse agrees with him.

Agassiz said, concerning this point: "It would be in precise conformity with analogy that such an animal of the Enaliosaur type should exist in American seas, as I have found numerous instances in which the fossil forms of the Old World were represented by living types in the New."

Dr. J. E. Gray, late of the British Museum, a strict zoologist, is cited by Gosse as having long ago expressed his opinion that some undescribed form exists, which is intermediate between the tortoises and the serpents, and he (Gosse) sums up the English evidence of the sea serpent as follows: "Carefully comparing the independent narratives of the English witnesses of known character and position, most of them being officers under the Crown, we have a creature possessing the following characteristics: (1) The general form of a serpent; (2) great length, say above 60ft.; (3) head considered to resemble that of a serpent; (4) neck from 13 to 16in. in diameter; (5) appendages on the head, neck or back resembling a crest or mane (considerable discrepancy in details); (6) color, dark brown or green, streaked or spotted with white; (7) swims at the surface of the water with a rapid or slow movement, the head and neck projected and elevated above the surface; (8) progression steady and uniform, the body straight, but capable of being thrown in convolutions; (9) spouts in the manner of a whale; (10) like a long 'nun buoy.'"

Dr. Jordan states that the sea has been as fully explored as the land. Well, it may have been; but that is not saying very much for our actual knowledge of its vast hordes of life, when we consider the limited means we have for exploring the sea. If its inhabitants are not obliging enough to come to the surface, and let us view them there, then we have only the dredge left as a means of forcing our acquaintance upon them, and how uncertain that is. A prominent member of the U. S. Fish Commission, who has had long experience in dredging, told me that he thought he would have as much chance to dredge up a trilobite, or a sea serpent, as he would to obtain a buffalo skull by dragging an anchor over the plains from a balloon. Yet, he hoped to live to see the day when a trilobite and a sea serpent would somehow be caught.

Finally, there is no biological, zoological, or geological reason why a modern sea serpent should not have come down to us from any of the old sea serpent stocks.

We have the king crab as such a descendant from the pre-Cambrian trilobite stock, the *Lepidosiren*, *Protopterus* *Ceratodus* and *Polypterus* from the Devonian

Lepido-ganoids, and a number of modern Placoids. Agassiz concluded that it was possible for some modern form of the Enaliosaurians to still exist in the American seas; why not have some descendant from the cretaceous Mosasaurs, of which there were at least fifty different species, some reaching a length of 75ft., or from the many forms of Plesiosaurs of the Jurassic period?

PLAINFIELD, N. J., Feb. 27. STEPHEN A. KROM.  
[If correspondents who are especially interested in this subject will turn back to the issues of FOREST AND STREAM for Dec. 14, 1892, p. 331, and Dec. 21, 1892, p. 406, they will find there a good deal that bears on the "sea serpent" question.]

### A PET BAT.

I HAVE often glanced over your Natural History columns, and been both amused and instructed. As one of your purposes seems to be to rid the readers of an unnatural and inhuman antipathy to all forms of life lower than man, allow me to aid by describing my experience in taming and making a pet of a common bat. This little animal is too often stamped and beaten out of existence on grounds as ill-founded as those on which all snakes are condemned.

I found my bat on a window sill one spring-like day in mid-winter (1894), and brought him in to save him from freezing to death. I gave him the free range of the two rooms more particularly appropriated to me. For some days the bat was quite shy and hung himself away during daylight behind a picture frame, coming out at night to circle around, perhaps in search of food. On these occasions I would place a very fine piece of raw meat on my finger, and waiting for him to light, would place it near his jaws. He soon learned to snatch it off and devour it, chewing it a long time. I then gave him a few drops of water from my finger or a pencil, and he would fly around for a while and then hide himself away. For a week or eight days at a time he would chatter and snap (and bite, too) at any one touching him. However, his bite would scarcely penetrate the outer skin.

He soon got so tame that I and my two-year-old boy could handle him with impunity, and my boy grew much attached to him, and always asked for his "bug" to be placed on his head or hand, and would carry him around that way for some time, the bat clambering all over him.

The bat seemed to become quite attached to me. While I was sick in bed he would lie for hours in my half closed hand or against my neck, and by the time I got well could often be called to me. On such occasions he seldom flew right on me, but would fly near, alight, and come up my pantaloons, up my vest, and seek his ease hanging on my collar or in my bosom. This habit eventually caused his death, for having to wear a flannel cloth on my chest soaked in camphorated oil, the fumes one day overpowered him, and clogging his lungs suffocated him. Before this happened I found out that this little mammal is capable of a great deal of affection and will prove a familiar and interesting, if odd, pet. He would forsake his haunts at any time to be on me, and when I tired of him and gave him a toss into the air he would as likely fly back to me as anywhere else, next preferring the headboard, window or door-casing, or bookcase, where he would hang upside down.

Further, I succeeded in proving to my wife and mother that a bat's ambition in life is not to fix itself in a woman's hair, and that if he did get in that it was not necessary to sacrifice the hair to get the bat out. And that, instead of being covered with insects, the little animal was very cleanly. I never discovered, and I searched carefully and microscopically, any vermin on him. After eating he would fly to the window-casing and there, upside down, would perform his ablutions, always keeping his fur as soft and clean as could be desired.

This pet bat I kept alive and thriving on raw meat chopped fine or scraped, milk and water, and he soon learned his feeding place and the feeding hour. Of course the season being mid-winter, no trouble was experienced in keeping him prisoner. My mother and wife got to regard the little fellow favorably and would allow him to crawl on their hands and arms, which I considered a great victory over prejudice, antipathy and superstition, for the bat is unfortunately rated among the unlucky possessions.

After death, though reluctantly, I dissected the little fellow and found a large brain half as large as the first joint of my finger. His backbone with ribs was terminated by a finely tapering set of bones forming the tail. This mammal is not far below man in development, and in zoölogy is rated above birds, reptiles and rodents. He had lungs, heart and liver in proportion to his size and a stomach much resembling the human stomach.

If this eulogy of my pet bat is doubted, I would say that this is by no means the first time a bat has been tamed and made a pet, as will be found by referring to books on zoölogy (Cheiroptera), Chambers' Encyclopedia and Britannica; but I do hope I am the first to relate such an experience in your columns.

LLOYD J. SMITH.

PHILADELPHIA, Pa.

### Mountain Sheep Horns.

CORA, Wyoming.—*Editor Forest and Stream:* I would like some of your correspondents who have hunted and killed Rocky Mountain sheep give the size of the largest horns of the bucks measured around the base, that is, the circumference. I have killed a good many bucks, and some of them were so old that they were almost toothless, and I never got horns yet that were over 15½ in. in size. Some of the old ones would measure as much as a foot from the base as at the base, but the points are most always badly worn off by long usage, especially when they come in front of their face. I hear of 18, 20, and even 22 in., and one report is that a party has offered \$500 for a pair of 22 in. I think he can offer \$5,000 and not be afraid of having to pay it; I do not think that such a sheep lives in the Rockies. I have my doubts about the 20 in. and I would like to see the 18 in.

MOUNTAINEER.

### A NEW SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$3).

## Game Bag and Gun.

### IN DIXIE LAND.—IV.

[From a Staff Correspondent.]

#### An Illad of the Trousers.

AS I WAS saying, it was early morning at Morrilton, and the nigger hadn't called us, and the train had whistled, and we wanted to catch that train the worst way in the world. We had two guns and a shell box and a bag or so apiece, besides the four dogs and other odds and ends. The crossing between the hotel and depot was paved with large, irregular stones. When one adds that it was dark, and supplements it all by again reverting to the incomparable creases in Dick's trousers, what more remains to be said? The mind at once leaps to the conclusion that Dick had both hands full, that he was hurrying, that in the dark he stumbled and fell and that his trousers —

Ah, why is it that the good die young, that flowers cannot last, that one's good girl marries some one else and raises a large family, that the beautiful is the perishable, that the sun of life's hopes is the total of life's disappointments? Of Dick's trousers I approved fully, and they must have been a source of secret satisfaction to that modest young man himself, they sprung so nicely over the hips, hung so faultlessly straight and easy, clung so delicately but firmly in at the heel, dropped chastely at the instep, and withal supported so severe, so ascetic a crease, the same extending not too high, but just high enough. Why, then, was it in the cynicism of fate that Dick must fall, must strike one of the yawning cobble stones, and rise again still running, with face flushed with the dominant determination to catch that train, but with a wide and ragged cut across the knee of his trousers at right angles to the divine crease and extending indefinitely far to the right and left until lost in the gloom of the early morning twilight?

It is enough. The sun rose. The train whistled and pulled in. We boarded it. We sat attempting to con-

THE ALAMO.

verse in figured carelessness. We gazed from the window at the passing show of the landscape. In pity one offered Dick a cigar. As best we could we assumed a gaiety we little felt. Useless. We could not disguise the fact that Dick's other trousers were locked fast in his trunk at Little Rock depot; that the said trunk was checked through to San Antonio; that we had just three minutes time to make the connection with the south bound train at Little Rock; that our plans necessitated our making this connection; that therefore in a few short hours he, Dick, would be speeding southward, not twenty yards behind another pair of trousers, reaching for them, yearning for them, longing for them, knowing they were there, there in the baggage car, so near, so impossible, so like a fitting, evanescent dream, while strive as he might, he could gain no nearer to the quest, but must sit for a day and a night hopeless and uncomfortable, until relief and San Antonio should come. We could not evade this heartless truth. Meantime, there was lack of woman's nursing, there was dearth of woman's tears, and not a safety pin in the outfit. Dick crossed his knees convulsively and I thought I heard a sob.

#### Southward Nevertheless.

But we hasten. Let us only say that we were late into Little Rock, and instead of three minutes had only twenty seconds in which to catch the Iron Mountain train south. Here Chicago training was useful. In fifteen seconds we had our guns and pack bags aboard, our dogs slammed into the baggage car, the crate thrown in after them, the waiting trunks from the Little Rock depot slung in after that, our breakfast ordered at the buffet, and were standing on the platform waving adieu to our kind Little Rock host, Mr. Irwin, who stood holding in one hand our enormous bundle of birds, and in the other the chains of his faithful friends, Nancy and Jack. Perhaps it is as well the adieus were short, for we couldn't have thanked Mr. Irwin enough for his kindness to us if we had tried all day.

And so we sped southward rapidly, putting in most of the time eating soft boiled eggs, and pork and beans from the buffet, for Dick's appetite was now as impetuous as my own. The public may lose interest in this appetite, but it goes, because I know that the main thing in a winter trip for rest is an appetite that increases with every roll of the wheels away from home. That means that a trip is a success. Try it, and you will find it a success in your own case of grudge against the world, the cook and the sons of men.

I hope that on your sleeping car there will be a pretty girl. There nearly always is, especially in this part of the country, and there may be worse things to help pass the time, if the girl be not too disturbingly pretty or inane. There was one on our sleeper. But Dick—what did Dick do? Alas! He convulsively crossed his knee

and looked out of the window; and again I thought I heard at least a sigh.

I hope also that, when you take your trip, you will have made proper commissariat arrangements for your dogs. We still found the baggage man polite and kind to a degree, but dogs can't eat newspapers or oranges, and there was nothing else left on the train. The short stops allowable at the meal stations left us only time to take the dogs out on the platform for a little exercise, and not time enough to get any table scraps for them to eat. The only thing we could depend on was the staple lunch counter sandwich, the price of which remains ten cents, no matter how far south you go. When it comes to supplying a dog with a body 6ft. long, every inch of which is filled with a yearning, craving want for food, with railroad sandwiches enough at ten cents each to keep the craving want in even reasonable subjection, the situation is one deserving the attention of our ablest financiers, especially if you are a trifle hungry yourself, as I believe I have said we were. Dick would go to the baggage car and take out the dogs when we came to a meal station, and I would go to the lunch counter and get a long paper sack full of the most desperate sandwiches. Then we would anchor the dogs to a post, and surrounded by a curious crowd of grinning niggers, proceed to feed the dogs. This latter was a simple thing. You held in your hand a large, luscious sandwich, and fixed your eye upon Nip's generous mouth, which was practically a red-lined sandwich cistern, that's all it was. You dropped the sandwich delicately, with a slight turn of the wrist. Nip did the rest.

#### Still in Great Game Country.

Meantime we must not lose sight of the fact that we were still in a great game country. Arkansas is one of the very best game States in the Union to-day. It is perhaps only a question between Arkansas and Texas. The West is out of it now. The West is done, and its game is gone. The story is told in effect for that country. The story will not be told so soon for the South, for there the conditions are more favorable for game. Moreover, the settlers of the South are not apathetic foreigners who care nothing for a gun, but sportsmen themselves, who know how to value sport. Hospitable to the point of punctiliousness, they will welcome gentlemanly shooters, but that is the only kind they will welcome, and therefore I believe it will be a long time before they are going to allow their game to be killed off as it has been in the West. You will not have to study far to reach in the South a very pronounced sentiment which is the best possible protection for game—a sentiment which is inherent and natural, not artificial or compulsory.

At Texarkana, for instance, one can stop off and make a central headquarters as at Little Rock. He will be in the heart of a country full of quail, turkey and deer. At any one of a dozen points between these two cities, one can find himself in practically the same sort of situation.

I have said something earlier about bass fishing in this country. We hear nothing of it as we do of the Northern famous waters, yet there are Arkansas streams by dozens, which would drive the fly-fishers crazy. The bass are there and they will take the fly, and one can depend on his catch. Our host at Little Rock told us that he had had the finest fly-fishing for bass he ever had in his life, in the streams and bayous about that favored city. Of course, the best of this sport comes earlier in the season, and we did not try for the bass, though with bait the members of the little club whose house stands only a few miles from the city, were taking fine strings of bass late in December. As the weather grows cooler the bass take to the deeper water, but they hardly hibernate and will bite on warm days practically the winter through. In the summer time Arkansas is not a desirable country for the Northern angler, they told me, for the danger of malaria is very pronounced.

I found the Little Rock anglers using the most modern appliances. For instance, the Johnson Fancy fly was one of our host's favorites. Bait-fishing also was much done, and our friend showed us a very killing minnow trap invented by his father. It was simply a flat basket made of fine-meshed wire, the top of the wire being so drawn in at the edges as to make a covered rim around the entire top. The basket being baited is thrust down in the water like a dip-net, by means of a pole. When brought up, the minnows dart down and out at alarm, as is their habit, but are caught and held in by the covered rim. This I was assured was a very deadly style of minnow trap, and was the invention of an old and very successful angler, Mr. Irwin père, who lives at Kansas City, and is an ex-president of the Missouri State Association.

#### Half and Half.

At Texarkana you are half in Texas, half in Arkansas, and wholly in paradise, if the weather is as balmy as it was when we were there. Here we left the Iron Mountain road, our car now continuing south over the Texas & Pacific Railroad, still in a game country, and still among baggagemen different from the *genus intractabile* of the North. Therefore, the trying question of transporting our dogs became a task of pleasing lightness. I think the baggageman of the South has a soft spot in his heart for a dog. Also, he knows a pointer from a setter.

At Longview the fast train continues its way still south, but now over still another road, the International Great Northern. And still you are in a shooting country. Gradually the character of the country is changing now. You approach the plains, the mesquite and the cactus; but always there remains with you the gray aspect of the tangled coverts, the wide cotton fields and the rude cabins of the negroes. The cabins grow more and more picturesque, and apparently less and less habitable. Evidently you are reaching a land where easy weather is the usual thing. Presently the mesquite will grow grayer, the moss will show more on the trees, the cabins will turn from logs laid crosswise to logs standing upright or to adobe. A still greater languor will be in the air of the local life. The sun will be shining warmly, brightly, not keenly but dreamily. There is no ice, no snow. You are a million miles from winter and from care. Life is not a stark spectre, but a swimming, radiant dream. You are young, you are again happy, you are —

In short, you are asleep, and it is a good sleep.

#### San Antonio.

When you awake you are away, 'way down South in Dixie, and things have drawn about them in the night, you find the intangible serape of half-Spanishness. And presently you are in San Antonio, San Antonio the old, the mys-

terious, the sun-bathed, San Antonio de Bexar, the sphinx of the Southwest. Now that you are there, it is ten to one you can't pronounce the name of the town. On the plains we used to call it "Santone." The city itself, now becoming modern and advanced, prefers a departure from the border days, and calls it San Antonio in full. The Americans speak of Bexar county, Bexar street, Bexar anything—and there is a good deal of Bexar around—as if it were pronounced "Bear." But the Mexican who devoutly dreams away the warm sunshine of the day in front of the ruined missions which speak so plainly of another day, crosses himself and beseeches the good San Antonio de "Bay-ar" to send him success with the señorita whom he loves or the chicken he will fight in to-morrow's cocking main over in the "old town." The man has not yet been found who calls Bexar "Bex-er."

My friend Dick had never been in San Antonio before, and it was a keen delight for him to walk out in the bright morning air and see the oddly clad greasers, the picturesque niggers and the hardly less picturesque white hangers-on about the depot building. It was all very different from anything of the North. We liked it so well that we determined we would not go directly on through to the Gulf coast, but would spend a day or two first in San Antonio the blessed, San Antonio the golden—San Antonio, which after a while will be so well known to Northern travelers that it would be thought foolish to spend even so much time as this in writing about it.

In the first place, we got located at our hotel, and turned the dogs out for a run, which certainly they must have enjoyed after their long ride cooped up like market-bound fowls. Then Dick heaved a sigh of relief as he opened his trunk, mingled with a sigh of regret as he laid aside the trousers fatally injured at Morrillton. After that, we kicked aside our useless overshoes, hung up our overcoats at the hotel and went out for a walk.

#### America's Thermopylae.

History cherishes the story of Thermopylae, and Leonidas will long remain a good card at country lyceums. But if my memory serves me aright there was one Greek got away at Thermopylae, and it's no cinch a good many of the others wouldn't, if they hadn't been embarrassed by the Persians. Yet here, in this old, un-American town, about which we hear little in history, took place that unsung Thermopylae in which there was not one survivor, a battle in which every man of the victims fell a hero, and took with him his pro rata of the enemy. That fight in the stuffy, smoke-filled, shot-riddled old adobe, the old Alamo mission, is not distant enough for us to reverence it. The proof is too tangible. You can see too easily the place where the Mexicans dropped into a heap and burned the bodies of Crockett, Travis, Bowie and their fighting men. They have built a church on that place. When the church has fallen in ruins will be time enough, perhaps, to begin to think about the Alamo and the men who defended it, and who helped give Texas to the Union.

#### Had Sustained a Loss.

Dick and I visited the old plaza where once the *chile* girls held their midnight fires, but here we met a disappointment, and found the town had sustained a loss. The *chile* girls had moved to another plaza, and Martha, the *chile* queen of four years ago, was gone, deposed, lost—in short, married. Another *chile* queen had arisen, Sadie yclept, who scorned to sell *chile* out of doors at midnight, and who actually had a *chile* restaurant up on the Alamo plaza. Thither, then, that evening.

But about the *chile* pastime and the *chile* queen as about many things in San Antonio and elsewhere, I must write later, promising faithfulness. It grieves me to reflect that we have not killed a single thing in this article—except the Mexicans at the Alamo, who had been dead—but I promise that from now on this story shall become bloodier and bloodier, and in parts shall fairly reek with gore.

I can hardly help stopping to write about our *chile* soiree at the *casá de la Reina de Chile* Sadie. You see, the new *chile* queen was called Sadie. Dick had never seen a *chile* queen, and wouldn't have known one from Adam. Indeed, I imagine that a great many people don't know what that unique being, a *chile* queen, is; neither do they know what a *chile* supper is. But it takes time to tell all these things. For instance, as I was saying, when Dick —

909 SECURITY BUILDING, Chicago.

#### A TRIP FOR MEAT.

COLUMBIA FALLS, Mont., Jan. 17.—On Dec. 4 Jack, the Young Person and I started from Coram on the morning train for Belton to get a little meat for winter use, for, be it known, that dried venison is a favorite of mine, with milk gravy or any other way. We had shipped the boat the day before, and on arrival at B. found the craft in good shape. We had to drag it over snow about 50yds. to the river, and after loading in bedding, provisions, etc., we started to float down the stream for Columbia Falls, a distance of about 20 miles. Jack was provided with a .50-95, the Y. P. with a .40-60, and I had my old .45-60.

About two and a half miles below Belton we stopped to investigate a small island. J. strayed off to the right. I went north from the river, and the Y. P. started for a small rapid above where we landed, in order to get a few trout if possible, but without any success. In about 20 minutes I heard the "mountain howitzer" roar four or five times, and then Jack's signal. Got to him in about 15 minutes and learned he had wounded a doe, which had taken to the river and swam out of sight around a bend. I have forgotten to mention the most important part of the outfit, Jack's dog Nigger, than which there is no gamier dog on earth. Of the five mountain lions Jack has killed this fall and winter Nig has treed four, and tackles them at any time or place, without fear of the consequences.

On getting around the bend we saw the doe standing on a gravel bar and chased her about forty rods; she then took the water to swim ashore, and when she got ashore I finished her with a shot that broke her back. On her run she started two more deer that escaped.

Two miles below where we captured the first one we saw another deer on a small point at the foot of a rapid. The Y. P. was in the bow, Jack in the middle and I was paddling and steering. We were still as mice and got within 100yds. before she noticed us, and there she stood and looked at us until we were within 60 or 70yds. I fired two shots at her, Jack two and the boy three, and the

last shot he downed her. We put in to shore, and just before landing out jumped her fawn and started along the side of the hill. I take the credit of stopping him. Having cleaned these we loaded them in and started on.

On a point where the North Fork joins the Middle Fork we saw two more deer, and as we intended to stop here for the night in a trapper's cabin we drifted down as slowly and quietly as possible. When within about 80yds. they started and Jack turned the mountain howitzer on them. In the intervals the boy was getting in his work with the .40-60, and your uncle occasionally swelled the chorus with the .45. They ran 200yds. to the bank of the North Fork, turned to run up the stream, when one of them took to the water and swam across, ran a few yards and laid down. Jack got out on the point with Nig and ran to where this one had crossed; the other kept up the North fork, uninjured, at least we saw no blood. We put Nig across after the one that was lying down, but on his approach up she jumped and started down the river. Jack stopped her with ease about 100yds. away.

We carried the dunnage up to the cabin, unpacked, and while the boy and I were getting wood, Jack ran the culinary department. In about half an hour we gathered round the fireplace to a meal of venison, light bread, butter, coffee, pickles, cookies and milk.

Just after dark it began to rain, and kept it up until 12 M. next day. After dinner we started, and after passing a bad rapid Jack got out to walk a short distance, and inside of 100yds. knocked over a towhead. We now concluded that we had meat enough, and set sail for Coram, reaching Jack's house about 4 P. M., and next morning started for Columbia Falls.

We could have killed a dozen more deer if we had wanted to, but we had enough, and quit. By the way, let me mention that if any one imagines he can drive center in 100yds., standing or sitting in a boat on the streams in this part of the world, he must do finer work than I have seen done by any one up to date.

Since writing you before, Jack has killed another mountain lion, making five, and saw tracks of two more. He has the greatest dog I ever saw. Don't seem to be afraid of anything. H. H. G.

#### AN OLD-TIMER ON THE PARK.

Editor Forest and Stream:

By reports in the papers I see that the annual assault is being made on the Yellowstone National Park in a bill before Congress, granting right of way to a railroad through it, this time from a new direction and from a new motive. Heretofore it has been alleged that the Cooke City mines could only be reached by a railroad via the East Fork of the Yellowstone and Soda Butte Creek. Now the proposition seems to be to run a railroad into and across the Park for the accommodation of tourists, etc.

Now, it is a singular fact that the applicants for all such franchises in this country are parties who could not build a railroad ten miles long even if they could obtain permission from Congress to do so, but would probably try to sell out to some company able to build the road. It is quite common in this country for parties to get right of way over some route which will be likely to be of value in the near future, and to make a preliminary survey and make a little show of work and then wait for some company to buy them out; failing this the whole scheme drops out of sight. The great trans-continental lines have been greatly embarrassed in this way, and it would be well for our law-makers to bear this in mind and refrain from granting exclusive privileges unless the grantees are able to do the work, or else prohibit the transfer to another party.

Now every man in this country believes that the miners of the new world (Cooke City) district should have a railroad as soon as possible, as many of them were there long before the National Park was thought of as such; and went there young and vigorous men, and are still there representing their mines, even though they have grown old and gray waiting, never losing faith in ultimate success. But even these men are beginning to look to the East instead of the West for an outlet. Now the route via Clark's Fork to connect with the N. P. or any other road is but little longer, and doubtless just as good, as that by way of East Fork and Cinnabar, and has many advantages which the other has not. It would not be confined to connection with the Northern Pacific only and would open new fields of coal and other minerals. Besides, the Northern Pacific is not now in condition to extend its lines or build new ones, while the Burlington and Northwestern are both reaching out into this country and are not financially embarrassed.

In the past, all attacks on the Park have been met and defeated by its friends in the East, and we confidently look to them for its future protection. They are too far away to be interested in its spoliation, and men who have lived for years in the midst of the sublimest scenery are not so alive to its grandeur and beauty as are people from the East, to whom it is entirely new. To the old-timer it has become commonplace and he cares less for its preservation, and considers it only for its commercial aspect.

Now the facts are, that the Park has not in itself been made more attractive by the carriage roads, hotels, etc., constructed there, but it has been made accessible to a class of tourists who without them could never have gazed on its wonders. But I will leave it to any one who visited the region twenty years ago, before any roads were made or houses built, when all was as nature formed it, to say if it was not more attractive then than now. On the other hand, we know that good hotels and good roads are a necessity for Eastern and European visitors.

Friends of the Park who knew the true condition of things, have always insisted that a railroad through the Park would drive all buffalo, elk and other large game away, and that in a few years all the animals of that class that are left will be those protected by the Government.

But there is one thing in the management of the Park that is wrong, and that is that the national pleasure ground is becoming too much the private property of the licensed transportation companies and hotel syndicates, and many people of limited means are deprived of the pleasure of visiting the Park by reason of the exorbitant charges at the hotels and for transportation. The regulations should be such that people could hire any one to carry them through the Park so long as they obey the laws concerning it and abstain from mischief. I believe that most of the acts of vandalism committed in the Park have been done by those whose wealth or official position has caused their acts to pass unnoticed.

The regulations should be as liberal as possible, for

while all people are taxed for its maintenance but a small percentage visit the Park, and it is very unpleasant for many who do so to be constantly under military surveillance, and military, and the military in charge should be as strictly prohibited from destroying game as are the citizens visiting it. PIONEER.

#### THE CAPTURE OF HOWELL.

We published last week a brief telegram, announcing the capture of the notorious poacher Howell with the skins and hides of ten of the National Park buffalo which he had killed near Astrigent Creek, in the Hayden Valley. This news was exclusively for the FOREST AND STREAM, none of the other papers, either daily or weekly, having learned of it, but two or three days after its publication in FOREST AND STREAM, a general press despatch appeared in all the papers, announcing that hunters were committing depredations in the Park and explaining that this was due to the laxness of Congress in failing to provide any law by which such depredations can be punished.

As stated in the FOREST AND STREAM, the capture was made by Burgess, the Park scout, and a full and detailed account of it will shortly appear. In the meantime we are able to give some facts connected with the capture which cannot fail to be of interest.

On Tuesday, March 13, in obedience to orders received from Capt. George S. Anderson, Burgess left the Lake Hotel for the Pelican Creek, traveling of course on snowshoes. That night he spent not far from Broad Creek and a few miles northwest of Fern Lake. Early the next morning, very soon after starting out, he struck an old trail of snowshoes, and following it up stumbled upon a cache of six buffalo scalps and six skins, from three of which the hair had been partially removed as if for the manufacture of rawhide. He took this plunder in and passed on to the south until he had come near the mouth of the Astrigent Creek, where he again struck a snowshoe trail, this time freshly made. Following it up he came to the lodge belonging to the traveler, which was pitched about two miles northwest of the mouth of the Astrigent Creek. While waiting here Burgess heard some shots, and soon located his man, whom he found on the north bank of Pelican Creek, about one mile west of the Astrigent Creek.

The man was busy skinning a buffalo, and five of these animals lay about him. Burgess rushed upon him, and Howell was so occupied with his work that he did not see his captor until he was close to him. He had no time to think about making any resistance, but threw up his hands at once. Burgess brought him in and reached the guard house at Fort Sheridan at about 4:30 on Wednesday, March 14. Howell is now confined there, and will no doubt remain until news has been received from Washington as to what is to be done with him.

A party from the post was at that time at the lake, and at the date of our advices were about to begin to bring in the plunder.

There have been at least eleven buffalo killed and no one knows how many more. It is certain that Howell has been in the Park several times during the winter, and it is not very unlikely that he may have killed a large number of these animals. It is evident that unless something is done at once to make poaching a crime, the Yellowstone Park buffalo will very soon be wholly exterminated.

#### WHERE ARE WE AT?

Editor Forest and Stream:

"Coahoma's" recent animadversions on the snake killer as approved by FOREST AND STREAM, the sportsman's arbiter, brings us to that point where we must stop and study the compass of life and try to determine where we, as sportsmen, are at. This is evidenced by the interest manifested by readers of FOREST AND STREAM in the issue just at hand.

It is no new subject, for in every thoughtful sportsman's mind there rises now and then, like Banquo's ghost, the question: What place does the sportsman occupy in the great problem of life? It will not down, and we are forced to contemplate it whether we would or not.

Man with a show of reason assumes superiority over all other creatures and by that assumption he further assumes a terrible responsibility, the responsibility of the conqueror in his treatment of the conquered; the responsibility of him to whom is given the power to say to one: thou mayest live: unto the other; thou shalt die. That responsibility that assumes the arbitration of matters involving life and death. Reflections pertaining to this subject cannot come under your ban, "political or religious." They are close to the sportsman's heart and he is still entitled to know his true place if anybody can teach him.

This undefined, semi-dormant desire manifests itself on every page of FOREST AND STREAM, as every observant reader knows. We read between the lines if not in them this desire for enlightenment. Naturally as sportsmen grow older and become stiffened with rheumatism, the witchery and glamour of the chase abates. When the fires of life begin to burn low and the light in the eye grows dim, it is then that we stop and take our bearings and begin to ask serious questions. Seldom do we see the red-cheeked boy with a rod or gun in his hands handicap himself with any such embarrassing reflections. He steps from the cradle inspired with high resolves to kill and destroy the lower orders of life mercilessly, and to wage a war of extermination against snakes, spiders and "injuns" in particular. When confronted with the proposition that even the least of God's creatures have been created for a purpose, and have some rights and certain privileges, he falls back on the Bible admonition, "and thou shalt bruise his head," in the matter of snakes, and rests his cause against other forms of life on assumptions, extremely vague it is true, but all founded on the general declaration that all things are created for his use, benefit and pleasure. He tells us that the big fish are made to eat the little ones, because they do eat them, and Dean Swift only reverses the anatomical allegory when he declared:

"a flea  
Has smaller fleas that on him prey;  
And these have smaller still to bite 'em,  
And so proceed ad infinitum,"

but all going to show that "the course of nature seems a course of death."

The proclamation giving the snake the "right to life, liberty and the pursuit of field mice," may interfere somewhat with the vested rights of the field mouse to pursue his usual avocations, but it is doubtless founded upon the correct theory. Conceding as much, do we not find ourselves in a rather anomalous position? We must interfere and abrogate the penalty of death inflicted by the strong upon the weak in the lower orders of life so far as we can, or just keep hands off and let nature take her course absolutely and without any limitations, with the chances decidedly in favor of the snakes, hawks, sharks, cougars, skunks and others of the enviable "four hundred," the elect as it were.

If "Coahoma's" intentions were peaceable, why was that Marlin carbine "conveniently hanging to his saddle" at the time when he observed the eagle rending the fish on the bank of Flower Lake. We are informed that the Marlin was for duck, squirrel or rabbit and not intended as a disturbing element where "Coahoma's" own appetite was not concerned. This raises another question, viz.: If "Coahoma" or his family was not hungry he certainly had no right to compass the lives of any of these creatures. If hunger required the sacrifice of life then he must disclaim any element of sport in connection with the transaction and concede that he was pot-hunting (hunting for the pot), for when one takes the life of a creature to appease the cravings of a hungry stomach he is no more entitled to call it sport than the farmer would have to speak of the sport of killing a fat hog or cow. Understand, "Coahoma," you are no more guilty than myself or any other sportsman; it is the proposition we have in hand, not the individual. If sport is "that which diverts and makes merry," then the sportsman's anxiety about the welfare of his family must be modified even if they are out of meat.

Many perplexing questions follow each other when we pause to consider this question. For example: Are the protective laws of our country enacted in the interest of the game itself or only that we may be in at more deaths, on the same principle that the farmer by the sweat of his brow looks after the increase of his herds and flocks? Does the taint of barbarism still stick to us that we should find the greatest of our pleasures in the sorrows and sufferings of other life? However, I will venture the assertion that no thoughtful sportsman ever took the life of fish, flesh or fowl without experiencing a sort of pricking sensation at his heart; a remorse born of the consciousness of guilt.

But, Mr. Editor, will you or kind-hearted "Coahoma" please tell us where we, as sportsmen, are at?

S. H. GREENE.

PORTLAND, Oregon, March 14.

## CHICAGO AND THE WEST.

[From a Staff Correspondent.]

### A Game Pocket.

A GENTLEMAN who wishes to be known as "W. W. W." very kindly writes as follows from Mandan, N. D., and I know his letter will be read with interest by many who do not often meet with such generosity of purpose:

"Being a sportsman and good reader of FOREST AND STREAM, and therefore unselfish, I would like to share my game pocket with yourself or any of your friends who may stray out this way the coming fall. The shooting here is excellent and game of all kinds more plentiful than it was six years ago, with perhaps the exception of antelope. We have white-tail deer, cranes, swan, geese, ducks, sharptail grouse and jack rabbits in plenty. I have never seen grouse as plentiful before as they have been the past two years, and we should have lots of them this coming fall as the winter so far has been very mild and food easy to secure.

"The deer are increasing every year, and will continue to do so as long as the Indians are kept on the reservations during the 'breaking up' of the Missouri in the spring. Then is when they do the most damage to the game, as the water drives the deer out of the thick brush to the hills and small brush patches near the river, where they can be killed easily.

"Last spring I saw an Indian with the skins of over a dozen fawn antelope which were not over three to four days old when killed. All the deer the Indians (Sioux) kill during the open season wouldn't keep them from starvation, as they are most indifferent shots. Most of the deer ground we have here is on the Missouri bottoms, and there they can 'laugh and grow fat,' as it is almost an impossibility for a man to secure one by still-hunting. About the only way to get a shot is at a water hole, morning or evening, or to find a runway near a clearing and camp. It requires a vast amount of patience, as I have found out from experience.

"By the way, as I understand it, 'still-hunting' means following a runway or taking a trail and following that. Am I right or wrong? One evening last October I found a haystack just west of a cabbage patch on the river bottoms near town, and as the stack was between two well defined runways which led to and from this patch, I concluded to 'go into camp.' I crawled up on the stack, and fixing myself comfortably, waited for perhaps an hour. Finally, just as it was getting dusk, I caught a glimpse of something coming out of the brush. At first I didn't know whether it was a fox or a deer, but as it approached I saw it was an old doe, head and tail up and stepping as if on eggs. She came within about 80ft. of me, and right in line of the rifle. I did not dare raise the gun, as she was looking right at me, and it was so near dark I couldn't see the sights. She stopped opposite me and I lowered the rifle a trifle and pulled the trigger. She dropped to shot and I found I had struck her in shoulder, and ranging back the bullet had broken her back. This was within two and one-half miles of town.

"About two or three days after this I went down to the same stack one morning at 4 o'clock and at daylight saw an immense wildcat making a breakfast off the paunch of this deer. I shot him and he jumped around for about a minute, I should judge, with a .40-65 bullet hole clear through him lengthwise.

"The climate here is 'way up' and in the fall we have the finest weather I ever saw anywhere. It is great sport to start out after grouse here in October, as then they are good, strong, swift flyers and do not have to be kicked up.

"My dog is not a very good one, that is, no prize winner. She is just a common meat dog, of the English setter type, pedigree unknown. I never owned a better dog, however, for trailing wounded deer.

"I had quite a heart-rending experience last fall while on a little hunting trip with a party of friends just below Fort Abraham Lincoln. We all left town about an hour before daylight, and as we had only six miles to go, we got there in plenty time. After taking care of the teams we separated, and each taking one of the many wood roads running through this bottom, we started out with the firm resolve of laying out some old buck the first shot. I went over toward the Missouri River, where the timber is more open, and about 7 o'clock, as I came to a little clearing, I saw two very animated-looking white things bobbing up over the rose bushes. Soon I saw more than the tails, and found out they were an immense buck and doe. The buck kept well in the brush, and the doe, not being so wary, was hopping along out in the open. They turned and came down toward me. I waited until after the doe passed, as I wanted a shot at the buck; but he wouldn't show himself plainly enough. Finally I cut loose at the doe and down she went, only to get up again. I shot her again as she jumped, and this time she stayed down. At the second shot the buck ran out into a thin patch of willows, and I got a shot at him as he was going away from me. I don't think I hit him the first time, but at the second shot he fell all in a heap and lay there kicking, within 75yds of me. I walked down to where the doe was and bled her. Starting for the buck I was surprised to see him get up and skip, and as I was in a thick tangle of grapevines and brush I couldn't use the rifle at all. Calling to one of the other boys who was not far away, we dressed the doe; hung her up, and then started after the cripple. He bled but a few drops and we never found him, but found out later in the day that he ran by one of the other boys, giving him three good open shots at less than 50yds., but he failed to score a hit. In the course of a couple of hours I went back to where I had hung up the doe, and she 'was not.' Some miserable whelp from Bismark appropriated it, as there were two of them on our side of the river that day. I saw them while looking for the crippled deer just as they were leaving our side of the river in a boat, but at that time I did not know the deer had been stolen. Had I known it I rather think they would have come back. I had no more shots that day, but two of the other boys were more fortunate, each getting a fine yearling buck. That day we saw ten deer in this patch of brush, and it is only about a mile long by a half a mile in width. Not very large but plenty thick.

"Should either yourself or any of your friends happen out this way I would be glad to put them on to the best shooting. Hoping that the FOREST AND STREAM 'rabbit scheme' is working smoothly and that old FOREST AND STREAM will never grow less, I will close. Do not forget me when you come this way. "W. W. W."

## STOP THE SALE OF GAME.

A PLATFORM PLANK.—The sale of game should be forbidden at all times.—FOREST AND STREAM, Feb. 10.

Editor Forest and Stream:

I most heartily indorse your platform, and in line with this, hope the new organization, the National Game Bird and Fish Association, will nail your colors to their mast-head and work for the same end.

Let the many local societies adopt these sentiments, and it will not be long before such laws will be made and enforced as shall stop the destruction of the many thousands of game birds killed for profit.

Last fall in Minnesota and North Dakota I heard and saw enough to open wide the eyes and set to thinking the most credulous sportsman. In Minnesota tons of chickens and grouse were killed and shipped by market-shooters and self-styled sportsmen, and sold (lawfully) within the State, while there were as many more shipped out of the State (unlawfully) and sold. In North Dakota every man with a gun and brains enough to use it successfully would kill every marketable bird he could, and ship to St. Paul or Chicago, according to the state of the market, it being just as easy to send to the latter place as the former, although against the law of the State.

I also found some of these self-styled sportsmen from a city in an adjoining State, with dogs, tents and cook, who had been out from the day the chicken season opened, killing, killing, killing, and shipping out of the State to a certain cold storage house, where the game would be kept until it was a scarcity in the market, and then "give it to their friends." What a feast those friends must have had, for they had sent up to the time of my meeting them, about 1,000 chickens and grouse, and when I left, those ardent, expert sportsmen were still slaughtering.

I know of others in the East, who go to the Western prairies for sport, who shoot day after day every game bird they can, but they say none are wasted or lost. Why? Because they stifle their consciences by sending all they cannot eat to the market to be sold and use this ill-gotten money toward paying their expenses.

I was informed by a native of Dakota that he had no trouble in sending his game to St. Paul or Chicago. A pair of chickens now and then, handed to the express messenger, changed every box or barrel to "dressed poultry." Must these things go on forever? Shall railroad companies and individuals continue openly to violate the laws, because of the "almighty dollar"? Take from these individuals and corporations this, the only incentive, by forbidding the sale of game at all seasons, and the question will be promptly and most satisfactorily answered.

PHILADELPHIA, March 19.

H. O. WILBUR.

From the Annual Report of the Minnesota Game and Fish Commissioners.

We have the honor to lay before you the report of the Board of Game and Fish Commissioners of Minnesota, for the year ending Dec. 1, 1893. Since our last report was made a new game code formulated by this board was presented to the Legislature, and with a few minor alterations it was enacted into law, and it is now accepted as the most practical and efficient game law that this State or the Northwest has ever enjoyed.

Under the provisions of this law the board appointed one of its members to act for it and to be known as its "Executive Agent, and who should have all the powers possessed by the board when it, the board, was not in session." This was for the purpose of concentrating responsibility and authority, and for the more efficient administration of the law in its practical workings. The wisdom of such provision has been evident from the start; the department has had a head, and the work of its employees has been subject to constant supervision and direction.

The duties devolved upon the executive agent, as representative of the board, have been voluminous and have required almost his entire attention. To one not familiar with work of this kind it would seem as though there could not be such a vast amount of work. But when one is conversant with the detail required to intelligently administer the duties of the office, it at once becomes evident that this has assumed a department of itself, and is one of no little responsibility.

This board has not looked at the subject of the protection of the game and fish of the State from simply a sportsman's point of view; but we have considered it rather from an economic standpoint. In the bountiful supply that has been provided this State of the food product, as seen in the quantity of game, birds and animals, and the great variety and number of fish that inhabit our waters, is to be found a matter which is worthy more than ordinary attention.

The people of the State, as a whole, seem to appreciate but sparingly the bountiful provision that nature has made of this food supply, and the importance of it is only realized by them when the supply has become exhausted.

Our citizens who live in the section of the State known as the "Park Region," are not aware of this bounty that nature has provided, or if they are aware of it they seem to care so little about its preservation that they give no thought to any caring for it, or realizing its value to them, or that it is sure to be soon exhausted, if they do not take measures to protect it. They seem to be impressed with the idea that it is something that will never fail, and acting upon that impression they unwisely and indiscriminately slaughter it at all times and seasons; not taking thought for one moment that there must surely follow the inevitable result of exhaustion and extermination. This was and still is to some extent the condition of affairs in several sections of the State.

It has been the aim of the board in the past to endeavor to educate the people to an understanding of what the "laws for the preservation and protection of game and fish" mean. Having this idea in view since this commission was organized, and working out on the lines of educating the people, as before stated, we are pleased to announce that we can see that our efforts have been successful in a great measure, and that to-day the sentiment of a vast majority of the citizens of the State is in favor of propagation, preservation and protection of the birds, animals and fish of this State. They begin to realize what it means in the way of a cheaper food product for them, and their assistance in aiding our officials in the enforcement of the law, has been, and is, of great value. The old idea of protection, that it meant the preservation of the game and fish of the State as a benefit for sportsmen alone, has, in a large degree, passed away, and has given place to the newer idea that it is for the preservation of the food supply and the provision of that supply for its citizens. The farming element of this State are aware of what this food product means to them, and our most valuable assistance comes from the farmers and those living on the frontier, or in sections where the game more largely abounds.

In carrying out this new game code the State was distracted and a warden for each district was appointed, the idea being that the warden so appointed, and residing near the commissioner, might be more immediately under the supervision of the board, and he, the warden, might have the opportunity of consulting with the commissioner in the pursuit of his duties. We are very much pleased to refer to the work of our wardens and their efforts, as having been very effective in greatly reducing the lawlessness respecting the killing of game and fish in large quantities, as has been the custom heretofore. Many of these officials have encountered extreme danger, and but for their firmness and the idea that the State was behind them in all its authority, they would have been unable to perform their duties and secure the results that they have. These wardens were required to report to the executive agent each month in full, the work that they had performed during the month last past, and to keep in constant communication with him in reference to cases in hand. We also made use of a detective force which we have scattered through the State, and we have received the assistance of numerous citizens who have made reports to this office. For obvious reasons we have preferred not to embody in this report the report of the wardens and the detective force and others above referred to, for by these reports we have secured information which we can the more readily make use of advantageously by refraining from their publication.

In the beginning of our work, under this new law, we realized the necessity of having at our command a legal adviser, who should be fully conversant with all the legal requirements, and well versed in the law pertaining to this especial subject. We, therefore, had a consultation with the Attorney General, which resulted in our finding that his office was so burdened with duties of the State, that it would be practically impossible for him to give us the required assistance in the prosecution of our work that we deemed necessary. He, therefore, upon consultation with Your Excellency, informed us, that with your consent, we might secure the services of William Ely Bramhall, an attorney of St. Paul, who had given the "Game Laws" an exhaustive study, and who was probably better versed and posted in all matters pertaining to this subject, from a legal standpoint, than any one else of his profession in this western country. We have drawn very heavily upon his time and knowledge in all our work, and by his counsel and aid we have been enabled to secure a great deal of valuable information that we trust will ultimately result very beneficially to this State. As his work was largely of necessity in the cities of St. Paul and Minneapolis, we secured his appointment by the County Attorney of Ramsey county, as especial counsel to prosecute in Ramsey county courts, all cases of infraction of the game and fish laws, that might come before these courts. We are now in a position to carry on our work at less expense in this department than we have ever been before.

The matter of game laws and the knowledge of them, looked at from a legal standpoint, is a subject in itself, and that it is a subject of no small import is well known, when one comes to study it.

We now have in vogue a system which we believe will be invaluable to us in the future, in the apprehension of those who are engaged in the wholesale slaughter of game and fish and the transportation of the same out of the State.

The use of nets in our inland waters and streams in the past, has been the means of largely undoing and destroying the work of the fish commission in the stocking of the

waters of the State. The new code, absolutely forbidding the use of a net for any purpose, and the enforcement of that portion of it, has already proved the wisdom of such legislation. The increased quantity and number of young fry of all kinds that are to be found in our lakes and streams is abundant proof of our assertion, and if we can keep the nets out and prevent the wholesale and indiscriminate taking of fish by them, we can, in a short time, restock these now depleted waters. In the counties of Otter Tail, Douglas, Becker, Grant and Crow Wing, where are to be found the greatest number of lakes, there reside a large number of people who seem to think that the fish supply will never be exhausted, and who, at all times and seasons, have insisted on taking them, and that too, in unlimited quantities and amounts. The wardens have put in a great deal of work in that section of the State, which heretofore has not received much attention, and have endeavored to break up this practically wholesale netting, and we are pleased to report that they have succeeded fairly well.

In our efforts to prevent the destruction of game and fish, we have carefully considered the different ideas and methods suggested by the members of the board, and those of others of experience, in handling this subject. We have arrived at the conclusion that if we could control the markets or control those who handle the game and fish in quantities, and restrict the sale and quantity of these articles, that we could the better protect the same. Our efforts have, therefore, been directed to shutting off and controlling the marketing facilities in the large centers of the State. But the law being new, and we not having had it adjudicated by the higher courts of the State, we have deemed it wise to "make haste slowly" and have now several cases which are in process of adjudication. We have also accumulated evidence in a great number of other cases, so that when judgment shall have been rendered in those cases that are now in court, and in case the judgment should be favorable to the State, we will be in a position to take the action necessary to put a stop to the illegal business of game traffic, as now carried on in such voluminous measure.

In the cold storage business as carried on in this State, we recognize one of the greatest obstacles to the enforcement of the law for the protection of game and fish of the State. This business depending in a large measure for its success upon the handling of game and fish for a profit, it is a question of great importance to determine if it can openly and flagrantly continue to act as a "fence" for the use of the market-hunters and dealers in game and fish, and the shipment of the same out of the State. For without the facilities afforded by the system of cold storage, there would not and could not be such a great amount of this material handled. The quantity of these articles handled yearly by these cold storage companies is something enormous, and by the reason of their method of conducting their business, which they realize is contrary to law, it is impossible for us to ascertain accurately the quantity handled. We are able only to approximate. It is safe, however, to estimate that at least 4,000 carcasses of venison will be handled and shipped out of this State for the year 1893, and the number of birds we estimate at 40,000 dozens, or 480,000 birds, that have been handled in this market since the open season began in July. This includes duck, plover, grouse, partridge, woodcock and pheasant, the larger part of which have been taken in this State and killed. In addition to this, thousands of ducks and geese, which have been killed in North Dakota, have been marketed and transported through the game centers of St. Paul, Minneapolis and Duluth to Eastern markets. A large quantity of this product is secured ostensibly on the Indian reservations; and by those who are professional market-hunters, who are employed by dealers in that commodity, both in this and adjacent States. It is the custom of these dealers to employ Indians and irresponsible white men and half-breeds, who reside on the Indian Reservation, to do the killing and to bring the material to some convenient point for shipment to the dealers who reside in Chicago, or some other large city outside of the State. The game is killed in quantities and is frequently in quantities sufficient to make carload lots, and is billed by the agent and shipped out of the State by aid of the common carriers under the name of anything else than its proper name.

The question of such killing on the reservation and how to handle and prevent it is one that is at present receiving the attention of this board and of the game and fish commissioners of several of the other States in which Indian reservations exist. This matter was brought up at a recent conference of the game and fish commissioners of the several States which was held in Chicago under the auspices of the United States Government in October, during the World's Fair, and the matter was deemed of sufficient importance to bring it to the attention of the Interior Department of the United States Government, who alone have jurisdiction on these reservations, and we trust that we may secure such action through that department as will in the future shut out and shut off the above named class of irresponsible game butchers.

The common carriers doing business in the State, who transport all this game from places where it is killed, have not seen fit to endeavor to co-operate with this board, nor to comply with the plain provisions of the law applicable to them, although it was plainly, thoroughly and fully set forth and made known to them through circulars issued by this board, and through the game laws which were put into the hands of each one of the managers of the several companies from the time of the enactment of the law. They have seen fit to figure that the small amount of money that they might receive from the transportation of the game in and out of the State, contrary to law, was of more importance to them than such an amount as they might receive from those who would come into the State to indulge in the sport of killing and the consequent amount of money that they would necessarily expend while here.

Inasmuch as these game carriers refuse to recognize the law, we were under the necessity of having one of them indicted, and since indictments have been secured, they one and all have manifested a disposition to aid us very materially and energetically in the enforcement of the provisions of the law. We are able now to state that we have the hearty co-operation of the officials of the express and many of the railroad companies in our work. This has been evident in the cases of one or two of the express companies who have requested our executive agent to draw up such a circular letter, addressed to the agents of their com-

panies, as he wished, relative to the shipment and handling of game and fish, and they have given this circular their official sanction and signature, and distributed it among their employees.

The difficulty is not so much with the official management of the common carriers as with the subordinate employees, and now that we have an understanding with the officials, and have their aid and the promise that their instructions will be lived up to to the letter, or that the offending employee will be summarily discharged, we have reason to believe that we shall meet with greater success than we have heretofore even hoped for.

It is but justice to say that when the matter has been thoroughly presented to and understood by the above-named officials, and the position that they have unwisely assumed toward the law has been made plain to them, that they give us their hearty co-operation, particularly so after we have given them to understand that it is our intention to enforce the laws relative to the protection of game and fish of the State through the common carriers. A few examples of decapitation among the employees will have a very salutary effect upon the balance of the forces of the railroad and express companies.

The sentiment in relation to the retention of the game and fish of this State, within this State, for the use of its citizens has grown and increased very rapidly, as it has become known in what vast quantities it is being shipped out for consumption in the Eastern States; for, as a matter of fact, Minnesota, Wisconsin and North Dakota furnish for the Eastern markets at least fifty per cent, of all the large game consumed, and Minnesota alone contributes a large percentage of the cheaper and coarser food fish that are handled in St. Louis and Kansas City, and points adjacent to these cities.

One great source of trouble and annoyance that we have experienced in the enforcement of this law, arises from the refusal of the justices of the peace throughout the State, to enforce the plain provisions of it. Many of those who commit the offenses hold such community relations, that the justices are loth to perform their plain duties, and in many instances they presume to declare the law unconstitutional, and do not even hold a prisoner and give the State an opportunity to prove otherwise. The county attorneys have also in several instances looked with disfavor on the enforcement of this law, because, perchance, it may interfere with their political fortunes, and they, therefore, have but feebly assisted our officers in their prosecutions.

BINGHAMTON, N. Y.—*Editor Forest and Stream:* You have surely sounded the keynote of the situation when you say prohibit the sale of game. Some of my observation is in a way that I have not seen mentioned. Having been in the restaurant business I can safely say that three-quarters or more of those who eat the game would gladly see the sale prohibited. I mention this to show how little real demand there is for game, and were it not for the profits to commission merchants and to those who serve the game, there would be no selling. It is the few against the masses.

#### Asleep on Post.

TEN summers ago I camped for six weeks on a little lake which is situated in Herkimer county, New York, and which at that time was a veritable sportsman's paradise. Little did I then think how near the day was when the "summer girl" would drive us old hunters to seek new lakes and forests. But alas, with the opening up of that country by the railroad, it came only too soon.

I arrived in camp that summer late in the afternoon, and was not long in getting my duffle arranged and taking my place in the bow of the boat under a jack. But luck was not with me, and for five nights I floated without seeing or hearing a deer. I was then invited by a neighboring party, to join them on Moose River for a day's hounding. I accepted, and was stationed on an island just below where a runway crossed the river. I shall never forget that day. It was so still and peaceful that a hound's voice could have been heard for miles. Not a cloud was in the sky, and the warm air heavily laden with the scent of balsams and spruces, caused a drowsiness to come over me. I lay down on my back, well hidden in the long grass, and pondered over my recent hard luck in floating. Suddenly my heart gave a bound, for there was a splashing in the water at the lower end of the island. That's a deer at last, I thought; but on looking I saw nothing but a flock of sheldrakes. Again I lay down, and although I fought it off, the sleep lost in floating soon asserted itself, and I dozed. In the course of an hour I was waked up by more splashing, and this time it was apparently very close. So, without thinking, I jumped up, and there, not 15ft. away, stood the most startled buck I have ever seen. I looked at him, he looked at me; twenty seconds passed. My heart was thumping against my ribs fifty pounds to a thump. My rifle was at my feet, and that confounded deer trying to look holes through me. But at last I stooped for my rifle, and the spell was broken. With a whirl and a spring my venison was vanishing down stream. Then the bullets began to fly, but I verily believe that deer went faster than they did; at any rate six empty shells lay at my feet when that buck disappeared around a bend of the stream. Perhaps the wasting of all that good lead was caused by buck fever. I will not deny it, although I had hunted and shot a good many deer before this buck took such a mean advantage of me. I was looking for a deer ahead of the hounds; not for one to sneak up behind me in that fashion. But I learned a lesson, and since that time I have never slept when watching for deer. PERCIVAL.

#### A Townsend Wildfowl Sketch.

THE series of sketches, which we printed some time ago, entitled "Among the Wildfowl," from drawings by Mr. Wilmot Townsend, attracted much attention and admiration from practical duck hunters. Mr. Townsend's ducks are real ducks, the creatures actually seen in the air and on the water. Mr. Townsend has just completed a new drawing, entitled "Outside the Danger Line." It depicts a flock of broadbills alighting; and the study of action will readily be recognized by observing gunners as true to the life. The scene represented is on a calm day, when with nothing to alarm them, the ducks have concluded to rest a while far from shore. The sketch depicts the action displayed by the different individuals comprising the flock as they pitch to the water. It is distinctly a study of broadbills, for other ducks have different methods of

accomplishing the same feat. The drawing has been reproduced by the artotype process, the plate being 16x21in. When Mr. Townsend brought one in to us the other day we suggested that some of our readers might like the engraving. The edition is limited to 100. The price is \$3. We can supply it.

#### No Punishment for Park Poachers.

ALONG with the dispatch which we printed yesterday announcing the destruction of big game in the Yellowstone Park, comes a dispatch to FOREST AND STREAM announcing the capture by a Government scouting party of a notorious poacher named Howell with eleven fresh buffalo skins in his possession. This arrest would be a matter for great congratulation if the poacher was likely to be properly punished, but, as FOREST AND STREAM points out, there is practically no remedy against the perpetrators of such outrages, although the Government spends considerable money keeping troops in the Park for its alleged preservation. The stealer of a Government mule would suffer much more severely and certainly at the hands of the law than the destroyer of a part of the few remaining buffalo on this continent. The Senate committee on territories will give a hearing next Wednesday on a bill which will supply some of the legal safeguards which the preservation of the Yellowstone Park requires. It is to be hoped that in some way enough members of Congress can be interested in this matter to secure favorable action.—*New York Evening Post.*

#### A Button that will Do the Rest.

CHICAGO, March 22.—*Editor Forest and Stream:* Some time ago I saw in a sportsman's journal a notice, where the writer suggested that a badge for sportsmen and lovers of rod and gun be gotten up, by which they might recognize each other, and the idea has taken me by storm. When we see what a hard task it is to effect any national associations, owing to the utter impossibility to unite all interests of the many States of our wide land, and when we see how important it would be to see the grand army of sportsmen united and visible also to the eye of the uninitiated, it seems to me that some way may be found by which this could be done, and I think here the way is found, a badge, to wear which shall be a sportsman's pride, which shall at once stamp him as one of a great croud of men who have at heart not game destruction, as so many seem to think, but game protection, as one who loves the game and will only diminish the supply when the law allows it and when it will not tend to exterminate the species. He who goes to the field and streams with this love for our game cannot and never will be a game butcher and a game hog.

I have, therefore, executed a design for a badge and submit it to the American sportsmen as a token of good fellowship. It bears the motto "Protect the Game." For a centerpiece I took the noblest of our game birds, "Bob White," he who is inhabiting our broad land from the Atlantic to the Pacific, from North to South, who, by his cheery voice, his game-ness and beauty, is known and loved by all who ever visit his haunts.

Permit me to state what I hope this badge may accomplish:

First—The closer acquaintance of sportsmen, who so often, when out on the road, would like to meet another, yet do not like to touch the subject to any one and who, when they do see one, would only too gladly receive all information they may want and which is always so gladly given. They could recognize him at once, and we all know wherever two sportsmen meet, open hearts and hands are waiting; he sees himself among friends; for no club, no lodge, no association of any kind brings men together so closely as sportsmanship will do; but so often we do not know that maybe near us sits a man whose heart beats as warmly for our beloved passion as our own and we pass by him unknown.

Second—Would not the sight of the badge on many a man's lapel cause the public to inquire and see with wonder that the sportsman recruits and comes from all walks of life, from palace and hut; and seeing that one great impulse moves them all? Field sports will become more popular, more respected and known, and the subjects of universal game protection will begin to interest those who now are almost or totally ignorant of the matter, this would certainly educate our people to that end and that they will begin to value the birds and beasts and fishes which inhabit our fields and streams, not as a matter of commercial value, but because they furnish such recreation and game for the sportsman in their pursuit to find many friends, and the subjects of universal game protection will begin to interest those who now are almost or totally ignorant of the matter, this would certainly educate our people to that end and that they will begin to value the birds and beasts and fishes which inhabit our fields and streams, not as a matter of commercial value, but because they furnish such recreation and game for the sportsman in their pursuit to find many friends, and the subjects of universal game protection will begin to interest those who now are almost or totally ignorant of the matter, this would certainly educate our people to that end and that they will begin to value the birds and beasts and fishes which inhabit our fields and streams, not as a matter of commercial value, but because they furnish such recreation and game for the sportsman in their pursuit to find many friends, and the subjects of universal game protection will begin to interest those who now are almost or totally ignorant of the matter, this would certainly educate our people to that end and that they will begin to value the birds and beasts and fishes which inhabit our fields and streams, not as a matter of commercial value, but because they furnish such recreation and game for the sportsman in their pursuit to find many friends, and the subjects of universal game protection will begin to interest those who now are almost or totally ignorant of the matter, this would certainly educate our people to that end and that they will begin to value the birds and beasts and fishes which inhabit our fields and streams, not as a matter of commercial value, but because they furnish such recreation and game for the sportsman in their pursuit to find many friends, and the subjects of universal game protection will begin to interest those who now are almost or totally ignorant of the matter, this would certainly educate our people to that end and that they will begin to value the birds and beasts and fishes which inhabit our fields and streams, not as a matter of commercial value, but because they furnish such recreation and game for the sportsman in their pursuit to find many friends, and the subjects of universal game protection will begin to interest those who now are almost or totally ignorant of the matter, this would certainly # Camp-Fire Flickerings.

"That reminds me."

## THE LAST OF THE STRETCH SNAKES.

"Hol' on er bit!" Lighthouse Charley emerged from the cavernous depths of his old green "gre't co't" and held up a deprecating hand. Treat Clark had been painfully spelling out a half column account of a savage prize fight in an adjoining county, at the end of which, the reporter, warming up to his subject, declared, "Thus ended a famous battle, one long to be remembered in the annals of the grandest form of contest on earth—between two human beings with bare fists to the finish!" Ejaculations of "The't's so, ber gosh!" and "En he ain' very fur wrong thar nuther!" came from the expectoratorial targeteers who had been decorating the stove to a considerable extent during this enthralling narrative.

"Twa'n't ter enny ways compare with ther hookin' er them two bull pups daown to Stratford P'int las' Fast Day, I'll bet er wad er money!" put in Eph Sandford, the doubting disciple, "why, them dawgs ud er bin chawin' yit of thet infarnal, dad-blasted, flap-eared ol' Dawson ad'en er yelled 'p'lice'!"

"Arfther all Oi don't know that onny uv yees his iver sane a rale schrimidge," interrupted Pat Nolan, surreptitiously refilling his yellow clay pipe from the box behind the counter under cover of the argument, "that is onny er yees that misht ther foight b'twene Larry McBride's owld gold bantam an' Barney Craven's silver whoite lasht Sotherday evenin', be ther howly face av ther praste, thim wor r'yul boyds! Why, yees hav' no crachures on this side er ther big salt drink thot kin foight." Just here Lighthouse Charley woke up with a last violent snore, and snatching an idea of the controversy, promptly took a hand.

"Hol' on er bit," said he, rubbing his eyes and blinking, "thar may be er good many kin's er fights an' er heap er diffrence er 'pinion 'bout 'em, but when all's done an' said ther cre'tur' ain' been born yit ter outmaneuver er git aroun' er reel clever snake. Er snake wuz tu much fer ther fust man an' woman thet ever breathed on airth, an' they've kep' on bein' tu much ever sence. Fac' is, they're sech er plaguey sight smarter'n other things, that ther ain' no kin' er struggle when they tackle hold; but yer let one snake grab ernuther an' then, says I, thar's er skirmish ter make ther Pope git down off his gilt throne en holler 'Bully!' Thar ain' anuther livin' cre'tur', whether man, bird, fish er reptile, betwixt sunrise en sunset thet kin twist horns with Mister Sarpint. An' speakin' er snakes fightin' minds me er sumpin. I see the wust tussle last Sunday er week thet ever I did. Awful 'twas!"

The old man assumed an awed expression, as if the mere recollection overpowered him, and relapsed into silence. Every one was regarding him anxiously, for Lighthouse Charley was recognized as an authority on snakes, and his observations on curious species were carefully treasured up and passed from one to another of the villagers. Invariably he fell into this state of apathy after he had awakened peculiar interest in some new story, and it had been discovered years ago that nothing save a good, blood-stirring drink could arouse him to a talking mood or refresh his failing memory.

"Phwat wuz yez erboot to observe, Mister Baldwin, aboot ther snaix yez wuz spakin' uv?" ventured Pat, studying the label on a starch box with well-feigned interest.

Only the asthmatic ticking of the clock broke the stillness. The student of snake life had apparently resumed his slumber. With a despairing glance at Eph, Pat, who was devoured by curiosity and could not have waited five minutes more, called:

"Hoil! Mister Gregory, could yez be sittin' oot er small glash of rye for Mister Baldwin an' mesilf?"

Gregory dropped his painful mathematical chore of adding up the daybook and brought from the little triangular cupboard a yellow-glass bottle and two small tumblers with badly broken edges. If the onlookers thought the cheering music of clinking glass would awaken the sleeper they underestimated the art of the venerable sage. Not until he had been called several times did it even dawn on him that anyone had spoken, and after that on account of his deafness it had to be explained to him that he was invited to take a drop of cheer. After a murmur of protest he submitted and, strangely enough, heard Pat's purposely low-toned query of "Wather in yours, Mister Baldwin?" and started up a prompt "No!" that caused just a shadow of a smile to play across the Irishman's face. After a preliminary sip he renewed his inquiry, vigorously stirring his grog:

"Yez wuz soyin' erboot thot snaix foight yez observed," with a wink at Eph's younger brother, who was purloining a few very dry prunes during Gregory's absence on a trip to the cellar for molasses. And by the way, these journeys to the nether world were invariably times of universal depredation, and even the short measure that the conservative Gregory took care to give in the dark barely equalled his unconscious losses above board.

"So I wuz, so I wuz," Lighthouse Charley admitted, with some reluctance. "What wuz I a-sayin'?" Oh, yes, hum! hum! Awful, thet fight, awful!" Pat, seeing that a lapse of memory was imminent, sighed and refilled the empty glass.

"It's loike pourin' wather intu er bothmless pot, sure, Mister Baldwin, fur me ter thry ter kape thetish glash full!"

"You rec'lec' ther ole foundations en' timbers thet lie down ther junction er Mill Race Brook en the Wepa-wang, whar Beman's ole gris' mill oncet wuz?" Lighthouse Charley was under full sail now, and did not wait for the nods of assent. "Wal, en' ud'neath them 'jists en' wheels thar's bin ever sence I cum' on ther stage er fambly er af-fired remarkerbul snakes, en I very much doubt ef enny er yer ever seen one on 'em, even Eph thar, thet fishes the brook reg'lar when ther trout 'gin ter flip in ther April days. Yit et's more'n er score er years gone now thet I faoun' them dark green divils livin' thar. En er loose pile er broken wood en mortar wuz the'r den, en thar er warm day t'werds noon time yer could allers spy 'em et play er feedin' ef yer wuz quiet-like en' still. No wonderment ter me 't er slashin', kersplashin', perslushin' cuss like Eph never seen 'em. Tarnal s'prise' ez 't he kin ever git er smell er fish makin' sech er raow long-stream."

The old man paused to cast a severe glance in Eph's direction, but Eph with his eyes half closed was appar-

ently unconscious. The fact was, owing to a shortage in funds, that sportsman had not been able to "call out" a glass of whisky for the snake historian of late and hence the mild rebuke. "But then lordy-me, enny yawpin' school gal kin chet these yer 'hand traout' leetle minners thet's on'y fit fer bait fer er decent fish," pursued the old man with contempt. "Some er these dark nights, Pat, my boy, ther ole man 'll take yer aout en show yer wher' ther parients er Eph's traout live. But ter git back ter these snake. 'Twa'n't ther purty green shiny cut with red specks en, ner ther yellor eyes ez big ez er York shillin' thet flickered en burned some like fire thet wuz ther s'prise'ment 'baout 'em. Yer might well git ter garpin' w'en I tell yer they wuz stretch snakes!"

"Howly Mither! Phwat, a stretch snaix?" gasped young Nolan, letting his underjaw drop in uncontrollable astonishment.

"Stretch snakes they wuz, jes' the samey," proceeded the oracle, moistening his lips with an unctuous smack, "en more'n thet, they c'u'd stretch ter beat enny livin' er dead thing thet wuz ever pulled aouten es natri'l length er thickness. Menny er time I've seed 'em er feedin' by ther brook with jes' ther tip er ther tails lef en ther burrow waoun' raoun' er beam so 's ter hol' like death 'tself, stretchin' way aout, ter twelve, yis, bergobberswang, I've seed 'em reach sixteen feet goin' fer er frog er one er these lizard-creepers. Course the natri'l size warn't more'n three feet long en er inch thick, but this reachin' more'n made 'em ekal ter er seven-foot moc'sin er black snake. Enny other snake thet cum by en picked er row wuz done fur. No more'n he'd git huffy 'n he felt hisself grabbed en drawn enter this burre like er rope walk hed tuck him 'fore he c'u'd spell letter S with his tail. Somehaow, though, this yer climate didn't do well fur these stretchers. They kin' er died off en petered aout tell ther warn't las' year on'y one lef', er slappin' big chap, nearly four foot long, thet whar long er practicin' all these years en er natri'l born genius fur extendin' hisself, got so he c'u'd fa'ly lengthen aout ter twenty-five foot. I b'lieve ez er solum fac' thet thet cuss c'u'd reach from Sunday afternoon er this week plum enter Saturday night er week arter next."

Another libation and following smack of appreciation from the gray-haired keeper of the inland "lighthouse," who seemed to be seriously affected by his recollections of this serpentine marvel.

"Yis, thet wuz his gre't fortée like, this lettin' hisself aout, but all ther same et wuz longer this yer same 'lastic trick thet he cum ter grief las' Sunday a week. Yer see all these years diff'runt kin's o' snake champiowns hed tried ter daown these chaps er some er the biggest er the lot hed cum plaguey near doin' it. But thet 'pull in' bizness hed allers so tuck ther breaths erways thet they warn't good fer nothin' when they landed en ther burrer. Then too late years this yer ole stretcher rigged up er couple er stones close tegerther wedged tight en ther maouth er ther den so's when he drew back on thet 'snap' game er his'n he yanked ther poor devil he'd grabbed 'tween these sharp edges en did him hifalutin' quick. Yit when er feller's pridin' hisself on sech er dog-blasted keen bit er wisdom, some other man's allers layin' awake nights thinkin' how ter bust his kertrapshun. En over en the willer-shoots cross ther Mill Race ther lived er leetle stumpy water-moccasin thet wuz no fool, nuther, tho' he hedn't enny store clo'es ner enny top-notch tricks. Fur weeks he's bin er lyin' guiled up en er hatch top er ther flat rock en ther stream whar the sun wuz hot. Other folks might er thought he wuz jes' er swimmin' er sleepin' but I seed his tail kerwaggle ev'ry now en agin en when er snake does thet he's layin' powder-trains und'neath somthin'. Yit nothin' turned up till las' Sunday er week. I wuz sittin' on ther ves' bank er ther main stream whittlin' aout er new ax halve when I see ther cute leetle moc'sin cum slidin' aout'n ther willer clump en dive en. He swum und'r water tell he got mos' ter t'other shore en then cum up ter take er squirt. Ther stretch snake wuz layin' short-very front er ther burrer, blinkerin' his eyes en rollin' over so's ter show up his e'gant suit er clo'es en ther sunlight. All 't once he caught sight er this leetle gray snake makin' impendent signs at him en kin' er darin' him ter fight. The small feller hed clumb ashore en wuz in the line er er big kerwallopin' strong hick'ry tree nearly twenty foot off from the burrer. That wuz all suffishunt fur Mr. Stretch; aout he shot, en ez t'other snake dodged he follered him like lightnin' raoun' ther tree en raoun' ergin' 'fore he cud grab him. Ther little fighter hed tuck er turn raoun' er root en then the Injun rubber man snake 'gun ter draw en. Thar he wuz, one end wrapped raoun' er beam en tied en er hard knot (fact guess 't had growed so sence 'twas tied, no one cud er unloosed it, en t'other double lapped raoun' er twenty-year-ole hick'ry tree. Course 'twas like yu er me playin' tug-er-war long er one er these yer forty-ton steam bull-gines, en ther more nothin' give way ther more thet snake made his muscles jump. Don' need no prophut ter tell ther rest. Las' he giv' sech a dad-lung, scatter-blotted ole pull thet he broke hisself plum en two en died er agonizin' death. I kin fa'ly see ther smile er triumphs thet ther moc'sin hed on when he unwrapped hisself en svum off ther fav'rite rock. Thar he guiled up en snoozed, en ev'ry now en agin he'd kin' er put his head with his tail en say, "Thet settles em fer good, ole boy."

Lighthouse Charley seeing that no more spirituous moisture was at hand, rose and buttoned up his woolly wrapping, preparatory to departure.

"Look yeah, Misser Baldwin," interjected 'Jedge' Spence, a dilapidated ex-slave, black as pitch and bent as a pine knot, "whar kin er po' man-like me see one dem won'tul snaikes yo' bin tellin' us er stratche story ob?" A doubtful smile played across the old negro's scared face.

"Enny body but er nigger would er listened en heered me say thet that wuz ther 'las' er ther stretch snakes!" With which parting words the outer door slammed and the old man was gone. H. PRESCOTT BEACH.

# Sea and River Fishing.

## ANGLING NOTES.

### Smolts.

MR. JOHN MOWAT, of Campbellton, N. B., writes me again about the smolts, and little by little we may come to a better, truer understanding of the full history of the salmon, and reconcile conditions which now, apparently, contradict one another when observed in different countries or different waters. Mr. Mowat's letter is eminently practical and is as follows: "I read with pleasure your notes in FOREST AND STREAM of Feb. 24 on the age and growth of salmon, about which there is such a diversity of opinion held by what seems to be tangible proof. Much of this could be explained, I think, if climatic conditions and locality were properly considered. For instance, take a river with fairly clear water, gravelly bottom and shelving banks, where the water close to the shore is warmed by the sun and seldom touches the freezing point, and having in it a large supply of insect life. Take another stream without these favorable conditions, and having a solid girdle of ice on its surface and in places frozen to the bottom. Would not the young fry become smolts possibly in six months in one case, while in the other it might take eighteen months, as is the case in our Northern rivers, thus making it nearly two years from the laying of the egg until the fry becomes a perfect smolt?"

"It is possible some parr may be hindered in growth\* from some cause, and remain for another year in fresh water. My attention was drawn to this by catching some smolts much larger than common; they were probably 9 or 10 in. long, and on examination as to their extra fullness I found the milk ovaries full, something I never found in the common smolt. The question arises, had they been to sea, if so, how long? One of the reasons why I imagine they had been to sea is this: We believe the descending December smolts return as grilse the following July, weighing from 3 to 4 lbs., and so far as I have observed, all of them males, some years more, some less; in some rivers they are plentiful, in some rivers there are none.

"It is possible, however, in rivers where the fish run small, say an average of 10 lbs., that females of 6 lbs. weight will give spawn, but in all my piscicultural experience of 10 years I never saw a female under 10 lbs., and the grilse were all males, forcing me to the conclusion that the females remain nearly two years at sea before returning to fresh water.

"Regarding experiments in the growth of the young salmon, you mention smolts one and two years old being about the same size. This may be perfectly true and to my mind can be easily accounted for.

"Let each of us take 100 eggs of the same hatch, you keep yours in water from 33 to 40°, and I place mine in water at from 60 to 65°, and I will have the young fish feeding with the sac absorbed, and yours will not be out of the eggs—this I know from actual experiment. I have seen ova from Fraser River salmon taken in October, and brought overland here fully eyed in November. Placed in the troughs the fry would burst the shell in January, and in April they would be an inert mass on the bottom with the sacs still attached. Our eggs of the *salar*, are laid down Nov. 1, and about the first week in May the fry are clear of the shell; if the weather is fine and the snow water gone they will wiggle around quite lively; should a frosty week come, then it seems to take the vitality out of them and they look as if they feel the cold, huddling in heaps, so they often have to be moved to prevent their smothering. This is caused by the water getting 2 or 3° colder.

"I should certainly think the salmon you mention, taken in the lower Hudson at 1 and 1½ lbs. were older than eighteen months, or had, some time, got a taste of salt water.

"Respecting the young salmon taken last fall in the lake that I spoke of, the two largest taken were some of the product of 500 fry only, which my son placed there in June, 1891, consequently they were about 2½ years in the lake. The smaller ones, of which a dozen were taken, being about 3 in. shorter than the others, and about ½ lb. in weight, were planted in June, 1892. In this lake are very fine trout, plenty of them, and averaging 1½ lbs. in weight. It also contains fresh-water smelt and chubs. The water is not clear, although there is a good deal of gravelly bottom. We are watching with much interest the results of this little stocking now that we are assured of its success.

"I may say further on this smolt question that I think ours when going to sea will average about 7 in. in length, but remember that our salmon are big fellows. Would it follow in the family, do you think, that the smolts would be above the average size? Who knows? At all events it is a reason."

### Comments.

The smolt that I mentioned in FOREST AND STREAM as giving ripe milt as I took it from the hook, had not been to salt water. I caught it in the brook where I planted the fry, and between that stream and the sea are three falls and a number of dams, not one of which could smolt or salmon reascend after once passing down over them. This smolt was even more advanced than the one mentioned by Mr. Mowat, for the milt was ripe and the time was October. The ripe smolt was on the gravel where there was a rapid in the brook, and it was quite by chance that I cast my fly where he got it; for all the best of the young salmon in the brook appeared to be in quiet pools, and it was from such pools that I caught the others mentioned. It is possible that had I fished the rapids other ripe smolts would have been taken.

That Mr. Mowat's reasoning, based upon theoretical conditions of temperature for retarding or advancing the growth of young salmon, is sound, there can be no doubt except that he does not go far enough and lay stress upon food as a factor most favorable to growth, although food naturally results from the conditions of sunshine and warmth. This is illustrated in a marked manner in a

\* Not only possible, but an established fact. I planted one lot yearling Atlantic salmon (they were really about 15 months old) hatched from the same lot of eggs and reared together, and th ranged in length from under 3 in. to over 6 in. I went with a carlo of yearling California salmon to plant them in Vermont for the U. Fish Commission. They were really 11 months old, and though reared together, there was the same difference in length as in *salar*. The strongest fry got the most food, and their growth was more rapid. A. N.

CHAINED

Do the next best thing—  
Read the  
Forest and Stream.

article in a French publication of recent date. The author of the article is Mr. J. Kunstler, and Mr. Charles G. Atkins of the U. S. Fish Commission has just sent me a translation made by his assistant, Mr. Charles Cecil Jocelyn. The author relates that by a system of feeding rainbow trout have, in France, been brought to maturity and ripe ova have been taken from them, when they were less than twelve months old.

It is not unusual to hear that some of our native brook trout breed when they are yearlings, but in such a case "yearlings" is a conventional expression. Trout do breed the year after they are born, but they are born in the month of January, perhaps, and spawn in a year from the following October or November. Or they may actually be two years old, as I will show.

These are facts: In Pennsylvania trout begin to spawn Oct. 10 and they may be hatched in forty-five days, so they may be born Nov. 25, and as the sac may be absorbed in thirty days they may be feeding before Jan. 1, and yet as they are turned out the following spring or summer as fry, it is customary to call them yearlings the succeeding year, when by a strict accounting it may be twenty-four months between the time of breaking the egg and spawning of the "yearlings."

But the results obtained by Mr. Kunstler fade into obscurity alongside of the claim made by an European correspondent of mine. By his system of feeding he claims that he can raise trout in ten months to one and two kilograms ( $\frac{2}{3}$  to  $\frac{4}{3}$  lbs.) and salmon in the same length of time to two and four kilograms ( $\frac{4}{3}$  to  $\frac{8}{3}$  lbs.). That is in ten months from birth he produces grilse or salmon. I have for more than a year been investigating this reported miraculous growth, but so far have obtained nothing to publish.

As to Mr. Mowat's final query, Why is it not reasonable that a race of large salmon should produce larger smolts than a race of small salmon? I planted a large number of lake trout fry from a race of large lake trout in a lake containing only a race of small lake trout, and the average size of the trout and the maximum size of individuals have increased in this lake. Much of the increase is doubtless owing to the fresh blood, but the introduction of a race of larger fish must play its part. Some years ago it was given out from one of the New York State hatcheries that lake trout reached a length of 13 in. when three years old. I have always assumed that this measurement was obtained from the young of Lake Ontario trout, as I understood at the time that the eggs at the hatchery came from that lake. On the other hand, Mr. Frank Clark, at Northville, Mich., gives the length of a lake trout three years and three months old at 16 in., presumably the fish being descended from Lake Michigan trout.

#### Analogous Testimony.

It is perhaps curious that I had written to this point when the mail brought me a letter from Mr. Charles G. Atkins concerning a subject in no way related to what I have been writing about, but in which he incidentally touches upon the subject of smolts in illustrating another matter. This is the extract: "So far as my own experience goes (I own that it is not quite sufficient to settle the matter) salmon are not quite so rapid growers during their two first years as trout, but this is in water that rarely rises to the temperature of 70° F., and possibly in water above 70° the salmon would grow faster.

"Now, a salmon passes the first one or two years of its life in the river. I mean, of course, when at liberty under natural conditions, and during that whole period (I have reason to conclude that in our river it is two years) it only attains a length of 6 to 8 in. If it comes back as a grilse, it then weighs, at the age of say three years, only 3 or 4 lbs. A salmon weighing 8 lbs. would surely be an adult, and could not be less than four years old."

Conclusions derived from observations made on a river stocked with salmon, the stream never before having contained them, are more reliable than observations made on a salmon river with no fixed point to start from and no means of tracing individual smolt or salmon, and no way of separating one individual from another. It is from data obtained on a stocked stream that leads me to believe that smolts go to sea when two years old and return as salmon when four years old; and as no grilse have been taken, so far as can be learned, it is assumed that grilse do not enter the stream. I am in hopes to try still further experiments with salmon fry the present year.

Mr. Atkins having had charge of the salmon breeding works of the United States Fish Commission since its organization, I know of no man in this country more competent to speak of the habits of the fish than he, and the little that I have been able to observe confirms his views.

A. N. CHENEY.

#### BOSTON FISHING LINES.

A MOVEMENT is on foot to get the Maine Central Railroad to put on a night train from Portland, Me., to Farmington, and for the Sandy River and the Phillips & Rangeley roads to put on a connecting train. The proposition is to have the night train leave Portland for Farmington immediately on the arrival of the train over the Boston & Maine which leaves Boston at 7 P. M. This train would land the Boston or New York sportsmen at Rangeley in season for breakfast, and then down the lakes in the morning. Such an arrangement would greatly convenience a majority of sportsmen in Boston, who are desirous of reaching some hunting or fishing grounds by night trains. The want of time keeps more of the busy sportsmen at home than any other cause, and if the Rangeleys could be reached by one night's ride from Boston, it should increase the travel in that direction. Mr. L. Dana Chapman, with Dame, Stoddard & Kendall, has already taken considerable interest in the scheme and has mentioned it to many sportsmen, and finds the plan to meet with their most hearty approval. The plan would put the Rangeleys on a par with Moosehead, which lake may be reached by the usual summer trains in one night from Boston. By means of such a train over the Maine Central, New York sportsmen could leave that city at noon and be landed at Rangeley the next morning. The scheme is to be laid before the General Passenger and Ticket Agent of the Maine Central, Mr. Fred Boothby, at once.

The ice left the Penobscot River on Thursday of last week, the earliest, say the Maine papers, since 1851—other papers say since 1818. The celebrated salmon pool at Bangor is clear of ice and the salmon fishermen will now

try the fish every day. But the chances are not favorable for a run of salmon for some time yet, though the extremely early departure of the ice would indicate an early run of salmon.

Boston fishermen are fitting out for April 1, the opening day of the trout season in Massachusetts. The members of the Monument Club are getting their lines ready, and many of them will visit their preserves in the vicinity of Bourne on the opening day. They will take some large trout, no doubt, as in former seasons. By the way, it is darkly hinted that Mr. Walter L. Gilbert's preserve is sometimes drawn upon a few days in advance, and that some good-sized cultivated trout are let go in the preserved waters along the Cape, in order that the owners of the preserved streams may have the supreme pleasure of catching the big trout. One thing is sure, and that is that there is little fishing on the Cape and the South Shore nowadays, except in the protected waters. The country boy, with his pin hook, his alder rod and his wriggling worm, stands but little chance, except that he steals the fish. Great is wealth and weak is rusticity!

Capt. Fred C. Baker, of Rangeley, reports the ice very thick and strong in the Rangeleys, with a good deal of snow ice over it. This, he believes, will cause the ice to be slow about going out. On the other hand, Billy Soule, one of the best known guides and camp keepers at the Rangeleys, thinks that the ice will go out before May 5.

The Gilbert trout bill had not passed its final stages in the Massachusetts Legislature on Saturday, and there was then some hope that it might be defeated after all, though but little is being done to hinder its passage. The defenders of a good trout law have got tired, and there is danger that the Gilbert bill may go through from a sheer lack of interest on the part of those who have formerly labored nobly in its defeat. SPECIAL.

#### THE FLY-CASTING TOURNAMENT.

SAN FRANCISCO, March 14.—*Editor Forest and Stream:* At a meeting of the committee on fly-casting tournament, held Tuesday evening, March 13, it was decided to make the style of casting in event No. 5 (lure casting) double-handed instead of single-handed, as at first proposed.

The merchandise prizes already donated are one Leonard rod, one Bristol steel rod, reels, lines, flies, etc.

The height of the platform will probably be raised to 18 in. above the surface of the water instead of 1 ft. as originally proposed. In all other respects the rules will remain unchanged.

The tournament will be held in the Midwinter Fair grounds. Director-General Young has offered to make a lake suitable for the purpose of the tournament somewhere in the Recreation grounds, and has also offered a handsome trophy to be presented to the one making the highest average in events 1, 2, 3 and 4 (fly-casting), both of which offers the committee has accepted.

A candidate for the trophy must enter in all the fly-casting events, viz., 1, 2, 3 and 4.

The date of the anglers' convention has been fixed for Friday, May 5, at 8 o'clock P. M., to be held in Festival Hall, at the Fair grounds.

It is proposed to give a "fish dinner" on Saturday evening, May 6, at a cost not to exceed \$3 per plate, to which dinner all anglers and their friends will be invited; further notice of same will be given hereafter.

Copies of the rules and events will soon be printed and forwarded, together with blank applications for entries to all anglers in the State whose names are known to the committee.

All who anticipate entering the tournament should, however, immediately forward name and address to Walter D. Mansfield, No. 3 Pine street, San Francisco.

The above is a complete record of the business done at our meeting on the 13th.

W. D. MANSFIELD,  
Secretary of Committee.

#### Florida East Coast.

PALE BEACH, Fla., March 16.—We are enjoying superb fishing here at present, some fine catches having been made. Last week Mr. J. B. Riley, of New Haven, and myself caught during the forenoon 33 fish that weighed 268 lbs., the largest two weighing 33 lbs.; they were the gamy kingfish. During our fishing we used a sponge glass to see in deep water, and could see perfectly plain 50 ft. deep and watch the thousands of great fish moving about feeding. It was great sport to see them take our bait and after they were hooked to watch their maneuvers to get away. Occasionally we would see a great shark and then it was a question to get our hooks in the boat before they got hold to cut them off. We had to look out for the jewfish, monstrous great fellows, weighing from 200 to 400 lbs. Our boat was too small to tackle such fish. Yesterday one was hooked and landed here that weighed 216 lbs.

Several sharks have been caught; one was landed here a few days ago that was 9 ft. long.

The finest black bass fishing I have ever had is also to be enjoyed by going but a short distance from the hotel, to one of the fresh-water lakes, that is one of the many that form the great everglade country. The bass seem to be waiting to be caught, and the largest kind; I have not caught any larger than 7 lbs., it was not my fault, but the fault of my light tackle. One wants to be equipped with plenty of good stout fishing tackle to land the big ones of these lakes; they are caught here weighing as high as 20 lbs. N. W.

#### New Jersey Trout.

ASBURY PARK, N. J., March 19.—The very warm weather prevailing has sent some of the most enthusiastic anglers to the brookside during the past week, and some very good catches of trout are reported. Personally I have seen none of the big strings, but have seen enough to know that they are not all fake stories. The law, which permits taking trout March 1, is regarded by most anglers as wrong, and was repealed last week in our Legislature, making the date April 1, but it has not yet received the Governor's signature. Owing to the unofficial character of our Senate, the legality of the bill is questionable, and doubtless will receive but small attention from the fraternity. Striped bass are beginning to move in our locality. Last Friday six were taken at one haul in a herring net. In Manasquan River, so far, none have been taken with rod and reel. But this week will witness the effort made if weather holds good.

LEONARD HULT,

#### MASSACHUSETTS TROUT LAW.

AN OUTLINE OF LEGISLATION FOR THE PROTECTION OF TROUT, WITH SOME OBJECTIONS TO THE GILBERT BILL.

As early as 1822 (Acts and Resolves, Chapter 21) a law was passed prohibiting the catching of trout in "any rivers, streams or ponds within the Commonwealth, by day or by night, in any other way or manner than by hook and lines." Penalty, fifty cents for each fish illegally taken.

In the year 1849 (Chapter 36) the first close season on trout fishing was established. It applied to "Mashpee River" and the "District of Mashpee," from Sept. 15 to April 1. Penalty, fifty cents for each fish had in possession, knowing the same to have been taken illegally.

As early as the year 1856 three commissioners were appointed to investigate and report to the next general court upon the artificial propagation of fish and the expediency of introducing the same into the Commonwealth.

In 1866 the taking of trout within the Commonwealth from Sept. 20 to March 20 was prohibited. Penalty, one dollar for each fish unlawfully taken.

In the same year (1866) two commissioners were appointed on the fisheries in the Merrimack and Connecticut rivers.

This was the origin of the State Board of Commissioners on Inland Fisheries and Game.

In 1869 the laws were "amended and enlarged," and the close time continued as before (Sept. 20 to March 20).

In 1874 (Chapter 186) the law of 1869 was repealed and a stronger enactment passed, as follows:

"Whoever takes or catches any trout, landlocked salmon or lake trout within the limits of this Commonwealth, or buys, sells or has in possession the same, taken within said limits between the twentieth day of August and the twentieth day of March in each year, or takes or catches any trout, landlocked salmon or lake trout with any net or salmon-pot, at any season of the year, shall forfeit for each fish so caught a sum of not less than five nor more than twenty dollars."

The friends of trout protection found in their attempt to punish offenders, that the phrase "taken within the limits of this Commonwealth" was a loop-hole by which dishonest dealers were able to escape conviction, as it was impossible to prove where the fish were taken.

They sought to improve the law of 1874, and in their efforts were ably assisted by ex-Governor George D. Robinson, then a senator from the second Hampden District. He caused the law as it came from the House in the year 1876 to be amended and vastly improved in effectiveness. The iron-clad statute of that year was largely the product of his brain. Under that law the penalty was raised to ten dollars for each fish illegally "taken or had in possession."

The law declared also that "In all prosecutions under this act, the possession of any trout during the time included between the dates stated above shall be *prima facie* evidence to convict under this act."

The law was further strengthened by the addition of section two, making it the duty of selectmen, police officers and constables to cause the "provisions of this act to be enforced in their respective cities and towns."

Under this law it was possible for the friends of protection to secure convictions. A great stumbling-block had been removed in striking out the phrase "taken within the limits of this Commonwealth." By his work in connection with this bill, Governor Robinson won the grateful regard of every true sportsman acquainted with the facts.

All previous laws had been in some degree experimental, with an evident disposition on the part of lawmakers to give added strength to each new enactment. Penalties were increased. The close season extended. There had come to be greater certainty of conviction. This was the culmination of enlightened public sentiment.

The law was enacted in obedience to public opinion in regard to the protection of food fishes.

The same sentiment manifested itself in more stringent laws for the protection of smelts and lobsters.

The year 1880 was marked by a retrograde step—allowing trout not taken in any of the waters of Massachusetts to be sold or had in possession. But thanks to the intelligence of the legislators of 1884, it became unlawful for "any person to take, sell, offer, or expose for sale or to have in possession a trout \* \* \* between the first day of September and the first day of April. The weakness of the law of 1880 was removed.

The close season has continued to the present time (Sept. 1 to April 1).

Under the law of 1874 the prosecution were forced to show that trout illegally sold were "taken within the limits of this Commonwealth." This proved an insurmountable obstacle in attempts to secure convictions under the law.

So under the law of 1880, when it was lawful to have in possession or sell trout "not taken in the waters of this Commonwealth," all the trout to be found then came from outside the State. This was a loophole by which avaricious dealers were enabled to escape the penalties of the law.

It cost the friends of protection large expenditures of time and money to test the laws of 1874 and 1880, and they are not anxious to be compelled to test such an enactment as the Gilbert law, against which the first objection is that it contains an avenue of escape for those who for any reason wish to engage in the illegal capture or sale of trout.

Under that bill the prosecution must show that trout illegally held, or offered for sale, are not artificially raised.

The external appearance of such trout is not different from that of wild trout. The difficulty in the case is apparent. As under the law of 1880 all the trout to be found were taken without "the limits of this Commonwealth," so under this bill all the trout will be "artificially raised" trout.

By one stroke the passage of that law will undo the work of more than a quarter of a century.

The Boston market will become the dumping ground for the poachers of all New England and the British Provinces.

It may be urged that the Commissioners are to provide means of discrimination. The difficulties in their way are too great. They cannot circumvent the cunning of poachers and law-breakers.

In that regard, the framing of the bill is a device for concealing the "true inwardness" of the bill under the cloak of the Commissioners' indorsement. It has even been reported that the Commissioners are not opposed to

the bill (?), with this proviso: "If it can be passed without injury to the wild trout."

The second objection to the bill is that it is unfair to other States. In 1891 the Legislature of Massachusetts passed a resolution in "relation to adoption of uniform laws for protection of food fishes in the New England States."

It requested the Commissioners on Inland Fisheries and Game to confer with the proper authorities of each of the other New England States, with a view to securing the adoption of "uniform laws" to protect the food fishes of those States and report the result of the conference to the next Legislature. (Acts and Resolves of Mass., 1891, p. 1107.)

The conference met in Boston, Nov. 16, 1891, and Commissioners from all the States were present, with the exception of Vermont.

Commissioner Brackett, in his report for 1892 (p. 34), says: "A large majority of the Commissioners were strongly opposed to the Gilbert bill. And all appeared to agree in regard to liver-fed trout for food."

Of all the New England States (five of which were represented in the conference) Rhode Island alone allows fishing for trout earlier than April 1. Out of twenty-five States having a close season, twenty do not allow trout fishing earlier than April 1; six do not allow it till May 1, while several have the open season from April 15. Some States have non-export laws, others limit the amount to be taken, and some prohibit taking trout through the ice.

The third objection to the bill is that it is inconsistent with the established policy of the Commonwealth.

In the veto message of Governor Russell, submitted on the return of the Gilbert bill to the House of Representatives in 1892 (Acts and Resolves, p. 633) His Excellency says:

"The Commonwealth by many and careful regulations and restrictions has vigorously undertaken the preservation of her useful fish. In furtherance of this well-established and wise policy she has created important and expensive offices, made large appropriations of money, imposed restrictions and obligations upon private ownership of land and water used or useful for fisheries, carefully limited the time, manner and place of fishing, and as a regulation the most stringent and efficient, short of entire prohibition, forbidden the purchase, sale or possession of many fish out of the lawful season. All of this State supervision and interference with personal liberty and private property have been only upon the conceded fact of the common interest of all the people in the preservation of useful fish in the Commonwealth, and the necessity of united and so of State action to this end.

"Such action, year by year increasing, has been with the approval and upon demand of the people.

"Among the first most needing such legal protection have been the trout."

The Governor further speaks of the "large expenditures for hatcheries, propagation and distribution," tells us that unrestricted fishing would soon "exterminate the trout."

"Such restrictions already established are difficult of enforcement, and in my judgment would become impossible of enforcement if it is made for one's pecuniary interest to violate them by opening to him a valuable market out of season."

"The restrictions" intended to prevent the sale of other trout can be easily evaded, and I believe will be practically useless.

"All trout may soon be made to meet the required condition, or to escape detection if they do not."

He declares that he cannot give his "approval to such legislation or aid in" the establishing of an artificial trout industry by special favors from government to the injury of the public.

The Governor sums up his objections as follows:

"First, because it permits an act which I believe will remove the most efficient restraint upon the illegal catching of trout, and will lead to their extermination.

"Second, because it establishes a precedent which, if followed, will go far to destroy the usefulness of the fish and game laws of the Commonwealth.

"Third, because in effect, if not in form, it is legislation for a special interest against the public interest, and to the public injury."

### More Rhyme than Reason.

PROVIDENCE, R. I.—Several times I have seen in articles reference as to the direction of the wind for fishing. Here is a little verse which although known to some may be new to others:

When the wind is in the north,  
No good fisherman will go forth;  
When the wind is in the east,  
'Tis good for neither man nor beast;  
When the wind is in the west,  
Fishing is at its very best;  
When the wind is in the south,  
It blows the bait to the fish's mouth.

H. T. M.

### Death of Col. R. M. Taliaferro.

AFTER a lingering illness Col. R. M. Taliaferro died at his home near Rockville Centre, N. Y., aged 72. He was born in Wythe county, Va., and was always a typical Southern sportsman with the rod and gun, and during his prime was one of America's experts at fly-casting. He was the father of the wife of Mr. C. K. Farmer, of Indianapolis.

### Mr. Blackford's Trout Opening.

MR. EUGENE G. BLACKFORD, of Fulton Market, this city, will make his usual display of trout on the opening of the season, April 16.

### Natchaug Fishing Prizes for 1894.

THE Natchaug Silk Co., whose big fish prize competition was so successful last year, announce a new list of prizes for 1894, as follows, aggregating \$225 in gold for fish caught between April 1 and Nov. 1:

First prize, \$25 for the heaviest muskallonge; second, \$25 for the heaviest small-mouthed bass; third, \$25 for the heaviest large-mouthed bass; fourth, \$25 for the heaviest lake trout; fifth, \$25 for the heaviest brook trout caught in other waters than the State of Maine; sixth, \$25 for the greatest variety and largest number of fresh-water fish caught in one day by one person; seventh, \$25 for the greatest weight of any kind of fresh-water fish caught in one day by one person; eighth, \$25 for the heaviest fish of any kind caught with the Natchaug silk line in fresh or salt water; ninth, \$25 for the heaviest brook trout caught in the State of Maine. As the trout caught in the lakes of Maine are acknowledged to be genuine brook trout, on account of the size of these fish we bar them from our fifth prize, and offer this as a special prize for these waters.

Conditions.—All of these fish must be caught with the Natchaug silk fishing line in fresh water (except prize 8) and by fair angling. Competitors must forward to the Natchaug Silk Co., Willimantic, Conn., or Chicago, Ill., their full name, post-office address, together with the description and weight of fish caught, and name of dealer from whom line was purchased, within seven days after such catch is made, together with the name of one reputable witness affixed. On Nov. 7 the award will be made and the list of successful competitors announced in the FOREST AND STREAM. All successful competitors before receiving their prizes will be required to send an affidavit as to their statement of fish caught.

The winners last year were: First prize, John J. Hildebrandt, Logansport, Ind., caught Oct. 26, Kankakee River, muskallonge weighing 26 lbs. Second, George J. Bradbeer, Detroit, Mich., caught Sept. 30, St. Clair Flats, small-mouthed black bass, weighing 7 lbs. 2oz. Third, Paul Lang, Orford, N. H., caught May 14, Newfound Lake, N. H., lake trout, weighing 14 lbs. Fourth, R. N. Parish, Oakdale, Conn., caught Sept. 15, Rangleys Lake, Me., brook trout, weighing 6 lbs. 9oz. Fifth, B. Waters, Chicago, and Ben. Wolf, Ewart, Mich., each having caught a large-mouthed bass, weighing 6 lbs. 2oz. Sixth, Will. Cunningham, Attica, Ind., caught Sept. 23, Kankakee River, Ill., 101 fish, including 11 varieties, the largest weighing 12 lbs. Seventh, J. B. Carlin, Ashland, Wis., caught July 22, Pelican Lake, Wis., muskallonge weighing 26 lbs. Fish was not weighed until five days after being caught.

### Sunday Fishing.

SOME years ago a number of gentlemen visited the mountains of Colorado for the purpose of fishing. Among the party was a bishop of an Eastern diocese of the Episcopal Church. Fishing was the sole occupation and amusement of the visitors; so when Sunday came, as there was nothing else to do, the laymen of the party got out their rods, preparatory to casting a line. But they were in a quandary as to the bishop. They did not want to hurt his feelings by leaving him behind, nor did they want to offend his religious principles by inviting him to go fishing on Sunday. Finally one of them plucked up courage and told him of their dilemma, whereupon the good man said that he would tell them of a happening in his earlier life which he thought rather apropos.

"Some years ago," he said, "when I had charge of the affairs of a parish, I was awakened about 2 o'clock one morning, and upon inquiring who was there, heard a man's voice reply that he was there with Miss Blank, and that they wanted to get married. I reasoned with him about the untimely hour, but to no avail; he meant to get married right then and there. So I put on my clothes and gown, and went downstairs and began the marriage service. Everything went along as dictated in the service till I asked the man, 'Wilt thou take this woman to be thy wedded wife?' to which he replied, 'What 'm I here fur?'" They waited for the bishop.—*Harper's Magazine.*

### PUBLISHER'S DEPARTMENT.

#### A New Lyman Sight.

DR. WILLIAM LYMAN has devised a leaf sight, which is a combination of a bar with a triangular ivory center and a wide open V crotch. "Many sportsmen who use my rear sights," says Dr. Lyman, "do so with the ordinary crotch sight on the barrel. This is much in the way and the shooting is done at a great disadvantage. My leaf sight can be put in place of it. It folds down close to the barrel, allowing the shooter to use the combination sight in an unobstructed manner, and the result is that the shooting is twice as good as when the ordinary crotch sight is on the barrel. Although the shooter should in any case use my tang sights for nearly all shooting, he has the satisfaction of knowing that if he wishes to use this leaf sight that it is the best form of crotch and bar sight in use. The bar leaf is excellent as a twilight sight or when used at night with a jack."

#### Wm. Mills & Son's Catalogue.

THE long-established and popular firm of Wm. Mills & Son, dealers in fishing tackle, of this city, have issued an elaborate catalogue of anglers' appliances; and they have shown a good deal of horse sense by getting the document into shape at this time when the average fisherman's fancy is lightly turning to thoughts of a spring outfit for the waters. Everything that an angler in his right mind could want as essential and some things that no one unless out of his right mind would count as other than pure luxuries are here catalogued, named, illustrated and price-listed. The Messrs. Mills can supply everything but the actual water, the fish in it, and the skill to take it out.

#### Conroy's Catalogue.

AN interesting illustration in Mr. Thomas J. Conroy's catalogue of angling goods, just issued from the Conroy establishment on the block with FOREST AND STREAM, is the very last one in the book. It is a vignette printed from the original woodcut used by John Conroy in 1830. It is not quite up to the mark of modern wood engraving, but Mr. Conroy ought to regard it with much complacency, for its antiquated air is suggestive of the long life of the Conroy fishing tackle house. The catalogue illustrates lines, rods, hooks and all the other articles that in 1894 go to make up a complete stock of anglers' supplies.

#### Mason's Chess Book.

WE have received from Horace Cox, London, a copy of "The Principles of Chess." The author is not Mr. Frank Mason, but the celebrated chess player James Mason.

#### An Opinion from Lansing.

LANSING, Mich., March 18.—I hand you \$4 for a year's subscription to FOREST AND STREAM. I have files for fifteen years. Have just been reading "Danvis Polks'" "Friends in Need." This alone is worth the whole "price of admission." I like your "plank!" It is a winner. In fact, I can't just think of anything I don't like, unless it be that Bre'r Hough's wind (or ink) gives out too soon sometimes. If I ever get time again will send some notes. LAMONT THOMPSON.

## Fishculture and Fish Protection.

### Causes of Malformation in Artificially Hatched Fish.

SOME months ago I think I noticed an article or two on the obscure character of the causes of deformity in young fish artificially hatched, and I trust that my interest in the subject may be my excuse for offering these notes from my personal experience. Such instances as have come under my observation have led me to think that deformities in fish embryos belong to two distinct classes, viz., one class comprising those that have two heads or two tails, or any portion of the body duplicated, though otherwise perfect in form, and a second class comprising those that are literally malformations, *i. e.*, badly formed fish having curved spines, spiral-shaped bodies, crooked tails and the like.

Though not an embryologist, I conjecture that the deformities of the first class have their origin away back in the period when the germ of the egg is being formed in the ovaries of the parent fish, for I cannot see how any duplicate bodies or duplicate parts of bodies can be produced after the framework, so to speak, of the egg has been completed within the parent fish. The duplicate forms must of necessity already exist potentially in the germ of the egg when it is ripe for extrusion from the ovaries. No subsequent manipulation, of course, can make a double embryo, if it does not so exist in the egg germ when development is completed. If it is a perfectly formed egg to begin with, nothing can make a double-headed or double-tailed fish develop in it while hatching. Consequently no mismanagement or misfortune in the hatching of the egg can cause this first class of malformations. They at present lie beyond the power of human agency to cause or to prevent. These consequently belong to a province with which the fishculturist has nothing to do, and which consequently impose no responsibilities on him.

I think, however, that it is not so with the second class, comprising the embryos with imperfect and misshapen bodies—at least not always so. These certainly can be produced and I think generally are produced by something that happens to the egg after it leaves the fish. By this I mean that an egg which comes from the parent fish perfect may be so treated that it will produce an embryo with a curved or spiral spine, or with a crooked tail or anything else that has been found to actually occur in the way of a literal malformation. If my conclusions are correct, then the germ of the duplicate forms already exists in the egg before it leaves the fish, and the misshapen forms are produced by some injury to the egg after it leaves the fish. This being true, the subject becomes a matter of practical interest to the fishculturist and it comes within his province to deal with it. And now the question presents itself directly to us, how do these injuries happen and how do they produce the malformations? That it is an easy thing to cause the injuries may be inferred from the exceedingly delicate and sensitive nature of the substance of which the fetus or embryo is composed, at least before the appearance of the black choroid pigment usually called by fishculturists the eye spot.

Every fishculturist knows that a short time before the eye spot shows, and while the base of the skull is hardly outlined and the spinal column appears only as a fine dark thread in the middle of the embryo, the eggs are so extremely sensitive that they will hardly bear the touch of the soft beard of a feather without being killed. If they are so delicate as this, and they certainly are, it naturally follows that a slight touch or a jar, though not sufficient to kill the embryo, might nevertheless injure the internal structure of the egg sufficiently to produce a malformation. Indeed, I have often wondered, when I considered that the brain, heart, gills (lungs), eyes and spine were all nothing but a semi-fluid substance at this stage of development, that these organs did not get all jumbled together sometimes in an indistinguishable mass as the eggs were rattled about in the trays. Considering the delicate material inside the egg, the wonder to me is, not that there are so many malformations at birth, but that there are so few. Think for instance how easy it would be for some of the delicate cells of the dorsal cord while they are forming to get displaced or possibly ruptured by some slight blow or jar, but if it does happen, the result must be a deformed spine. I am consequently inclined to believe that malformations are usually caused in this way, viz., by injuries to the embryo, too slight to kill the egg, but effective enough to disturb or displace the delicate cells forming within, to the extent of producing imperfect and misshapen forms when hatched.

Now, a fishculturist has only to look back over one season's experience in hatching eggs to recall many ways in which these not quite fatal, but nevertheless damaging injuries may happen to the embryo. For instance, at the very outset, when the eggs are first pressed from the fish, we know that sometimes they strike the bottom of the pan very hard, with apparent impunity; but though they are not visibly hurt, who knows but what the germ right then and there receives an irreparable injury, afterward to manifest itself in a malformation. Then again, I have often seen egg pickers in the hatching house, before the appearance of the eye-spot has indicated that the delicate stage is past, whirl the eggs about with great force, and excuse themselves by saying, "that does not hurt the eggs. You see it does not kill them," and then give the eggs another whirl to emphasize their statement. Now, it's true we do not see the eggs killed before our eyes, but how do we know that such handling is not disturbing the delicate structure within, and getting the sensitive little embryos out of shape, to appear ultimately as deformed fish?

There are other ways in which careless management may produce this. For example, if sediment is allowed to collect on the eggs when hatching, although it may not so entirely stop up the pores of the shell membranes as to kill the eggs, it may nevertheless so interrupt the development of certain parts of the embryo as to create a deformity.

Sometimes, owing to the want of a proper water supply, or to the eggs being left too long in the packing boxes during transportation, the shell will shrink and appear to have a dent on one side of it, although the egg survives apparently uninjured. Whether this actually produces a malformation I cannot say, but at all events it usually develops an embryo that never will be good for much. Sometimes again little parasites will fasten themselves on the egg while hatching, and if they are allowed to remain long enough they will, I think, though not wholly destroying the life of the egg, cause an imperfect development of the embryo, resulting in a malformation at birth. And lastly, I must mention that I have sometimes suspected that abrupt changes of temperature in the hatching water might produce deformities. Of this I am not sure, however, so I will only say that when the water supply changes several degrees between night and day, and the development of the embryo is rushed forward at a great rate of speed during the day by the warm water, and retarded again at night by the cold water and rushed again the next day, it certainly would not be surprising if the various organs of the embryo within did not get formed just right. This, however, is only a suspicion of mine.

Although I do not claim to have established the fact that malformations are caused in the way above described, it seems to me that there is a possibility that sometimes they may be, and accordingly, if any novice in hatching fish eggs is not unwilling to accept advice from a fishculturist who perhaps may lay claim to the doubtful merit of having had the longest experience of any in this country of now having, I would say, "Do not think you can be too careful in handling the fish eggs in your care. If you do not know whether any specified treatment will hurt the egg, give the delicate little

embryo the benefit of the doubt, and avoid that particular treatment; and because the egg does not die and turn white right before your eyes on account of rough treatment, do not be too positive that the rough treatment is not going to show its effect some time in the future.

Above all, do not, as the writer has often done, lose your temper when the eggs at their sensitive stage die so easily and almost at the slightest touch; for this is doubtless a merciful provision of nature to avoid giving life to misshapen and ill-organized, and consequently unhappy and pitiful, creatures.

LIVINGSTON STONE.

#### Mr. Jex on Sea Fishery Depletion.

LONDON, England, March 3.—*Editor Forest and Stream:* I find in your issue of Feb. 10, 1894, that you have mentioned my name in connection with the important question of the destruction of immature fish, and brood and fry. There is no question that this is a serious matter for fishermen and the public alike, not only of food for the masses but the employment of the men engaged in the catching of food fish. In the waters around the British Islands of late years, sailing vessels have been replaced by steamers, involving a much larger catching and killing power, and I am sorry to say that in some places our waters have been nearly depopulated of fish. Many varieties now command three or four times the price that they sold at thirty years ago. I find that not one of my vessels, which are nearly double the size they were then, 60 and 70 tons of your measurement, can now catch as much fish in a fortnight as they did forty years back in one night. This has been steadily going on in the catch per vessel, yet since that time we have increased our catching powers to an enormous extent. At one port where I was when a lad forty-five years ago there were but six vessels engaged in trawling for bottom fish; I have seen over 900 vessels registered from there; at other ports then unknown there are now from 300 to 1,000 vessels engaged, many of them steamers. This increased catching power keeps our markets fairly supplied, but the quality and size is very much inferior to what it was in years gone by. I have 12 vessels that I work at one port and another; I am part owner of 20 steamers and 50 sailing vessels, and have been engaged in all classes of sea fishing, long line, drift net and trawl, and I speak not with a theoretical but a practical knowledge of the effect of the destruction of brood and fry. I know of a fishery on this coast line that within the last twenty-five years has been swept out clean by the use of small meshed nets. That fishery extended about 150 miles, and was a mid-winter herring, with a good many shad, most prolific fishes. Of late years we have neither had nor seen a fish. There is not a doubt that this is due to the destruction of brood and fry; and there are many other fisheries in a similar danger. Many of our deep sea fishes come into the bays, estuaries and mouths of rivers for food, light and heat; as they become larger they migrate into deeper water; but before they leave it must be that vast quantities are taken by improper instruments, especially small mesh nets, the required size picked out, and the fry allowed to be washed away by the tide or used as manure upon the land. Such wholesale destruction of the people's food should be stopped. It would be well for your people if laws can be passed prescribing the varieties and sizes that may be taken, with adequate punishment for violation; also a limitation as to distance from shore, whether three miles or otherwise. These are the measures that we are trying to get passed here. Should reasonable protection be had, those engaged in the fisheries will in a short time see for themselves a vast improvement in their catches. Your purse seines, pound nets, top and bottom seines, and all nets with small meshes do no end of killing of what should be protected. On this side there is no question that such has been the means of a vast destruction of our own deep-sea, mid-surface and surface-swimming fisheries. I am certain if protective measures were taken it would be for the benefit of those who may for a time think that they will be deprived of their means of livelihood. But on the contrary they will find in a short time an improvement, and they will be glad of the adoption of such measures for their own interest. Your mackerel and menhaden and many of your whitefish need protection, or you will find that the catches will go from bad to worse, and those engaged in the industry will be sorry that they did not take measures in time to protect their own interests and the well being of the people at large. I could say much more upon this subject, but I have taken up too much of your time already.

EDWARD JEX.

(Fish salesman, auctioneer and smack owner, Billingsgate.)

## The Kennel

All those who love a dog because it is a dog, and not merely a medium for the accumulation of dollars and cents, are invited by the editor to consider this department as one in which they can discuss amicably any subject that is of interest to the canins fancy, without fear of their communications being subjected to personal comment or ridicule.

#### FIXTURES.

##### DOG SHOWS.

March 27-30.—Philadelphia Kennel Club, at Philadelphia, Pa., Dr. D. B. Darby, Sec'y. Entries close March 16.  
April 17 to 20.—New England Kennel Club, at Boston, Mass. D. E. Loveland, Sec'y. Entries close March 31.  
April 18 to 21.—Southern California Kennel Club, at Los Angeles, Cal. C. A. Sumner, Sec'y.  
May 1 to 4.—Special show of St. Bernard, Collie, Spaniel and Fox-Terrier clubs, in connection with the Hempstead Farm show, Madison Square Garden.  
Sept. 10 to 14.—Toronto Industrial Exhibition Association, at Toronto. C. A. Stone, Sec'y.

##### FIELD TRIALS.

Sept. 5.—Manitoba Field Trials Club, at Morris, Man. R. J. Gallagher, Winnipeg, Sec'y.  
Nov. 6.—International Field Trials, at Chatham, Ont. W. B. Wells, Sec'y.

Don't forget that entries for Boston show close Saturday night, March 31, with David Loveland, New England Kennel Club, Boston, Mass.

#### Adornment of Sideboards.

*Editor Forest and Stream:*

In your issue of March 17 you state: "Dr. Longest, we would think, would be a member of the club and adorn his sideboard with some of the handsome trophies they offer." The rule of the American Mastiff Club reads: "None of these cups to be awarded unless there are three at least entered and actually in competition." I have sent my entries for both Detroit and Chicago shows, but the money was returned to me, there not being sufficient entries to compete for same. I should only be too pleased if more of the members of the American Mastiff Club would enter for these handsome cups—to adorn their sideboards.

C. A. LOUGEST, M.D.

Boston, Mass., March 17.

#### POINTS AND FLUSHES.

[By a Staff Correspondent.]

The following extract from a letter received by Mr. F. R. King, of Leighton, Ala., contains information of special interest to sportsmen. The writer of the letter is Mr. H. J. Burrell, of Portland, Ore., and is in reply to a letter of Mr. King containing a request for information on the subject. Mr. King is a member of the Manchester Kennel Co., which has an important place in the annals of field trials and in field trial records for several years, and a high place in the esteem of sportsmen. Mr. King informs me that an earnest effort is being made to introduce the pheasant in his section, and the information contained in the following letter was sought to advance that purpose. It reads as follows:

"You say a gentleman of your place is raising pheasants for sale, but you do not say what kind. I will take it for granted that they are Chinese pheasants, better known as Mongolian pheasants. Chinese pheasants were imported into this State about eight years ago. About twenty-five pairs were turned loose in different sections, and now there are thousands of them. They breed very rapidly. An old hen will raise two or three broods a year, according to the season, averaging about 10 chicks to the brood. As soon as the first brood is hatched, the old cock takes them in charge, and the hen goes to laying again, and so on.

"It is no uncommon thing to kill three different sizes of pheasants out of the same covey.

"Late in the fall the birds separate; that is, the hens bunch together and the cocks the same until spring, when they mate.

"They work mostly in open ground, around wheat fields and pasture lands, where they can catch grasshoppers, and around cornfields, old orchards and vegetable gardens. They are very fond of cabbage and garden truck in general.

"Now, as to the sport they afford in the field—they are entirely different in their habits from any birds we have in this country. Dogs have to be specially broken on them.

"It is very seldom you can take a dog which has been broken on quail, prairie chicken, etc., and then break him on Chinese pheasants.

"They are great runners. It takes a good dog to catch an old, wing-broken cock. Old and young birds run more or less, but young birds only run a short distance, when they lie nicely for a dog.

"A dog has got to do lots of trailing. He must not stand so soon as he strikes the scent, as the bird is probably 100 yds. or more away.

"Mr. Monteith, my shooting companion, owns one of the finest Chinese pheasant dogs in this part of the country. I have seen him trail an old cock fully 500 yds., making half a dozen stands before the cock would lie close, or as we say, 'hole the bird.' A young bird usually lies close after the first run.

"You can readily see that a dog not used to that kind of working will not be in it for a minute. Lots of times the old birds will not lie at all, but will run for a ways and then flush.

"It is useless to work a bird down wind when once flushed, for the moment he hits the ground he runs like a race horse for pasture new.

"Mr. Monteith and I have made several large bags over his dog Dukes. We killed 101 in one day a year ago last September. Last September we killed 73 in one day. Mark's Hal is a very good retriever, but he doesn't 'catch on' to China pheasants very well."

There is most excellent quail shooting along the Illinois Central and Kansas City, Memphis & Birmingham railroads, but what is now an abundance will gradually diminish to a dearth of shooting if more restrictive laws are not passed, and the season shortened. There is now nearly six months of open season in the South; too long by far considering the numbers and destructiveness of the modern shooter. The introduction of the pheasant would be a great addition to the game resources of the South.

#### Back in the Fold.

The many friends of Mr. W. W. Titus, of Waverly, Miss., and few people, handlers or otherwise, have more friends than "Billy"—will be pleased to learn that he will join his business interests with field trials and again will be in the thick of the competition. I quote some extracts from his letter to me, not the least interesting part being the amusing satire on the wide-ranging dog. He says:

"After much deliberation, I have decided to come back to the fold again and handle in field trials. What induced me to do this, more than anything else, was the opening of the 'Selling Stake' in the Eastern trials. If I go there for the purpose of running shooting dogs, it will be just as easy to take a few dogs for the other stakes.

"There is little here in the way of news, especially that of a canine nature. I might tell you of some wonderful dogs that I have, but I suppose it would be more wonderful for some gentleman to tell of dogs they owned which were any other way. \* \* \*

"I had quite a chat with old Uncle Chess. Among other matters, we talked about dogs. Uncle Chess was very anxious to know what constituted a first class dog in these degenerate days, and I tried mighty hard to tell him, but I don't think the old man comprehended very clearly. At last I told him about the wide-ranging dogs we had, and the old man wanted to know if they were not a heap of trouble to keep track of. 'I had a dog once,' he said, 'way back in the 50's, that was the outragingest dog I ever saw. I recollect one day I was out hunting in a country I was a stranger to, and I lost my dog. I kept hunting and a-hunting for the dog until finally I was lost myself. About this time I met a old gentleman on a horse, with a sack of corn in front of him, evidently on his way to mill.

"'Mister,' said I, 'have you seen anything of a dog that looked like he might be lost?'

"'No, my boy,' he replied, 'are you sure you aren't lost yourself?'

"'No sir, I ain't sure about not being lost. In fact, I know I'm lost. But, Mister, that dog is lost so much wuss 'n I am, that I ain't got any time to think about my own troubles.'

"About this time my dog came in sight, and, though I caught him, I had to lead him home and tie him—couldn't use him for a week."

"How was that, Uncle Chess," I required.

"Why, the blame dog was so badly lost that it took him a week to find out who I was, and the darn fool was always mighty distant after that. I always thought he acted like he was suspicious that I was an impostor and was palming myself off for his master, till finally I felt so hurt about the way he treated me, that I gave him away, but he was a ranger, though right."

"Would he retrieve?" I asked.

"Would he what?" said Uncle Chess, eyeing me suspiciously.

"Would he bring a bird when you killed it?"

"Oh, I didn't exactly understand you. Yes, he would bring a bird every time. Once I was out turkey hunting (he was a good turkey dog) and he crossed the river and got after something in the cane on the other side. I thought it was turkeys and I ripped and snorted, and told him to catch 'em. Bring him out, I yelled; and from the way the cane was smashing and a cracking I decided he had caught one. Directly he and something come rolling out of the cane into the river, and then began to swim toward my side. As he was below me I made my way down to where he would land, and what do you think he had?"

"I'm sure I don't know, Uncle Chess, without it was a turkey."

"He had the biggest, blackest billy goat you ever put your eyes on."

"About this time the train stopped at my station and I got off."

"I am preparing to go to North Dakota about the last of June, and will take my field trial dogs up there and give them a good start for next fall."

There is a rumor of the formation of a new field trial club in the South. It is the intention to give liberal purses and to hold the trials in January. There will be more definite information to give soon.

There is a strong sentiment in favor of forming a club which will cater more especially to the interests of amateurs. Such a club could be formed successfully, I believe, as there is a large amateur contingent which hold aloof from trials from a belief that they have no chance to win against professionals.

B. WATERS.

900 SECURITY BUILDING, Chicago.

#### Denver Dog Show.

THE first show given under the auspices of the reorganized Continental Kennel Co., now known as the Western Kennel Club, seems to have been a success, at any rate, as far as the quality of the dogs exhibited is concerned. Although there were only about 180 entries, the show boasted some of the most prominent dogs of their breeds in the country. Such are Sir Bedivere, Rustic Beauty, Melrose, Alton II., Gem of the Season, Wellesbourne Charlie, Maney Trefoil, Attraction, The Graven Image, Wal Hampton and others. The local kennels, such as St. Patrick Greyhound Kennels, with Pearl of Pekin, that Best Gem of the Season, Boomerang, St. Patrick, etc., and the Carlowie Collie Kennels, with their collies, Maney Trefoil, etc., quite held their own in open classes with the strong Chestnut Hill Kennels. Mr. John Davidson judged all classes. Our detailed report of the show has not arrived yet. The list of awards is as follows:

##### PRIZE LIST.

MASTIFFS.—Dogs: 1st, R. H. Goulding's Mars; 2d, F. A. Hasen-plug's Bevis II. Reserve, Carrie Bock's Troy. Very high com., J. F. Symes's Standish of Berkshire. Bitches: 1st, M. Miller's Nitger. Puppies: 1st, Carrie Bock's Doctor.

ST. BERNARDS.—ROUGH-COATED—CHALLENGE—1st, Argyle Kennels' Sir Bedivere. OPEN—Dogs: 1st, F. H. Fisher's Saladin; 2d, Mrs. F. E. Shepherd's Big Ben Leonard. Reserve, A. C. Shallenberger's Alton II. Very high com., G. Rice's Mascot-Captain. High com., R. M. Kennedy's Bob, Duke of Highlands and N. Goff's Mountain Chief. Com., Mrs. W. W. Williamson's Beauty and Mrs. J. Filmore's Roxey. Bitches: 1st, Argyle Kennels' Rustic Beauty; 2d, A. C. Shallenberger's Alta Berna. Reserve, E. Jones's Nello J. High com., S. L. Bigelow's Ute Princess. Puppies: 1st and 2d, C. T. Wentworth's Lord Alton and Lady Alton II. Very high com., Hon. O. E. Le Fever's Sir Bevis. SMOOTH-COATED—CHALLENGE—1st, Argyle Kennels' Alton II.; 2d, A. C. Shallenberger's Melrose. OPEN—Dogs: 1st, A. C. Shallenberger's Patrician. Bitches: 1st, Argyle Kennels' Pratt's Belle; 2d, E. T. Weiant's Columbia Venus. Puppies: 1st, A. C. Shallenberger's Patrician.

GREAT DANES.—1st, F. S. Anderson's Anderson's Sandor; 2d, J. McArthur's Don Juan. Very high com., Mrs. M. Crawford's Captain. High com., B. K. Walker's Prince. Bitches: 1st, F. S. Anderson's Flora A.; 2d, D. Fitzsimmons's Lady Venus.

NEWFOUNDLANDS.—Prizes withheld.

BLOODHOUNDS.—1st, R. G. H. Huntington's Jack Shepard.

RUSSIAN WOLFHOUNDS.—Dogs: 1st, 2d and reserve, P. H. Hacke's Smeltchak, Odnor and Argus. Bitches: 1st, P. H. Hacke's Koketka.

DEERHOUNDS.—Dogs: 1st, M. Harrison's Douglas. Bitches: 1st, Broadmore Kennels' Lassie Jean.

GREYHOUNDS.—CHALLENGE—1st, Gem of the Season. OPEN—Dogs: 1st and 2d, St. Patrick Greyhound Kennels' Monk Bish and Boomerang; 2d, St. Patrick Greyhound Kennels' Pearl of Pekin and Black Maria. Puppies: 1st and 2d, R. L. Lee's Montana and Donald.

FOXHOUNDS.—Dogs: 1st, Chestnut Hill Kennels' Denmark. Bitches: 1st, Chestnut Hill Kennels' Rosemary; 2d, Vinewood Kennels' Dolly-go-nimble.

POINTERS.—Bitches: 1st, J. C. Harrington's Dido A. Puppies: 1st, H. C. Glaze's True Silver.

ENGLISH SETTERS.—CHALLENGE—1st, J. Lewis's Victress Llewellyn. OPEN—Dogs: 1st, American Field Kennels' King Gladys; 2d, T. J. Mansfield's Frank. Bitches: 1st, L. Dingle's Nig; 2d and very high com., American Field Kennels' Rattle and Queen Gladys. Puppies: 1st, 2d and very high com., F. F. Thomas's King's Valentine, King Leo's Antony and King Leo's Mary. Reserve, J. M. Norman's Bella. High com., American Field Kennels' King Allister.

IRISH SETTERS.—Dogs: 1st, W. H. Hill's Donowa; 2d, D. L. & A. Carmichael's Shamrock Bruce. Very high com., C. W. Marche's Terry. Bitches: 1st, Kildare Kennels' Ruby Glenmore II.; 2d, Lake Shore Kennels' Lake Shore Ruby.

GORDON SETTERS.—Bitches: 1st, Mrs. N. M. Clapp's Dixie.

CHESAPEAKE BAY DOGS.—1st, D. L. Mechin's Punch; 2d, J. Lansing's Vic.

IRISH WATER SPANIELS.—1st, B. F. Lewis's Kitty of Cork.

FIELD SPANIELS.—Dogs: 1st, B. F. Lewis's Newton Abbott Torso; 2d, Lake Shore Kennels' Nick Ott. Very high com., J. Smith's Coup's Gyp. Bitches: 1st, J. Smith's Dorothy; 2d, F. Van Dornum's Dandy.

COCKER SPANIELS.—CHALLENGE—1st, C. F. Sackett's Othello. OPEN—Dogs: 1st, Luckwell & Douglass's Woodland Count; 2d, C. F. Sackett's St. Lawrence Prince. Very high com., J. H. McTague's McTague's Cherry. Bitches: 1st, Dole & Thomas's Woodstock Dora.

COLLIES.—CHALLENGE—1st, Chestnut Hill Kennels' Wellesbourne Charlie. Reserve, Carlowie Collie Kennels' Maney Trefoil. OPEN—Dogs: 1st, Carlowie Collie Kennels' Chrisholm; 2d, Rose Hill Kennels' Reserve Bohn. Reserve, Chestnut Hill Kennels' Prince Valera. Very high com., H. H. Field's Psyche and Rose Hill Kennels' Denver Sandy. High com., F. S. Anderson's Toronto Wonder and A. H. Lowe's Roslyn II. Com., J. H. P. Voorhees's Senator. Bitches: 1st, reserve and high com., Carlowie Collie Kennels' La Creole, Sooty and Heather Twig; 2d, Chestnut Hill Kennels' Gipsy II. Very high com., high com. and com., Rose Hill Kennels' Rose Hill Dolly, Maid of the Mill and Princess Sheila. Puppies: 1st, Chestnut Hill Kennels' Orme; 2d and reserve, Carlowie Collie Kennels' Chrisholm and Sooty.

BULLDOG.—CHALLENGE—1st, F. F. Dole's Graven Image. OPEN—Dogs: 1st, Woodlawn Park Kennels' Wal Hampton.

BULL TERRIERS.—CHALLENGE—1st, F. F. Dole's Starlight; 2d, Luz-boro Kennels' Crisp. OPEN—Dogs: 1st, F. F. Dole's Topsparkle. Bitches: 1st, F. F. Dole's Edgewood Topsy; 2d, Chautauqua Kennels' White Gipsy.

DAKSHUNDS.—1st and 2d, Winrush Kennels' Jargonelle and Jay. BEAGLES.—CHALLENGE—1st, G. D. Welton's June M.—OPEN—Dogs: 1st and 2d, G. D. Welton's Joe and Pomp. High com., R. C. Perky's Don. Bitches: 1st, G. D. Welton's Superba.

FOX TERRIERS.—CHALLENGE—1st, Toon & Thomas's Lady Roseberry. OPEN—Dogs: 1st, South Shore Kennels' George Bell; 2d, Painter Bros' Stinger. High com., L. E. Myers's Aristocrat. Bitches: 1st, W. P. Tichenor's Juggles; 2d, L. E. Myers's Chip. Reserve, Woodlawn Park Kennels' Jess II. Very high com., high com. and com., South Shore Kennels' Fancy II. and Flirt. High com., C. A. Scofield's Fidget. Puppies: 1st, T. K. Twist's Whistle; 2d, L. E. Myers's Chip. Very high com., South Shore Kennels' Fury. High com., Ed Smith's Denver Ed Smith.

IRISH TERRIERS.—Dogs: 1st, Woodlawn Park Kennels' Jackanapes; 2d, Toon & Thomas's Brickbat, Jr. Bitches: 1st, Chestnut Hill Kennels' Candor.

SCOTCH TERRIERS.—Dogs: 1st and 2d, A. F. Hertzler's Killtip and Rattler. Bitches: 1st, Toon & Thomas's Merry Call; 2d, A. F. Hertzler's Bessie.

SKYE TERRIERS.—1st, H. K. Oner's Endcliffe Maggie.

YORKSHIRE TERRIERS.—1st, John Bell's Bo-Peep.

BLACK AND TAN TERRIERS.—1st, Chesterford Park Kennels' Rochelle Oolah.

PUGS.—Dogs: 1st, Lake Shore Kennels' Duke Howard. Bitches: 1st, Lake Shore Kennels' Lake Shore Julia; 2d, E. Triplett's Judy.

BLENNHEIM SPANIELS.—1st, G. H. Moore's King of Diamonds.

KING CHARLES SPANIELS.—Prizes withheld.

MISCELLANEOUS.—Equal 1st, Woodlawn Park Kennels' Dewr and F. W. Broad's Chihuahueria.

##### SPECIAL PRIZES.

St. Bernards—Best kennels, Argyle Kennels; best in show, Sir Bed

vere; best pair, Sir Bedivere and Rustic Beauty. Russian wolfhounds—Best handled, P. H. Hackel. Greyhounds—Best kennel, St. Patrick Kennels; best greyhound, Pearl of Pekin. English setters—Best kennels, American Field Kennels. Collies—Best kennel, Chestnut Hill Kennels. Beagles—Best kennel, Geo. D. Welton. Fox-terriers—Best kennel, South Shore Kennels.

## DOG CHAT.

Messrs. James Mortimer, E. M. Oldham and Major J. M. Taylor are the judges so far chosen for the Toronto show in September next. Mr. Oldham will of course take spaniels, and it is to be hoped that he will not, for his own sake, raise the "anti."

Mr. J. C. Vail, of Warwick, N. Y., intends, according to a local paper, to build some new kennels on his property and will again take a limited number of dogs to board and train. The Frank Forester Kennels have held some good dogs in their day.

The Boston *Herald* says there are fully 10,000 dog owners in Boston who take more or less interest in the doings of the kennel world. If this is the case the N. E. K. C. should not bother themselves about the loss of Fast Day.

### P. K. C. Show.

The entries for this show closed with 479 entries as follows:

Mastiffs.....	7	Poodles.....	26
St. Bernards.....	83	Bulldogs.....	12
Bloodhounds.....	2	Bull-Terriers.....	14
Great Danes.....	10	Dachshunds.....	4
Newfoundlands.....	1	Beagles.....	28
Russian Wolfhounds.....	9	Fox-Terriers.....	42
Deerhounds.....	2	Irish Terriers.....	4
Greyhounds.....	15	Black and Tan Terriers.....	3
Foxhounds.....	9	Scottish Terriers.....	4
Chesapeake Bay dogs.....	3	Skye Terriers.....	2
Pointers.....	86	Yorkshire Terriers.....	5
English Setters.....	43	Toy Terriers.....	2
Irish Setters.....	31	Pugs.....	9
Gordon Setters.....	7	Toy Spaniels.....	14
Irish Water Spaniels.....	1	Italian Greyhounds.....	1
Field Spaniels.....	9	Miscellaneous.....	8
Cocker Spaniels.....	47		
Collies.....	28	Total.....	479

The entry of English setters must be peculiarly gratifying to Mr. Taylor, as he makes his debut as a judge. Spaniels, beagles, fox-terriers and poodles must also be considered as complimentary to the judges. Collies have a good entry, too, considering the fact that the judge is himself a prominent exhibitor in this breed, and therefore his entries are so many lost.

### Los Angeles Show.

The dog show committee of the Southern California Kennel Club have decided, owing to the great expense that would be incurred in getting a judge from the East for their show alone, to secure local talent. Mr. H. H. Briggs, a prominent San Francisco sportsman and president of the Pacific Kennel Club, together with A. Russell Crowell, kennel editor of the *Breeder and Sportsman*, will take all breeds except fox-terriers and bull-terriers, and these will be passed upon by Mr. G. L. Waring, a gentleman who has lately come out from England and who is said to have judged at some small shows in England; and pointers, which Mr. R. T. Vandevort will judge. Owing to the backing down of the other clubs on the Coast, the Los Angeles enthusiasts, to whom such an event is furthest from their thoughts, this show should be given the support which their enterprise and love of dogs deserve. The club has never missed a show since its organization and this will be their sixth gathering, while only two shows have ever paid a profit. The club is supported by sportsmen and they see no reason why they should not hold a show because there is some work and no pay.

We omitted to mention last week that Mr. George S. Thomas, while at Chicago, sold his black and tan terriers Rochelle Turk and Rosette to Mr. Fred C. Stilson, Janesville, Wis. Mr. H. Jarrett also sold a cocker spaniel by Fascination to Miss Materson, of Kansas City.

While at Chicago show we heard a rumor that Mr. Lawrence Shuster, of Philadelphia, had died very recently. We regret to hear the sad news confirmed. Mr. Shuster was well known as one of the oldest and most prominent fanciers in Philadelphia, his English setters having won both on bench and field. He was identified with the early Philadelphia K. C. shows, being treasurer, we believe, and also was connected with the *Fanciers' Journal* in that capacity when it started on its troubled career. In late years his interest in kennel affairs, outside of the P. K. C. field trials, has not been very active.

Mr. Reick, contrary to custom, did not purchase any St. Bernards during his recent trip to Europe, but from the kennels of Mrs. L. E. Jenkins, of Forest Hill, he secured the Blenheim spaniels Wild Honey and Nokomis, said to be the smallest in this celebrated exhibitor's kennels. They are each under 6lbs. weight.

It is most amusing to read the learned opinions of those who have never seen the dog Pade as to whether he is a pure beagle or a basset-beagle or what not. *Stock-Keeper* prints a picture of the dog and then asks, "What is it?" which is just about the best way to treat the subject. Mr. Millais takes up the question as to whether the dog has basset blood in him, but as his deductions are entirely drawn from the photograph spoken of it is merely an opinion as to that photograph and not of the dog, as no one from that picture can form a correct idea of the dog's crooked forelegs. We may say in answer to Mr. Millais's opinion regarding malformed beagle legs in their similarity to the basset crook, that the peculiar formation of Pade's legs is not due to "osseous enlargement of the distal cords," but the crook is "largely due to the arrangement of the bones in the carpus" and "the phalanges are turned outward." No one ever said that Pade had a basset front pure and simple, but rather that Pade showed in his forelegs every indication of a basset or dachshund cross.

Dr. H. Koenig, of Lexington avenue, New York, has purchased from the Dutchess Kennels a very handsome dog pup by Alton, Jr., out of Miss Anna.

The Philadelphia Kennel Club will make a bold bid for success in the matter of attendance, at any rate. To each ticket of admission will be attached a coupon which will entitle the holder to participate in drawing for a pedigreed dog that will be donated each night. Each day a dog of a different breed will be given away.

The English fancy is having a regular Donnybrook sort of a time over the appointment of the Irish terrier judge for the Kennel Club's show to be held next month. It seems Mr. G. R. Krehl suggested Mr. Hill, a well-known judge of the breed, for the office, and he was appointed. Mr. Hill not being on the Irish Terrier Club's list of judges, the president of that body of specialists is using his best endeavors to boycott the show in true Irish fashion, which, in the interests of the breed the club is supposed to foster, cannot be called very praiseworthy on his part. Mr. Krehl, as vice-president of

the club, on the other hand, has explained his position in a letter to his paper, and calls upon the exhibitors to back up the judge with their entries. The fight is only just commencing, but will attract considerable attention on all sides before the show comes off.

The noted deerhound exhibitor and breeder, Mr. Weston Bell of Rossie, Perthshire, Scotland, is dead. He owned the celebrated dog Rossie Ralph and was counted the most successful exhibitor of deerhounds in Great Britain, besides having a number of winners in other breeds from time to time. He was the author of "The Scottish Deerhound" and was only 35 years old at the time of his death, which occurred March 9, from pneumonia.

Mr. Geo. Bell, of Toronto, we are glad to see, is on the war-path again, this time as a competitor for P. K. C. prizes. He called at our office on his way to the Quaker City, and is enthusiastic over a 7-months-old Canadian-bred black and tan terrier he is sending there. Dusky Trap he reports as looking fit and well, weighing 18lbs. A 4-months-old pup by him is to make us all open our other eye at Toronto next September.

### The N. E. K. Club.

The N. E. K. Club have provided a class to be known as "907A," for Dalmatians, dogs and bitches, offering \$10 and \$5 for first and second respectively. Friends of the Boston terrier have offered the following additional specials for that breed: \$10 for the best brood bitch, to be shown with two of her produce; \$10 for the most typical-headed bitch, and \$5 for the best dog or bitch puppy.

The Toronto Kennel Club held its annual meeting March 22, with President J. F. Kirk in the chair. The club's spring show, which will be open to dogs owned in Canada, will be held April 13 to 14, at the Granite Rink. J. S. Williams will judge St. Bernards, C. A. Stone pointers, English and Gordon setters, Richard Gibson fox-terriers and George Bell all the rest. Premium lists will be issued this week and a number of specials are promised. The old list of officers was re-elected with J. F. Kirk as President, A. A. McDonald and W. S. Crawford being added to the executive committee. A deputation from the club was to wait on the Attorney General on March 23, to urge the passage of a bill under which dog thieves may be more easily prosecuted.

In collie bitch pups at Chicago show first should read Tom Godslan's Blossom and Willowdale Kennels' Pride, which was the next number to Blossom's, and the number against their names could apply to either, hence the mistake.

Referring to dachshunds at New York, Dr. E. Guenther, of Newark, N. J., writes: "I would ask you in justice to Mr. Manice, of Pittsfield, Mass., to make the following correction in your valuable and to me ever welcome paper. In your list of prize winners at the late show of the Westminster Kennel Club, in Class 144A, dachshund puppies, you give first to my bitch puppy Nanette; second to Pretzel (John H. Mathews) and vhc. to Hermit (Windrush Kennels). I am aware that the official catalogue published the awards as above, and this very likely explains your mistake. The awards were as follows: First, Hermit (Windrush Kennels); second, Pretzel (John H. Mathews); vhc., Nanette (Dr. E. Guenther)." We are pleased to give Dr. Guenther the opportunity to make such a courteous correction.

Mr. C. Stedman Hanks, the owner of the Seacroft Kennels, is passing the winter in the South. At present he is enjoying the fishing on the east side of Florida, in a houseboat. He writes: "I am away from all doggy news; please send me a copy of the *FOREST AND STREAM* which has the account of the New York show and the reports of the different judges on their awards."

Mayor Stewart, although he is a busy man these days with the care of the municipal affairs of Hamilton, Canada, on his hands, has not entirely relinquished his interest in dogdom, and speaks of getting out from England another bulldog or two. We may yet see another show at Hamilton, and under the patronage of his Worship.

### What has become of the Bull-Terrier Club?

#### Lord Walbeck.

Last week we referred to a dispatch, sent to the dailies during the Chicago show, which alluded to a St. Bernard stolen from Mr. Geo. J. Gould. Mr. Gould has not lost a dog, and the report is entirely erroneous. It will be remembered that after the New York show we stated that some one had shipped No. 25 instead of No. 52 from the Garden on the morning after the show. No. 25 was Mr. S. Miller's dog Lord Walbeck and No. 52 was Mr. E. W. Fiske's dog Hamlet. As soon as Mr. Miller heard of this when he went to the building to get his dog on Saturday morning, and not finding his dog, he at once shipped No. 52 in his own crate to Mr. Fiske at Mount Vernon, and then proceeded himself to Mr. Fiske's place. Arrived there, he found that no St. Bernard had reached Mr. Fiske's kennels, although his spaniels had arrived. Mr. Fiske subsequently received his dog Hamlet, but no trace has as yet been found of Lord Walbeck. The dog is a valuable one and well known at dog shows. He is the only son of Young Bute and Miss Anna in this country, having been imported *in utero*. Mr. Miller is naturally very anxious about his dog and is investigating the source of the dispatch alluded to above, thinking the dog referred to may be his. Whether the W. K. C. can be held responsible for the dog's loss is an interesting question which is now under consideration. Mr. Miller having put the case in the hands of his lawyer. If any one should hear of the dog it would be a kindness to advise Mr. Miller at 21 Centre street, New York city, as to its whereabouts. The W. K. C. is using every endeavor and no little money in trying to trace the dogs—the Irish terrier Shargar is also still missing.

The name of the donor of the scarf pin to be given to the owner of the black and tan terrier winning the most prizes during the present dog show season is Prof. Wm. G. Ingram and not Graham, as first stated.

### Great Danes.

While at Detroit we had the pleasure of meeting Mrs. Glynn, the owner of the Wolverton Kennels of Great Danes. She stated that it was her intention as soon as she could sell her kennel, to follow her husband to England. We are therefore not surprised to hear that Mr. Lawrence, of Columbus, Ohio, who has lately made such rapid strides to the front in the great Dane fancy, has purchased the whole of Mrs. Glynn's kennel. This purchase includes three fine youngsters out of the well known Senta, that died recently in Mr. Lawrence's kennels. They are about one year old; Senta's Brutus is one, the blue dog that won at Detroit and Senta's Rheda and Senta's Mascot, first and second respectively at that show, are the others. With the help of this new and young blood, the Kennel Lawrence expect to add many more winning brackets.

The *British Fancier* did an enterprising piece of work in getting out a special edition of their paper containing a report of the Manchester show, with its 650 entries, on the second day of the show. This journal seems to be a more than lively "corps," and its predicted death appears to be as unlikely as its success seemed assured. *FOREST AND*

*STREAM* does not wish to be robbed of its laurels, and we must remind our trans-Atlantic contemporary that this journal was the first to issue a special edition during an important show. This was in 1892, when the New York show, with its 1,400 entries, was fully reported, embellished with a large number of half-tone pictures of the winners and all the judges.

The late Manchester show was scarcely the success of former years, as far as entries went, though the quality could not be cavilled at. The Deakin challenge cup for the best in sporting and non-sporting divisions was captured in the former section by the well known pointer champion Saddleback, the wire fox-terrier Cauldwell Naller getting reserve, and in the latter by the crack smooth St. Bernard Lola IV., Southport Perfection, the collie, coming in for reserve. "Billy" Graham brought out a new Irish terrier bitch Breda Bee, that is said to be a "corker." Owing to a number of unfortunate causes, chief among them being the very mystifying new classification of the Kennel Club, a number of classes were cancelled, such important breeds as bloodhounds, pugs and greyhounds not having sufficient entries.

Mr. A. H. Megson, of Manchester, recently purchased a young collie, Guy Mannerling, by Sefton Hero, for \$1,000, that is said to be very nearly a world beater if he only gets his ears up a bit more; in coat, bone, substance and style it is said he cannot be excelled. He won all before him at the Manchester show, where he was first shown.

The *Sporting Mirror* (Eng.) says in speaking of the New York show, "FOREST AND STREAM wins the whippet so far as full judges' critique goes." This is a new term to us, but as a whippet is supposed to be fast and gets to the front pretty quick we take the above as a compliment.

The English Mastiffs Ogilvie and Jubilee Beauty, together with the crack Plutarch, have been sold since Capt. Pidcocke's death, which occurred recently, to Mr. A. D. Intcliffe, Failsworth, Lancashire.

We learn that an order has been placed on the other side for the best Irish terrier dog or bitch that can be procured.

### Louisville Dog Show.

THE secretary of the Louisville Kennel Club, Mr. St. Marc Mundy, writing about their coming show, says:

"The directors of the Louisville Kennel Club (incorporated) held their regular weekly meeting on Wednesday evening, March 21, at the Armory. Of the nineteen directors only two were absent, which illustrates the interest taken in the club's affairs and the present important topic of interest, its first annual dog show, which will be given May 9 to 12, the week following the Hempstead Farm Specialty show in New York.

"The dog show committee reported themselves ready to submit the result of their labors on the premium list and the list recommended by them was adopted unanimously. It provides for forty-five different breeds, including miscellaneous, and 152 different classes, while the total sum of the purses will amount to over \$2,000, exclusive of the handlers' prizes, of which there will be five. Three for handlers non-residents of Jefferson county, Ky., or Floyd and Clark counties, Ind., and two for handlers residents of those three counties exclusively. The moneys for the five handlers' prizes will amount to a total of \$150.

"The judges so far decided upon are Messrs. Mortimer, Roger D. Williams and Major J. M. Taylor, but there will be one, and possibly two, other judges added to the list, as we are now waiting to hear from several gentlemen. Our premium list will be ready for distribution March 31.

"Louisville being a port of entry, arrangements are now on foot to enable our Canadian brother exhibitors to bring their dogs here in bond, and so avoid the disagreeable payment of duty on their animals. We also hope to make arrangements for special transportation for the Eastern and Northern exhibitors, by having two special cars leave New York after the Hempstead Farm show, and come out over different routes.

"These two routes will be selected with the idea of securing the most benefit to the different exhibitors, by having the cars pass through certain cities, so that exhibitors living between New York and Louisville, who may not attend the New York show of May 1 to 4, can meet these cars at points nearest to their homes, and thus secure the benefit of their use and cheaper transportation to Louisville and return, for these cars will return over the same route they came here by. We are also figuring on having a special car put on and run from Chicago for the benefit of the exhibitors from that city and vicinity and the Northwest.

"Nashville is also talking about giving a dog show the week after ours, and if they do, the exhibitors from a distance will then be able to take in both, as Nashville is only a little over six hours' run from here. Should they give this show, and commence it on May 10, all the exhibitors can have their dogs cared for here, the few intervening days between the two shows, remain and see the Kentucky Derby on the afternoon of the 15th, and yet be in Nashville the following morning in plenty of time to bench their dogs. To any one who has never seen the Kentucky Derby and the grand stand thronged with the beautiful Southern women, as it is on Derby day, I will simply say, it is a sight well worth going a few miles to see."

### "Vicissitudes of the Judging Ring."

Editor *Forest and Stream*:

In behalf of F. M. Thomas, relative to "Vicissitudes of the Judging Ring," will say he is out of town and on his return will make answer to the above. A. MILTON MYERS.

CATSKILL, N. Y., March 24.

### ANSWERS TO CORRESPONDENTS.

I. P. M., Erie, Pa.—Is there an English mastiff dog registered under the name of Rex? If so, what is his pedigree? Ans. Rex (A. K. C. S. B. 9,705), by Turk II. out of Bess, by Major out of Mollie. Turk II., by Rajah out of Brenda.

E. F. G., Nashua, N. H.—You do not give the name of the beagle.

## Hunting and Coursing.

### FIXTURES.

April 17.—South Dakota Coursing Club's inaugural meeting, at Mitchell, S. D. Entries close April 16. S. S. Batley, Sec'y; Fox Kenney, Judge; Joseph Dodd, Slipper.

### Brunswick Fur Club.

THERE will be a special meeting of the Brunswick Fur Club, at Mechanic's Hall, Boston, Mass., on April 17, at 12 M. A delegate to the American Kennel Club will be elected, and other important business will come before the meeting. The annual field trials will take place during the week of Nov. 5. The place will be announced later.

### International Coursing Meeting.

Editor *Forest and Stream*:

As there never has been published a report of the receipts and disbursements of the International Coursing Meeting, would it not be of interest to a great many readers, for the treasurer to do so? NOMINATOR.

### Coursing in South Dakota.

THE Huron Coursing Club has decided to offer a "sapling" stakes, to be run at the meeting there on April 10. It will be for eight or ten puppies whelped since April 10, 1893, and will be run in connection with the twenty-four-dog stake. The meetings at Oakes, Huron and Mitchell are expected to be large, as there is so much interest manifested among the owners of the leash in those towns. Mr. H. G. Nichols writes us that the weather at present is fine, and the ground could not be in better condition.

After April 1 that enthusiastic courser, Mr. J. H. Rew, will be located at Artesian, S. D., in the general merchandise business. He will also keep his kennel of greyhounds there.

### HUNTING AND COURSING NOTES.

On March 9, while F. Gray Griswold, M. F. H. of the Meadowbrook Club, with E. T. Cushing, E. W. Roby and H. L. Herbert had a pack out on Hempstead Plains, L. I., for an exercising run, a fox was found near Hone's Wood which afforded the liveliest sport for nearly two hours. Reynard ran through Wheatley and then through a pretty stiff fence and rail country, finally being run into near Stanley Mortimer's place in the Wheatley Hills. This is said to be first wild fox put up by these hounds in some years.

In Queens county, N. Y., the county law, passed at the last session, authorizes the payment of \$5 bounty for each fox and \$1 bounty for each weasel, possum, racoon, skunk or woodchuck killed.

## Yachting.

THE article by "Thalassa," on the length and sail area of recent British yachts, which we reproduce this week from *The Yachtsman*, is interesting in connection with a similar investigation of yachts built under the old tonnage rule and the then newly adopted rating rule by the same writer in 1887, and also with the comparisons of American yachts made by us in 1889. The diagrammatic method followed in all three cases appeals immediately to the eye, end is clearer and more convincing than any tables of figures; and the curves as plotted throw much light on the comparative development of the different sizes of racing yachts. It is worth noting that in our investigations the 30ft. and 40ft. classes showed an abnormal proportion of sail area, and a similar excess is found in the present diagram in the nearly equivalent classes of 10 and 20 rating. Owing to the lack of a few well developed small classes, our comparison was not carried below the 30ft. class, but from that class upward the curve was very similar to that shown in the present diagram for the old tonnage boats, the smaller ones being more heavily rigged and the ratio of sail to length decreasing rapidly as the size increased; the largest ratio in the 30 and 40ft. classes being 150%, while in the schooners of about 100ft. l.w.l. it decreased to less than 100%. The result of the rating rule, as here shown, has been to produce craft of much less sail area than is found in connection with any given length on this side of the water; while the proportion of sail area is very small in the open sailing boats, such as the 1/2 and 1-raters, but comparatively large in the yacht classes.

THERE are two points in "Thalassa's" letter with which we cannot agree, his conclusion as to the effect of lighter materials, and his surprise, as expressed in the final paragraph. As we understand the case the use of lighter materials in hull or rig means an increase of ballast and sail-carrying power on the same model, permitting a larger rig and increasing the length of the ordinate of the curve instead of decreasing it. As regards the comparative power of the large yachts built under the tonnage and rating rules, it has been known to Americans for some years, in fact, since Genesta raced here in 1885, that the old tonnage cutters, in spite of their weight of ballast and displacement, were vessels of low power. It is with regret that we note that while in 1885 there was a large fleet of American racing yachts to which such investigations might profitably be applied, to-day there are not only no live racing classes as the basis for such work, but practically no racing yachts in any class.

The condition of yacht racing on both sides of the Atlantic at the present time shows a curious paradox. In spite of Navahoe's defeat last year, the great event of the season was the successful defense for the eighth time of the America's Cup, and the defeat of the sixth British challenger. The victory of Vigilant over Valkyrie was no less complete and notable than in former years, and the honors of the season clearly rested on this side of the Atlantic. As the natural result of this state of affairs one would look to see life and activity on the part of the victors and corresponding discouragement and apathy on the part of the vanquished. Far from such being the case, however, the result is exactly opposite; in England and Scotland designers and builders are busy with new yachts and alterations on those of last year; in America there is no talk of building or racing, in fact the only new yacht of any note in the shops of the builders of the successful yacht of last year is for a Scotch owner. Of course the prevailing business depression is an important factor in the condition of yachting; but that it is not the only one is proved by the similar dullness that has prevailed in former years, though never to so great an extent, immediately after a successful defense of the America's Cup.

So far as true racing goes, there is nothing in the condition of business to hinder the building of racing yachts, as the best sport to-day is to be had in the classes below 40ft. If yachtsmen really want to race, there is ample opportunity for good sport in the 21, 25, 30 or 35ft. classes at a moderate outlay; in fact now, when many of the large steam yachts and expensive craft are likely to be laid up all the season, is the very time for yachtsmen to seek the keenest kind of sport in the smaller racing classes. It is an interesting question why, after being beaten on this side, British racing goes on as usual, while a victory here is as likely as not to be followed by a dull season. While Vigilant lies rusting on the beach and Colonia in the water, Valkyrie is busily fitting out for her return voyage and a busy season with Britannia and Satanita. In the next class, the 40-rater, there will be one new and several old yachts; the 20-rating class promises to be especially good this year; the fight in the 10-rating will be hot enough though the attempts to beat the new Herreshoff boat, and there is a certainty of good racing in the smaller classes. A careful review of the outlook on this side will show that every class from the smallest up is practically dead, so far as continuous racing through the season is concerned, and there is no saying when building and racing will take a turn upward. The course of designing, building and racing in Great Britain of late years has been by no means all that could be desired; but at its worst it is far better than on this side, where regular class racing seems a thing of the past, and where the national prestige depends on a successful spurt at intervals rather than a regular progress from year to year. Just now that course of experiment and improvement has absolutely stopped in America, while on the other side is going on steadily in the building of new boats and the racing of them with older ones.

AFTER a prosperous existence of five years, the New York Yacht Racing Association has lately been threatened with serious trouble

from within through the attempt to pass an amendment to the constitution which is obnoxious to a number of clubs. The two prime functions of such an organization are first to promote good feeling and harmonious action among all local clubs, and second to promulgate uniform regulations and rules for racing. The first end has been very successfully accomplished thus far; a number of clubs about New York have been brought together and have worked very harmoniously, their *esprit du corps* in fact being the mainstay of the organization, as local conditions prevent the holding of more than one Association race each year, and interfere with any general attendance of a majority of the fleet in the club regattas of the various Association clubs.

In the second end the Association has been less fortunate, as the measurement rule adopted by it at the start and retained ever since, is diametrically opposed to all modern tendencies in yacht racing. While for a certain limited class of boats the rule answers well enough, it places a heavy tax on everything of modern design, and its adoption and retention has undoubtedly retarded the growth of the Association.

The principal if not the only argument in favor of the rule has been that it was acceptable to a majority of the clubs in the Association, and that its adoption prevented the disputes and dissensions which must inevitably follow an attempt to adopt any rule taxing sail as well as length. As a matter of expediency, this reasoning carried some weight five years ago, and the adoption of the rule was acquiesced in by those who were opposed to it as wrong in principle, merely because it smoothed a way for the union of the various clubs. The recent attempt to rivet this same rule on all Association clubs, to the exclusion of all other rules, presents a strange state of affairs; the same men who in the interests of union and harmony have opposed all attempts to replace a poor rule by a newer and better one, have now deliberately sacrificed the general interests of the Association in an attempt to force a general compliance with the old rule.

The adoption of a rule that would be up to the times and suitable to the present trend of yacht racing might have cost the Association some members, and have temporarily interrupted its successful growth, but with the final result of placing it on a stronger and better footing, and of attracting to its membership those new yachts which are so rapidly outnumbering the old square-ended craft. Now, the Association has met with a serious setback, and with no possible good results to follow; it will take no short time to heal the present breach between the advocates and opponents of the disputed amendment. The latest proposal toward a compromise is most unsatisfactory, the pressing of the amendment in a mutilated and emasculated form, which makes it inoperative in practice, but retains it in the constitution as a constant source of irritation to both sides. If those who have already pressed the matter to a point where it has wrought serious injury to the Association are honest in their protestations of allegiance, and unwilling to sacrifice much good work that they have done in the past, they will see the propriety of quietly dropping the whole matter and using the powerful influence which should still remain with them to smooth out all recollection of it.

The local conditions in the vicinity of New York are decidedly unfavorable to general interclub racing, such as maintains about Boston; the clubs on the Hudson River proper, the Upper Bay and the Sound are separated by distance and by tidal waters covered with steam craft, so that a trip from Gravesend Bay to New Rochelle, or even to Yonkers, is too lengthy and troublesome to be undertaken save for some special occasion; and yet such trips are necessary to a large number of yachts which would enter any local race. Under such circumstances the Association cannot hold more than one open race in a season, and it must be content with an indirect influence on the club races. Its true field is a wide one, but still it has limits; the ordinary jealousies and disputes that afflict all local organizations, afloat or ashore, must be subdued by allegiance to the general association as a body, and by respect for its officers and laws. While the first object is to secure harmony and unity of action, and the observance of uniform rules, it is hardly less important that all rules should be brought to the highest standard, and that the Association should be progressive.

The question of a measurement rule is the most difficult one which the Association has yet been called on to settle. The "mean length" rule was in 1889 in use by most of its clubs, and a large proportion of the yachts were built to race under it. Apart from other considerations, the practical difficulty of measuring a fleet of at least 100 yachts from twenty different clubs was a serious one, and would have been much greater under a rule including sail area as well as length. Even at that time, however, the length and sail area rule was almost universal, and since then it has become the recognized rule of American clubs; while the length rule in its various forms has disappeared, save from the smaller New York and Boston clubs.

To-day the objections to taxing overhangs and the desirability of taxing sail are recognized by clubs and yachtsmen wherever yachts are raced; and in striving to force the Association to the sole recognition of the "mean length" rule, its leaders have placed themselves in opposition to everything which is modern and progressive in yachting.

The whole question may be summed up briefly: If the New York Yacht Racing Association is right in prohibiting overhangs and compelling the building of yachts with plumb stems and stems, then Herreshoff and Watson are wrong, the great yacht clubs of America, Great Britain and France are wrong, and yachtsmen throughout the world have fallen into grievous error.

### New York Y. C.

THE phenomenal growth of the New York Y. C., which began just after the Puritan-Genesta races in 1885 and has gained impetus with each succeeding contest, has made necessary a very general revision of its laws, which work has been in the hands of a committee for some time, and was finally submitted to the members on March 22, at a regular meeting. In the absence of Com. Morgan, Vice-Com. E. M. Brown presided. After the routine business, the report of the special committee on the admission of ladies as members, Messrs. Wm. F. Douglas, J. D. Smith and F. T. Robinson, was taken up and the following amendment, proposed by the committee, was adopted, subject to ratification at a future meeting:

"Any woman owning a yacht is eligible for election to the club as a flag member, and shall upon election pay annual dues, but no initiation fee. Such membership shall continue only during the period of a yacht ownership and carries only the following privileges: The right to fly the club burgee, to have private signal registered with the secretary, to enter yacht in club races and the use of the club stations and floats."

The following amendments were discussed and adopted:

CONSTITUTION.  
Add to Article III, paragraph entitled "Treasurer," the words "which he shall keep in two accounts, to be known as principal account and income account respectively. To the principal account shall be transferred and therein kept all moneys now invested in bonds or received from life membership funds, and all moneys which shall hereafter be received by the club from life memberships and admission fees. In the income account shall be included all other receipts of the club."

Strike out of Article VIII, the last clause thereof, reading as follows: "These payments shall constitute a reserve fund to be deposited in a New York trust company by the treasurer, and no disposition of this fund shall be made except by a vote at two meetings, one of which shall be a general meeting."

Amend Article IX, to read as follows:  
"At the first general meeting in each year or as soon thereafter as an election can be held there shall be elected on separate ballots a regatta committee, a library committee, and a committee on club stations."

"The flag officers, together with the secretary and treasurer, shall, *ex-officio*, constitute a finance committee."

"At the last general meeting in each year there shall be elected by ballot a nominating committee."

Strike out of Article X, paragraph "House Committee," the words "They shall, at the second general meeting in each year, submit to the club an estimate of the amount that they may deem necessary, inclusive of the rent of the club house, to properly carry on and maintain the said club house until the first general meeting of the club, and an appropriation shall then be made in which shall not be exceeded except by special action of the club."

Strike out of Article X, paragraph "Library Committee," the words "At the second general meeting of each year they state what appropriation should be made for the ensuing year."

Strike out of Article X, paragraph "Committee on club sites, stations and floats," both from title and body of the paragraph, the words "sites" and "and floats."

Add to Article X, as amended the following:  
"The finance committee shall consist of the flag officers, the secretary and the treasurer."

The finance committee shall hold a stated meeting at the club house on the third Tuesday of February in each year, at which meeting all applications for appropriations of club moneys for the use of the several committees and of the secretary and treasurer for the ensuing year, and also an abstract from the treasurer's accounts for the past year, showing the income of the club during that time in four separate items, namely:

First—From life memberships.

Second—From admission fees from new members.

Third—From annual dues.

Fourth—From all other sources; and also showing the amount of principal funds in the treasury, shall be submitted in writing by the chairman of each of the said several committees and by said secretary and treasurer.

The finance committee shall have supervision of all appropriations of club moneys for use of officers and committees, and shall review applications for the same, and upon the basis of the abstract of the treasurer's report shall estimate the income of the club for the ensuing year.

"At the second general meeting in each year, under the head of 'miscellaneous business,' the finance committee shall submit to the club its estimate of the income of the club, together with a statement of the several amounts which it deems necessary for the use of each committee and officer for the ensuing year, for the performance of their several duties and for the maintenance of all club property in charge of said officers and committees respectively, which several and respective amounts said finance committee shall then move to be made by the club as general appropriations."

All applications for appropriations shall be submitted to the finance committee at its stated meeting, or at any other time, provided that if not submitted at the stated meeting a special meeting of said committee shall be called as soon as convenient after such application shall be made to consider the same.

The finance committee shall report on such application at the next meeting of the club, when, if it approve the application, it shall recommend the same and move that the necessary appropriation be made by the club, or, if it do not approve the same, it shall so report to the club.

"Application for all appropriations shall be made by addressing the same in writing to the finance committee at the club house."

And to Article X, the paragraph entitled "Nominating Committee," and to the last clause thereof, to wit, the words "This committee shall be elected at the general meeting in each year," and except that from the second paragraph there shall be stricken out the words "First general meeting in each year," and inserted in lieu thereof, "Meeting of the club at which action shall be taken thereon."

Add to Article X, the following:

"No change in yacht ownership on the part of any member of any committee shall disqualify him from serving during the full year for which he shall have been elected."

"Each of the committees mentioned in this article shall have power to fill vacancies in its membership occurring during the year for which it shall have been elected."

Amend Article XI, by transferring the existing provisions thereof as thus amended to Article X, and inserting in lieu thereof the following provision:

"All expenditures of club moneys shall be authorized by the club upon recommendation and motion of the finance committee, or against or without the same only as herein provided."

"Appropriations shall be classified as general appropriations, which shall consist of all appropriations made and paid from the income account."

"Special appropriations, which shall include all made and paid from the principal account."

"General appropriations shall be made at the second general meeting of the club in each year for the use of the secretary, the treasurer, the regatta committee, the house committee, the library committee, the committee on club stations, or any other general meeting or special meeting called for that purpose, for any object not herein specified. In the aggregate the general appropriations shall not exceed the estimate of income for the ensuing year as made by the finance committee."

"Special appropriations shall be made at any two meetings of the club, but only upon vote taken upon a call of the roll."

"No appropriation shall be made without the recommendation and except upon the motion of the finance committee, nor in amounts in excess of those recommended by and moved for by that committee, except by an affirmative vote of two-thirds of the members entitled to vote, present and voting, taken upon a call of the roll."

"No member present and entitled to vote shall be excused from voting in the motion to appropriate money without the recommendation of the finance committee, or in excess of the amount recommended by the committee; upon refusal of any such member to vote he shall be recorded in the negative."

"It shall be the duty of each committee and officer named in this article to prepare in writing a detailed statement of the expenses necessary properly to be incurred during the ensuing year by the committee or officer, and the same shall be presented to the finance committee at or before its stated meeting in February."

### BY-LAWS.

Strike out of Chapter 13 the last clause thereof. Amend Chapter 15 by striking out the clause thereof which reads as follows:

"An appropriation shall be made at the same time to defray the expenses of the regatta and all other club races held during the season, which appropriation shall not be exceeded without the written consent of a majority of the flag officers."

The following new members were elected: John Moller, John Habershaw, Henry W. Bucknall, Walter S. Logan, John I. Waterbury, H. O. Havemeyer, Jr., George B. Magoun, Franklin L. Gunther, Alexander M. Prudden, Henry B. Hendricks, Lieut. J. D. Selridge, U. S. N., Lieut. R. G. Devostort, U. S. N., Eugene Tomkins, Lieut. C. King, Jr., D. Le Roy Dresser, John B. Mills, Robt. Stewart, W. H. McCord, Cais C. Bragg and John H. Gourlie.

Mr. J. S. Bergen, Secretary J. V. S. Oddie, Mr. A. B. Jones, Mr. F. T. Adams and Treasurer F. W. J. Hurst were appointed a committee to arrange for the proper celebration of the fiftieth anniversary of the club's organization, which will occur on July 30 of this year.

Mr. Smith, chairman of the America's Cup committee, offered the following resolution, which was unanimously passed:

"That the members of the New York Yacht Club desire to officially express their appreciation of the patriotic and sportsmanlike action of those gentlemen, to whom we owe the fleet of splendid vessels called for by the challenge of the Valkyrie in 1893, and on behalf of the yacht clubs of this country to thank them for their noble efforts to guard for us the emblem of the yachting supremacy of the world, the America's Cup."

Letters from Lord Douraven thanking the club for electing him an honorary member, and advising that the Valkyrie would not be raced in American waters this year, were read.

During the evening there was an exhibition a very handsome silver trophy presented and made by the Whiting Mfg. Co. of New York, to the club's order, for presentation to Mr. C. Oliver Iselin, the head and representative of the Vigilant syndicate. Mr. Iselin being absent through illness, the presentation was deferred, but Mr. J. D. Smith, on behalf of the cup committee, transferred the cup to the club.

### YACHT NEWS NOTES.

Valkyrie still lies on Tebo's drydock, but her racing spars were shipped on March 17, to the yard of E. J. Echols, and Capt. Cranfield and his crew will sail for New York on April 4, to fit out at once for the return voyage.

Romola, steam yacht, sailed from New York on March 20, for Portsmouth, Eng., in charge of Capt. Hammond, having been sold by Mr. Pulitzer to an English owner. The price is stated at \$25,000.

Semirauts, steam yacht, sailed on March 23 from Marseilles for Philadelphia, having on board her designer, Mr. Alfred H. Brown and Messrs. Pearce, Roberts, Forest and Danielson. Her new owner, Mr. A. J. Drezel, will change her name to Margherita.

Messrs. A. B. Sands & Sons, the yacht plumbers, have recently patented a very compact and light folding lavatory for yachts, two sizes being made. The smaller size complete, with pump, bowl, soap dish, etc., weighs but 13lbs.

## The Action of the Y. R. A. Rules on Length and Sail Area.

To the Editor of the Yachtsman:

Although you are a strong opponent to the present rule of rating, many of your readers may possibly be interested in an analysis I have recently made with a view to determine best lengths for the Y. R. A. classes in British waters and climate, more especially as some of the results were unexpected.

My object was twofold—firstly, to indicate what may be termed the best lengths in each of the existing classes of the Yacht Racing Association; and, secondly, to show the different action of the present Y. R. A. rule (where Rating =  $L \cdot S \div 6,000$ ), and of the old Y. R. A. rule (where Tonnage =  $\frac{1}{2}(L + B)^2 \div 1,700$ ).

As regards the first question, it will be found that the most convenient way to analyze the subject is to compare the length of hull on load-line with the square root of sail area, and perform it in such a manner that the results at once appeal to the eye.

A comparison of L.W.L. with R. on a diagram gives the same results; but they are not so easily seen, the curves being much flatter, and, consequently, the variations from the mean curve in those classes which do not agree with it are less convincingly displayed. Moreover, the mean curve itself could not have been found by a simple comparison of L.W.L. to R., whereas the analysis pursued shows that no curve could pass through the main point of existing tens and twenties, the Britannia point and the origin.

After trying various methods for indicating the relations of L to S diagrammatically, I found that the clearest and most easily comprehended was one in which the ordinates represent the percentage ratios of  $\sqrt{S}$  to L, and the abscissæ represent the rating of the yachts and classes to be compared.

The diagram is plotted from the following table, in which the first column gives the names of yachts, the second their ratings by existing Y. R. A. rule, the third their sail area, and the fourth the percentage ratio of their  $\sqrt{S}$  to L, which is of course =  $100 \sqrt{S} \div L$ .

The table would be of inconvenient size if taken into the smaller classes of 1 and 1½-rating, but the results can be stated briefly, thus: The percentage ratios of  $\sqrt{S}$  to L in the class of 1-rating are:

Callista 90.0, Corisande 74.7, Callacom 94.5, Dona 84.3, Doushka 81.5, Dot 83.9, Fader 90.1, Fantom 70.0, Fiend 93.5, Fleeting 83.0, Harle Holla 91.3, Icipit 83.9, Javelin 85.2, Kitten 80.6, Leading Article 86.3, Maharance 86.0, Mahatma 80.7, Marion 75.9, Mazoe 84.7, Minuet 86.6, Morwena 97.3, Querida 83.0, Rhosyn 78.2, Rogue 76.2, Roulette 85.8, Sacharissa 80.8, Scud 81.6, Tartar 93.2, Tip-Cat 82.9, Tisane 83.1, Tramp 86.4, Unit 93.0, Unit (Mersey) 89.5, Vikendor 72.2, Viva 99.1, Whisperm 83.8, Whoo-hoo 87.0, Wolfhound 92.3. Mean (of 33), 84.90.

The ratios for the ½-rating class are:

Assepal 84.0, Coquette 83.1, Eileen 84.7, Humming Top 90.6, Idono 74.0, Jabiru 87.0, Khistie 73.1, Ladybird 76.6, Lady Grisel 75.5, Mosquito 78.8, Nautilus 71.3, Pique 74.2, Razamuffin 80.7, Sagamore 72.3, Spruce 87.3, Vega 95.3, Wee Winn 78.0. Mean (of 17), 80.76.

Collecting the means, they are:

In the large class, 114.23; 40-rating, 106.47; 20-rating, 110.35, 10-rating, 112.89; 5-rating, 93.63; 2½-rating, 89.14; 1-rating, 84.90; ½-rating, 80.76.

Now, it is evident that the variations in these means must follow some law of change, and, as such change must be gradual, the means themselves should follow a curve when the boats race in the same climate under similar conditions. It will be found on trial that the small classes and the large class, as represented by Britannia, fit the curve shown on the figure (the mean value for the large class is probably too low, owing to the ridiculous sail plan put upon Satanita); but the 40-raters are slightly below the curve, the 20-raters are above it and the 10-raters (except Doreen and Mabel) are dreadful sinners. A dark spot shows the mean value in each class to the limits of diagram. Any attempt to raise the curve toward the tens and twenties fails to produce a probable result. Moreover, it would be worse for the forties. I am, therefore, convinced that the curve shown on the diagram is nearly correct for the average climate of an English summer and for our present means of building racing yachts. The successful use of lighter materials in the construction of hulls, or of lighter cotton or silk in the sails, or lighter spars and rigging, would lower the curve, not raise it—in which case the position of the forties would be improved, but the positions of the 20 and 10-raters would become still worse.

Now, the best percentage of  $\sqrt{S}$  to L, as shown by the curve in each Y. R. A. class, being 78 for ½-R., 82 for 1-R., 88 for 2½-R., 93.5 for 5-R., 100 for 10-R., 104.5 for 20-R., 108.4 for 40-R., 110.7 for 60-R., 116.5 for 150-R., let us convert these percentages into best lengths.

Call the percentage of  $\sqrt{S}$  to L, P.

Then  $L = 100 \sqrt{S} \div P$

But  $L = 6,000 \div R \div S$  (by rule of rating).

Estimating L from these two equations we get:

$\sqrt{S} = 6,000 \div R \div P$

$S = 360,000 \div R^2 \div P^2$

$S = 360,000 \div R^2 \div P^2$

$S = 360,000 \div R^2 \div P^2$

$S = 360,000 \div R^2 \div P^2$

$S = 360,000 \div R^2 \div P^2$

$S = 360,000 \div R^2 \div P^2$

$S = 360,000 \div R^2 \div P^2$

$S = 360,000 \div R^2 \div P^2$

$S = 360,000 \div R^2 \div P^2$

$S = 360,000 \div R^2 \div P^2$

$S = 360,000 \div R^2 \div P^2$

$S = 360,000 \div R^2 \div P^2$

$S = 360,000 \div R^2 \div P^2$

$S = 360,000 \div R^2 \div P^2$

$S = 360,000 \div R^2 \div P^2$

It is interesting to note that Columbine's point lies close to the racing curve, although she is a "cruising yawl," intended only "for occasional racing."

In conclusion, let the student observe the different action of the old Y. R. A. rule, sometimes called the 1730 rule. The result is roughly indicated by the dotted line on diagram, and passes near to the points occupied by Doris, Ulerin, Lenore, Tara and Marjorie. Their relative sizes are compared by the existing rule of rating, because it gives as true an index of their power as the tonnage rule under which they were built, and because it obviates a second diagram and enables us to compare them, not only *inter se*, but with the boats built for the existing rule. It has not been considered necessary to plot a large number of the old boats. The two curves show the precisely opposite tendencies in the two rules—so far as the relation of sail to length is concerned. This, of course, was already known. But the fact that the curves intersect at all (as they do near the Tara point), and that consequently the present rule produces more powerful boats per unit of length in the large class than did the old rule, may possibly cause surprise to some yachtsmen, as it certainly did to

THALASSA.

COMPARISON OF RATING, LENGTH AND SAIL AREA OF BRITISH RACING YACHTS.

	R	L	S	$\sqrt{S}$

THALASSA.

## The Mediterranean Races.

The absence of a suitable number of competitors made the racing at Cannes rather perfunctory, as Britannia, of 8 ft. 1 in. w. l., was of course much more than a match for the old Valkyrie, of 7 ft. 6 in. w. l. The 40-rater Oretta, née Deerhound, of 59 ft. The first race of the Société Nautique de Cannes took place on March 10, Britannia winning by 40 m. from Valkyrie, while in the 20-ton class Luciole, a French-built yacht, won from three competitors, and Va Partout, née Glycera, sailed over in the smaller class.

On March 11 the races were for feluccas, sand boats and small craft, and on March 12 the races were for the old Valkyrie, of 7 ft. 6 in. w. l. The first race of the Société Nautique de Cannes took place on March 10, Britannia winning by 40 m. from Valkyrie, while in the 20-ton class Luciole, a French-built yacht, won from three competitors, and Va Partout, née Glycera, sailed over in the smaller class.

The races for the Goelet-Bennett cups were sailed on March 13, Britannia easily beating Valkyrie and Oretta, while Cristoforo Colombo won the 20-ton cup. On March 14 Britannia won the city of Cannes prize, and Cygne the Monte Carlo prize. The race for the Carnot cup was started on March 16, but a storm drove the yachts home. It was sailed on March 20, Britannia winning. On March 17 the grand review took place. The Prince of Wales sailed on Britannia in all the races. Among the steam yachts were Mr. Bennett's Namouna and Mr. Goelet's White Ladye, and Queen Mab, chartered by J. T. Lord, all under the American flag. Mr. James Gordon Bennett has offered a prize of \$1,000, in addition to the cost of the coal on her home voyage, to the winner of a steam yacht race for vessels over 100 tons builders' measurement, with a prize of \$400 for yachts under 100 tons, and one of \$25 for steam launches carried on yachts. The races will take place off Nice on April 2.

## A New Schooner Yacht.

DURING the past week nearly all of the daily papers have published the notice of the launch of a new schooner yacht, built at Bayles' yard, Port Jefferson, for Mr. George G. Chisholm, of New York. This elegant craft, said to have cost \$25,000, is none other than the old schooner Lancer, for the second time masquerading under a new name, having discarded her late name, Enigma, for the new one, Wayfarer. Lancer was modelled and built in 1881 by Alonzo E. Smith, of Islip, for Col. Josiah Porter, a wooden centerboard schooner 8 ft. 8 in. over all, 7 ft. 6 in. l. w. l., 2 ft. 6 in. beam, 9 ft. 6 in. depth and 7 ft. 6 in. draft. In 1892 she was purchased by her present owner, and in the course of fitting out, in lifting one of the masts for some repairs, it broke in two while slung, and on examination the spars and rigging were found to be so far gone that it was necessary to replace everything above the deck. Under her new rig the yacht was known as Enigma, and as such she was in commission last season. When she laid up in the fall, some repairs to the hull were found necessary, and she was taken to Bayles' yard, where an examination disclosed the fact that the hull was in much the same state as the spars had been. The yacht was placed on the ways, the spars still standing, and the planking and frames cut away, leaving the keel, sternpost and deck, and on this foundation the so-called new yacht Wayfarer was built. We recently had the pleasure of viewing the result, and of the model the less said the better.

The Sewaren Land and Water Club is considering the establishment of a floating club house off its station at Sewaren, N. J., on Staten Island Sound, and a canvas of the club members indicates a strong feeling in favor of such a step. With a commodious and handsome club house, and a safe and quiet anchorage which will admit yachts of up to 8 ft. draught at all times, the club will be able to offer advantages to local yachtsmen that few other organizations possess. The station is only forty-five minutes from the foot of Liberty street, and the trains are frequent and comfortable. The club has now about twenty boats on its list, from a forty-footer down, and the membership is made up of New York business men.

The annual meeting of the Yapev Aquatic Club, of Bordentown, on the Delaware, was held in the club house on March 7, and the following officers were elected: Pres., S. W. Beldon; Vice-Pres., D. R. Brown; Purser, Chas. E. Burr; Captain, Fred. G. Wieser; Mate, J. M. Hartley; Directors, Geo. F. Tyler, W. Robbins and R. Bennett. The club is in a flourishing condition, being practically out of debt and owning a \$2,000 club house on the river front.

## The A. C. A. and its Critics.

Oh, he's all right. Who's all right? Why, Holden is. Except that he is misguided and misinformed, and thus is all wrong. Now, I have always thought Mr. Holden a pretty decent sort of a fellow and with considerable enterprise; had he gone to a few of the meetings in order to get the right view of the case under discussion, he would either be talking on a different stratum, if, as probably, he takes in order to see his name in print, or he would not be talking at all; for he would be of the opinion as all right-minded canoeists are, that the A. C. A. meets are just the best place in the world to go to, when you have been around with the bicycle cranks, the rowing men, and others of that ilk, and are tired of that sort of thing, and when you are in a state of mind to wish a sojourn among the most manly, jovial and true-hearted men that drift from a life of life; when you want to find sportsmen of whom you are proud to call yourself one of them and consider that you belong to the first body of "amateurs" in the utmost purity of the word, that is in existence.

Now for "Pulex." He is a funny fellow and ought to apply for a position with Barnum & Co. But I repeat, who is he? He claims to be on a par or even ahead of our noble "lex," but I am pretty well posted on canoeing matters, but fail to recall ever having even heard of him. If this discussion keeps on, we will have even men who are not members of the A. C. A. taking a hand in it, for I have heard of funnier things than that happening, and just speaking of funny, I would not be very much surprised to learn that "Pulex" could not show a certificate of membership, or any credential that he is even a canoeist. It strikes me, from the accurate knowledge he has of Mr. Holden's movements, that he is probably a disgraced Jerseyman who has an axe to grind and probably does not live far from the famed Rutherford. Perhaps Mr. Holden has beaten him in a race some time, or even perhaps won the smiles of a girl that "Pulex" was suing for. From the way he talks I should judge that he was "down" on the whole Passaic River. Probably he is not well thought of out there, and if he is, he is not out who he is they will probably think less of him than heretofore.

I should judge that some time one of the Hoboken men had gotten him in tow and taken him along with them on one of their delightful little cruises, treating him as all canoeists treat one another, and he thought he had reached the Mecca of canoeing. No, no, Pulex, it was only the beginning. Just cruise up to Croton Point this summer and you will see how the height of your happiness.

Then, too, we will have a chance to see what sort of a cruiser and combined funny man you are.

You are as badly informed as Mr. Holden is. If you do not believe me, ask Com. Dorland, and while you are at it, ask him about "collecting" news and editing a bulletin. I have not heard yet of his looking for situation, and if he don't give you a bigger fright than the man that wanted to make him "speak German as soon as he opened his mouth" last week, I miss my guess.

Mr. Burns is the right sort of a man after all.

Much obliged old man, you are right, if I can sit on the balcony all the time, it is not likely that she would be doing some of the things she does. It would be wasting ink to deny Pulex's statement that we do not do any canoeing out there. Let him come around almost any day, or any time of day, during the season, and he will find some about.

Let him join us around the camp-fire, on the cruise, on our "picnics" with the girls, or even in a race (if he can go fast enough to keep up), and see if he don't think we are as nice as we think we are.

There is one point that I endorse thoroughly in Pulex's letters; his admission of Hoboken. They are a fine set of fellows, hospitable, entertaining, good cruisers and have only one failing, they do not race enough.

As to Mr. Holden, at times I have thought there was hope for him, and then again he will say something which will disprove it. I admire his feeling that every canoeist should be a member of the A. C. A., but not for a mercenary object. He says a man gets absolutely nothing for his dollar unless he goes to the meet and that no one has told him to the contrary.

He says he can get all the important news of the meet from the newspapers and magazines. The ideas as to fittings etc., he can pick up well enough to suit him from his contact with others in cruising or visiting at neighboring club houses. What a narrow-minded, mean policy that would be. Suppose every one followed the same lines, would we have any A. C. A., any clubs, any canoeists or any canoeing at all?

I am afraid that the fellow who would be satisfied to work on such principles, would be the kind that would borrow his neighbor's paper instead of buying his own, or would cut a hole in the circus tent to see the show, instead of paying his admission.

LANTIER

On March 12, in the U. S. District Court at Boston, Judge Nelson gave his decision in the suit of Mr. Vanderbilt against the Metropolitan Steamship Co., for the loss of the steam yacht Albatross; the decision being in Mr. Vanderbilt's favor. The amount claimed is \$305,000, but the amount to be paid will be settled by an assessor, and will probably be limited to the appraised value of the colliding vessel, the H. F. Dimock, at the time of the disaster.

### Midwinter Fair Shooters.

SAN FRANCISCO, Cal., March 11.—*Editor Forest and Stream:* Last Sunday, at the Midwinter Fair shoot, Geo. Helm made one of those lucky strugs that seldom fall to any marksman, viz., on his first ticket of three shots for merchandise prizes on Midwinter Fair target, he made the possible 25 25 25—75. He received the hearty congratulations of all the sporting big game men.

RUTHERFORD, N. J., March 25. J. T. HOLDEN.

ATLANTIC DIVISION—F. O. Gross, Philadelphia, Pa.

## Chicago Challenges New York.

**Heidenreich Rifle Club.**  
 NEW YORK, March 25.—Scores shot at a distance of 100ft.: Horn 241, Roberts 236, Goodman 233, Steckel 233, Kaufman 233, Koch 226, Heidenreich 208, May 218.

**Columbian Pistol and Rifle Club.**

"The Blue Grass team presented to the club last evening a handsome rocking chair. The club expects to increase the membership to 200 before May 1."

### Paterson Rifle Association.

### Here is a Score.

By this complete score you can see that the shooter only missed be blackonce, on his thirty-sixth shot, making a 16; and at the same time he made the highest 100-shot score, topping the high score of M. Dorrier by two points.

CHARLES C. WISSEL.

### Midwinter Fair Shooters.

Scores on the ring target were only fair, C. Thierback making 92 and Dr. Rodgers 91. D. Taktor made 69 on the Midwinter Fair target. The "kingship" is in great doubt and will not be decided until the last shot is fired next Sunday. Only three are seriously competing for this honor, and it is apt to prove somewhat costly to the winner. ROSEL.

Rockner.....	232	230	E. R. CHADBOURNE, Sec'y.		

### Greenville vs. Excelsior.

On Wednesday night of last week, the "celery" district in Jersey City known as Greenville, was the scene of a large gathering of rifle men and their friends. It was the third anniversary of the organization of the Greenville Rifle Club, and in order to make the occasion of greater interest to members and guests, a team match was arranged with the Excelsior Club, 10 men a side.

The weather was beastly, rain and heavy fog enveloping the entire city and harbor, making travel both uncomfortable and dangerous. Many friends of the club from the upper part of New York and Brooklyn were prevented from being on hand to participate in the festivities owing to the weather conditions. The two cities, however, were well represented by a delegation of sportsmen who were impervious to rain or fog. With them came the Manhasset Quartette of Brooklyn, the echo of whose songs are so popular in the Edison Phonograph at the present time. Recitations and good stories by Messrs. Spayne and Dalton of Brooklyn, and by that local humorist Robert McDonald, interspersed with songs of the quartette, and others kept the large gathering which filled the club house in a continuous condition of mirth and good fellowship. The club's "Chef," Edward Borr, was in his element; he had his lunch tables loaded with the good things that help to put the inner man in good humor with the outer.

The shooting off of the match part of the programme was not started until nearly 9 o'clock P. M. The heavy fog had its best shooting talent on hand and in good form to uphold the honor of Greenville. The Excelsior team, accompanied by a large delegation of friends and members of the club, was on hand at an early hour in the evening engaged in practice upon the ranges, in order to get the lay of land, as it were. It was reported that Capt. Hansen had been for several days previous to the match engaged in putting his team through a severe course of training in order to be in condition to recover the prestige which the Greenville team secured in the last series of matches. Capt. Hansen's well-laid plans went amiss through the machinations of Chef Borr, who, as soon as his eye rested upon their good form, says to himself, "By gum! I'll stiffen every mother's son of them, till they're so full they can't shoot a little bit," and at them he went, and till the glare of his eye, Capt. Hansen's labor of the previous week was gone to the dogs.

The Greenville team put up the highest total score for a 10-men team ever made in the gallery, it being no less than 2,341, against 2,261 for the Excelsior team. The latter team, as a whole, shot in poor form, but as Jimmie Hughes expressed it, they had a high time, and if the Excelsior team desire to down the Greenville team in the future, the Excelsior Club will have to add all the latest improvements in club shooting, among which will be a Chef "à la Borr." The scores are appended, 10 shots per man, possible 250:

Excelsior Team.	
Weber	25 25 24 24 24 24 23 22 19 18—238
Hughes	25 24 23 22 21 21 20 20 20 20—216

E. A. Graef, scorer.	

### Jerseymen at the Targets.

The Saturday outing of rifle men from the Greenville and Excelsior Clubs, in Armbruster's Park, on March 24, brought together the usual number of regulars. The weather was warm and clear, light and variable winds with a dry atmosphere gave some of the best of the bullet cranks more or less trouble during the afternoon. Messrs. Dorrier, Hansen, Plaisted and Chavant went into a handicap sweep, 100 shots per man, Dorrier granting Hansen 25 points, Plaisted 50 and Chavant 100.

Dorrier did not shoot in the high form that he has been in of late, his total for the 100 shot, being 2,341. Hansen made a handicap of 25 points a total of 2,327, one point behind the old veteran. Plaisted got into trouble in his third and fourth strings and made a poor showing in his 100 shots, making only 2,062 in his total. Chavant retired from the contest on his fifth string. Robidoux, C. Boag, Scheeline, Hill, Agneau and Frank Chase, of the Greenville Club, were on hand and participated in a few practice scores. After the close of the shooting, all hands adjourned to the dining room of the Hotel Armbruster, where a pleasant hour was spent in discussing the merits of one of Mother Armbruster's Saturday evening lunches. Scores:

Chavant	20 19 20 22 22 21 17 18 24—206
Hansen	19 22 20 25 25 22 17 20 21 16—199

### Schlicht Rifle Club.

TWENTY-FOUR members of the Schlicht Club were present at headquarters on Monday night to compete for the class medals. The following are the winners: Geo. Dorr, champion medal; Wm. Schlicht, first class; M. Dans, second class; E. Mehr, third class. The scores are appended, 10 shots each, possible 50: Geo. Schlicht 24, Geo. Dorr 237, Wm. Schlicht 237, M. Dans 233, J. Diehl 230, A. Meyer 229, Capt. Brellenthine 226, E. Mehr 221, Geo. Laulenberger 221, Geo. Richter 220, John Dedrick 219, J. Schlicht 219, L. Dorr 219, G. J. Goehring 219, C. Meyer 216, C. Greek 216, P. Mane 215, G. Scholys 215, E. Poersch 211, F. Dambrix 210, C. Stein 203, J. Bouders 200, A. Tribut 205.

### Our Own Rifle Club.

THE OUR OWN CLUB of Hoboken, N. J., held its weekly gallery shoot on March 13. Twelve members participated in the competition. Adolph Malz put up the good score of 244. Kruse was second, with 240, Boehmcke third, with 238. Nearly every week sees one or more individual matches shot off on the club range between members of the club. This sort of practice adds to the shooting form and confidence of the riflemen in his rifle. Scores: Adolph Malz 244, J. H. Kruse 240, W. Boehmcke 238, W. P. Dilger 231, F. Sessmann 228, O. Schmidt 224, R. Harthoff, Jr., 218, J. Stein 203, H. Molkeuber 203, C. L. Dilger 202, A. T. Cuneo 212, C. Schmidt 202.

### Lady Miller Rifle Club.

THE Lady Miller Rifle Club of Hoboken keeps up the even tenor of its weekly practice for class medals. Some weeks the matrons get away with the medals and the honors, and then again the misses make a rush and reach the goal. This week the matrons got a little the best of the game, winning two out of the three. The winners were Mrs. Meyns first, Mrs. D. Miller second, Miss Saunders third. Scores: Miss Saunders 237, Mrs. Meyns 218, Mrs. D. Miller 218, Mrs. Stein 221, Miss N. Miller 217, Mrs. Abrie 215, Mrs. Stach 212, Mrs. Fish 210, Mrs. Beglar 207, Mrs. Volk 211, Miss Mannheim 209, Miss Yourman 203, Miss Clausen 203.

### Greenville Rifle Club.

THE anniversary racket and team match of the Greenville Club at its headquarters on Wednesday night previous had a disastrous effect upon the nerves of some of the shooters that stuck to them until the practice shoot on Friday night. Only sixteen members were present to participate in the competition for the class prizes. The scores are appended: Dorrier 245, Plaisted 240, C. Boag 240, Robidoux 239, Purkess 239, Collins 236, J. Boag 237, Chavant 234, Dods 235, Agneau 234, Lembeck 233, E. Wuestner 233, F. Wuestner 216, Hill 224, Barr 223, Holzapfel 204.

### Palisade Rifle Club.

FIFTEEN members of the Palisade Rifle Club met at headquarters in Geo. Schlicht's gallery March 18, for weekly practice. Scores: C. Hemberger 234, Fred Esperer 234, Geo. Dorr 233, Fred Krobatsch 231, H. Bose 231, R. Glaser 219, O. L. Aufderheide 216, Fred Ward 212, Wm. Rose 211, Wm. Ables 209, Ad. Ahles 209, Aug. Ahles 207, W. Bontamps 205, Henry Aufderheide 200, L. Dumont 200.

### RIFLE NOTES.

AT the weekly shoot of the Excelsior Club on Tuesday night only three men were on hand to compete for the class medals. Hennessey made 244, Duff 241 and Bins 241. The members of the club have been rather negligent in their practice of late, and the result is that their last series of matches with the Greenville Club have been in favor of the Farmers.

We have been requested by one of our correspondents to set a rule for the settlement of ties in handicap matches. The best rule that we know of in the interest of the sport is to shoot, or in other words, shoot off the ties. Any rule that decides ties by the most men who shoot, or the least others, gives the advantage to the scratch man in most instances.

The contemplated gallery match between teams from the Williamsburg Schuetzen Corps and the Empire Rifle Club, which grew out of the rivalry generated at the Zettler Club tournament on Feb. 23, will not be shot off this season. The Williamsburg Corps will open its outdoor shooting at Cypress Hills Park the early part of April, and the gallery rifle will remain in the rack until next winter.

The Paterson (N. J.) Rifle Association forwarded a challenge to the Greenville Club last week, to shoot a friendly one and home team match on the outdoor range. The Greenville Club has accepted the challenge, and the first match is arranged to come off at the Greenville Schuetzen Park, Saturday, April 14.

The New York Independent Corps opened its season shooting at 200 yds. on Wednesday of this week in Washington Park, a report of the shoot will appear in next week's issue. The New York Central Corps also opened its season on Thursday in the same park.

Champion Gus Zimmerman will pay another visit to Europe in June to participate in the great shooting festivals which will be held in Germany, Switzerland and France in July and August.

A visit to Cypress Hills Park last week developed the fact that Chas. C. Wissel is getting this popular resort into first class order to receive the host of riflemen who will be found there with the opening of the summer season in April.

The Zettler Club will open its summer practice here on April 8. The club has organized a liberal programme of prizes, which should draw out the maximum strength of the shooting element in the club.

The report in last week's issue of the team tournament of the Dominion Off-Hand Rifle Association shows that our cousins over the border are keeping rifle matters in a healthy condition. We hope to see them represented at our great shooting festival which comes off in New York in the summer of 1895. This recalls to our mind a remark made some weeks since by that old American rifleman and inventor, J. H. Brown, who, in speaking of the rifle and its interests, declared that the riflemen of America should make a concerted effort to revive international match shooting. No doubt this recommendation of Mr. Brown's will be seconded by every lover of the rifle in the land, but there is a mountain of obstacles in the way of its accomplishment and no engineer in sight competent to remove or tunnel the obstruction.

Some of our local followers of rifle matters are inclined to get hysterical over the Ross-Dorrier match, which comes off on April 18. The two principals in the coming affair are not losing any sleep over its outcome, and to all others we would say keep cool until the crisis is over, when Wissel will probably have a stock of chopped ice and Mumm to stimulate the joy of the winners and likewise drown the sorrow of the losers.

A committee from the New York Rifle Club is out looking for a desirable park in which to hold the weekly practice shoots for the coming season. The idea that we, the proprietors report that their dates for the coming season have filled up unusually fast thus far and that the prospects are good for a successful year for rifle shooting.

Now that the outdoor shooting season is drawing near and the gallery will be discarded to some extent, it would be a rather interesting match to have some Hudson county club pit a team against the famous Hudson Rifle Club. Where are the Millers, could they not make a go at the Marion boys?

The equipment of the ranges of the Hudson Rifle Club is as near complete as any in the country, being supplied with four ranges, with a complete light and dark system, and a target man takes but a short time to shoot team matches, so that the evening can be devoted to sociability as well as marksmanship. Now is the time for some of the clubs to give them a rub. Who will be first to "knock off their chip" and enjoy their genial hospitality which is always noticeable at their home.

## Trap-Shooting.

All ties divided unless otherwise reported.

If you want your shoot to be announced here send in notice like the following:

### FIXTURES.

April 4.—New Jersey Trap-Shooters' League, third team contest, combined with all-day tournament of South Side Gun Club, at Newark, N. J.  
April 4.—Morley vs. Outwater, 50 birds, \$50 a side. Morley vs. Ryan, 25 birds, \$25 a side, at Willard's Park, Paterson.  
April 4.—Interstate Manufacturers' and Dealers' Association's grand American handicap at Hunter Park, Long Island.  
April 4.—Texas State Sportsmen's Association eighteenth annual meeting, at Austin, Texas. Wallace Miller, Sec'y.  
April 4.—California State Sportsmen's Association tournament, at San Francisco.

April 7.—Union Gun Club, 50 targets, \$5 entry, open to all. Also club and sweepstakes shooting, at Springfield, N. J.

April 11-12.—Baltimore (Md.) Gun Club, tenth annual tournament, at Grason's Park; two days targets, third day live birds. H. A. Penrose and E. D. Miller, Managers.

April 12.—Morley vs. Smith, 50 live birds, \$50 a side, at Willard's Park, Paterson.

April 18-19.—Interstate Manufacturers' and Dealers' Association tournament, at Pittsburgh, Pa. Pittsburgh Gun Club will add \$200.

April 24-27.—Central City Gun Club's tournament, Central City, Neb.

April 25.—Central New York Trap-Shooters' League, second tournament, at Rochester.

May 1-3.—Peekskill (N. Y.) Gun Club, spring tournament; two days targets, last day live birds.

May 1-6.—Arkansas State Sportsmen's Association's fourth annual tournament and meeting, at Ft. Smith, Ark.; \$1,000 added money; professionals and experts will be handicapped. Address Joseph P. Matthews, Ft. Smith, or John J. Sumpter, Jr., Sec'y, Hot Springs, Ark.

May 2-3.—Interstate Manufacturers' and Dealers' Association tournament, at Springfield, O. Springfield Gun Club will add \$200.

May 8-10.—Ohio Trap-Shooters' League annual meeting and tournament, at Columbus, O. Ed. Taylor, Sec'y, Cincinnati, O.

May 15.—Second annual tournament of the Atlantic Trap-Shooting Association, at Lynn, Mass. W. F. Brown, Sec'y.

May 17-18.—West Newburg (N. Y.) Gun and Rifle Association's spring tournament.

May 17-19.—Interstate Manufacturers' and Dealers' Association's fourth tournament, under the auspices of the Prairie Gun Club, at Garfield Park race track, Chicago, Ill. The Prairie Gun Club adds \$500 to the purses.

May 22-25.—Knoxville (Tenn.) Gun Club's thirteenth annual tournament; first days, targets, \$1,000 added money, known traps, unknown angles; last day, live pigeons. Open to the world. No handicap. R. Van Gilder, Sec'y.

May 30.—Eastern New York League tournament, at Canajoharie, N. Y., under the direction of the Canajoharie Gun Club. Charles Weeks, Sec'y.

May 30.—Central New York Trap-Shooters' League, third tournament, at Utica.

May 30-June 1.—Interstate Manufacturers' and Dealers' Association fifth tournament, and second annual tournament of the Michigan Trap-Shooters' League, under the auspices of the Valley City Gun Club. \$200 added money.

June 4-9.—Illinois State Sportsmen's Association tournament, at Chicago. W. L. Shepard, Sec'y.

June 5-7.—Kansas State Sportsmen's Association's fifth annual tournament, Topeka, Kansas. J. C. Clark, Sec'y.

June 8-9.—Hingham (N. Y.) Gun Club, first annual tournament.

June 11-16.—New York State Sportsmen's Association for the Protection of Fish and Game, thirty-sixth annual tournament, at Utica, N. Y., under auspices of Oneida County Sportsmen's Association.

June 12-14.—Atlantic City Rod and Gun Club, three days' tournament. Address R. C. Griscom, Sec'y, Atlantic City, N. J.

June 14-15.—Association of the Northwest, annual tournament, at Tacoma, Wash.

June 13-21.—Chamberlain Cartridge and Target Company's first annual tournament, at Cleveland, Ohio. \$1,000 added money.

June 27-28.—Interstate Manufacturers' and Dealers' Association's sixth tournament, under the auspices of the Elwood Gun Club, at Elwood, Ind. Elwood Gun Club will add \$200.

July 4.—Central Gun Club tournament, at Duluth.

July 13-19.—Interstate Manufacturers' and Dealers' Association's seventh tournament, under the auspices of the Kentucky Gun Club, at Louisville, Ky. The Kentucky Gun Club will add from \$300 to \$400.

July 25.—Central New York Trap-Shooters' League, fourth tournament, at Syracuse.

Aug. 21-24.—Pennsylvania State Sportsmen's Association annual tournament, under auspices of Altoona Rod and Gun Club, at Wopsononock Park, Altoona.

Aug. 29.—Central New York Trap-Shooters' League, fifth tournament, at Auburn.

Sept. 26.—Central New York Trap-Shooters' League, sixth tournament, at Rochester.

Oct. 4-5.—West Newburg (N. Y.) Gun and Rifle Association's fall tournament, at West Newburg.

Oct. 24.—Central New York Trap-Shooters' League, seventh tournament, at Utica.

Nov. 28.—Central New York Trap-Shooters' League, eighth tournament, at Syracuse.

## DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed.

At the annual meeting of the Fitchburg (Mass.) Rifle and Gun Club the following committees were appointed: Finance Committee, H. I. Wallace, E. B. Twitchell, I. O. Converse; Membership Committee, H. E. Houghton, David Salmon, E. B. Twitchell; House and Grounds, E. N. Choate, F. S. Washburn, L. R. Sharkey, G. C. Pierce; Committee on Range, E. E. Howard, C. L. Tenney, W. V. Lower; Trap Shooting, S. P. Putnam, O. G. Converse, E. Estabrook; Indoor Range, E. E. Howard, F. Washburn, I. O. Converse, A. M. Sanderson, E. J. Lewis; Fish and Game, Chas. H. Potter, C. W. Pillsbury, I. O. Converse, S. P. Putnam, Dr. J. W. Stimpson. The report of the range committee that, notwithstanding the new Wallace street, the club would be unmolested, and the range of the club can be used as heretofore, was accepted.

COLUMBIA, Pa., March 15.—There was a big meeting of sportsmen at Hotel Columbia last evening to reorganize the Columbia Gun Club, increase its membership, and make arrangements for the shooting campaign. It was agreed to increase the membership to forty-five or fifty. Officers were elected as follows: President, E. W. G. Taylor; Vice-President, John C. Broome; Secretary, Harry H. Myers; Treasurer, Samuel Hoffman; Finance Committee, Messrs. Broome, Taylor, Myers, Watson and Fendrich; Committee on By-Laws, Messrs. Hoffman and Watson. The club has leased a tract of ground from Mr. Wm. Morris, in East Columbia, and at the meeting last evening it was decided to erect a club house on the lot. It will be comfortable and adequate for the purposes.

If the new repeating shotgun of the Winchester Repeating Arms Co. does not go to the front it will not be on account of not having crack shots in the first and foremost ranks; the company has secured the services of the champion of Kansas City, who is shooting the race of his life with the new arm. And then they have W. R. Hobart, the crack shot and hustler of the South Side Gun Club, and one of the best of the Jersey shots; and also Ferd E. Van Dyke, also of New Jersey, who won the target championship at New London in 1892 and who is a rattling fine shot under all conditions. And again Rolle Holmquist has started in to shoot the new gun and intends to make some new records at targets, as well as making it talk loud on live birds.

"Dutchy" Smith, of Plainfield, has made two matches with T. V. Morley at Plainfield, the first to be shot at Willard's Park, April 13 and the second at Plainfield three weeks later. The conditions, which are identical for each match, are 50 live birds per man, Hurlingham rules to govern, for \$50 a side, loser to pay for the birds. Morley and Lever, of Elizabeth, have also arranged to come together in two matches, one of which will have been shot before this issue appears, but too late for particulars. The conditions for each match are 25 live birds per man, \$25 a side, Hurlingham rules, except one barrel only to be used.

GREENSBORO, N. C., March 18.—The annual meeting of the Greensboro Gun Club was held last night. All the old officers were re-elected for the coming year, namely: President, James D. Glenn; Secretary and Treasurer, E. L. Hilmer; Captain and General Manager, J. F. Jordan. J. W. Fry was elected a member of the executive committee and E. T. Garsed was elected a member of the club. It was decided to

## Winners of Lakeview Prizes.

The Lakeview Rod and Gun Club held its last shoot for the season of 1893 March 17. The warm spring day thawed out sixty of the boys, all anxious to see the deciding scores for the 1893 prizes, and see the new automatic trap-pulling indicator invented by A. W. Walls.

The prize winners for 1893 were: Silver pitcher, decorated with crossed guns and laurel leaf wreath in alto relief, line-engraved hunting scene, etc., conditions 15 targets, unknown angles, American Association rules, no handicap, weekly shoots to begin May 1 and end Sept. 11. Fifteen entries were made and the prize won by N. W. Parker with 150 breaks out of 285 shots; C. M. Williams second with 145 breaks.

Gold-lined silver cup, 10 birds, seven shots, N. W. Parker, winner, 28 breaks, 70 shots; C. M. Williams second, 25 breaks, 50 shots, in a field of 16 entries.

Silver trophy, 20 birds, 12 shots, 50 cents entry, 33 contestants, 240 shots each, N. W. Parker, winner, 122, 10 shots; C. M. Williams, second, 84, 8 shots.

Highest number of shots during the season, \$5, C. M. Williams, 1,590. Highest number of breaks during the season, \$3, N. W. Parker, 902. Attending greatest number of shoots, \$3.50, C. M. Williams, 28. Best average shooting for season, \$2, C. M. Williams.

Greatest improvement, \$1, C. A. Hansen.

The scores for the day were as follows, special silver cup race, 20 singles, 5 traps, unknown angles:

McLellan, 01010001100010101-8	Kinerson, 010011111111101011-13
Skinner, 11010001101101101-13	Williams, 110001100101110000-9
Maseroft, 111101101101101101-10	Pade, 0000010100101000000-4
Walls, 01011011010011000110-10	G Reeves, 000000111110101000-8

C H Goodell, 0100000000-1	

## Jeannette Gun Club.

There was a big turn-out at the last shoot of the Jeannette Gun Club, and beside the regular club contest at 10 birds, a team race was shot between F. Baar and F. Walbaum on one side, and C. Carr and C. Langeau on the other, 25 birds per man, for \$100 a side. Jacob Pentz was referee, and A. Christen scorer. The result:

F Baar, 100111011111111110100011-18	
F Walbaum, 0101100111111000010000-12-30	
C Carr, 11001100100011111011010-15	
C Langeau, 1111111111111011011111-22-37	

Club shoot:	
C Offmann, 1010110101-7	G Steffens, 1110111111-9
H Otten, 1010110101-7	J Kroeger, 1101100101-7
C Boesch, 0010010111-6	C Mohrmann, 1101101101-8
H Heinke, 1001010101-5	H Winter, 1011111111-9
H Raub, 1110101101-6	A J Chester, 1011010111-5
F Baar, 1010110111-8	R Kuart, 0111101011-7
W P Rinkhoff, 1111011111-9	L Lebing, 1010010100-6
F Karstens, 1010010101-5	F Reichard, 1001010101-5
H Rottmann, 1100101111-7	F Walbaum, 1000101010-4
C Meyer, 1110111111-9	H Nobel, 1011001010-5

## Coney Island Rod and Gun Club.

The monthly shoot of the Coney Island Rod and Gun Club held on March 14, called out a goodly number of members and some good scores were recorded, despite the cyclonic breeze that blew across Woodland Park. The main attraction was the club shoot at 7 live birds, handicap rises, for the Plate diamond badge, this being the eleventh of the series of twelve contests. Mr. Fred Pfander is practically the owner of this handsome souvenir, which is well worth the winning. He has won it four times out of eleven competitions against some of the best wing shots in this section. In to-day's contest two of

his birds were carried over the boundary by the wind and fell stone dead:

W Lair (26yds).....1111120-6	012	F Pfander (28).....23e12-5	10
Dr Van Ord (30).....1100201-4	1231	J E Orr (25).....1011022-5	121
J Schlemann (25).....1200111-5	0	W Schelges (35).....212130-6	201
F McLaughlin (25).....0010011-4	1120	C Englebrecht (25).....0020001-2	
F Eppig (23).....1003210-4	2112	C Plate (25).....121210-6	121
H McLaughlin (25).....1021113-6	w	D Lynch (23).....0100221-4	01
J B Voorhes (27).....1221123-7	131	Capt Craemer (25).....1221112-7	10
A Eppig (25).....0012023-4	101		

The shoot off of the ties was at three birds, then miss and out.

On Dec. 13, 1893, Mr. Pfander won the badge competition by killing 11 to W. A. Little's 10; Jan. 10, killed 10 to W. Lair's 9; Feb. 14, killed 11 to C. Murphy's 10, Dr. Northbridge's 9 and C. Engle's 7.

## Princeton 'Varsity Gun Club.

PRINCETON, N. J., March 14.—The 'Varsity Gun Club faced a March gale to-day in their first practice for the intercollegiate race. The targets did not mind the wind a bit, but tumbled, dipped and dodged like a lot of jacksnipe. The blizzard brought tears to the shooter's eyes, but the hard shell tar-coats went right on, unbroken, round after round, though the shot could be plainly heard rattling against them.

The targets were a bad lot, acknowledged by the manufacturers "too hard a bake," but even this would not altogether account for the awful scores.

The veterans Lewis, Vaughn and Tiffany scored 14, 12 and 13 respectively out of 25. Balance of score is unfit for publication, and we suppress it with satisfaction.

One incident of the melancholy meeting raised a smile: A crow, beating to windward, passed overhead (out of range), but immediately after weathering traps, pressed downward by the gale, came near the ground. He could not fly as fast as man could run and some of our undergar, sprinters started after him.

Oh, what a sight for gods and men—and a Kodak—was the race that followed! No. 8s were too light, however, and the result was very

## THE TROUT SEASON.

THIS week in waters of Long Island and Massachusetts, and in Connecticut and Iowa the season has opened in which trout may be lawfully taken. There has been an exodus of men completely equipped, with their tackle in perfect order, intent on luring from the waters the prey from which they have been so long debarred. Side by side with these, up and down the brooks and along the little rivers, the small boy with his cut pole, his gigantic hook and his pocket full of worms, wriggles his way through the underbrush, making his way to the deepest holes, where he knows the "big ones" lie. These he takes, and perhaps before night turns into metal or paper, to him much more acceptable than the ruddy flesh of trout.

It is only in the southernmost tier of States where trout are found that the season opens as early as All Fools' Day. For New York in general, for Pennsylvania and for some other States the date is April 15, while in Maine, Michigan, South Dakota and Pike county, Pennsylvania, May 1 is the opening day, and in Colorado it is postponed until June 1.

We are not of those who believe in always starting out on the opening day. Too often this means facing a cold rain, handling an ice-bound reel and line, fishing with numbed fingers, and—worst of all—getting no fish; for these are slow to rise in the cold, rough weather of early spring. Better it is, we think, to be governed by the weather conditions rather than by the calendar, and to choose for the first outing for the season one of those warm few days which even now are at hand. There may be softer fish in the brooks than there were on the opening day, some of the big fellows may have found their way into the frying-pan and so have escaped you forever, but on the other hand, those that are left will rise with more energy, fight harder for their inches, and last longer than those taken in a snowstorm or out of water, that is icy cold. Besides the actual pleasure to the angler from the fish and their condition, there is the still greater delight to be derived from all the beauties of awakening nature now spread before him, and which the warm sunshine invites him to enjoy and to dream over.

The man is happy who goes a-fishing for the first time, if not on the opening day, at least early in the season. Shut up, perhaps, during the long winter months in office or store or city, the sights and sounds and odors of nature now seem to him something altogether new. They are revelations of another existence, yet each charmed sense brings back to him memories of other days like this, but none so beautiful nor so happy. For him now the new-come bluebird warbles his sweetest notes; for his pleasure the ruddy-chested robin hops fearlessly over the brown meadow and digs his yellow beak deep into the soft earth in search of the luckless worm that too early is seeking the light. The modest flowers of early spring—liverwort and violet, adder's tongue and

wind flower, and blood root on the sunny banks—show their tender beauties to him. Though known to so few of those who share his life in the busy world, they are old friends of his.

He hears the roll of the woodpecker on the dead limb, the lighter tapping of the vagrant chickadee and the sharp complaining of the clambering nuthatch. From some knoll in the depths of the wood comes the distant thunder of the grouse's drum; crows caw on the tops of the tall chestnuts, and from far above them falls the shrill cry of a red-tailed hawk poised on motionless wing.

Only now and then are such sounds heard. For the most part the woods are silent. The song birds have not come, yet he knows that through the forests, over the meadows and among the brambles that grow along the old stone fences, is marching northward noiselessly, but steadily the vanguard of an army soon to make itself both seen and heard. But it is not yet here.

Everywhere in field and wood and air is the sense of a silent unseen brooding motion, which shall soon burst forth into something to be seen and heard and felt everywhere. Catkins of alder are swelling, buds of willows are turning green and those of the soft maple red. Yet a little while, and all this silence of preparation shall have passed and we shall see nature no longer working in secret, but openly, joyously, in the sight of all the world.

## SNAP SHOTS.

Time is gradually revealing to us the latent and unsuspected potentialities of journalism as exemplified in the onward and upward progress of the "Sportsmen's Favorite Journal." It has in times past by alluring descriptions of favored regions impelled folks to desert their altars and their fires and the green graves of their sires and move their lares and penates to distant climes; and it has even restored members of a family, lost to one another and separated by the distance of the Atlantic from the Pacific. It has promoted acquaintances among scores of people, who but for it would have been ever as strangers, and by it have become lifelong friends. And now comes an esteemed contributor who avers, "And do you know that, not only many of my most prized friends, but some of my best clients, have come to me through the columns of FOREST AND STREAM. \* \* \* I can trace several thousand dollars directly to the friendship of FOREST AND STREAM." There is a record indeed; and it is one worth having, and not to be hid under a bushel.

It does seem that if we must adopt some one name for the fish known as landlocked salmon, and as ouananiche or winninish or fresh-water salmon, we might choose something better than ouananiche, which is a heathen word done into French and given a Parisian accent. If whonanishe is the English equivalent of the Montagnais name, why is not whonanishe to be adopted rather than ouananiche, which not one person in ten knows how to pronounce until he is told? Whatever name be adopted there will be some advantage in having one uniform designation, for this will materially aid in the discussion of the game qualities of the fish as it is found in different waters. The ouananiche of the Lake St. John district might lose some of its wild flavor if called landlocked salmon; but it is quite certain that the landlocked salmon of our own New England waters would be none the less worthy of the angler's keenest skill even if it were handicapped with the outlandish Indian-French hybrid cognomen.

Another instance of the perverse wilfulness of fate. Commander Verney Lovett Cameron was the first European to cross the African continent in its central latitudes, accomplished many other feats of exploration notable for their arduous and hazardous nature, was honored by geographical societies for his daring and achievement, and came through all perils unscathed, only to die last week from the effects of a fall from his horse in the hunting field.

Maryland is not likely just now to have a long close season on quail. A bill making a close time for two years was introduced into the Senate recently, but tabled indefinitely. Dr. John J. Fort tells us that the new bills amending the law are almost as numerous as the counties of the State, and the result will be to make Joseph's coat a thing of the past as a reminder of some-

thing variegated and patched. By the way, it strikes us that Dr. Fort has a not unworthy ambition, expressed in the declaration, "I don't know that I can leave my children any better legacy of public good than to have them know their father was one of the first active and actual movers in a struggle for sportsmen's rights and privileges."

Not until within comparatively very recent years have competent scientific and systematic investigations been undertaken to determine the true character of certain species of birds and other animals commonly called vermin. As a result of such studies abundant reason has been found already for a reversal of opinion respecting some species which have heretofore always been under a ban. The public at large is slow and reluctant to accept scientific testimony in behalf of such creatures. Hawks and owls, for example, are now known to be of incalculable benefit to agriculture as destroyers of noxious animal life; and yet it would be too much to ask of the present generation, nursed in prejudice, that it should turn sharp about and befriend the birds which it has always pursued with such unrelenting assiduity.

The Minnesota Game and Fish Commissioners have given much attention to the enforcement of the law providing for fishways in dams. They report that almost invariably, when the owner of a dam which is an obstacle to the passage of fish has been properly approached, and the matter has been properly explained to him, he has cheerfully complied with their request. During the year 1893 notices were served on fifty-seven dam owners, thirty-seven ways were constructed, and others will be in readiness this season. To provide free passage for fish is half the battle. Too often the public is ignorant, officials apathetic, dams numerous, fishways unknown and fish never heard of.

The game law committee of the New York Assembly possesses a dangerous capacity for mischief, when, as the chairman remarks, it goes into executive session. Exhibit A—Its impatience to discuss seriously any specific point except license to spear suckers. Exhibit B—The bill in which it has incorporated its ignorance of what the game interests of the State demand and its callous disregard of the demands of people who do know something of these things. We printed a summary of the bill last week. It has gone to the Senate, and there it should have nine-tenths of its provisions eradicated for the public good.

Long Island trout fishermen have crowded the season this year by getting their representatives at Albany to put through a bill making Saturday the opening day, when according to the calendar it would fall on a Sunday. The Long Island trout season opens by the letter of the statute on April 1, which was Sunday, but by virtue of this new rule the opening day was Saturday, March 31. The season for the State at large then will begin on Saturday, April 14, instead of on Monday the 16th. The full text of the new law is given elsewhere, it applies to both fish and game.

The didn't-know-it-was-loaded idiots have close competitors in the knew-it-wasn't-loaded variety. One of these latter in Pennsylvania the other day was fooling with an old revolver, pointing it in joke at his sister and his father; and when they had been frightened as much as he thought they should be by a weapon which he knew to be not loaded, he placed the muzzle against his own head and pulled the trigger. What happened then was so sudden that he probably never realized his mistake.

Mr. Roth, the Cincinnati hotel man who has just been beaten on his quail case, will carry it up to the United States Supreme Court, and there the Cuvier Club will continue the fight. If we were advising Mr. Roth we should tell him to stop where he is; but it will be a satisfaction to have the question passed upon by the Supreme Court.

The annual meeting of the American Fisheries Society will be held Wednesday, May 16, at the rooms of the Fish Protective Association of Pennsylvania. Papers of interest will be read. The secretary is Mr. Edward P. Doyle, No. 53 Broadway, New York.

## The Sportsman Tourist.

DANVIS FOLKS.—XXVII.

### Luck of the Woods.

THE report of the gun led Drive to the spot by a shorter route than the devious course of the fox. The hound looked up with reproachful, wondering inquiry a moment when laid on the trail, and then resumed his slow, persistent pursuit with a renewed burst of far-echoed melody. Sam listened in vexation of spirit to the receding notes of the hound and the answering echoes growing fainter and fainter till they were scarcely distinguishable above the fitful stir of dry leaves in the vagrant wafts of air and the constant monotone of the evergreens on the wind-loved heights.

At last they faded quite beyond the scope of intetest listening, and then dismissing with them all thoughts of sport, he went on over ledges and through depressions toward the mountain lot. His woodsman's eye soon discovered the faint marks of one boundary, which he traced to an ancient corner tree, encircled by its axe-scarred "witnesses" and bearing the moss-grown initials of the colonial surveyor and the numbers of the four lots whose common corner it had established, when Governor Benning Wentworth held disputed sway over the New Hampshire grants. Thence he carefully followed the eastern line through the forest whose autumnal silence was as unbroken as the dead stillness of winter, save for the occasional rustle of fallen leaves and the liquid tinkle of a rivulet ringing its course with a chime of foam bells.

The iterant clamor of a log-cock on his accustomed beat, the patient tapping of his lesser brethren, a squirrel's rasping of a nut, the petulant squalling of the jays, were sounds common to both seasons; but as Sam, with the habitual caution of a hunter, went noiselessly onward, he became aware of sounds that seemed strange and at variance with these. It was the noise of delving with spade and pick in stony soil. He moved cautiously in its direction till he came to the brink of a ledge overlooking a level plateau or terrace, whereon he saw almost beneath him three men, two entire strangers, but one who was steadily wielding a pick he recognized as a trapper and root digger, from a neighboring town.

A ministerial-looking gentleman in seedy black clothes, was carefully examining the upturned earth and stones, and the third, who was evidently first in the order of their worldly standing, was intently watching the proceedings while nervously puffing a cigar of such fragrance that when it reached Sam's nostrils he was possessed of a desire to smoke and instinctively put his hand in his pocket for pipe and tobacco. But denying himself, he quietly stretched out in a comfortable position to peer over the edge of the cliff to see what kind of work was being done on his property.

"Well, Professor," he heard the smoker saying, "what's your opinion of it?"

The Professor chuckled some specimens thoughtfully from hand to hand and answered in measured precision: "It is apparently an ore of good quality, but that can of course only be ascertained by smelting it in sufficient quantity for a practical test of its quality."

"Worth buying, do you think?" the other asked.

"Certainly," was answered with a decision that was presently qualified by "at a reasonable figure, Colonel."

"Of course," the Colonel answered impatiently, "It isn't likely any one will ask a steep price for a mountain wood lot, but suppose they should get their ideas up, how much would it do to pay?"

"It is very convenient to the Forge," the Professor pondered, "hematite is apt to be hard, but it can be mixed with a softer ore to advantage; the bed appears to be quite extensive, I should consider it safe to pay a thousand dollars."

Sam's heart was beating so loudly that he mistook it for the ponderous throb of the forge hammer two miles away and prognosticated a storm from what he called the "holeriness of the air."

"Pooh, a thousand dollars. Any of these people would jump at half that. It's more money than they ever saw, and it's nothing but a wood lot anyway." The Colonel threw down the stump of his cigar and stamped it out.

"And that would leave you \$500 to buy a race horse, another Cock of the Rock, or to divide between me and our friend Trask here, who is the real discoverer of the bed."

"O, William is going to be paid well for his time and trouble," said the Colonel.

"Wal, I callate I ortu hev suthin' more 'n days' wages seein' 'at I diskivered this 'ere bed," the person referred to remarked squatting on his haunches so that his knees were in a line with his ears, his arms outstretched between them, while he meditatively poked the earth with the point of the pick. "Yis, an' more 'n I c'd ha' airnt diggin' jinshang, or trappin'. Sh-sh-sh! Hear that aire haound dawg. He's comin' right stret here. Gawly bleue, I wish 't I'd fetched my gun."

He suddenly uncoiled his long legs and sprang up like an attenuated jack-in-the-box, bending an attentive ear as he stretched out a widespread hand to enjoin silence.

Sam was giving such close attention to this conversation, that his ear did not catch the voice of the returning hound until drawn to it by the words and attitude of Trask. Almost in the same instant he saw the fox a long gunshot off on the brink of the ledge, picking his way along the naked rock, intent on the strategy of a puzzling trail, yet with ears and nose alert for any lurking enemy. Sam took in at a glance that most perfect picture of cunning that nature gives, the cunning which it was his chief delight to foil, and the hunter's instinct arose above all other thought or plan, joined with a desire to atone for the morning's blundering shot.

His gun was aimed with deliberate celerity, and in the same instant spat forth its deadly charge, and in the midst of a requiem of echoing report and resounding bugle notes, poor Reynard tumbled down the cliff, almost at the feet of the prospectors, who were more startled by the sudden apparition than was he by the stroke that ended his life with its first shock.

The secret of his presence being disclosed, Sam descended to secure his quarry, which he did with well-simulated surprise at the discovery of witnesses to his shot.

"By the gre't horn spoon," he declared, coming to a sudden halt before the group, with the fox lying yet untouched at his feet. "You folks scairt me aouten a year's growth, a-comin' on tu ye so unexpected. I'd jes' as soon ha' thought o' runnin' on tu a camp-meetin' up here, fer I s'posed me an' Drive an' the wil' critters hed the woods all tu ourselves. Haint strayed off an' got lost ner nothin', hev ye?"

The Colonel hesitated a moment, considering whether it was not best to accept this as an explanation of their presence, but at once dismissed it as not a plausible one.

"Why, no, I can't say we're lost, for our friend Trask seems to know the lay of the land. But I'd like to know who owns this lot. There's some timber on it I'd like to get. This yellow birch is just what I want. There's some pretty good trees here. That tree, and that," indicating with his forefinger a couple of shaggy giants that reared their rustling manes just beside him; "don't you think they'd do, Professor?"

The Professor ran a critical eye upon them and nodded a dubious affirmative.

"There's slews o' yaller birch all through here fer few miled, jest as thick as 't is on this lot," Sam said.

"Yes, I know," the Colonel replied hurriedly, "but I want the pick of it all, and I'd as soon begin here as anywhere."

"I don't see what on airth anyb'dy wants of yaller birch in p'tic'lar," said Sam, "ef 't was cherry birch for furnitur, naow, but yaller birch, good land, what d' ye want o' that?"

"Never mind what I want of it," said the Colonel with the air of one impatient of questioning, "I want it. I've been informed this part of the mountain belongs to a man by the name of Lovel. Do you know him?"

"Yes, I know him."

"Do you think he'd be likely to sell it? For a reasonable price, of course, you understand."

"Yes, I know him. He'll sell," Sam said, and then continued with apparent irrelevance, as he stirred the upturned ferruginous earth with his toe, "this ere is a kinder cur'us lookin' sile o' land. Looks as 'ough it hed got rusty a-lyin' roun' useless so long. Guess like 's not the 's iron in 't."

The Colonel declined to notice it with a sidewise glance.

"Ah, yes, it does look a little odd. Trask's been digging some of his wonderful roots here. The owner's name is Lovel, I believe I'll call and see him."

Sam straightened his fox upon a convenient log preparatory to skinning it, seated himself astride it and began whetting his knife on his boot.

"You needn't bother tu," he said, "he's right here, all ready for a trade. I'm him. Naow, haow much be you goin' tu offer?"

"You?" cried the Colonel, quite taken by surprise, and then advancing toward him with his right hand cordially outstretched, "Why, Mr. Lovel, I'm delighted to meet you, sir. De-lighted. You are just the man I want to see and meeting you here saves lots of bother. My name's Ketchum, they call me Colonel sometimes."

Sam stuck his knife in the log and not without a flattered sense of receiving distinguished consideration, took the proffered hand of the most celebrated speculator and fast man of the county.

"And this is my friend, Professor Stillman, and Mr. Trask, you may have met Trask, for he's a hunter," the Colonel said, introducing his companions, with whom Sam shook hands with less embarrassment. "That was a capital shot, Mr. Lovel. If I'd made it I should be proud as a peacock. I never could shoot a fox. They're too smart for me. Have a cigar, Mr. Lovel."

Sam was nothing loth to accept the proffered Havana already recommended by the fragrance of its predecessor beyond all need of words. The Colonel obligingly lighted a new-fangled match in a little vial of liquid and held it for him till the cigar was properly fired. He had never tasted anything with so delicious a flavor before, yet it only made him hungrier for his more satisfying pipe. Having his own cigar well lighted the Colonel took it from his lips to say, while he regarded Sam with a shrewd, downward glance:

"Now, about this wood lot," he emphasized wood. "What are you going to ask for it, cash on the nail the minute the deed is signed?"

"What 'll you give?" Sam asked, feeling the edge of his knife with a critical touch.

"Oh, I don't want to put a price on another man's property," said the Colonel, encouraging his cigar with a few rapid whiffs. "Name your price and I'll tell you whether I can pay it."

Sam nerved himself to a supreme effrontery and made his offer in a voice so steady he wondered if it was his own.

"Wal, then, I'll take fifteen hundred dollars for 't," and was so appalled by the extravagance of the price he had named that he did not venture to look up, but began carefully ripping the hindleg of the fox.

"Whew!" the Colonel blew out a mouthful of smoke in a long whistle of surprise. "Fifteen hundred dollars! Good Lord, man, are you crazy? Why that's more than a thousand acres of this mountain land would bring. You're joking, Mr. Lovel. Let's quit fooling and talk business."

"I mean just what I say," Sam said, gathering confidence he knew not how, "fifteen hundred 's my price."

"Oh, well, then it's no use talking," the Colonel declared with assumed indifference that scarcely concealed his vexation. "I don't want the birch bad enough to give that or half of it. Some other lot will do about as well. Come, Professor, we might as well be off; come, Trask, show us the way out."

Trask shouldered his pick and spade and led the way with long strides, followed with slower steps by his companions, who presently halted and conferred together in low tones. Then the Colonel returned a little to ask, "You really mean to say that fifteen hundred is your price?"

"Sartinly," said Sam, stripping a leg of his fox.

"It's ridiculous," the other insisted, "fifteen hundred dollars for a patch of mountain land only worth the wood and lumber that's on it."

Sam suddenly faced toward him: "Look a-here, Colonel, what's the use o' your foolin'! It haint the wood you want. It's this 'ere iron ore." He picked up a handful of the black and rusty fragments and held them out in his open palm. "I do know what it's wuth, mebbey four times what I ask fer it, but you c'n hev it fer that, hit er miss."

It had seldom befallen Colonel Ketchum's brazen face

to be surprised into such blank astonishment as now over-spread it.

"Who the devil told you there was ore here?" he blurted out.

"O, I've knowed it fer quite a spell," Sam said with a coolness that was amazing to himself, considering he had known it but half an hour.

"Well, if there is, it may not be worth a thing."

"I've hearn the 'was them 'at 'ould pay a thaousan' dollars for 't. It's consid'able handy to the Forge. I guess the Comp'ny 'ould give suthin' for 't."

The Colonel retired to confer with the Professor, then came back. "Well, I've concluded to take the chances and give you a thousand," Sam shook his head. "Well, le's split the difference and call it twelve-fifty."

"No," said Sam, completing the stripping of the fox of its beauty and tossing the carcass aside, "I guess I'll give the Comp'ny a chance fust."

The Colonel chewed his cigar, forgetting to nurse its languishing fire, and after some moments of silence said: "Well, I'm going to be a confounded fool and give you your price."

"I p'sume tu say I'm the fool," answered Sam with a nervous laugh.

"Mr. Lovel," the Colonel said, regarding him with growing admiration, "I aint surprised that you take in the foxes."

"I can't help a-knockin' 'em over when they blunder right ontu me," Sam said with becoming modesty.

"Well, Mr. Lovel, I'll pay you cash down, when we git the papers made out to-morrow."

"All right, an' naow I s'pose we might as well hyper aout o' this!" Sam said, carefully shaking the fur of the fox skin, turned right side out, into comely fluffiness. "Be you folks goin' my way? Come o' dawg."

Drive reluctantly arose from the bed he had made in the leaves, refreshed himself with a sniff of the fox tail dangling from his master's pocket, and limped with gingerly, footsore steps in the rear of the party as it took its way down the rough descent.

The Colonel discoursed with as continual volubility as the uncertain footing would permit and seemed in excellent spirits for a man who had just made a bad bargain, as he continually averred he had done. After appointing a meeting at Joel Bartlett's for "drawin' writin's" for the next morning, Sam parted from his new acquaintances where their ways and his diverged, and held across the fields homeward with a light heart.

"I've allers faoun' my luck in the woods," he thought. "It fetched me Huld, an' naow it's saved me a hum' fer her an' Bub an' the ol' folks." ROWLAND E. ROBINSON.

## ON THE NORTH SHORE OF LAKE SUPERIOR.

(Continued from Page 266.)

AFTER breakfast the next morning we started for the angle in Pancake Bay, but as it was a long mile before we could reach it, and along a shore that had heretofore been considered the trying place of the vermilion-hued beauties, we concluded to give it a thorough flogging, in hopes of arousing some dappled patriarch of the deep. At it we went, sending our lures into every tempting place that looked like a lair for the gameful fish. I never was so hopeful of starting one for my fly, for never was there place that appeared more trouty than this. Boulders big and little, shattered rocks of all sizes and forms, chasms deep and narrow, ledges ragged and shelving, were in ample confusion; yet the particular denizen of the deep we sought stirred not at sight of bright or dark or fanciful feathers, whether tossed with the lightness of down or fluttered with incomparable skill. We gave them the range of almost the entire catalogue of flies, with a few novelties of Ned's masterpieces done up in ruby red, but it was in vain, for they moved not.

The place had evidently been depopulated by the tawny savages with their terrible pot-hunting tactics of the treacherous gill-net and the deadly set-lines. The premium they received from the market purveyor of ten cents per pound was too tempting to permit of leaving any of the handsome tribe in their native haunts. At last, wearied and saddened over the deplorable development, we reached Pancake Bay, and then, after two hours of industrious work, were rewarded with only two tiny trout that ran a few inches over the legal size. Ned could contain himself no longer at the miserable luck we were having, and therefore sought consolation in singing,

"The trout I'm catching now are naught  
To those that in my youth  
I threw right back as soon as caught;  
Six-pounders they in truth.

And so I sigh for days gone by,  
My heart bleeds, O, it does—  
And tears come welling to my eye  
For times that used to was."

There was still one chance more for the quarry, and that was an earnest search for a noted reef about a mile or more from shore, which we had heard of time and again, and said to swarm with lovely trout of gigantic proportions. Well, we began the quest, but it was like looking for the sunken treasure of the piratical Captain Kidd. We rowed here and we rowed there, and we rowed all around, looking for the shallow water, but ere we found it indications of rain and storm showed up in the west. Immense clouds of inky blackness were driven before the wind with an appalling look, as if on mischief bent. A moan of thunder was heard and then a vivid streak of lightning painted its sharp and lurid lines on the rolling clouds, which were heavily surcharged with dense vapor.

The reef and its finny dwellers thereon were very suddenly forgotten, for we were over three miles from camp, and with a head wind to contend with it was indeed questionable whether we could make it without being deluged with the threatened shower or driven ashore on the rocks by the storm. The boys were quick to realize the situation and applied a vigor to the blades that made them bend as if they would momentarily break.

"We may make it," said Peter, as he made the water foam from the tip of his oars, "but it will be a close race."

Ned was sure we could, but as I viewed the great, ugly-looking wings of smoky clouds spreading out on all sides as they came tearing along before the fierce gale, I was exceedingly doubtful of the result. There was no apparent danger of swamping, but only in getting a good soaking, for neither of us had our rubbers aboard, as we

were positive when we started of a continuance of favorable weather.

Lake Superior is a capricious monster, a veritable womb of storms. Zephyr breezes are soon turned to hurricanes, and gentle waves form in foaming crests with a suddenness that would inevitably shatter the most substantial fabric.

Every minute the wind was increasing and the waves rolling higher. Soon the white caps were tumbling on every curving ridge, and as the boat rode into the battling surges it would fall with a decided thump, and the water fly from the sides with a stubborn spitefulness. The lake was evidently becoming enraged, making it harder and harder every minute for the toilers at the rowlocks. Manfully stuck the half-breeds to their work, and after an hour's incessant and vigorous rowing we rounded into lovely Bachewauaung Bay and a good harbor, with the pattering rain at our heels. As violent as the indications were for a tempestuous storm, it, fortunately for us, veered to the southeast, giving us only the fringe of it in a small shower. That ended the pursuit of the carmined beauties for the day, for we remained at our quarters during the afternoon drawing consolation from our books and the cribbage board, which were ever enjoyable.

Indications of a change in the heated term which had continued for the past week were now quite manifest, as cooler weather and a somber sky had fully developed. This would evidently improve the fishing, for the lake, during the reign of the sultry weather, had been as smooth as a parlor floor, scarcely a tinkling cat's paw being observable, and that only during the morning and evening breezes.

A boy from the lighthouse, that evening after supper, set a gill-net in the bay in our immediate vicinity for the capture of herrings, as he stated, but we presume if a spotted trout got ensnared it would hardly be liberated, particularly if it were marketable as to size, for down to the fishing station near by it would go for its value in ducats. Oh! these pot hunting Indians; what fearful raids they have made the past few seasons on this beautiful and delicious fish! Tons upon tons of them have gone to the Chicago market, where they sell for about 50 or 75 cents per pound. The Fish Commissioners at both the American and Canadian "Soo's" pay no attention whatever to it, satisfied to keep their eyes closed to the defiant piracy. Julian Ralph in *Harper's Monthly* says:

"I find that on both shores of the lake there is a growing feeling that, in spite of the millions of 'fry' the Fish Commission dumps into that and the other lakes, the vast reservoirs of delicious food are being ruined by the same policy and the same methods that make our lumbermen the chief criminals of the continent. Men who have spent years on the lakes solemnly assert that not only are the annual yields becoming smaller and smaller, but that the sizes of the fish are growing less and less. Worse yet, they assert that illicit practices, or those which he made illicit, result in the catching and destruction of millions of fish which are too small to market. I do not believe that any man of leisure could find a more benevolent cause in which to enlist than in that of a crusade against the use of small-meshed nets in Lake Superior. I will not, on my present knowledge, say that the planting of fish fry is a waste of time and energy, but it certainly is regarded by many as ineffectual in the present crisis. Government had better direct its energy to that ounce of net-cutting that is better than a ton of fry."

"At present there are trout a-plenty in the streams that flow into the great lake through the beautiful forests which clothe that enormous tract, in which, south of Superior alone, there are said to be between 500 and 600 little lakes. Exactly like it, from the sportsman's point of view, is the region north of the lake, where the land looks, upon a detailed map, like a great sponge, all glistening with water, so crowded is its surface with lakes and streams."

Early the next morning the young half-breed was on the lake with his boat, lifting his gill-nets, but the finny harvest did not pan out to his entire satisfaction, as he only had eight herrings and a lot of perch and suckers, the two latter being disdainfully thrown upon the bank. I asked why he did not return them to the element, and in reply he stated they were dead when taken out of the net and that to throw them back would drive the fish away, and this is the belief of every Indian and half-breed along the shore; and further, they will not even put any vessel in the lake near their nets in which fish have been washed.

When the young half-breed passed our quarters he gave our boys three of the herrings which he had cleverly cleaned, and in such a thorough manner had the work been done that not a bone remained in them. The back bone had simply been deftly taken out with the other bones adhering to it. We had them—the herrings—for our breakfast, and I must confess they were almost as toothsome as the delicious trout of the pellucid pool. I now looked with more favor on this much abused fish, for I had always shared in the general belief that they were entirely too bony for the table. Ned remarked, when at breakfast, with a humorous twinkle in his eye, as he lifted one of the browned fish to his plate, "We came for trout, but it looks very much as if netted herring were to be the substitute."

"Be patient, gentle angler, till we have reached the golden beds where abideth the peerless fish of the painted fins and spotted sides."

"How far hence lieth this royal bed of rose-colored beauties?"

"About fifty miles; far beyond the famed river called Agnawa."

"Would we were there now."

And then we sighed in unison, and sighed deeply at that, for this land of promise, but with the prospect of an adverse change in the weather, as well as an adverse breeze, it was just then impossible to make the advance, and so we concluded to await the arrival of the tug Annie Clarke, in order to secure some mail matter we were expecting. We were evidently anchored for another day.

After breakfast, we crossed to the island opposite, which was about three miles distant, in expectation of inducing some hungry or inquisitive trout to investigate our lures. Here again we found the wind blowing to such an extent that it was hard work to satisfactorily lay our flies upon the water. We, however, received a rise or two from some of the juvenile class, but failed to impale them. Every minute the wind was increasing and the white horses gallily topping the waves, while the rocky shore was one mass of creaming foam.

"The sky looks black around, around,  
The sky looks black around;  
And he that would be merry, boys,  
Come haul his boat a-ground."

Ned suggested an immediate retreat, as there was strong evidence in the sombre masses of clouds scudding low and swiftly, of an approaching storm. The warning was one to heed, and in consequence word was given to hoist sail and let her slide for the fishing station on the opposite side. The boys turned to with willing hands and soon the sails were in position, and when the stiff breeze filled them we fairly flew over the racing waves, lifting the water in dazzling snows and gracefully tossing the foam bells from her plunging bow. It had become a wild and wicked sea in a very short time and bade fair to test the sailing capacity of our Mackinac long before we would reach the distant shore. She, however, behaved most handsomely, gallantly riding the rolling, roaring, angry waves and bringing us into harbor without shipping a single sea.

As it was two miles from here to the camp, and the wind was in our teeth, and nothing but disagreeable tacking would take the boat there, we concluded to anchor her here and tramp the distance through a dense wood to our quarters. The storm which had been threatening when we started was now fast becoming one in reality, and it was indeed questionable whether we would reach camp before the vapor clouds dissolved and the silver drops pattered. The wind was also assuming a fierceness that wildly tossed the overhanging boughs and made the forest roar and crack, while "the thunder winged with red lightning and impetuous rage" lent assistance to the elemental warfare. In addition to this it was intolerably sultry, the road rough and stony, and the walking, as a consequence, very toilsome. Soon a few drops of rain fell, then a brief cessation, and by the time we reached camp Jupiter was about ready to again open his floodgates and deluge the parched earth. Observing our tents in a fair way of going to sea over the bluff from the unruly winds, they were at once strengthened, and no sooner was it done than the storm broke with terrific violence, giving us a heavy downpour,

"Foul with stains  
Of gushing torrents and descending rains."

The heavy shower continued for about an hour and then it fretted itself away to the mutter of distant thunder.

With the disappearance of the storm the air began to grow quite chilly, and then a heavy fog arose that enveloped both land and sea in the misty vapor. It was a dismal picture, all the delicious charms of the lovely bay and its surroundings having suddenly disappeared in the dense masses of cloudy dampness. The wail of the waves sounded as audible and dreary as the very groans of nature itself; cold winds constantly sighed o'er the bare scarps of the low cliffs in our immediate front; the trees, thickets and the bending grasses were all headed to the full with the dripping moisture; in fact, everything was dull and blotted with humidity; not even the shrill scream of a white-winged gull was heard, nor the tender note of a robin broke the dismal solitude that prevailed.

After the radiance and softness of a summer morn, marvelous in gold and crimson tints, this sudden plunge into an abyss of dreary gloom was not without its depressing influence. Ned whistled and sang to keep his courage up, but the notes were only half-hearted, more mournful than melodious. We, however, wore the long hours away with the excitement of cards, the reading of fiction and the discussion of varied topics until supper was served under our tent.

The tug we had expected during the day did not arrive, owing doubtless to the storm and fog, so we took on a good stock of patience that night when we retired, hoping to hear more favorable news in the morning of the overdue boat.

The dawn disclosed a heavy fog with the sun endeavoring to penetrate through the vaporous masses. It was a very favorable indication and our hopes for clearing weather ran high. Another straw of importance to this effect was noticeable in a spider's gossamer web that had been spun with "thread of the finest tether" during the night, on a tall bush in front of our tent, and which looked like a delicate piece of lovely frosted silver work as it swayed to and fro in the morning breeze. Mr. Spider is evidently a weather prophet, and would never have worked his airy loom if rain had threatened.

Soon as breakfast was over we sent the boys down to the fishing station for the anchored boat, while Ned and I strolled over to the rocky beach and surveyed the waves as they beat against the iron-bound shore. In a brief time the fog began to rise and fade away, and then the blue above appeared in its regal beauty, while the bright sun once more poured its golden libations o'er the woods and waters. The hills gleam out as clear cut as crystal against the sky; the valleys charmingly recede in hazy softness, while the gentle wind once more sways the sable plumes of fir and balsam and plays with the tall pine tops.

A steamer's whistle is now heard and then a small tug comes in view and heads for the fishing station. It is evidently the missing tug which has had a hard night of it wandering aimlessly around in the heavy fog.

About noon the boys returned with the boat, bringing us a big package of letters and papers which they had received from the long-looked-for tug.

The afternoon developed into one of infinite loveliness, which we enjoyed in reading our delayed mail and in luxurious idleness. Myriads of flies drawn from their secluded retreats by the warmth of the sun's bright rays were drying their tiny wings and warning their round bodies as they soared and flashed in the golden glow. Some were in sombre colors, others bore aureate hues on their gossamer drapery, while many there were as black as night, or painted with "olives dark as the midnight tree" and as coarse-robed as of "beetle stamp." What a strange fascination there was about them as they swarmed around our tents with their bulging eyes and their slender shapes. It was but a brief time, however, before our admiration and observation were turned to denunciation, for the piratical species which had collected in great clouds on every side of us began their vampirish tricks of painful boring and cruel blood sucking, and then there was a scamper and a hasty anointing with the powerful repellent. This held them at bay until it was thoroughly dried and then another attack and another anointing, and so on till bedtime, when the protective mosquito bar completely baffled them,

The next morning at 6 o'clock we left Bachewauaung Bay with a balmy air blowing mild and glad through the bending trees and o'er the rippling lake. It was really one of those elemental conditions, surprisingly delicious, an earthly joy that one is prepared to demand in Paradise. We sailed along as if

"In a magic dream,  
By shadowy wood and crystal stream,  
By mountain peak and forest dell,  
Where fawns and fairies love to dwell."

Rounding the lighthouse point we skirt along a low-cliffed shore that is wooded to the very edge for at least two miles, and then are at charming Pancake Bay, with a stretch of eight miles to the opposite shore. We made the crossing in about an hour and a half to the tinkling cadence of the snowy spray as it fell and raced from the bow in fan-shaped ripples. Now we reach a rugged shore that assumes the picturesque, and which changes as unexpectedly as the pictures presented by a revolving kaleidoscope. Rounded forms of granite, gneiss and other igneous rocks, massive and grand, generously line the coast. It is an impressive and bold formation that runs ragged and serrated, with gravelly beaches here and there, and then again, a small islet or two of aged and well-worn granite in a variety of tints, comes into view with a grace of irresistible attractiveness. Scarred cliffs of a dreary and interminable gray look sternly down upon us, while, as if to brighten the scene, clusters of birch and balsam, cedar and pine, give vividness and relief to the weather-stained and lichen-covered rocks that almost continually form the shore.

Reaching Maimase, we are amid the most impressive scenery, which continues till we come to the harbor at the point where a fishing station has recently been located, and which very materially detracts from the magnificence of the islands so attractively clustered here. Unsightly shanties and rude store houses now stand where formerly lovely groves were in regal mantle of living green.

The breeze is now fast giving way to the burning orb, the sails scarcely fill, and the tinkle from the bow is a mere whisper. Overhead the silvery skies are beautiful with tiny snow-banks that float and mingle with a grace of motion that is poetry itself, while the gentle air from the deep woods is laden with balm on its wings that intoxicates with the very essence of health.

The half-breeds look ominously at the half-filled sails, shake their heads and sigh, and inwardly count the prospective hours of toil; still we move lazily by rocks and reefs, by points and promontories, by lovely coves and retreating bays, by ragged cliffs and towering mountains, until the old sails are lifeless.

Then the boys take to the oars, and again we move with an increased speed that gave us hope of reaching our destination a few hours before sunset.

Ned, tired of idling, concluded to try the silver spoon for the capture of a Mackinac trout, and so overboard went the deceitful lure that span with the revolving regularity of clock-work. He patiently waited for a strike, and when within about a mile of the twin sisters, or split rock as some call it, an aroused Mackinac dropped on the bright lure like a panther on his prey, and then the braided twine was gathered in, hand over hand, with an astonishing swiftness, and when the proper time to boat him came he was swung with a surprising swiftness to the bottom of the craft that must have about deprived him of his remaining senses.

"He will do for the pot," says the troller.

"Ay, for the pot-hunter, too," I responded.

"Thanks."

And then in deep silence and with a sardonic grin at my malicious reference, he again had the silver spoon whirling in the water, but he received no response, and was fain to wind up when we were about to land. The fish he had taken was a "shore Mackinac" and weighed about 4lbs. and was quite an acquisition to the larder and would assuredly prove appetizing as a supper dish, for we were both like hungry wolves, having had nothing but a cold collation since morning.

It was about 5 o'clock when we entered the channel that divides the two islands, and in the course of an hour had the camp in apple-pie order; and then supper was duly served and hugely enjoyed, for there is nothing like a keen appetite to give relish to the smoking viands.

Dryden felicitously covers the case when he said:

"No poignant sauce she knew, nor costly treat;  
Her hunger gave a relish to the meat."

Satisfied that we were on good trouting grounds, we concluded not to cross to the main shore for fishing till the next morning. We had had unexampled sport there the previous season and presumed it would be repeated again; but Ned thought not, and pointing to some of the implements for gill-netting and a few tepee poles which had been left behind by some vandals said, "Were it not for these evidences of the barbarians' recent visit we would have had faith in it, but surmised they had netted and fished out about every trout in the neighborhood." This somewhat destroyed my confidence, and wishing to disprove Ned's unfavorable prediction at once got my rod and flies ready for action and went to the choicest places around the islands and commenced casting, hoping to lure and hang a trout or two. I worked incessantly for nearly an hour, but not a rise did I receive, and then I began to feel a convert to his belief. I hoped, however, that the main shore would develop on the morrow a tribe of the jeweled beauties eager to spring upon the fluttering fly.

The twilight hours were indicative of stormy weather, and shortly after retiring Old Jove let loose his hosts and rain fell in torrents, accompanied with vivid lightning and heavy peals of deep-toned thunder. To add to our misery the gale brought down the tent, and the boys being aroused by our resonant yells, came to our relief and raised and strengthened the canvas with additional cord. This little event, though somewhat disagreeable, was heartily laughed over by all parties. Silence one more reigning in camp we were soon in peaceful slumber, amid the racket of the elemental battle that moaned ever and anon like a frenzied beast.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

## Natural History.

### JAGUARS IN HONDURAS.

"I'll be shot if I know just how to take the confounded tigers," said Pense, as he handed his cup for a second installment of hot coffee. "I've seen a few jaguars, and I've heard the Waikas and the Payas tell yarns about others, but the brute I had an interview with on that arroyo running into the Oro, up here a little ways, beat me completely."

"I was following up the arroyo when I came to a place where it was choked to the top of the banks with big boulders. I thought that it would be easier to climb out of the ravine and go around than it would be to clamber up those smooth stones, so up I went out of the ditch. The woods were open enough there. Well, sir, the minute I put foot on the top of that bank I was looking square into the eyes of the biggest tiger I ever saw."

"Of course. Each tiger is the biggest ever seen." "Oh, I know that," replied Pense good humoredly. "I've said the same, many a time, when others have been telling their tiger yarns. So I'll take it all back. The fellow I was staring at, and that was staring at me, wasn't really a big one. To confess the honest truth, I don't believe that he was bigger than an elephant; but it is the solemn truth, he looked as big as a church—he looked to me bigger than all the rest of outdoors."

"That fellow just lay there in the sunshine and blinked, actually blinked, as much as to say, 'Come, here's a nice warm spot and I've had a good dinner. Come and lie down here and we'll take a little nap.' He had a ware's head and bones beside him, so I knew what the matter was."

"At first I was fairly paralyzed at seeing him lying there in the sunshine that made the yellow spots among the black of his sleek hide look like big nuggets of gold set in black lava, only his coat shone more than lava shines. His tail lay curled around beside him, still except the tip end, and that bent a little, slowly. It was plain enough at a glance that he had stuffed himself as full as a tick, and was too sleepy and good humored to care a darn for anything or anybody."

"Well, it was a curious chance to see a menagerie, and after I'd looked at it may be two minutes I began to think that it might be really a free show for me after all. So I thought that I'd back down into the arroyo and skin out to where I left my gun and things, same as we all do just when we are going to run our noses into some place where we'll want our shooters. Then that blasted tiger shut both eyes for a moment, then half opened them and shut them again. He was too sleepy to care."

"Well, I'll be hanged," says I to myself. 'Have I tramped through these woods and tramped up that rocky quebrada to be stopped and insulted in this way? I'll have that chap out of there or know the reason why.' So I looked out a good place to jump for in case of trouble, and then gave a big yell. Going to scare him out of that, you know. His eyes popped open, but he didn't scare worth a cent."

"I'll try a stone or two, and see how you'll like that," says I. I grew bolder, you see, when I saw that he was too lazy to move. So I slipped down into the gully and tossed half a dozen stones up to the top of the bank and followed them myself. I pitched three or four of the stones over the bushes to where the tiger lay, but was careful to keep out of his sight. I waited half a minute, then peeped through the leaves. There that lazy beggar lay, in the same place, but his eyes were open."

"Maybe you know, some of you, how many different kinds of a darned fool a man can be. I haven't found out all of them yet, and don't expect to. What the dickens possessed me I don't know—maybe it was the sleepy, don't-care way he acted, but I ought to have known better, for his eyes were shining green, and his tail was straightened out, all but the tip end, and was waving over the wet leaves behind him; and his ears were cocked a little toward where I stood. Like a fool I chucked a stone at him."

"The next moment I was skinning out of that. I just flew down the quebrada, but how I ever got to the place where my gun was I'll be blessed if I can tell. It would break any man's neck to run over those smooth and loose stones, when he took care how he went. But I got my rifle, and of course didn't care then how quick he came; but he didn't show up. So I went on up the arroyo again, and climbed out to look for him in the old place; but he wasn't there. I saw no sign of him after that. I wonder what he thought of the impudence of the two-legged brute that wouldn't leave him in quiet to enjoy his siesta."

"What I've been wondering ever since is: How many times out of a hundred can a man fool around black tigers in these woods, and stand and yell at 'em, and chuck stones in their faces like a blasted idiot, without getting scratched. Why, it gives the coffee in my cup a chill when I sit here and think of that interview I had with his royal nibs in his bedroom."

Captain Brown lit his cigar, tilted his chair on its hind-legs, and swung it around until his elbow could rest comfortably on the table.

"You see that jaguars can be quite good-natured. In fact, I have known them to be quite sociable in their way, and to show considerable interest in people. I remember, for instance, a time when I took the short cut over the mountain between Concordia and Guaymaca. 'Twas late when I started, and night was near by the time I rode out of the green montes on the top of the range. I thought little of that, however, until my mule snorted and wheeled in the trail. I stopped her and turned her nose down hill again; then I saw in the dim light a long, slender form beside the trail and not more than 10 yds. away."

"I pulled my pistol and dug my spurs into the flanks of my mule; I spoke to her and she started forward, for she was brave and had great confidence in me. We've known each other intimately for five or six years, and have pulled each other out of more than one scrape."

"The jaguar trotted off 10 or 15 yds., when it heard my voice and saw us start on down the trail. The moon rose just then, and we could see the cat quite plainly. It trotted along quietly over the pine leaves that covered the ground, keeping about a rod or perhaps two from the trail. When it found it was foreraching on us it would

stop and wait until we came nearly abreast; then it would start down the hillside again."

"Some way I didn't shoot at first, possibly because I was giving attention to my mule. And then I thought that, as I was safe enough with my pistol in hand, I'd see what the brute would do. So we jogged along, Dolly and I, studying natural history when it was natural. Dolly did jerk her tail once in a while, and snap her jaws on the bit, but she made no other sign to show that she was not quits contented with the condition of affairs."

"We three went three or four miles in that way. Then the cat stopped in a patch of moonlight that seemed as bright as day—you all know how wonderfully plainly the moonlight here shows everything it falls upon—and turned her head toward us, as much as to say: 'Hear those dogs! What do you think about them?'"

"Old Don Pablo's dogs had heard us coming, and were making the usual racket. I rode along, and when we were abreast of the tiger it started down the hill again, as though it had come to the conclusion that it would be safe to go on, if I was ready to face the dogs."

"The voice of the dogs came ringing up from the valley again, and seemed nearer than before. The tiger stopped again, gazed at the valley where the dogs were, looked at me for a moment, and slowly turned and walked up the hillside. I put the revolver hook in my belt. There was nothing near that I wished to shoot."

"I was on a tramp through the woods of the Uampu, one day," said Peritará, in quiet, reminiscent tones. "There had been a light rain, most of the afternoon, and the newly made trail I was traveling was wet. I saw the fresh tracks of a tiger in the sand beside a creek which I forded, and came across it two or three times afterward when I crossed the stream, which I had to do often, because the trail followed the little valley for several miles."

"This fellow was keeping company with me, I knew, but it did not trouble me any, because I knew that tigers hereabout often do that, from curiosity, probably. But toward night I began to wish that the brute would either quit my trail or give me a shot at him or her. It may be well enough to jog along with a tiger beside you, by daylight; but one is likely to feel some distrust of such a neighbor in the darkness—especially when he has never been properly introduced."

"At last I came to where the trail ran down a steep clay bank, and near the foot of the incline I saw the two roofs of leaves that the men had slept under when at work cutting the trail, a week or two before. And in the clay of the hillside I also saw eight or ten footprints, each as big as my hand, left by the tiger. The water running down the hill had not yet filled the imprints—so I knew that they had been made less than a minute before I saw them."

"Night was near, so I hurried to make a fire. I felt that I wanted a good fire that night, as much as I ever wanted a fire in my life. Not that it was likely to be cold, but I had a turkey on my back, that I had killed that day, and roasted turkey would be good to eat. But everything was dripping wet, except, perhaps, the under side of those roofs of leaves, and I had hard work to start a fire. Again and again did the leaves and bark burn out and leave unburnt the splinters which I had split from the charred sticks I found on the ashes of the old camp fires. I began to fear that my matches would give out, and then I would be uncomfortable, for raw turkey is not really good food for man; and I would not like to be suddenly called upon in the night to welcome a neighbor whom I had never seen, to a house in which there was no cheerful blaze."

"But at last the fire blazed up brightly, and lit all the dripping trees about. I cut a goodly pile of branches from a dead tree that had been cut down near the camp, and then I squatted beside the bed of coals and roasted part of my turkey. I threw the bones out on the trail where I could plainly see any animal that might come to get them."

"Then I put on more wood, spread my hammock on the dry spot under the leafy roof, put my blankets in the hammock and sat down to wait for the coming of dawn. After a while I thought that it would be more comfortable to lie down to watch than it would be to squat there all night—and it was then only 8 o'clock. So I piled on more wood and lay down to watch those bones."

"It was broad and sunny daylight when I saw the place where the bones of the turkey were thrown. They were gone, but the tiger had left tracks there. I don't know that I ever saw him, or her."

"That reminds me of a trip I made across the mountains, from Culmi to San Estaban," said another of our party. "The region is pretty wild, for there is only one house in the whole thirty miles, and it is green forest all the way, with rather rough hills, tumbling streams in wild quebradas, and tangled thickets—a place that would make the true hunter's heart laugh. We lost time in getting away from our friends in Culmi, and sunset was near when we reached the bank of a creek where our Paya guide pointed to some tracks in the sand. 'Tigre negro, señores,' said he, in quiet tones."

"I was new to the country and the people in those days, and his manner and voice were so quiet that I thought that he might be trying to scare us, and when he proposed that we should go into camp within five rods of those tracks, I felt sure that he was fooling us. So when our mules had been picketed where they could reach some gamelote, I went back and examined the sandy borders of the stream. Sure enough, the footprints were those of some big cat. They looked to me like those of the mountain lion, but the Paya said: 'Lion here, too, but he is gone long time.'"

The next morning I examined the bank of the creek where we had crossed it, and also where we crossed it again after leaving camp, and not five rods from our camp-fire. There were scores of footprints in each of the places. Our beasts snorted once or twice in the night, and one of the horses squealed and let fly with his heels, but there was not a scratch on any of them in the morning."

"Not one of us got a glimpse of tiger or of mountain lion that trip, although we feel quite certain that one or more followed us for miles through the thick woods. I have learned since that they are almost sure to skulk along beside travelers in the woods, sometimes for days, seemingly from curiosity, merely. We all know that they seldom actually attack a human being."

D. E. VERAS.

### Amiable Wolves.

VINTON, Iowa.—There are always prairie wolves here, and sometimes a gray wolf is seen in the timber along the Cedar River. Last winter a wood hauler was coming up the river, when he was startled by seeing two wolves run up and trot along, one on either side of his team. The only weapon the man had was an axe, and several times he struck at the wolves. When he did so the wolves would spring to one side, and then work back close to the sled. After they had followed along in this way for a few minutes they trotted off into the timber. They may have been the same jolly pair that a man saw afterward trotting along beside his team just the other side of the road fence. They acted so friendly like that the man stopped his team and walked up to the fence with his whip in his hand. The wolves stood still and looked at him until he cracked his whip at them and almost reached them, when they jumped back and sat down. Soon they moved up nearer the man, and he snapped his whip at them again, and again they jumped back, and went through their former movements until the man became tired of it. The wolves seemed to think it was great fun."

These wolves were better natured than a timber wolf that was seen by a wood chopper at Fish Lake, eight miles north of this place. The man was on his sled, and was surprised to see a big, ugly-looking fellow walk past him, seemingly paying no attention to him, as much as to say, "I am minding my own business and I expect you to do the same." After the man had gotten somewhat over his surprise, he thought that he would at least hurry that wolf a little; so, seizing his axe, he sprang from the sled and started for the beast, but the wolf wheeled around and opened his jaws, and snarled and looked so hostile that the man could not tumble over himself fast enough in his endeavor to get back on to the sled. After the wolf had got good and ready he turned to walk away again. The man scratched his head and concluded that he and the axe ought to be enough for one wolf, so again he jumped from the sled and ran to overtake the fellow; but the timber prowler wheeled again and with savage snarls started to meet the man half way, and again the man let no snow melt under his feet while getting on to his sled, which he concluded—and wisely, too—was the best place for him, while the surly wolf took his time and disappeared in the woods."

These incidents remind me of a good and true wolf experience connected with a sportsman of this place, but I am a little touchy about relating it, because I do not wish to be called a

Mt. Tom.

### Mountain Sheep Horns.

WORCESTER, Mass., March 31.—Editor *Forest and Stream*: I have hunted mountain sheep wherever they are to be found on the American continent. I have a head with horns on which I killed that measure 17 in. at the base and are 42 in. long. I believe this to be the largest set of horns that can be produced in this country. Like "Mountaineer," I have on my hunts often heard of these 20 and 22 in. horns, and have left offers of big money with guides to let me know when they get one larger than mine. I have never heard from them."

A. B. F. KINNEY.

### An Albino Fox.

WORCESTER, Mass., March 29.—Albino is getting to be quite the fashion in almost everything this season. I think I have got the best yet. My brother sent me last week from Conticook, P. Q., which is close to the Vermont line, an albino fox skin. It is not an arctic fox, but a real red fox, perfectly white."

A. B. F. KINNEY.

## Game Bag and Gun.

### ON THE LOWER POTOMAC.

DURING the Christmas holidays "Billy" Hofer and I made a trip on the steamer T. V. Arrowsmith around the mouth of the Potomac River. We started about 3 in the afternoon, and almost before we were away from the wharf we saw a flock of about fifty ducks. When we were a little way below Alexandria we saw another flock, this one having nearly seventy-five ducks. They were too far off for us to tell what they were, but from flight and general appearance they seemed to be teal. We were in the pilot house at the time and the quartermaster, who was at the wheel, said it was rather unusual of late years to see many ducks so near Washington."

The steamer is the old Arrowsmith, of New York Harbor. She is almost entirely made over and has lost much of her former speed, but she can still do fourteen knots an hour under favorable conditions. The dining saloon is on the main deck and has windows all the way around, so that you miss none of the sights while eating. This is a great advantage, as every inch of the way between Washington and the mouth of the river is interesting."

About an hour after seeing the flock of teal our attention was attracted to the continuous flight of crows across the river toward the Virginia side. There must have been many thousands in sight, all the time from about 4 to 5 P. M. On asking the pilot about them he said that thousands of them leave their roosting place, a "rookery" back of Alexandria, every morning at sunrise, and go up toward Baltimore to feed. There they spend the day and return at sundown to the rookery, which they have occupied for many years."

Late in the afternoon we began to sight occasional bunches of ducks, whistlings and waterwitches most of them, and just before sunset we saw a flock of about 150 ducks. By the time we passed Mount Vernon it was quite dark, so we were unable to see a flock of geese, which we heard honking right under the shores of Washington's home."

The first landing made after leaving Alexandria was at Colonial Beach, a recent but flourishing summer resort. Billy and I had just gone to bed, and as the noise made by the deck hands in shifting cargo was great, we lost our first nap and got into a talkative mood, which served to keep us awake till we made the next landing and took aboard a man who was also in a talkative mood, and as he had a penetrating voice he kept every one on the boat from going to sleep for a couple of hours. Still there was some compensation, for when he got through talking the whole boat knew everything about everybody who lived on the river from Hunting Creek to Chesapeake Bay."

There were several other landings made that night, and thanks to our friend with the loud voice we saw them all. The next morning we were within a couple of miles of the bay and we saw ducks flying in every direction, but there were no large flocks. After breakfast we went up to the pilot house, where we spent most of our time, and saw the pilot kill a gull with a .45cal. Winchester at what he called 200yds. The only kinds of duck we saw during the whole trip were the southernlands, whistlings, waterwitches and teal. The pilot said he had only seen one small flock of canvasbacks this year. At a landing which we made shortly before lunch we saw a man bring aboard quite a string of gray squirrels; some of them had tails ten inches long. In the string was a red-headed woodpecker. The market-hunters of this region send their strings of game up to Washington by the steamer, and we got a very fair idea of varieties and quantity of the game of this section by seeing what the men brought aboard. At the same landing we noted a pair of coons and a wild turkey. At other places rabbits, woodcock, quail, possums and, I am sorry to say, larks and sparrows were brought on board. These sparrows are shipped to Washington under the name of "reedbirds." There were also strings of miscellaneous small birds that should never have been shot. A great many fish are brought to Washington by this steamer. The pilot said quail shooting was good here, so that the people around the mouth of the Patomac have no cause to complain about their land game, but they have good reason to protest against the shooting of the much-diminished numbers of ducks.

The steamer's business is at the river landings, and up all the narrow creeks and bays putting into it, and after sitting in the pilot house in an inky black night and seeing the pilots feel their way through the winding channel of the creeks, unaided by buoys, search lights, or light-houses, one comes to the belief that river pilots must have some sense not possessed by ordinary mortals. In most of the channels the boat's keel was so near the bottom, that the wake was all muddy and the speed was greatly reduced by the suction caused by the closeness of the muddy bottom. On several occasions the channel was so narrow that the waves of the wake broke in 6in. of water but 15 or 20ft. off on either side of the boat, and it was not uncommon to feel her keel grating on the bottom as she passed over some hump in the channel.

Among the creeks and bays we visited were Nomin Creek, St. Clements Bay, Smith's Creek and Coan River. As we were coming out of Coan River, bound for St. George's Island, we saw the President coming home from a shooting trip on board of the U. S. buoy tender Violet. She turned around after a duck and gave us a chance to catch up with her a little, so we had an exciting race up river. As the Violet is a small boat, the Arrowsmith beat. We spent a whole day on the lower river, and a most enjoyable day it was. W. B. H.

WASHINGTON, D. C.

## RHODE ISLAND QUAIL.

Editor Forest and Stream:

I read with interest the article last week in regard to the transportation of quail for the purpose of restocking depleted covers. Our little State was given more space than any of the others, but the same as all of the other communications on the subject the results of the experiment were mere conjecture. It would be gratifying to all persons interested in the work of transplanting quail to have some tangible facts in regard to the success of their efforts. Our State is the most thickly populated of any in the Union, and still there is an abundance of cover left wherein game may find refuge. The expansion of civilization has not decreased the range for game as the open land is for the most part under a state of cultivation and affords better cover for quail every year. The larger game has departed to be sure and no reference is made in the game laws for the protection of deer. Two weeks ago one was killed in Exeter, and several have been seen in the southern part of the State this winter. Last week the blood in the veins of the old hunters became almost congealed when they heard of a big bear in Exeter, and a stage of rejuvenation commenced. The bear is still at large.

But as to the quail. Our winters are somewhat tempered from what they were years ago, but occasionally we have an old timer and then the crop of quail becomes blighted and shooting the following season is poor. Under the circumstances we are obliged to rely upon this gamy little bird for our sport. To let nature take its course would be a slow means of replenishing the supply, so after the severe storms of a year ago the sportsmen decided to assist nature in order to insure some sport during the last decade of the vanishing century. Under the auspices of the State Game Association, subscription papers were started and a goodly amount was raised. Orders were placed for birds early in the fall and during the winter they have been filled, a few birds being sent on at a time. The money now has all been expended and we believe that we shall profit by the work that has been so well inaugurated. Since last December, 121 dozen birds have been received from the South through the State Association. As many more have been purchased by private parties for preserves. It has been surprising to see the interest that has been aroused in the movement by persons who never saw a quail. They have handed in contributions and many of them have even done better than some of the hunters.

I have occupied a position in this work that has brought me in close touch with the association and have had under my personal supervision the handling of a great many of the birds. This enables me to speak with a certain degree of knowledge. The experiment was a costly one and we have profited by it. We have to-day after a most severe winter a supply of birds in our woods that has not been equalled for years. Some are native, most are Southern birds. We have lost some of the birds that were liberated, but we have saved many. The exact number it is impossible to tell. Our work has been done in a most systematic manner and so well pleased are we with the result that we shall repeat the work not as an experiment next winter. We lost some birds. That was to be expected. Next year we will lose few. Why? This year has been one of experiment. We have tried every means that was suggested for the preservation of the birds and know what can be done with every conceivable pen and method, while the birds are kept in confinement and know what to expect and how to treat birds that are liberated. Our experience has cost us considerable and it would take too much space to relate it, but I shall en-

deavor to place it before the sportsmen of the country in pamphlet form if it can be done at a reasonable cost. It would be the means of saving sportsmen a great many dollars. Nearly every week we hear from the birds that were liberated early in the winter before we had had any snow, and we know for a fact that a large majority of the birds we put out have survived the severe storms.

You quoted in your last issue a letter that appeared in the Providence Journal, from a Warwick farmer with comments from a sportsman. I inclose a clipping from the same paper that I furnished in regard to the matter.

"In an open letter to the Journal, a farmer from the town of Warwick has considerable fault to find with the sportsmen. The latter speaks in bitter terms about the way the farmers are treated by the hunters, and the only thing to be regretted is that the letter is full of truths. There are a great many persons who go into the woods who are anything but sportsmen. They do not recognize the rights of the farmers, and are nothing more than armed marauders. They trample down gardens and meadows, steal fruit and kill fowl, and, if remonstrated with, insult the farmer. It is this class of men who have no regard for the laws of the State, either those pertaining to the killing of game, or the rights of individuals, that make the average farmer the enemy to a man who carries a gun and owns a bird dog. The farmers are not to blame for the way they treat the hunters, for they have been forced to use them as they do for protection to themselves and their property. A farmer who is treated as a man is easily managed, and will have no objections to gentlemen hunting on his land. The Connecticut law that makes every farmer a constable on his own land is a pretty good law, and would be appreciated by the gentlemen hunters of this State as well as by the farmers. The hunters cannot expect to shoot on private land if the owners object, and if the owners are not treated properly they are bound to object."

While the farmer may have carried matters a little too far by killing off the game, it must be remembered that he has some rights that must be recognized. Few people recognize what the farmers of this busy State have to contend with from the hunters. Every water privilege in the State is occupied by a mill or factory making these plantations a hive of industry. The operatives are numerous and the State is crowded with mills and large corporations, and these operatives find that they can get into the country by walking a very short distance. This brings the farms into close communication with the mill villages, and the people fairly overrun the farms on Sundays and Saturday afternoons. Many of them carry guns but they are not figured as a factor in the depletion of game. They do, however, impose upon the farmers, and for this reason many of the farmers believe that every man who carries a gun is an enemy to him and a source of danger to his property. S. H. ROBERTS.

## STOP THE SALE OF GAME.

A PLATFORM PLANK.—The sale of game should be forbidden at all times.—FOREST AND STREAM, Feb. 10.

Editor Forest and Stream:

No doubt Brother D. L.'s position against the prohibition of game marketing is well taken, but it does go mightily against the grain of resident sportsmen when such a pestiferous fellow as we have here in a neighboring township ranges with his spaniels through all the best shooting grounds of the region in the first days of the open season, or a little before, and gets the cream of the partridge shooting, just for the money he can get out of it. The resident sportsmen are farmers, mechanics and professional men, who can get but now and then a day's shooting, while this fellow can use all days for this purpose. Though he is suspected of sending many of his birds out of the State, they go ostensibly to Burlington market, and so the non-exportation law does not reach him. If farmers post their lands they cannot watch them, nor afford to have them watched, and this man, who disregards all laws that he can safely violate or evade, does not care a snap of his finger for a posting notice. An entire prohibition of game selling would put an end to his evil practices. Yet in some respects his ways are no worse than those of another man that I know of, a non-resident who leases an extensive tract of marsh to the exclusion of all residents, kills four times as many ducks as he can use, and leaves half of them to lie and rot. Surely they might better be sold than wasted, as Mr. De L. says, and eaten or in some way made useful, which is the legitimate end of all game.

But, after all, what does it matter? Do we not remember "Nessmuk's" prophetic words, "The game must go," and going it is, inevitably, beyond the reach of us ordinary mortals, into the control of the rich, who will share it only with their rich friends. This lapse into Old World aristocratic custom goes sorely against the republican grain, but it must be endured, and really, it is the only hope of game preservation, for the guns of the multitude are too many for the wood folk. Either way, it is not of much consequence to us old fellows, who have had our day, but we cannot help being sorry for our boys, who will have no shooting but at lifeless targets, unless by luck or crookedness they acquire riches.

Concerning the destruction of game by predatory animals, I can bear witness that 45 years ago there were a dozen foxes, raccoons, skunks, mink, hawks of all kinds and the larger owls, where there is one now, and I am quite safe in saying that there were at the same time twenty to one of the present number of ruffed grouse, twice as many woodcock in their more restricted haunts, and innumerable ducks, where now can be found only individuals or scattered flocks. Nature rarely disturbs her own balance, but civilized man is continually interfering with it. He is the arch-enemy of the game, circumscribing its ranges, and waging an incessant warfare against it with constantly improved devices for rapid destruction. AWABSOOSE.

FERRISBURGH, Vt.

TITUSVILLE, Pa., March 27.—Editor Forest and Stream: May the day be near at hand when the solid plank in our platform for the suppression of traffic in game, which you are so ably advocating, becomes an effective law in every State and Territory. It will be the last and only law needed for the protection of game outside of an observance of the breeding and spawning seasons.

Until within the last two or three years fishing and shooting has been excellent about here, but now the streams and woods are nearly depleted of game, largely

owing to the painstaking efforts of the industrious market suppliers. Our Fish and Game Club is making great effort to restock the streams, and we have put in a great many thousands of the fry of brook and rainbow trout; but we have much to contend with in illegal fishing. Stopping the sale of game would also stop about 90 per cent. of illegal fishing and shooting here. C. F. E.

ELLCOTT CITY, Md.—I am with FOREST AND STREAM in its broad policy, vote first, last and all the time for the plank, "no game to be sold." SAMUEL J. FORT, M.D.

## The Chatham Reunion.

Editor Forest and Stream:

The Chatham Fish and Game Protective Association of Chatham, N. J., celebrated the fourth year of their existence as a corporate body by a most elaborate game dinner on Wednesday evening, March 28. The affair will long be remembered by those who participated as one of the greatest treats ever given by the association.

The dinner was served in the club house at Chatham, so well known to passengers on the D. L. & W. R.R., and was most enjoyable in every detail. It has for some time been the wish of a large proportion of the members to afford an opportunity to discuss the questions that have arisen from time to time concerning the work undertaken by the club, and this was the indirect cause that led to the filling effect commented upon late in the evening by the members. The participants included a large number of the members of the association residing in Morristown, Madison, Orange and Newark.

The president, Mr. E. L. Phillips, acted as toastmaster and delivered the address of welcome, which was enthusiastically received. The Rev. Dr. J. Clement French of Newark responded to the toast "The Forest and Stream," in a most eloquent and humorous manner.

Mr. Wm. Elder, the ex-secretary and treasurer, followed Dr. French with a very interesting history of the Association and its work, and expressed the wish generally echoed by members, that the Association will in the near future be a power felt throughout the State for the protection of our game and enforcement of our game laws.

This was followed by Mr. J. H. Hardin, who responded to the toast, "Our Game Laws," in a very humorous demonstration of how it was said but true that our members found it more to their interest to know nothing whatever on this subject. The respect with which these statutes are treated in our vicinity now, however, would suggest that somebody knew something about them.

The toast, "The Ladies," was responded to by Mr. John Jephson, and most nobly were they treated at his hands. After Mr. Jephson's toast a general discussion of subjects of interest was indulged in, and the party broke up with a feeling that the evening was all too short to thoroughly enjoy the affair.

It has been the practice of the Association for three years past to buy and liberate early every spring several hundred quail on their preserve, which includes a large proportion of the "great swamp" of Morris county, N. J., and some of the finest shooting ground in the Pas-saic Valley.

Some very fine shooting has been afforded to the members as the result of this and the farmers in the whole northern end of the State have commented on the number of quail on their grounds of late, having scattered from the club preserve.

A pheasantry is now under consideration and the club hopes within a few years to afford its members the pleasure of shooting on its preserve this most royal of game birds. A MEMBER.

## An Incident with the Grays.

WHILE on a still-hunt for gray squirrels one day last fall I did something that pleased me so much that I want to tell of it. I had just brought a gray to bag and stood reloading when I saw another run up a tall maple further down in the woods. I got down there as quietly as possible, when I discovered a hole in the tree about 50ft. from the ground. I made up my mind to wait for "his nibs," so seated myself comfortably on a large boulder with a good view of the hole. Presently a little black nose was poked out and a pair of bright eyes examined the situation and disappeared immediately. I "froze" to that boulder, my gun at a ready, and for about five minutes watched this game of "Now you see it and now you don't." Of course I couldn't shoot for he would only drop back into the hole and be lost.

At this juncture, with a noise like a young freight train, a big gray came tearing down from the top of the same tree. He did not see me till he got right beside the hole, and then he brought up with a jerk that must have disturbed his internal machinery. My first impulse was to "unhook" on him, but it flashed through my mind that such action would insure the one in the hole staying there, and if I did not fire I might get a chance at both. Almost immediately the first squirrel jumped out, and the pair, one on each side, started up the tree. With as pretty a right and left as I ever made I tumbled two grays in the autumn leaves. I felt so much elated at the way I had outwitted the wily fellows that I laughed outright, which frightened the red squirrel on the dead limb of the old hemlock so that he beat a hasty retreat to the dense foliage of its top. W. W. B.

VERMONT.

## That Mudhen Tournament.

LOS ANGELES, March 20.—Editor Forest and Stream: The "mudhen tournament" has come and gone, and as a result there are just 409 fewer mudhens in Los Angeles county. About twenty-five sportsmen participated in the shoot, and the three highest scores were 65, 63 and 48, made by Mr. Nottman, Mr. George Shields and Mr. Ed. Tufts.

The shoot did not take place on the grounds of the Long Beach Gun Club, as announced, because, owing to a scarcity of water, the mudhens had all left, or mayhap it was because they had a foreboding of coming evil. So it was held on the grounds of the Cerritos Gun Club, a small but aristocratic club of five members. And so closed a successful season, and for a time the guns will repose idly in their cases, except for an occasional turn at the traps, until the coming of next season shall call them forth again.

And by the way, I am on that plank! FOREST AND STREAM started the wedge, and it rests with the sportsmen of America to drive it home, CULPEPPER.

## IN DIXIE LAND.—V.

[From a Staff Correspondent.]

AS I WAS saying, Dick had never eaten a *chile* supper, so while we were at San Antonio we ate one. But I have changed my mind about telling of this one, because we had a much better one at the same place later on, and about this one I can tell after a while.

At San Antonio we were taken bodily in charge by that vigorous and generally known sportsman, Mr. O. C. Guessaz, and his friend, Mr. A. C. Paris, another of the San Antonio reliable, and they took us all over the town and introduced us on an average to three sportsmen a minute, all day long. It is simply astonishing what a number of sportsmen this cosmopolitan town contains. The gun clubs run away up in the fifties and sixties in membership, and the strength of the rifle interest may be seen from the fact that over 100 contestants are sometimes gathered at one of the shoots on the leading range. Of tarpon fishers, and bass fishers, and duck shooters, and deer hunters the name is legion. I am frank to say that I do not believe there is a city in the United States where the percentage of sportsmen is so large compared to the population as it is here. Sport here is practical and earnest, and savors not so much of the unhearty dilettanteism of a country where the opportunity for sport is meager and infrequent.

We found the shooters of this section all lamenting the extreme dryness of the season. Mitchell's Lake, the great club preserve, about ten miles from town, was entirely dried up. Many of the lagoons between San Antonio and the coast were entirely dry, and the complaint was general that even the quail were driven from their favorite grounds by reason of the drought, and had departed for regions unknown. A bag of 50 birds a day to the gun in the country around Marcellina was now thought good, where once 100 to the gun was common—where, indeed, the most conservative shooters told us, it was once clearly within the possibility of a good shot to bag 200 birds a day, provided he had men to carry guns and ammunition for him. (This statement may be scoffed at, but only by those who have never seen the number of Bob Whites in the level pastures of the section mentioned. The statement is unfortunately true. Such heavy shooting has been done there that it is likely it can never again be possible now.)

As to the duck shooting on the Gulf coast, we heard all sorts of conflicting reports. Some said it was good, some said it was poor. All thought it would be better if the marshes were fuller of water. We got straight tips on country covering about 500 square miles, and finally concluded we would have to chance it and not try to go to all the places we heard about. In time it will appear that what our friends lamented as scarcity of game was to us the greatest plenty. Reviewing the trip, we now know that we visited in all the best all around country now left in the United States.

## A New Tarpon Country.

On one thing all the San Antonio men agree, and that was the excellence of the tarpon fishing to be had at the Aransas Pass, near the coast town of Rockport, which was to be the furthestmost point of our journey. Mr. T. H. Micklejohn, one of the tarpon coterie of San Antonio, told us we would hardly get a tarpon in January or February.

"At any time from March or April till December, depending on the weather," said he, "you can not have only the prospect but the certainty of hanging a tarpon at the Pass, without the tedious uncertainty which marks the Florida fishing for the Silver King. In September I believe I could guarantee a decent fisher a tarpon for every day. I have hung eleven tarpon in one day, and landed two of them, and all of our little party that go down there have had equal experiences. Four of us killed nine in one day. The tarpon come into the channel of Aransas Bay, and in the proper season you can see them not only in dozens, but apparently actually in scores. You need not smile, for I have seen days when this was absolutely true. They run in out of the Gulf through the Pass at the jetties, and play up and down in the channel and in the shallow water inside. We don't fish for them still-fishing with ground bait as they do in Florida, but troll for them with mullet bait, as you would for mascalonge. When a tarpon strikes a trolling bait he does it with a rush, and you've got your hands full from then on.

"Yes, sir, I do not hesitate for a moment to say that we have the finest tarpon fishing at Aransas Pass there is to be found in America. It surely surpasses that of Florida, just as much as you can imagine. Moreover, our tarpon season is eight months long.

"You never heard of this country for tarpon fishing, did you? No, and there are a great many other things about Texas that you never heard of. The sportsmen of the North don't come here because they don't know the country, and they don't know it because no one has ever taken the trouble to tell about it."

Mr. Micklejohn's assertions we found borne out by every one we met along the coast, and although the season did not invite us to use the tarpon rods and outfit which he insisted we should take down with us, we only regretted the late date of our visit, and resolved next time to so regulate our dates as to add the killing of a tarpon to the long and varied list of sports possible in this singularly-favored corner of the world.

## A Winter Paradise.

At San Antonio we met Mr. A. W. Adams, of Chicago, who has spent two or three winters there to escape the tortures of a rheumatic trouble which is always aggravated by the Northern winter. Mr. Adams is a devout sportsman and looks on the winters now as being the happiest portions of his life.

"This town is simply a winter paradise," said he, "and I am surprised that it is no more widely known—though I believe they claim that over 1,000 Northerners wintered here last winter. The climate is dry, so warm and yet so bracing, that a fellow just can't stay sick here. I have tried California, all of it, and I consider San Antonio far and away superior in point of winter climate, and especially much better than California in rheumatic troubles.

"This is a great place to spend a winter. You can have every and any kind of field sports. The region about is full of all sorts of game, from deer and turkey down to quail, and even if you didn't want to shoot you always had plenty to see, for this is the oddest old town you ever did see—50,000, about half Mexican, half American, one-

third German and another third of all sorts. It's as cosmopolitan as any city in America, and yet as friendly and easy as a country village, and full of the best fellows you ever saw.

"What San Antonio needs more than anything else in the world is a good hotel. Give her that, and you can't hold her back from a big share of the winter traffic of the country. Her natural advantages for that purpose are not equalled anywhere in the United States."

San Antonio grew on us strongly as we went about it with our friends, and we almost regretted to turn our faces to the still further South. But we had not yet smelled the salt-water or killed a canvasback, and this we were billed to do. Therefore we told Mr. Guessaz and Mr. Paris that we would stop again on our way north and made our preparations for the short railroad journey which lay between us and the terminus of our long trip from the North.

## The Southern Railroad Man.

There is a difference between the Northern railroad man and the Southern railroad man. The railroad man in general is a maligned individual, for whom no one ever has a good word. He has to be brief and exact to hold his job, and he has to be icy and austere to save his time, but back of the cold front you usually will find a good fellow, well posted and liberal, fond of a joke and often fond of sport. The difference between the Northern and Southern railroad man is, I presume, largely one of exterior. The Northern official is gruffer and harder to get at. The Southern man is easier and more democratic of habit, and if I must say it, more polite.

Mr. Martin, the general passenger agent of the San Antonio and Aransas Pass R. R., to whom we had letters equivalent to a sight draft on his general information about the country, was out of town, but Mr. G. F. Lupton, assistant passenger agent, took us into the office of the road, stopped all the stenographers in their work, opened the doors, told us to take possession, and made us feel as though we owned a controlling interest in the stock, to

MEXICAN HOME—SAN ANTONIO.

say nothing of a large slice of the State of Texas. Once more we received the courtesy of a baggage frank for our dogs, and letters to employees which proved of great service. I cannot say enough for the courtesies shown us by the railroads all through our trip.

"We have been expecting you through here for several days," said Mr. Lupton, "but knew you were having a good time at Little Rock. They are looking for you down at Rockport, too, and you are sure to have a great time there. We hear of good bags of ducks down there still, and you will get shooting without a question. My only regret is that you are not here in a better tarpon season. You never ought to leave here without killing your tarpon, and if it were almost any month but this you surely would not have to. We have the best tarpon country of the United States and I don't say that because I'm in the railroad business either. You will have to come down again, if you don't get your tarpon this time. You can tell the readers of FOREST AND STREAM unhesitatingly that you have discovered a new tarpon country, and one where it isn't all waiting and no fighting, and you can say this on my personal, and not my railroad, advice, too."

## The Last Link.

It may be seen how close is the relation between San Antonio and the sea coast country. It is a mere trifle from one to the other. As San Antonio increases in vogue as a winter resort—which it cannot fail to do—the coastwise country below it will be visited by greater and greater numbers for the sake of the added variety and the great excellence of the sport offered. At present no one in the North knows of Rockport—nor many in the South, for that matter. Yet FOREST AND STREAM will presently show that here is one of the very best, perhaps actually the best, all-round sporting country for winter tourists there is on the continent—a place where you can get climate and actual shooting and fishing all combined. This is news, and good news.

Therefore we hastened to cover the last link in our journey, the short railroad run from San Antonio to Rockport over the Aransas Pass road. In this you leave San Antonio at 2:10 P. M. and get in to Rockport at 8 P. M., if memory serves, anyhow in the early evening.

## Kennedy Junction.

At Kennedy Junction, between the two points above mentioned, the shooter could locate for a great shooting time. The country is a beautiful one, and the San Antonio shooters told us it was a great place for quail, with the usual chance at bigger game, which prevails in all this region now in hand.

## Beeville.

Beeville is still further south than Kennedy Junction, and is another fine point. Beeville has been written of a great deal in the papers, and many will recognize this name before any others mentioned herein, because of the game stories from that village. The stories are not exaggerated. The quail, deer and turkey are not shot out of that country, but Beeville was in the center of the drought

this year, and much of the game moved away to the water courses.

## Alice.

Alice is the name of a terminal station on another branch of the Aransas Pass Railroad from that which we were on. We were told that a magnificent trip could be made by going to Alice and taking wagon there to the southeast, among the fresh-water lagoons, in the King's Ranch and Santa Rosita Ranch pastures. This is a great wildfowl country when there is any water in the country. This is newer ground than that directly south of San Antonio, and I believe I would rather risk it than the Beeville country, because it has not been much shot and is practically unknown. By getting down between Alice and Corpus Christi, well into the southwest corner of the State, and along the Nueces River bottoms also, one is in the best of the deer and turkey country, though away from all civilization and all supplies. This section we had not time to visit, so all I can say is hearsay, though hearsay of practical certainty. In short, when you get this far down, the only puzzle is to know which way to go. It is an embarrassment of riches. You are now in a real, actual, genuine game country at last. Don't worry where to go. Go anywhere, and be satisfied, and don't grieve if you didn't get to the best place of them all, and kill more game than anybody ever did before. Certainly you will here meet all sorts of contradictory advice as to the actual Mecca for you. Don't mind that; you meet it in any country, no matter how wild. Don't mind it. Be sure, it is Mecca all around you.

Perhaps readers will pardon the personal part of our story, in order to learn definitely what sort of sport we actually had at the points we visited, that being to some minds the only actual test. Therefore I shall give patiently the further details of our hunt.

## Rockport at Last.

We ran into Rockport at last, after our pleasant afternoon across the live oak intervals, the cotton fields and the open grass country of the great ranches. At the depot we were met by Mr. Milton Everett, the proprietor of the Aransas Hotel, to whom we had letters. So, though we were now a long way from home, we were still not out from among our friends. Mr. Everett impressed us as though we had always known him. It was natural to meet him, natural to get our baggage and our beloved dogs over to his house, to "clean up a bit," to eat a supper—dear me, what a supper we did eat of sea fish and oysters—and then to sit down for a rest or talk, at length safely and happily arrived at the end of our journey, in sound of the sea, many hundred miles away from Chicago, and an untraversable distance away from winter and from care. In Chicago you grow old. In Rockport you grow young. If I have luck I will again go down there and from time to time slip off a load or so of years. I say, then, in the morning after you arrive at Rockport you are young. Ponce de Leon missed the place.

## Couldn't Hurry.

You can't hurry at Rockport and you needn't try it. They won't have it. After a little you won't want to hurry yourself. In this salt, summery air you feel too good right where you happen to be to want to get up and go anywhere else. It isn't laziness, but a divine restfulness. Don't try to hurry. You'll only grieve and astonish people, and you won't be near so happy as if you take it easy. Don't go down there with only a week or so of time to spend. Make it a month. Then you will throw in another month when you wake up and find the first month is gone.

Dick and I, full of the city restlessness, wanted to get right out and do everything and go everywhere at once. Mr. Everett gravely acquiesced. So did Mr. J. C. Fulton, to whom also we had letters. Mr. Fulton is one of the wealthy and well-known citizens of the place, and to him and Mr. Everett my friend and I were indebted for most of the pleasures of our visit. I imagine they must have thought us two nervous individuals, we were so impetuously eager to catch a boatload of fish before breakfast, and kill another boatload of ducks before dinner. To all our wishes they gravely acquiesced, and said, "To-morrow."

## To-Morrow.

In fact, we were in mañana land, the country of to-morrow, the only country on earth where a man can actually rest or get rested. It was to-morrow, though I forget which to-morrow, when we made our first trip out of town after sport.

This is a very to-morrowish story, on the whole, it seems to me, but I can't help that. To-morrow, then, that is to say, in a later chapter, I shall describe Rockport fundamentally, shall explain how it is that most of the sporting at that place must be done by means of sailing boats, whose cabins afford cooking and sleeping accommodations. My immediate concern now is to kill a few ducks, and so bear out the promise of less bloodlessness in the future of this story.

## A Tidy Craft.

We sailed from the Aransas Hotel wharf, of a lovely morning and on a lovely craft. Our good fortune never forsook us, and we struck the best of the several sailing craft which carry passengers for this purpose. This was the Novice, a 31ft. cat-rigged centerboarder, 12ft. beam and 34in. draft. Novice has for skipper Capt. Johnnie Bludworth, and for mate Jimmie Bludworth, the former 25 years old and the latter 22. These two boys built Novice from stem to stern and from gaff to keelson, doing all the work from shaping the ribs down to caulking and painting. Johnnie Bludworth designed her, working from a sectional model of his own make. "I never have got far enough along to design a boat on paper," said he, "but I'm going to, some time." When I add that away down here on the Southern Sea Johnnie and Jimmie Bludworth have been treading FOREST AND STREAM for years, and know pretty well what all the Northern boats and builders are doing, it may be less surprise to add that Novice was a success from the start. She trimmed up everything in her country, and carries undisputed the gold ball of supremacy aloft on her mast. Moreover, in 1892 she left home and went clear east to Galveston, going out into the Gulf, and at the Galveston regatta beat everything that sailed against her in all kinds of weather, and brought home the great silver regatta cup, which now rests at Johnnie Bludworth's cosy home down at the Shellbanks shipyard. Novice has beaten the best North-

ern-built boats of professional design that have been sent to this country, and the seamanship that obtains here is by no means amateurish. I hope she will continue to beat them all, partly because we came to love the boat from sailing on her and learning her so satisfactorily, but mostly because she is sailed by two of the whitest boys that ever hauled a rope or shot a gun—two perfect young gentlemen, quiet, pleasant, plucky, cheerful and kind, absolutely the best guides I ever met on any trip. The stranger will do well to get these boys to take him out, for they have shot for the market, carried shooters and fishers, and gone out for sport themselves so much all over this coastwise country, that they know every inch of land and water thereabout, know where the birds are and know how to get to them if they can be gotten. Moreover, they are two lovable boys, boys out of a thousand, boys who will blush if they see this, but still boys who will sail in any wind and not get rattled in a squall—as we learned for ourselves. We thought it a big part of our luck that we fell upon Novice—the which we owed to Mr. Fulton's plans.

Our host, Mr. Everett, Mr. R. M. Innes, superintendent of transportation for the Aransas Pass R. R.; Mr. McCullom, of Covington, Ky.; Dick Merrill and myself, made up the passenger list, and Johnnie and Jimmie the ship's company. We were bound for the Shellbanks, on the dredged channel through the flats that separate Aransas and Corpus Christi bays. The run was about eight or nine miles, and we made it easy as a dream, Novice compelling our admiration the first hour we sailed aboard her.

#### By the Sea Shore.

At the Shellbanks the channel makes a swift bend out of Aransas Bay, and twists away through the flats, past the mouth of that wide and expensive dredged canal, which once made the claim of Aransas City to "deep water" and therefore to a metropolitan future—now, alas, not in the least metropolitan. The land here is low, with little islands and tongues and shallow sprits. Here Johnnie Bludworth has his shipyard, where the boats pull out when they want to calk or repaint, and he and his young wife are the only inhabitants of the bank. Across the channel is the Quarantine station. Beyond that is the lighthouse. Beyond that again, about six miles or so from the banks, is Aransas Pass, where the Government jetties are, and where the tarpon are, too. Beyond the Quarantine station, half way over to it, back of it—in short almost any direction you may look—are passes where the redheads fly to and from their feed. At the Shellbanks itself is a fine pass, and on all hands from this central point are miles and miles and miles of feeding grounds, covered with water from 3 in. to 3 ft. deep and full of the sweet bulbous rooted grass which is here the staple food of the wild ducks. Certainly a very pleasant set of circumstances for one wishing some easy and easily accessible duck shooting.

#### Among the Redheads.

Everybody went fishing but Dick and myself. The boys took us out with the sneakboxes to try for some of the redheads which we saw beginning to work. The Novice has two of these boxes and about 100 decoys in her outfit. The sinkboxes are made by the boy's father, who is a good metal worker, and are built after an original but very good model. They are about 7 ft. long by 3 ft. wide, with a high turtle-back deck, with coaming, leaving a cockpit about 4 ft. long and just wide enough for the shooter to lie down, which feat he must accomplish by sticking his feet under the turtle-back deck in front of him, and hunching his shoulders in sideways into the cockpit. When he wishes to shoot he simply sits up and shoots from that position. When in use, the deck of the sinkbox is covered with mud and salt marsh grass. The material of the boat is galvanized iron, and there are no air chambers. If filled, the boat would sink at once, but they will take an astonishing sea, so long as one keeps cool and doesn't fall out. Car locks of collapsible sort are provided. When in position the boat sits low in the water and makes an admirable blind. It must be borne in mind that nearly all the coast shooting at this locality is open water shooting, with not a particle of cover of any kind about. As usual, the hunter instinct has developed precisely the most useful sort of means to get at the game. By the use of these sinkboxes we made good shooting when others were helpless and could get no bag at all.

"Do you expect me to get into that cast iron tub and go out there into that sea?" I asked of Johnnie, as he signified his readiness to start.

"Why, we fellows do," said he, deprecatingly. "It's safer than it looks."

"All right," I told him, "if you can stand drowning I suppose I can, but I want to tell you right now, I'm plenty scared of iron boats with no air in 'em, when the waves are higher than a meeting house and the wind off shore."

Johnnie was so polite to laugh at me, and seeing he was so polite, I resolved to drown gracefully. I soon found, however, that the pesky little thing was a lot better than it looked. You couldn't upset it; and though it rowed just as well sideways as any other, it bobbed on the seas like a cork, and the waves never got beyond the coaming. Moreover, we had only a quarter of a mile or so to go, and then we struck a flat, whereat we pulled up our top boots and waded. This was on a feeding bed where the birds often banked up, and here Johnnie left me after we had put out our decoys and anchored the sink box quartering to them.

#### Killed Something At Last.

I lay down full length in the box, with one eye just over the leeward edge, with my open shell box between my legs, and with Roll Organ's gun poking out through the low fringe of grass about the coaming. It was a couple of hours before dark, perhaps, the wind was right, and the birds were moving, for I could see flock after flock passing, some in one direction and some in another. Many headed up the shore line of the Quarantine island, and of these I knew at once I should get in a few flocks, for the wind was exactly right for it.

It was not long before I saw a long, black line of rapidly moving fowl coming up my way, and when I gave them a call they swung straight in for me, and I don't believe you could have kept them out of that tough looking flock of home-made decoys if you had tried your best.

"Oh, dear, but won't I just kill about 19 of you, now!" I chuckled to myself, as they dropped and came skimming in with their wings set and their toes pushing out in front of them. I ought to have "let 'em light," as my

friend Harry Dale says, but I couldn't keep down any longer. I sat up, and it seemed to me that I had pulled most of the deck with me when I did. The birds bunched for an instant, and at 25 yds. I let them have it, expecting to kill the whole 19 right there. I heard the swish of the shot as they struck, but to my surprise only one bird fell out, though he was very limp and folded-up like. In my surprise at not killing the other 18, I dwelt so long that I had to be very careful with the second to cut out another bird, which also fell in a very tired way on the water. I had to let the other 17 go, but on the whole felt satisfied with my pair of redheads, which were in full plumage and extraordinarily fat and heavy—as indeed we found all the birds in that country.

I hardly had screwed myself into the sinkbox again before I saw another flock breaking their necks to get in among my decoys. As they drew down I sat up calmly on a wet place my rubber boots had left on the bottom boards, and the shot of Roll Organ's gun went snip! snip! about like snapping your fingers, against a pair of birds, and they came out with never a mark as they hit the water.

"The trouble with me is," thought I, as a bitter smile wreathed my cruel lips while I put in a couple more shells, "that I'm not understood. I'm probably the best duck shot there is in the whole world, and I never knew it before. I can do this every time. It's dead easy for us good ones."

I suppose I ought to stop the story right here, and let the impression go abroad that I was correct in my surmises as above. The truth is, however, that out of the very next flock I only got one bird, and failed so many times to get my double that I concluded probably I wasn't

MISSION OF SAN FRANCISCO DE LA ESPADA—SAN ANTONIO.

actually the best duck shot in the whole world, but maybe only the next best. For a time the birds swung to the right instead of to the left. That made it awkward shooting from the box, and I would miss with my second barrel. Then they would break to the left of me, and come in so close that I would miss them with the right and kill with the left. I killed a number at less than 20 yds. from the box, and this, it should be remembered, was right out in the open water. One way or the other, I found it almost impossible to keep from getting at least one bird out of each flock, for they were decoying beautifully and coming fast, so that soon I had a very nice little bag, indeed—enough to cover up the faintest of the big skiff in which Johnnie came out after me. I was quite in love with the world that evening, for I had had one of those rare treats—a thoroughly satisfactory little shoot on wildfowl. I was pleased with the sinkbox, pleased with the nitro loads I had brought all the way down from Chicago, and tickled to death with Roll Organ's gun, which mentally I resolved to steal. Evidently my first day at Rockport was a success.

Meantime another schooner-load of shooters had deployed along the channel back of my point and had canonaded the birds in such fashion that Dick, who was stationed still further back, had had little or no shooting and had only bagged half a dozen birds. "He's a mighty good shot, though," Jimmy assured me, confidentially.

The wind fell at sunset and we could not sail back to town. Dick and I ate a few dozen oysters after supper, and then tiring of that monotonous pastime went spearing flounders by lantern light with Johnnie. We had no spear so we sharpened a stick. That's good enough for a flounder spear. We got half a dozen of these misfit, side-wise fish, which we traded on the schooner for more oysters. Then a breeze sprung up and we tranquilly sailed home with a fine display of redheads cooling out in pairs along the stags.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

#### A New Wrinkle in Bear Traps.

SILVERDALE, Wash.—An Indian gave me a receipt for a—to me—new wrinkle in bear traps the other day. He says: "Get a pony beer keg and drive big wire spikes through from the outside, slanting toward the bottom. File them plenty sharp and knock one head out of the keg. Put honey in the bottom and leave it on or near the bear trail. Mr. Bear puts his head in (easy enough) after the honey and gets 'spiked in' so he can't get the keg off. What's the matter with poor Lo for 'ways that are childlike and bland?'"

EL. COMANCHO.

#### Maine Wildfowl.

BRUNSWICK, Me., March 26.—Geese and ducks are coming along in considerable numbers on their way to their summer resorts; but the shooting is not very good this spring on account of the unusually warm weather we have had since the first of March, and the ice is nearly all out of the salt-water bays. When there is plenty of ice we can approach the birds much better by making our floats resemble ice cakes.

NIMROD.

#### Velocity and Penetration.

BRUNSWICK, Me.—*Editor Forest and Stream:* In your issue of 24th inst. Mr. Armin Tenner makes the statement that the penetration of shot at a high velocity is not so great as it is at some lower velocity. Mr. Tenner does not make the statement without some good reason no doubt, but I have always found that I could drive shot deeper at 30 yds. than at 40 yds. or any greater distance, and I have always supposed that shot at 30 yds. had a higher velocity than at 40 yds. or any greater distance. I have always thought in common with most people that the higher the velocity of shot or bullet the greater the penetration would be. It is said by those who have tried it that a common tallow candle can be driven through a pine board of considerable thickness if propelled at a very high velocity, and I have always supposed the higher the velocity the greater the ability of any substance to overcome resistance; of course weight and hardness are additional factors.

I would like to hear from those who have had experience whether the penetration of a 12-gauge gun properly loaded is as great as an 8-gauge gun properly loaded. It is maintained by many in this vicinity that the 12-gauge is quite equal in this respect to the 10 or 8-gauge.

#### A Great Flight in Iowa.

ALGONA, Ia., March 28.—*Editor Forest and Stream:* We are in the midst of a great flight of ducks and geese. I have never seen anything like it in the twenty-eight years that I have lived in Algona. The birds appear to come from every direction, the largest share from the north. They fly close to the ground and are very anxious to light wherever there is a little water. I think the bluebills outnumber all the rest, although there are a great many canvasbacks, redheads, mallards, widgeons and green-wing teal, with now and then a broadbill. The birds are in good condition. There is a great deal of feed in the country. The Canada geese light in the river close to my house. The great storms in other parts of the country must have driven the birds here. We have had quite a good deal of wind, but no snow or rain.

### Camp-Fire Glickerings.

"That reminds me."

#### A Good Skunk Day.

*Editor Forest and Stream:*

This was in Maine and not over fifty miles from the capital city. It was cold; it seemed as though the mercury had gone down cellar or off to hibernation with the bears. But the big bay horse was a goer and recalled that of which Scripture says: "His neck is clothed with thunder, he paweth in the valley, he smelleth the battle afar off."

The robes were ample, and with the good fur coat, cap and gloves made that sleigh ride seem like those of long ago and almost renewed one's youth.

The driver, an improvised, but good one, then out of other work, grew confidential and reminiscent.

"I used to go skunkin' 'bout here in the winter."

Upon inquiry he said he made skunk catching his business in dull times. He had caught forty-two skunks alone and then formed articles of partnership with Sam, and they two together caught 135, all in one month. That made 177 of the odoriferous beasts disposed of in one moon by two men. They sold the skins and the "ile," and thus made a good thing.

"We hed one darned good day jess beyond them woods. We hed two dogs to find the holes, an' when they found 'em the dogs 'ud go off so's not to git the parfume an' we did the killin'." We hed spades, shotguns, revolvers an' a hook on a pole. Ye see the dogs told us jess where to dig an' when we opened a hole we could see the fellers, an' a clip on the head fixed the fust one an' the hook hauled them out, an' so on to the last. Now I'm tellin' ye we got fifteen skunks from that one hole an' there was no more smell than there was to the snow itself.

"We sot in to skin 'em an' when we'd got to the last two we tried to best each other. Jess then one o' the dogs spoke down by the crick an' we knew he hed something that wasn't skunk. We hustled down an' found the dog barkin' at a hole under the stun in the bank. I looked in an' see a coon an' shot it with my revolver, an' hauled it out with the hook. The old dog still barked an' I run in my hook an' pulled out another coon. The old dog still said there was something more an' I hauled out another coon—that made three coon. We went back an' finished skinnin' the skunks an' then separated, Sam takin' ten dog an' me the other, an' Mister, 'twa'n't more'n ten minutes 'fore my dog lit out a yelpin' like all possesst right toward Sam, who was a listenin'. Sam see a big fox comin' his way, an' he got behind a tree, an' when the fox was nigh enough Sam let strip with the shotgun, an' Mr. Fox keeled over. We skun him, an' Mister, I'm tellin' ye that in the next hour we got two more foxes. That made 15 skunks, 3 coon an' 3 foxes all in one day.

"We didn't lug home the carkisses of the skunks an' foxes, we took their pelts an' the fat of the skunks. We carried a flat tin can to put the taller in.

"The coon we carried in whole an' we sent the carkisses to Boston an' got \$5 apiece for 'em, an' we hed the pelts left. The skunk skins everedged 75 cents. Coon skins \$1.50; foxes \$2, an' the skunk ile brung \$4. I call that a good day's work."

I ventured on the antiquated chestnut and said: "And it wasn't much of a day for skunks after all." I was sorry I said it, for he indignantly fired back: "Yes 'twas too, the gosh all firedest day I ever see."

KENN E. BEC.

AUGUSTA, Maine.

#### In Hard Luck.

*Editor Hard Luck Department:*

This incident has been related to several of my friends, who did not see anything funny in it, so as a last resort, I will endeavor to unload it on FOREST AND STREAM, and try to forget it.

Sitting in my office on the top floor of one of Chicago's sky-ticklers one cloudy day recently, every little while I could hear a volley of shots, fired by hunters out on the harbor breakwater. The day was perfect for the sport and there was evidently a good flight. I had the same

reason for not being out there that the recently quoted Irishman had for not joining his neighbors in the "profession of the unemployed," "the boss wouldn't let me off."

A portly German entered and desired to see one of the firm on an important business matter. The gentleman inquired for was engaged, and in order to hold my German friend I commenced conversing with him about the view from our windows, incidentally mentioning that the shots we hear occasionally were fired by men shooting ducks out on the pier.

Previously listless he was now all attention.

"Vat," he said, "Vild ducks?"

"Yes."

"Out on the pier?"

"Yes."

He regarded me solemnly with evident distrust and surprise in his manner. After a short reflection he said, very deliberately and earnestly: "Dot is very singular. I didn't know dot de vild ducks would ever light on de pier."

I just showed the above to another client, who read it without changing a muscle. After a second, however, he smiled.

"Of course I see it," he said, "they wouldn't light on the pier, they would light on the water." ALGODON.

## Sea and River Fishing.

### NOW THAT APRIL'S HERE.

Now THAT April's here, there are bird songs everywhere,  
Floating out upon the lazy, hazy springtime atmosphere;  
The shallow, sandy brooks come leaping, laughing from their nooks,  
Like children after school is done, now that April's here.

Little flowerets peep from their beds of winter sleep,  
Across the velvet lawn, at dawn, the anemids slowly creep.  
A time of smiles and blisses, for the sun throws happy kisses  
Through the tears that the changeful skies of April weep.

The piping robins come back to the quiet home  
From which the frosts unkindly, blindly drove them far away to roam,  
The quail calls from the covers, safe retreat for feathered lovers;  
The plow turns to the sun the rich and yielding loam.

Here sit I and ponder, if the swift stream over yonder,  
Of happy days reminding, winding in its banks and under,  
As it murmurs down the valleys, holds some *Salmo fontinalis*,  
Of all his tribe the peer, the great and glowing wonder.

Now that April's here, I begin to question where  
My wife has hid the tackle that I laid aside last year,  
For I hear a voice that's calling where the water's foam is falling,  
And the eddies swirl and darken, now that April's here.

J. H. LA ROCHE.

### ANGLING NOTES.

#### Pronunciation of Ouananiche.

JUDGE S. H. GREENE writes me: "Through the columns of FOREST AND STREAM will you kindly educate us of the 'wild and woolly West' in the pronunciation of the name of that game fish of yours of the East, 'ouananiche'? Many of us who boldly, without the least hesitation, talk freely about Skamokawa, the capital of Wahiakum county; Humpulope, Semiahoo, Stillaquamish, Wa Wawai, etc., hedge on the word ouananiche, by simply spelling it, leaving each auditor to mentally pronounce it to suit himself, or, at most, stammering out something so entirely unsatisfactory that the attempted pronunciation is invariably followed by the parenthetical remark, 'or however you pronounce it.'"

I am a little surprised that this question was not asked long ago by some one of somebody, for common as this rather queer-looking word has become of late years I have known of but one attempt made to represent the correct pronunciation in printed letters, and in that single instance such dense ignorance was shown regarding the genealogy of the fish that the given pronunciation might have been regarded with suspicion, particularly as after representing the sound of the word the writer thereafter, throughout his article, gave an English rendering of the word entirely different from that which he had just said was correct. Canadian angling writers have sometimes spelled the word in English in one way and at another time in another way, representing entirely different sounds, but in the following I am confirmed by Mr. E. T. D. Chambers, of Quebec, who has collected fifteen mongrel forms of the word and who is an authority upon the subject.

Ouananiche is pronounced by the Montagnais Indian as if it were spelled in English—*whonanische*. The first "h" is used because they pronounce the word as if it commenced with an aspirate, and the "o" is employed for the broad sound of "a," as in the English word, wan. I think the most common form of the word represented in English spelling is "winnish," and Mr. Chambers explains how this has come about: "The French, having no 'w,' and their 'ou' being nearly its equivalent, as in *oui*, pronounced 'we,' the original French spelling 'ouananiche,' for the employment of which in preference to English forms of the word I have always strenuously contended, is the best possible picture of the spoken sound. Some of the French residents about Lake St. John pronounce the word as if its first vowel was an 'i,' and give it the English sound, and some anglers have carried this pronunciation away with them, and so have arisen the many mongrel forms of the word."

Webster's dictionary, 1892, perpetuates the spelling "winnish," and defines the fish as "the landlocked variety of the common salmon (Canada)." This is not the form generally or officially accepted in Canada, nor is the fish a landlocked variety.

#### Ouananiche or Landlocked Salmon?

It is rather agreeable than otherwise to have one differ with you, when it is done so pleasantly as in FOREST AND STREAM, March 10, where Mr. Eugene McCarthy objects to my description of ouananiche as weighing 25lbs. But have they not been caught weighing more than 25lbs? I did not say in Canada, nor did I even mean to intimate that such was the case. Is Canada alone entitled to the common name of a species of fish that exists elsewhere and grows to a larger size than in Canada? About the time of writing the note to which Mr. McCarthy refers, a

friend wished to mention in a pamphlet the fish called ouananiche in Canada (and, by the way, it is called landlocked salmon by a well-known Canadian writer in an article devoted chiefly to the Lake St. John fish), and landlocked salmon in New England, and he desired to use the most appropriate common name for the fish and consulted me about it. Gorman had just said that the salmon of Lake St. John, of Sebago, of Schoodic and of the Atlantic coast streams were one and the same, namely, *Salmo salar*. That whether they were called landlocked salmon in the United States, or ouananiche in Canada, they were not a variety, but the species itself. They are not landlocked salmon, for wherever found they can go to sea if they have the desire, as the way is open, and in all probability they were called ouananiche before they were called landlocked salmon. We really need but one common name for a single species of fish, as a rule, but to distinguish the salmon that go to sea from those that remain in fresh water, it is necessary to have two, and which is the best for the fresh-water fish, ouananiche or landlocked salmon? And which holds the age? I voted for ouananiche, no matter where the fish is found, and so used the word. "Trout" sufficiently describes *fontinalis* whether the fish is 2oz. in weight in Pike county, Pennsylvania, 8lbs. in weight in the Batican, in Canada, or 12lbs. in weight in Moosehucmaguntic Lake in Maine. The big-mouth black bass is not to be envied because it is an Oswego bass in New York, a chub in Virginia and a trout in Florida.

If there is danger of international complications arising over this name we could say the ouananiche of Canada and the ouananiche of the United States, to separate one from the other. When the country is in a depressed state and economy is in order, it is a great time to reduce the number of common names of some of our fishes that lead only to confusion and bad language on the part of some of our fishermen, as for instance when they find that a pike-perch may be, according to the waters in which it resides, a dory or a doré; a yellow pike or a green pike; a wall-eyed pike or a glass-eye; a hornfish or okaw; a jack-salmon or a plain salmon.

Unless served with an injunction, I wish hereafter to write of the fresh-water salmon, whenever I have occasion to do so, as the ouananiche, no matter in what waters it may be found.

#### The Other Side.

A gentleman who is a staunch friend of the ouananiche as found in New England waters, read Mr. McCarthy's letter in FOREST AND STREAM, and wrote me in defense of his favorite fish: "There is no difference anatomically between the landlocked salmon of New England and the ouananiche of Lake St. John—therefore they are the same fish."

"Environment, of course, modifies habits and conditions, size and energies. Fish that spend their lives fighting a 'turmoil of waters' have no time to grow, and are, as Mr. McCarthy says, usually washed off the hook when struck in their native element. The current does three-fourths of the fighting. Transfer such a fish to smooth water and he will be more easily mastered."

"Can it be that the vaunted fish of Roberval, tearing about in 'waters than which none can be wilder,' keeps the angler busy for 15 minutes only? There must be something abnormal here, some lesion of the fighting-quality lobes, judging from the action of New England ouananiche when hooked in those deep, quiet waters Mr. McCarthy affects to despise. I have known anglers play a New England landlocked salmon for an hour, the fish leaping repeatedly, and it required all their experience and strength to bring him to net. I have seen their bloodless hands and noted the reaction in complete nervous demoralization."

"Note their argument: 'The weight in the New Hampshire lakes is still another indication that those landlocked salmon are different from the ouananiche.'"

"A given fish will grow to three or four times the size in one water that it attains in another. Every angler knows this. Give the Roberval fish less fighting to do and more food, and they will doubtless grow as large and as fast as the New Hampshire salmon. Mr. Cheney is right, the name 'little salmon' does not correctly describe the fish in question, which attains a weight of over 30lbs.—not where it is stunted from birth by a harrowing fight for life in those terrible rapids we are told about."

"Pseudo relatives of the States! Big, flabby congeners of that Canadian wonder, this fighting pigmy of the Grand Discharge, how dare you 'usurp' the name the red man gave you? Aren't you ashamed to 'steal the thunder' of this minnow of the Petite Decharge?"

"After all, Mr. McCarthy admits that he has never met you, but formulates his ideas entirely from the experience of others—who appear to have spooned for you, doubtless in vain. When he makes your acquaintance he will acquire a deep respect for you."

In this connection I am reminded of a fight that I witnessed and timed on a New England lake when it required an hour and forty minutes, as I now recall it, for an angler to kill an ouananiche of about 15lbs. I thought the time overlong in which to kill the fish, but as it was not my fish perhaps I would better not air my views about the manner of killing it.

#### Spring Fishing.

There is every prospect at this writing that the ice will be out of Lake George, N. Y., before April 1, as there are miles of open water now. This is such an unusual thing that no one can remember its like. Last year the ice went out April 29 in the main lake, although there was ice in the bays on May 1, on which date the open season for lake trout fishing begins.

The trout come to the surface as soon as the ice is gone and remain on the top of the water rarely more than two weeks, so that the prospect for good surface fishing this year is not flattering, as there is yet a full month and more before it will be legal to fish. It remains to be seen whether or not the whitefish remain at the surface longer than usual this year. If they do, the trout will stay also, for they follow the whitefish and prey upon them. Just now there is a heap of speculation about what will happen.

Under date of March 18, one of the New Hampshire Fish Commissioners writes: "One week ago to-day I was at Newfound Lake, and while there saw a beautiful sight. At the outlet of the lake where, I should judge, there were some two acres of open water, I saw a salmon rise, and a man living there told me that the day before he saw six different salmon rising at almost the same time."

This is another indication that the season is unusually early this year, and that anglers may be disappointed about the surface fishing when the season legally opens.

A. N. CHENEY.

### THE LEAPING OUANANICHE.\*

BY EUGENE M'CARTHY.

"Felt the loose line jerk and tighten;  
As he drew it in, it tugged so  
That the birch bark canoe stood endwise."

APTLY do the words of Hiawatha portray, in part, what I wish to describe.

"How!" A small word, indeed, but what a task its explanation sets before me to perform. Should I begin by confessing that I do not know how to catch ouananiche myself, I believe that I would approximate the truth. The more time one spends in this fishing, and the more one studies the fish, the sooner one's belief is strengthened that the knowledge which should follow practice grows less instead of greater. With experience in catching ouananiche, one formulates certain ideas as to the proper way to strike them, to play them and to land them. Suddenly a change comes over the spirit of the fish, and the supposed proper methods are far better to honor in the breach rather than in the observance. These changes are radical and oft-occurring; applying as well to just where to find them as to their action when striking and when hooked.

I have before mentioned that the ouananiche are great fighters, surpassing even the trout and black bass in this particular, and it would almost seem as though there was method in their fight, they vary it in quality, but not in quantity.

To-day they are to be caught only in the white, boiling water just under a fall, to-morrow in the more quiet water beyond; to-day they fight when hooked, by constantly leaping from the water, to-morrow by running and sulking deep down; now they make prodigious jumps for a passing darning needle or some other member of the *mouche* family, and are not to be tempted by any of our flies. Again they rise quickly to any color or kind of cast that we may give them.

When an ouananiche is hooked, he is not even half caught; as my guides would say, "*Brébis comptées, le loup les mange*," truly one should not count their chickens before they are hatched, nor their ouananiche before they are netted.

The ouananiche has one mortal enemy in the pickerel (*brochet*), with which Lake St. John abounds, and which grow to enormous size. I have frequently caught ouananiche bearing large scars, both recent and old, showing narrow escapes from the enemy. Perhaps feeling the wound when hooked, and attributing it to their natural enemy may have something to do with causing them to fight as they will. In any event, the fighting they do is simply tremendous.

In rough water the ouananiche is rarely seen when he takes the fly, the choppy waves concealing his strike. The first intimation will be to see it jump from the water in the vicinity of the cast, and a severe tightening strain on the line. If this occurs when the cast is being drawn in and the rod elevated back, something will break unless it is possible for the tip to be rapidly given. If in smooth water, the strike can be seen, and the tip given at once.

Strike the fish firmly, but without a sharp jerk, as they usually hook only in the lip lightly, and the fly is easily torn out. Follow at once by drawing quickly an absolutely tight line, never relax, even an inch. Stop the reel, draw out between the reel and first ring from 3 to 4 ft. of line taut in the left hand. Give the fish the butt of the rod as much as possible, hold it absolutely tight without giving line except when it leaps; then slightly draw the tip and follow the leap with the necessary line from that held in the left hand. Being held absolutely in check without slack, the fish runs only within a short radius, pulling usually with all its strength; this may result in laming the wrist, but more fish are saved. If preferred, the reel can be used and the ouananiche allowed to run, but they turn and return so quickly that the slack cannot easily be recovered; result, that another run with the slack tightens the line with a jerk, the hook is torn out or broken, and the fish gone. Individually, I find an automatic reel preferable, as it will take the slack as rapidly as given, and to it I attribute the saving of many fish. Never hurry the fish, or attempt to lead it to the net until satisfied that it is thoroughly tired out, and do not relax the strain, or watchfulness, until safely netted. An ouananiche of about 3lbs. weight will require fully fifteen to twenty minutes or more, to kill it, and it will fight hard every moment.

Now it will leap from the water anywhere from two or three to a dozen times, rising fully 3 or 4 ft. from the surface, returning to the water only to make an immediate wild rush toward the bottom. If near a fall it will make many attempts to rush under the falling water, or in the rough part of the rapids, there to sulk, pull, and often shake violently to release the hook. Then perhaps, a rush toward the fisherman, a quick turn and deep down again, a moment's rest and then a violent race to and fro, as far as the line will permit. The jumps are quick, and occur when least expected, often following one another in quick succession. In fact, the fish are never at rest, but change their tactics every moment; each fish fights differently, the method pursued in catching one will scarcely apply to the next. The hand and mind must act in unison quickly, and both will be thoroughly occupied. There are so many "ifs" that it is easy to understand how questionable is the saving of the fish after being hooked. If well hooked, if the hook shall tear out, or if the hook, leader, line or rod shall not break. Be prepared to lose, as a rule, more fish than you save; that is the common experience.

In regard to the selection of tackle, the greatest care must be used. I find that an "E" silk line with a 6 ft. leader is best, and am always sure that my leaders and flies are new, well made, and will stand a good prior test. An "E" line being heavy, is less liable to break, and cannot be cut by the rocks when drawn across them, as frequently happens in playing a fish. A short leader is necessary to prevent its being tangled in the rough water of the rapids, or from the violent play of the fish.

All anglers have their favorite rods, either split-bamboo, lancewood or greenheart. All are good—the lighter and

\* From Mr. McCarthy's book of this name just published by the Forest and Stream Pub. Co.

more springy they are the better. Rods from 6½ to 8oz. in weight are the best, although lighter and even much heavier ones are used. The practical point is to have plenty of them, at least two or three, with several extra tips. Broken rods, and tips especially, are a frequently occurring contingency of ouananiche fishing.

Eight or ten varieties form an ample variety of flies and most of them should be tied on No. 4 hooks. The Jock-Scott, silver-doctor, brown-hackle, cow-dung, Seth-Green, Lord-Baltimore, Parmacheene-belle and scarlet-bibis I have always found to give me sufficient variety, and I have rarely used anything else. A good supply should be taken, since those not broken soon become

SNAGGING SALMON ON THE HUDSON.

I NOTICED the article in your last number on "Fishing With a Bare Hook." There was a similar method used on the Hudson last year at Mechanicville. As is well known salmon were abundant in that river last year. The fishway at the Mechanicville Dam was not opened for some time and many fine salmon were spawning in the river near the mouths of several cold streamlets which flowed from springs near the river. Where these streams entered the river there would often be a few feet of sand covered by shallow water and then breaking off abruptly into a deep round hole which was surrounded by a

THE ALBEMARLE SHAD FISHERIES.

COMPARATIVELY few who eat shad in their season are aware that the greater part of the supply in the New York and Boston markets comes from two single fisheries in Albemarle Sound in North Carolina. These two fisheries are *vis-à-vis*. One, the largest, belonging to Dr. Capehart, at Avoca, near Edenton, employs fine steam seine boats and 50 men; the other, Hare-Woods, directly opposite, has only two seine boats and a proportionate number of men, but it saves a handicap by using a seine which is five miles long, including the hauling ropes!

Just now the season is nearing its best, and in a few days will be at its height, fishermen being augurs. When the runs of shad are largest, as many as 6,000 fish are known to have been taken at a single haul. Four hours are required for a haul, and four hauls are made in a day, throughout the season, which is supposed to last 60 days. It is hard work. Last Saturday, when I was down at Hare-Wood's beach, 1,200 shad came in at one haul. Sometimes half a dozen big rockfish, or striped bass, come in, too, and no end of herring. Six rockfish came in on Saturday. During the climax of the herring season, which follows the shad, and continues after the shad have done, 200,000 herring at a haul are not uncommon. This makes a pile at the beach of 80ft. front, which measures 22ft. wide, and nearly 2ft. deep. At a distance it looks like a snow bank. Parties of ladies and gentlemen drive down from Edenton in carriages to see the sight.

Many of Edenton's best citizens operate fisheries, and while the season is on they rough it in common with the working fishermen, who are quartered in large barracks, where there is also a mess room, salting and packing rooms, barrel houses, engine houses for the steam winches which haul the seines, and other accessories. Recently, owing to warm weather, the business has not been remunerative, although the catch has been satisfactory. Prematurely hot weather is as fatal to profit in shad catching as premature frost is to the trucking interest. On March 23 the thermometer at Albemarle showed a noon temperature of 90°. On the 26th following snow threatened the growing peas which were already in blossom. Such are the vicissitudes of life and occupation on the Sounds.

Of course a good many shad are caught in seines in the Neuse River and at other places in Pamlico and Albemarle sounds; and they are caught in stake, drift and pound nets as well. Horse power is employed in hauling second-class seines, and the scows which "shoot" them, or lay them out, are propelled by oars. Their average length is 6,000ft., which is over a mile long. Pound-fishing is the least laborious and expensive. To operate a big shad fishery costs \$10,000 a month, and the plant or outfit requires a capital of \$20,000. It costs a good deal of time, money and laborious work to prepare the ground for seining by clearing it of snags and other obstructions. Drags, dynamite and sweeps are used, and frequently the services of submarine divers are employed. When ledges or reefs are discovered other ground has to be selected.

Formerly in Tyrrell county there were operated some of the largest seine fisheries in the world, but they were destroyed in the late war, and for want of capital have never been refitted. There are openings now for others to take

A 7½ LBS. OUANANICHE TAKEN BY MR. EUGENE MCCARTHY.

worn and battered from violent usage, are useless and need to be frequently renewed. I find, as a rule, that the most successful cast is cow-dung or brown-hackle for trailer and a Jock-Scott or silver-doctor for dropper. Use two flies only and fasten the dropper at the last knot on the leader next to the line. By doing this it will skip the surface better and take most of the fish, as its action seems to attract them more.

To give advice just how to fish for ouananiche, and to make fishing successful, is an utter impossibility; general information only can be given. It is practically necessary to know what to take in the way of clothing, tackle, etc., as one is too far removed from a base of supplies to get anything that may be needed. It is necessary also to know what one has to combat with in catching the ouananiche, what to use, and in a general way how to use it. Such knowledge to the angler fishing these waters for the first time will save him much vexation, a quantity of broken tackle, and perchance some fish. Beyond this, his own acquired experience will be his guide. Experience alone can prove his teacher. As the French say, "*A force de forger on devient forgeron*"—practice alone makes perfect. Previous fishing experience is a great aid, but the ouananiche is so totally different from other fish that it is like learning a new art to successfully angle for and land it.

When fishing the pools in the rivers, it is generally better, and more convenient to fish from the rocks, but in the Grand Discharge one can more readily reach the pools from a canoe.

Imagine yourself in the midst of a boiling rapid, your canoe dancing and bounding on the troubled waters. You make a cast, and you have an ouananiche, or perhaps two, as sometimes happens. Here you have excitement beyond compare. Imagine the skill necessary to handle and save them; your varied emotions; your surroundings—all—and then one fully appreciates that he is engaged in the finest fishing known. No fitting eulogy can be given such fishing. Only those who have been fortunate enough to enjoy it can understand and appreciate.

But one proviso is to be made to insure satisfactory success in ouananiche fishing, and that is to take sufficient time to fairly test them in the right waters at the right times mentioned.

**The Brook Silverside.**

CENTRAL LAKE, Mich., March 10.—*Editor Forest and Stream:* I send you by this mail in separate packages two specimens of small fish taken in our lake. They are not familiar to us and may be from the plant of "wall-eyes" made three months ago, of which no results have been apparent. It is hoped that you may be able to identify them.

F. H. THRUSTON.

[The fish is known as the brook silverside, or skipjack. It is not related to the "wall-eye," but belongs to the family containing the silverside or friar of the Atlantic Coast. The species grows to the length of only four inches and is valuable only as food for larger fish. It is common in streams and ponds in the Ohio and Mississippi valleys, and has been taken recently in the States of South Carolina and Florida. The brook silverside is a surface swimmer; its habit of skipping out of water and along the surface suggested for it the name skip-jack. This little fish is an excellent species for introduction into black bass waters and proves a most attractive live bait for that species when properly placed before the game.]

**Rappahannock Club**

FREDERICKSBURG, Va.—We have a club under the name of the Rappahannock Rod and Gun Club and Fish and Game Protective Association, with a membership of 75. Luke W. White of the Grace Pointer Kennels, President; Hy. Weman, Treasurer; C. McCalley, Secretary. We have secured the control of 1,500 acres of land as a game preserve, and have planted 200 large-mouth bass in the Rappahannock, with the same number of rainbow trout in a stream above town. We have also six Mongolian pheasants which we keep in pens, and with the increase of which we propose to stock our preserve.

L. G. R.

**Club Constitutions.**

SECRETARIES of game and fish protective clubs will favor us by sending copies of their club constitutions and by-laws.

growth of weeds. The salmon would come into these holes and be in the cool water, rolling on the surface occasionally so as to be plainly visible. The fishing was done entirely from the shore until a fish was hooked, when the person who was so fortunate, jumped into a boat and followed the fish into deeper water. All the boats were run up on the shore and from the stern several persons would fish. The boats were so numerous and so close together that it was almost impossible to cast. In pulling in your line you would always catch either a big stump, which must have been one mass of flies and broken leaders or another line. It was very odd salmon fishing to any one who had cast their flies on the swift salmon streams of Canada. The rods used were what each man happened to have and were a surprising collection for salmon fishing. A leader with four or five flies was the usual thing. These were in most cases baited with small pieces of salt pork. A very light sinker was used by those who had the best success. The most desirable position was to be right over one of the holes which I have already described. The flies, pork and all were allowed to sink. If a salmon was attracted by a fly so as to touch it or the pork (the feeling was like a minnow nibble), the line was

OUANANICHE POOL, FIFTH FALLS, MISTASSINI.

jerked straight upward in the hope of hooking the fish in the side or belly.

I believe there was only one fish taken fairly. He rose to a fly cast in the proper manner and weighed a little over 9lbs. I did not care to try the pork method and cast my flies on the surface, but with little success.

While fishing I noticed a tremendous fish-hawk which was sailing over the island in the center of the river. All at once he shot down into the water, and it was easy to see that he had fastened into something that was no toy, for though he flapped his great wings he could not fly, and could not seem to raise the fish at all. He kept beating his great wings, however, and striving with all his might to go off with his prize, but after ten minutes he saw that this method was all to no purpose, and tried a cute trick. He let go his hold for an instant and then fastened his claws firmly into the fish's head. He raised his right wing and struck it into the water, giving a powerful shove, then with the left, and in this way he swam 75yds. to a shoal off the island, and here succeeded in getting the fish ashore. Two fishermen started at once for the island and scared the bird away. They brought the fish to where I was and I saw that it was a salmon that would easily weigh 9lbs.

W. T. MORRISON.

NEW BRUNSWICK, N. J.

their places. This fact may be of interest to the proprietors of the deserted fisheries of the Connecticut.

Shad all go North on ice, but herring are chiefly salted and shipped in barrels. Herring roe has become quite an important commodity of late. Sturgeon of large size are occasionally taken in the seines, and their roe is utilized for caviare.

CHARLES HALLOCK.

**Took Two to Catch Him.**

FREDERICKSBURG, Va.—Tom Larkin and myself were bass fishing together in the Rappahannock, above this place. Tom had on a large chub, or fallfish, for bait, while I had a smaller one. After a few minutes Tom had a strike. The fish proved to be a slow biter, and mouthed the bait for ten minutes or more. Finally he made a circle and passed around my line before I had a chance to move it, and as I supposed, fouling my line. Tom said a few things and struck the fish, while I gave him plenty of slack. He was landed after a struggle of ten minutes and was found to have both hooks deep in his throat. He was a 4-pounder and a beauty. I promptly claimed half the honor of capture, which it is needless to say was not accorded by Tom.

L. G. R.

## BOSTON NOTES.

BOSTON, April 2.—The trout season of 1894, in Massachusetts, is open. April 1 was the opening day, and a most auspicious and delightful day it was. In the night the wind changed to the southwest, and the weather also changed from the chill and freezing of several days previous to the most delightful of April days. By 9 o'clock in the morning the mercury registered 60 in the shade. What a day for trout! But alas! It was Sunday! It is darkly hinted that some fishing was really done on Sunday, however, the sportsmen taking their chances with the authorities of the State.

The complaint is a bitter and a growing one that "there are now no waters on the Cape that amount to anything," where the private citizen may fish. The ponds and streams are nearly all under control of individuals or clubs. The angler, who is not so fortunate as to belong to a club, or to own or control a fishing preserve himself, is more than ever asking himself the question as to where he is to fish in the Bay State. But invitations to fish the stocked and controlled trout preserves are not very hard to obtain, if one manifests the proper spirit, and shows a true interest in the sport.

A good trout season is predicted. The streams are clear of snow ice unusually early, and the temperature of the water is favorable. This is especially true of the streams and ponds in Connecticut, in which several Boston and Worcester parties are interested.

The Boys' Party, of the Monomoy Brant Club, left Boston on Wednesday for the shooting grounds. In the party were Mr. Harry Read, Mr. E. Frank Lewis, of Lawrence; Mr. Harry Wright, of Walpole, and several others. The parties ahead of this one at the Monomoy and the other clubs in that vicinity are reported to have obtained but few brant, though many were seen. The weather was too fine, and though the birds seemed to be numerous off shore, they would not rise and come near to the decoys. Hence but few brant have been obtained. But the duck shooting has been fair. The party of which Mr. Adams, of Adams & Chapman, was a member, is reported to have taken "a barrel of ducks" at the Masquoit Club, across the bay from the Monomoy. But a late report from the Boys' Party, at Monomoy, says that the brant are behaving more to the liking of the shooters, and that some good hauls have been made.

The Bangor, Me., salmon pool is open much earlier than usual this year. Prominent resident members are trying the salmon, but up to the time of this writing no salmon had been taken. SPECIAL.

## A New Fishing Tackle Store.

WITHIN the past few days a big gilded fish has taken up his position overhanging the sidewalk next door to the FOREST AND STREAM. It is the totem of the United States Net and Twine Co., who have just opened at 316 Broadway a very handsome new retail fishing tackle store.

They celebrate their opening with an elegant display of oil paintings of fish, trout, salmon, grilse and black bass, from the studios of the most celebrated painters in the country, such as William M. Brackett, F. A. Tait, La Goodwin, Kilburne and others. These will remain on exhibition during the month of April, and anglers generally are invited to view them.

The Kosmic rod display is something wonderful. The United States people have recently bought this split-bamboo rod from A. G. Spalding & Bros., and now own the complete plant and factory. The exhibit is the same one that won the prize at Chicago, and it consists of a great variety of most beautiful Kosmic rods, from the \$500 gold-mounted beauties to the regular standard working rods.

Mr. E. S. Osgood, formerly manager of the fishing tackle department of A. G. Spalding & Bros., is in charge of the retail department of this new store, and Mr. H. J. Frost, who for many years has represented the company on the road, has now been brought into the office and placed in charge of the wholesale sample rooms as house salesman. Since Jan. 1 Mr. Francis E. Wardle has been elected secretary and manager of the company, Mr. W. H. Wallace remaining in the position of treasurer.

May the big fish swing aloft many years and the golden sheen be the symbol of the continued prosperity of these new next door neighbors of FOREST AND STREAM.

## The Red-Bellied Dace.

WEBSTER, Mass., March 19.—*Editor Forest and Stream:* Would you kindly tell me the common name of inclosed fish? The prominent black stripe on its sides is something I have not noticed before.

CHAS. GERBER.

[The red-bellied dace or minnow is a strikingly beautiful little fish at this time of the year, as it is now approaching the breeding season. It abounds in small streams from New England to Dakota and southward to Tennessee. Along the sides are two jet black narrow bands, one beginning above the eye and extending to the tail; the other occupying the snout in front of the eye and continued behind the eye to the base of the tail fin, where it ends abruptly in a slightly enlarged spot. The belly and the space between the bands are bright silvery, replaced by scarlet in breeding males, which have the same red color at the base of the back fin, tail fin and the fin behind the vent. In the height of the breeding season the fins are bright yellow and the body of the male is covered with small tubercles. The dace reaches a length of 3 in. In its habits it resembles the stone roller, with which it associates. It prefers clear streams which arise from springs. As an aquarium fish it is scarcely excelled in beauty and hardiness, and as a bait for the black bass it has few superiors among the minnows.]

## Delaware Bass.

WILMINGTON, Del., March 28.—A number of local fishermen have made good catches in this neighborhood. Last week some very good strings of bass and pickerel were taken on live bait at St. Georges, Del. J.

## Albany Game Legislation.

[Special Correspondence Forest and Stream.]

ALBANY, March 31.—The following is Chapter 183 of the Laws of 1894: Section 1 of subdivision 7 of Section 271 of the game law is hereby amended so as to read as follows: Where an act is prohibited between certain dates, it is not lawful upon the date first named and it is lawful upon the date last named. But when said last date shall fall upon Sunday it shall be lawful to shoot, hunt or fish on the preceding day, as if that day was the date so named in this act.

## Fortunate Bangor.

BANGOR, Me., enjoys the distinction of being the most convenient city in the world to a first-class salmon pool. It is perfectly possible for a citizen to go fishing there every day during the season without neglecting his business. He does not lose track of his interests and can give his directions from his boat almost as well as from his office.

The big game of the Maine woods crowds down close to Bangor, too. Fortunate residents hitch up their horses and drive out a few miles to hunt, and return with their venison still warm.

Bangor boasts of the pioneer canvas canoe builder, a first-class taxidermist and the largest manufacturer of moccasins and hunting-boots in the world. J. B. B.

## Fishculture and Fish Protection.

## Vermont Trout.

*Editor Forest and Stream:*

I read with pleasure the courteous comments on my letter relating to Mr. Titcomb's plan for protecting Vermont waters by your correspondent "Rod," and as a continuation of what has been written on the subject, must say I do not think it the purpose of Mr. Titcomb to post all small streams, as there must be some localities where all streams are small; and to deprive the people of one section entirely of their neighboring trout fishing would be unreasonable and unjust, causing the law to be felt as oppressive to them, thus rendering it practically inoperative.

Still, even these small streams could be shut off for a few rods at their heads, thus leaving an occasional spring hole to contain one and awhile a fair-sized fish for propagating purposes; and one good-sized spawner is worth a great many of the so called 6-inch fish, that amount to practically nothing as breeders. It is only recently that the Vermont people have realized the value of their State as a summering place for city folks, and now that they have commenced to advertise it, the volume of business in that line must increase, letting loose each year a large army of fishermen. How many keepers of hotels or boarding houses would be likely to have one of their boarders or their children find for taking trout under size? Not one, I believe. Were the streams posted in a manner to make it plain the State did the posting, and all trespassers were amenable to the State, the moral effect would help largely toward partial protection. Absolute protection cannot be had without prohibiting the catching of trout entirely for a number of years or on waters that have become the private property of individuals or clubs.

In the Adirondacks I know of small brooks that are seldom fished, but left to grow trout of sufficient size to be useful as breeders. These will drop down into deep water during the winter and such of them as escape the summer fishing work up stream in the fall and perform their natural functions, filling the little rivulets with small trout, they in turn becoming reproducers. Perhaps the plenitude of good fishing is one reason of this abstinence from fishing such waters. Perhaps it is education forced on the people by the logic of events, and as human nature is largely selfishness, the best way to protect the trout is to educate the Vermont folks that it is to their interest to observe the law, only I tremble for the fate of the little spotted fellows while the lesson is being learned.

I had a case come under my observation last summer that brought out strongly how queer may be some of the reasons actuating the defense of violators of the fish law. I was at Middlebury, Vt.; the county court was in session; they were trying a poor Frenchman from Orwell for netting fish (not trout). One of the selectmen of Orwell was there and worked very zealously for his acquittal. I was surprised to see this unwonted interest, and being personally acquainted with the gentleman quizzed him a little, developing the fact he wished to clear the man to prevent his family becoming a town charge, thus increasing the individual's tax, how much I wonder!

Now if we can make the people feel that it is to their interest to assist personally in carrying out this idea, by showing an increased trout supply, an increased revenue from city boarders and of lands sold for the erection of summer homes, giving a larger number of tax payers and a smaller amount of tax on the individual. Why won't selfishness do the rest? H. C. KIRK.

ALBANY, N. Y.

## Rearing Brook Trout.

*Editor Forest and Stream:*

In May, 1891, I planted upward of 7,000 speckled trout fry (American brook trout) in a pond about an acre in size, possessing, I think, many of the conditions for successful trout raising, both as the locality and temperature of water, etc. The pond is fed by about a dozen bottom springs in different parts of it, and will soon be reasonably well shaded with trees and shrubs, the depth being from a few inches to seven or eight feet, and in one spot twelve feet.

The trout have thriven well, and as they attained a large size as yearlings, must have bred in 1891 as well as '92-3, at least judging from the great number of all sizes that appeared in the pond last autumn. They were fed the first summer and winter, but owing to my absence from the locality, have not been fed since. They appear to have done well, however, without artificial food, but I am a little anxious about them this winter (the pond being seven miles off), and would like you to give me a hint as to whether they ought to be fed for the remainder of the winter through holes in the ice.

But what I desire principally is your opinion as to how many speckled trout, say an acre pond, with regular feeding would maintain without overcrowding? Do you say about thirty, forty, fifty, sixty thousand—or how many?

My object is to make a business of trout culture; adding other ponds interspersed throughout our locality with the expectation of realizing a profitable return. I may say that angling for pleasure by our citizens and others would be the principal source of profit, but of course the stock being kept up, netting for the market might also be resorted to.

Given, then, that the trout having been three years in the "original" pond, and that the largest sized ones average, say, half a pound, how many do you think it would be prudently safe to fish out every year, having in view the keeping up of the stock and making a permanent business of it? It will be easy under my plan to keep a record of the number caught—of course returning to the water all under eight inches—and call a halt when the maximum number has been reached.

As I have little idea practically of the fecundity of speckled trout, and cannot very well estimate, even approximately, the number of a sufficiently large size for table use that in a well-stocked pond of a given area it would be safe to catch each season, I shall be grateful for your advice as a guide in the management of a trout business.

This letter may appear to you chimerical, rather than practical, but if an approximate—guiding—answer can be made to it at all, I do not doubt but that it can be found in the sanctum of FOREST AND STREAM. CHARLES ARMSTRONG. HAMILTON, Ont., Feb. 22.

[As the trout have survived two winters without artificial food and have increased in number, it seems highly reasonable to suppose that the pond contains natural food sufficient for their needs. Among trout culturists, as well as

other members of a community, the motto "Let well enough alone" is never forgotten. Brook trout, as a matter of fact, are extremely capricious about feeding in winter.

It is well nigh impossible to lay down a rule for the capacity of a body of water for supporting fish life. This can be determined with accuracy by experiment only. The amount of the inflow from springs, and the extent and kind of food present, will prove the most important factors of the problem. The volume of the water supply can be determined from the amount escaping at the outlet, but the food-producing capacity is to be learned by actual trial with fish. And this matter will soon regulate itself, or it can be controlled by feeding during a portion of the year, say for a few months preceding the breeding season and in the coldest part of the winter if the fish can be induced to feed.

A better system of trout rearing involves a series of ponds in which the fish may be always assorted according to size and facilities for artificial hatching of the eggs and care of fry.]

## Handicapped Salmon Fry.

*Editor Forest and Stream:*

A rather remarkable condition of affairs in the life history of salmon was related to me to-day by Mr. James W. McGowan, of the Cascades, up the Columbia: About the 10th of this month while Mr. McGowan with a force of men were clearing a place for one of their fish wheels on the sloping gravelly bank of the Columbia they unearthed—or rather ungraveled—a whole hatful of salmon fry 1½ in. in length. Numerous springs in the adjacent bank kept the gravel moist enough seemingly to support fish life while the youngsters more or less patiently awaited a "rise in the Columbia." Possibly there is nothing very remarkable or unusual about this, but it was a revelation to me, and the McGowans, who have been actively and prominently engaged in the salmon industry for thirty-five years, were so impressed with the novelty of their discovery that they expressed a desire that it should be made known to the readers of FOREST AND STREAM.

I might add that they found a number dead where the gravel had dried, although this would be but a natural consequence. S. H. GREENE.

PORTLAND, Ore., March 23.

## PUBLISHER'S DEPARTMENT.

A. G. SPALDING & BROS., athletic outfitters, moved into their new and large quarters 149 and 151 Wabash avenue, Chicago, April 2. In addition to the increased facilities consequent to more space, the firm will have a well-equipped riding school for bicyclists, and for those interested in aquatic sports a full line of sailing boats, canoes and steam launches.

THE WATERBURY WATCH COMPANY, Waterbury, Conn., March 19, 1894.—Messrs. E. A. Buck & Co.: I received this day the shoes sent me and they are very satisfactory indeed, and I want another pair made without heels, same style of shoe, only what you would call a moccasin, with sole same weight as the sole on these shoes sewed on. Will hold this letter until I see some of my friends who I think will try the shoes. If so, hope to send you orders for more. In this I inclose postal note. Want also one more pair of shoes same as those just sent, but lighter soles. I inclose the note received from a friend who saw these shoes. Yours very truly, GEO. HEERT—Advs.

## The Kennel.

All those who love a dog because it is a dog and not merely a medium for the accumulation of dollars and cents, are invited by the editor to consider this department as one in which they can discuss amicably any subject that is of interest to the canine fancy, without fear of their communications being subjected to personal comment or ridicule.

## FIXTURES.

## DOG SHOWS.

April 17 to 20.—New England Kennel Club, at Boston, Mass. D. E. Loveland, Sec'y. Entries close March 31.

April 18 to 21.—Southern California Kennel Club, at Los Angeles, Cal. C. A. Sumner, Sec'y.

May 1 to 4.—Special show of St. Bernard, Collie, Spaniel and Fox-Terrier clubs, in connection with the Hempstead Farm show, Madison Square Garden.

Sept. 10 to 14.—Toronto Industrial Exhibition Association, at Toronto. C. A. Stone, Sec'y.

## FIELD TRIALS.

Sept. 5.—Manitoba Field Trials Club, at Morris, Man. R. J. Gallaugher, Winnipeg, Sec'y.

Nov. 6.—International Field Trials, at Chatham, Ont. W. B. Wells, Sec'y.

## PHILADELPHIA DOG SHOW.

March 27 to 30. Entries, 484.

THE Philadelphia Kennel Club did all that lay in their power to achieve a success with their show held last week in Tattersalls, on Market street, and take it all in all it was the best gathering of dogs that the Quaker City has seen in many years. The show was well advertised and the press lent its aid as probably never before, and lots of people came to see the dogs. But, as usual, the F. K. C. will have to shoulder a loss. The phenomenal run of fine weather experienced by all the shows in the circuit so far, was broken on Thursday last when rain fell quite heavily and interfered considerably with the gate. It was fine in the evening, however. A number of prominent fanciers were present and seemed to fully enjoy the opportunity to meet their fellow fanciers. Among those we noticed were Col. H. O'Bannon, C. W. Longest, H. G. Trevor, B. Alton Smith, Dr. Longnecker, Frank Carswell, Dr. Caldwell, Dr. Huidekoper, Frank F. Dole, L. Finletter, Dr. H. T. Foote, M. A. Thiman, J. T. Barnes, J. H. H. Macner, E. L. Kraus, E. W. Fiske, M. C. Viti, Geo. R. Preston, T. H. Garlick, C. S. Wixom, R. Fox, John N. Lewis, T. Johnson, W. T. Payne, G. P. Runtom, Frank P. Smith, W. Tallman, F. Sean, C. A. Shinn, W. J. Higginson, J. G. Thomson, G. W. H. Ritchie, Geo. Bell, Mr. Smyth, Mrs. Trevor, Mrs. Meacham, Mrs. Gilligan, Mrs. Read, Mrs. Atwood, etc.

The judging was all completed the first day and a marked catalogue issued the morning after by 7 A. M., a record scarcely even approached in this country before. The catalogue had few wrong entries and was well arranged, interleaved catalogues being provided for the press. Spratt's Co. fed and benched and Mr. John Read as usual, in his quiet undisturbed way, made an efficient superintendent, and everything was kept sweet and clean. Mr. James Watson was press agent and it is due to him in no small degree that the papers did so well and that the marked catalogue was out so early.

Mr. "Bert" Winslow, the popular president, was a whole reception committee himself, and did all, as he only knows how, to make things go. The bench show committee of the club, composed of Messrs. H. G. Sinnott, G. H. Thomson, C. G. Thompson, J. J. Schnellberger, Phil Walsh, Jr., G. Schreiber and Dr. L. C. Sauveur, worked hard and some of them were always on hand. During judging, Mr. H. W. Smith's rug was stewarded by Geo. Thomson, who also looked after Mr. Oldham's interests in the spaniel ring. J. R. Painter held the ribbons for A. C. Krueger, while Mr. Mortimer was relieved of much trouble by Geo. W.

Price. Dr. Darby helped his fellow medico, Dr. Sauveur, in the collie ring, while Harry Snnott and Mr. Price looked after Mr. Mason alternately. Dr. Glass attended to Mr. Taylor and Dr. Glover. Four rings were furnished upstairs, the show as usual being held on two floors in Tattersall's sales rooms. Dr. Glass "vetted" the show and Dr. Darby had lots to do as secretary and did it.

The judging of several of the specials created a great deal of interest. At the same time, in fairness to the three judges on whom devolved the arduous duty of selecting the best owned in Philadelphia and best American bred for the Ashmont Trophy, the judging of these events should have been attended to before the other judges returned home. Neither was it fair to the exhibitors, for, however good, say, a terrier might be, it would receive scant attention at the hands of a setter or a spaniel judge. On Messrs. Taylor and Oldham and Dr. L. C. Sauveur devolved the unwelcome tasks. In the competition for best owned in Philadelphia, those left in were Sandy Gladstone, the English setter, Bob Ivy, the pug, and Wellesbourne Charlie, the collie. The latter rightly won. There were others that should have been kept in, such as Scottish Leader, Queen of Skyes, Miss Wagglers or champion Middy, in preference to Sandy Gladstone.

The next competition, and one over which as usual there was lots of talk, was the Ashmont trophy for best American-bred in the show. Quite an assortment trooped in for this, but first one then another fell out, such as Royal Krueger the beagle, Warren Captious, the fox-terrier; Empress of Contocook, etc., but still the little black and tan terrier Perfection held on until he and Antonio, the English setter, and Ridgeview Tenny, the pointer, were alone left in to wrestle with the judges. As far as we could make out, the terrier was the "plump" for Mr. Oldham, Dr. Sauveur was undecided and Mr. Taylor wanted Antonio, and he wanted it badly and he got it. Antonio won, Perfection being counted out for not having enough flesh on his ribs, the judges forgetting he was but a seven months old pup. He should have won hands down, especially considering the difficulty of breeding such a good one of this breed, and this we suppose enters into the idea for which such a trophy is given.

#### Mastiffs.

James Mortimer, Judge.

Seven entries and three prizes withheld does not speak well for breeders of these dogs nor for the interest the members of the Mastiff Club evidently take in the breed. Dr. Lougest has kept to the front well this season and it is to be regretted that while the array of Club specials has been temptingly displayed at the head of every catalogue, the plums had to be passed for lack of other club entries. Lady Diana was the only challenge entry and looked none the worse for her travels. This is her first challenge prize. Emperor William scored again and must be getting dangerously near the coveted class. Bruce Caution loses to him much in massiveness of head, size and bone. In bitches (2) Cerene, well known and well shown, scored head and shoulders over Nell, from whom second was withheld. Nell and Bluff were in the local class, but the judge could not allow them in the money even then. Emperor William won the special for best in show.

#### St. Bernards.

Chas. H. Mason, Judge.

Had it not been for the Swiss Mountain Kennels which came out with all its local colors flying, the entry would have been very mediocre. With thirty-three shown altogether, sixteen came from the German-tan Kennels. There were no challenge roughs. That good dog Eboracum scored nicely in open dogs, beating Ardmore in body, size and massiveness, and squareness of head; although as a son of Lady Adelaide, Ardmore shows nice quality and a good type of head. Nero D. loses considerably in muzzle, front and hind quarters, though showing quite some quality. Bruce, Jr., he, deserved his letters and that was all; lacks the quality of the others. In bitches, Sunray and Harmony, the latter losing in size and substance, were placed as named, I like Harmony's head better, more quality. Lady Juno Jacques, should have more stop, and shadings would improve an otherwise fair head, good legs. The other five entries here were N. F. C. from the Swiss Mountain Kennels. Madam B., a rather well boned pup, too straight in face and not broad enough, won from a better headed one in Columbus, that has been round so much lately. Voodoo, reserve, is scarcely promising, plain head. In smooth challenge class, Scottish Leader as usual made the welkin ring and showed in his usual robust form. Empress of Contocook, the only entry from the Dutchess Kennels, was alone in her class and looked deeper in body than ever. In open dogs the short-tailed Chester is not so good on his legs, head and other parts that his short tail could be overlooked. Cestor of Contocook should be broader and deeper in muzzle and shows a little too much coat. In bitches (2), Sunol, June having strayed away, was the only entry; she has been out this season. Cestor of Contocook won in puppies, in Beauty's absence. The local class (7) prize fell to Ardmore, Rosabel second and another dog by Tristan G., Empire State, took reserve, shows great bone and rather nice head. The others need no particular mention. Swiss Mountain Kennels took the kennel prize, and A. L. Martin's Nero D. the special for best American-bred rough dog.

#### Bloodhounds.

James Mortimer, Judge.

Only two of this good old breed showed up and both have been mentioned on the Western circuit, Kaween again beating Belhus. Both looked well.

#### Great Danes.

James Mortimer, Judge.

Just an average show for Philadelphia, scarcely, perhaps, so good as last year's show. Theseus beating in head won over another equally well known one in Stanley that was at Detroit. Victor, third, loses in muzzle, cleanness in neck and a little in type of body and general makeup. Caesar is inclined to coarseness and straight behind; nice body and front. Bitches had three present, one absent. Fay won but was cleverly handled; her feet are out in front, plain muzzle and dips in back. Cora stands much better on her legs, is not so clean in throat but has a better head all over and is a better mover, and has more character and type. Dora, third, moves poorly, is throaty, elbows out, a trifle open in toes but otherwise a fair all round stamp with a muzzle too lippy and not of correct type.

The Newfoundland prize was withheld from the only entry, Rover.

#### Russian Wolfhounds.

H. W. Smith, Judge.

This show was interesting from the fact that both of the principal kennels have had a week to recover from their Western trip, and the way Turner had pulled his dogs together was very commendable. Stokes had not been idle either, but Turner had more to do in this respect. Leekhoi, in challenge dogs, looked fit to go for his life, and Argoss never came nearer being beaten in his American career; he looked bare and did not move with that sprightliness of action the other dog showed. Leekhoi excelled in coat and cleanness of shoulders; type put Argoss ahead. Leekhoi's time is coming if Argoss does not pull together. Col. Dietz, who showed the good effects of his week at home, scored again over Odrooski. At the same time if Argoss beats Leekhoi, Odrooski should beat the other. Sorvanets is getting cloddy and does not look half the dog he did. In bitches

Olivia, a grandly conditioned and coated one, showing beautiful quality, carried the judge away completely, so that he forgot her very faulty front and open feet, still she is a good bodied bitch. Riga came next, showing signs of the circuit's wear and tear against the other's prettiness. Lady Dietz, vhc., is picking up a bit, but still looked light. Olivia, rather strange to say, took the special for best in show, still if condition was the cause of Argoss being put back, Leekhoi on Olivia's type should certainly have won in his class. But the more we see of these dogs the less satisfactory seems to be the judging results, and probably there has been more hard feeling engendered than in the judging of any other breed, and when we import a Russian Demidoff or something of that sort we shall perhaps get a correct line to go by. H. W. Huntington took the kennel prize.

#### Deerhounds.

H. W. Smith, Judge.

Only one, Minna, from Mr. Page's kennel, his other, Lochiel, being absent. Minna was at New York. She took the medal for best.

#### Greyhounds.

H. W. Smith, Judge.

The trials of the circuit showed themselves plainly here. for Gem of the Season could scarcely stand up, and neither he nor Master Rich were really fit to show. And no wonder the light little Miss Dollar III. beat them out for special. Gem of the Season had been on the rail from Denver since the previous Friday night. In open dogs, first went to Baltic, a well put up brindle, excellent front, plain head, very good behind the shoulders, beats Norway Star in front and ear carriage, but is not so clean in outline nor so good in head. Cheeky Charlie, third, is a well made dog and a good greyhound, but handicapped here by condition; the others being shown very fit. The bitch class was poor—very, Miss Dollar III. very rightly being the only entry recognized for first honors, second was withheld and third given to a poor-fronted one in Nellie. Miss Dollar took the special for best in show and Baltic that for best owned in Philadelphia.

#### American Foxhounds.

Dr. H. C. Glover, Judge.

With the exception of one or two there was little in the open classes to command attention, Ranger II. though on the heavy type, beat Elite again in challenge. In open dogs Tuck beats Skip in body, front and muzzle. Bitches had five and the three winners were much on same type, Nip, vhc., being a lighter sort. The kennel prize went to the Lima Hunt.

#### Chesapeake Bay Dogs.

E. M. Oldham, Judge.

Mr. Oldham here made his debut as a judge in this breed, but his duties were not at all arduous. Cleveland was alone in dogs and Mary II. was also absent in the bitch class, so Bigelow Rose, from the same kennel, took the blue, the handing out of which was the only difficult duty the judge had to perform.

#### Pointers.

Chas. Heath, Judge.

A number of well-known dogs greeted this popular pointer man. Duke of Hessen and Tempest once more met with the same result, and Woolton Game, well shown, beat Hempstead's Pearl by the skin of her teeth, good bitch as the former is; Wild Lily and Lady Tammany were out of it; both are better in body conformation than head. The winners in heavy open dogs are known; that good dog, Sandford Druid, we have frequently spoken so well of, was placed over R. Panic, whom he excels in head and shoulders and front. Hempstead Drake, a nice sort, good legs and body, would do with more stop and has too light an eye. King of Hessen has a nice head, though wide between ears, a well-made son of Duke of Hessen. Gamester, vhc., should be cleaner in shoulders, good head, not well shown. In bitches only one, Kent's Belle, that was described at New York; she should be cleaner in skull. In light-weight dogs both Jersey dogs scored, Ridgeview Tenny first and Ridgeview Donald next. Tenny was in the heavy brigade at New York. I like Tenny's head better than the other, who is inclined to be dishd. Hempstead Carlo, third, is a nice-headed one, a little light in body. Aspiration, reserve, is rather a nice-bodied one, muzzle too fine. Doc Tanner would have a fair head if muzzle were not so plain, good legs and body. In bitches others that are well known scored. Hempstead Blossom moved up more than one or two pegs on her New York form; she is a good-legged and bodied bitch. Springside Nell again took honors above Fan Fan II. Graceful II., if a little stronger in head, would be better, shows lots of quality. Hempstead Zoe's, vhc., light eye and wide skull are against her. Fannie Kirk, in the same division, stands on good legs, but is plain in head, especially muzzle. Moderation, hc., deserved his letters, but is faulty before the eye and in shoulder. Some fair pups were shown, the Springside Kennels with its Pax and Lill, two more of the Donald-Lady Tammany litter that has done so well, scored somewhat easily. In the local class King of Hessen and Gamester took the money. Hempstead Farm Kennels won the kennel special, and their Duke of Hessen special for best dog with two of his get, Hempstead Drake and Hempstead Blossom; the bitch prize under same conditions was won by Woolton Game with the same two. Best pointer with a field trial record and best pointer in show was Sandford Druid; best American bred, Gamester.

#### English Setters.

Francis G. Taylor, Judge.

The challenge class dogs seemed a hot one with Toledo Blade, Glendon, Cincinnati and Monk of Furness entered, but the latter two were for specials only. Toledo Blade won, but Glendon is a better type, especially in head. In bitches, Donna Juanita beat the well-known Spectre. She excels in substance and hindparts. In open dogs Mr. Taylor had a notable class; there was little real bench English setter type, the field sort having the call. Antonio won; he is not a bench show dog, though he can go in the field, and was none too well shown, in fact looked rough. Sandy Gladstone has a better head and is fairly made all round, but is a plain one, lacking quality. Paul Hill is plain in muzzle, light in eye, otherwise showing some quality. The Earl might well have been higher up, shows more pretensions to bench form. Rock Noble, vhc., is too broad in skull and stop is not defined enough, good otherwise. Kent III. well deserved his letters; nice head, might be better in shoulders and front. In bitches a hard and trying class faced the judge, and many of them should have been weeded out to allow the others to be seen. The well-known Countess Rush scored again; she has been repeatedly written up. Toledo Queen, second, should have more stop; otherwise a good head and set on good shoulders and body. Flight of Riverview, third, is another well-known entry. Belle of Brownstone, reserve, is a well-ribbed one, with a good head, but stands a bit out in front. Among the lettered ones Prima Donna was hardly treated; she might have come in a good second; she is well known. Gossip, another plain one, but shown fat; can use her legs we know. Edgemark's Nellie and Victoria D. both deserved their cards, though the former has a better body than head; Victoria D., on the contrary, has a good head, if it had more stop, but is not so well ribbed. It is a noticeable fact that most of these English setters are to a great extent straight-faced. A well-defined stop adds so much to the make and symmetry of an English setter head. Cincinnati's Pride won in puppies, but I could not find it. Pop Monarch's head should be deeper

and squarer in muzzle, and legs need straightening. The others need no comment. Sandy Gladstone won in the local class, having a better head than Edna, second, who also lost in rib and loin. J. E. Dager took the kennel prize, and Antonio took specials for best in show and best with field trial record. Best bitch, Donna Juanita; best bitch owned in Philadelphia, Nanon.

#### Irish Setters.

Dr. H. C. Glover, Judge.

A number of good ones were on hand, the Seminole Kennels having a good entry, but the rank and file was not up to form. The classes were well handled. Challenge dogs brought champion Tim once more to the front, followed by Pride of Patsy, Montauk, Jr., getting left. In bitches, champion Laura B. had no difficulty in beating Elfreda from the same kennel. In open dogs, Seminole Kennels took first and second with Young Tim and Elcho, Jr., both well known; then for third came Mark Anthony, who is plain in head, too cut out before the eye. Pemberton, a large dog but well made, was given extra third. Don, reserve, has a head more on the English order, but nice legs and rib. Among the vhc.'s I liked Dennis the Gossoon, though he should be deeper and squarer in muzzle; Count droops behind, fair head and color; Bang has a very good head but turns his feet out, good color, considering type he might have been higher up; Young Signal is scarcely a show dog, plain head, stocky build. In bitches, Seminole Kennels took first and second again with Fly and Delphine, at the same time Delphine has a better head and eye, but loses in color a little, that is if I got the right one; numbers throughout the show were set with no attention to rotation. Ruby Glenmore II. has been recently described, she got third. Biddy, reserve, is another well-known member of the Seminole team, a little small. Maid of Borstol, while faulty in skull, should have had more than hc. In puppies, first was withheld and second given to Maggie Moore, a rather poor one, light in color yet. A big coarse dog in Speedaway won in "locals," his color is commendable. Roscoe II. has a coarse common head. Seminole Kennels took the kennel prize; champion Tim the special for best in show, and Ruby Glenmore II. that for best with Seminole Kennels not competing.

#### Gordon Setters.

Dr. H. C. Glover, Judge.

The entries here were disappointing, Dr. Dixon keeping out of the way; with one of the best Gordon judges we have officiating, the Philadelphia kennels should have come out in force, but probably the team needs a rest. Lady Gordon was the only challenge entry. A good-headed and tanned one in Homer S. won in open dogs. Wang Ivanhoe is not far behind had he more stop and squarer muzzle. Archibald, well known, is of different type, light in tan. In bitches, Tesse, first, although a little Roman-nosed, excels Daisy Ivanhoe in muzzle and before the eye, better forelegs, too. Belle T., third, should be flatter in skull and longer; good legs and tan. Kennel prize did not fill. Best Gordon owned by a member of the G. S. Club, Archibald.

#### Spaniels.

E. M. Oldham, Judge.

There was a pretty fair entry here and many of the faces are so familiar they scarcely need describing. The judge placed them well, sticking to his type all through. Kitty of Cork was the only Irish water represented. In field challenge dogs Newton Abbott Torso had not much trouble to score over Brantford Mohawk, better head, legs and body. Open blacks only entry, Sorry Jake, absent. Midnight III., a bitch of excellent type, faulty in head, won nicely in the next class from Maid, a little high on the leg, fair head and good body length. In any other color Coleshill Rufus, a dark liver, won from Brownie and Romeo, excelling in general type, height and coat. Russett, the only entry in bitches, was absent though her owners were there. In cockers, going through the catalogue is simply a repetition of late shows, although the awards are not the same. In challenge dogs champion Middy, very much improved with his week's rest, scored from Jay Kay, Pickpansia being absent. Othello should have had a look in, although not in his usual bloom. In bitches Miss Wagglers and champion I Say, in Black Dutchess's absence, was the order; there was little between them this time, muzzle and skull being in favor of Wagglers. In open black dogs King Raven, Jr., beats in body and general type. King Kole is small and Douglass, third, is shorter still. Donovan was put back to reserve; he is not this judge's type, but more of a cocker than the "extreme" Douglass. In bitches the entry was much larger, first, Rideau Reine, second, Lady Fidget, third, Miss Phyllis, reserve, Raven Belle, who loses in front and muzzle, nice sort otherwise. Among the three letter ones I liked Fashion, a trifle long, but all-round good type, well shown. Circe loses in front and muzzle, high brow. Other than blacks, Brantford Rufus scored another for Mr. Fiske, Wang, second, losing in body and front. Dandy S. was absent. In bitches Tonita, a trifle long, scored from the charming Ruth S., who loses before eye a bit, but body and legs cannot be beaten. Red Niobe's coarse head and front put her out. Fannie, vhc., had to give in to Cherry Blossom for reserve, losing in head and front to the other. In puppies, Midshipmite, one of those "dear" little things, scored over Zuleika, a red one, Circe getting reserve, beaten in skull, front and coat by the others. In the local class Jay Kay II., won from Wang. Kathleen, reserve, faulty in head and forelegs. Best brace of cockers, Middy and Miss Wagglers. Best brace other than black, Bell cup, Ruth S. and Zuleika. Best in open classes, King Raven. Best-headed cocker, Rideau Reine. Best brace of fields, Midnight III. and Coleshill Rufus. Best field bitch in open class, Midnight III.

#### Collies.

Dr. L. C. Sauveur, Judge.

A nice entry and the Doctor handled his classes correctly again. Wellesbourne Charlie and Flurry III. took the challenge prizes without competition; both looked well considering their recent campaigning. In open dogs (9), Christopher's sweet quality, excellent mane and style could not be denied. Woodmansterne Trefoil and Conrad II. came next; both are getting well into coat and should be right for Boston. Chesterford Marvel we scarcely recognized with his heavy coat on and promising mane; he was a bit light behind, has lots of quality. Hempstead Chief, short of coat, is bunched up in the shoulders, fair head. Ben Nevis, Jr., is a bit coarse, but a good deal like the old dog; faulty in ears. Bruce Christopher loses in head and size. In bitches, Ormskirk Julia, first, Woodmansterne Deborah, second, were streets ahead of Nettle, third. Julia showed light in body, nice head and ear. Deborah has scarcely the quality in head, but looked better in body, having a longer coat. In puppies, Hempstead Rex and Hempstead Bess, the New York vhc's., were placed in this order, although for sweet type I like the bitch best; the dog looked faulty in ear carriage and tucked up, the bitch was in better coat. Squire II. is a bit coarse. Pansy is too full in skull yet. In locals, Bruce Christopher was the winner. Chestnut Hill Kennels took the kennel prize. Breeder of best collie in 1893, Hempstead Farm Kennels with Hempstead Rex. Best stud dog with two of his get, Christopher.

#### Poodles.

C. H. Mason, Judge.

An excellent gathering of these dogs welcomed the judge. As usual the Meadowmere Kennels furnished the majority. The winners, most of them, have been so recently on the circuit, it is not necessary to describe many of them. Milo and

Dinah furnished the challenge winners, Rajah and Chloenot being shown. In corded dogs Duke beat the well known Bismarck, better condition and cords. In curly black dogs Sidi won again with Girofle second, losing in head and coat to the other. Ithel, a nicely made one with fairly crisp coat came third, and Dophan, inclined to cords, took reserve. The others were much on the same style, though several showed a good start for cords. In bitches that smart one, Bess, scored again with Girofle and Snowball in order next, all from the same kennel and with little difference between them. Juno, vhc., a smarter, better curled one than Frou Frou, reserve; Stella and Countess lose in coat. Diamond had no difficulty in scoring over the white half and half coated Bon-Ton. Best kennel, Meadowmere Kennels; best any variety, Milo; best black curly bitch, Dinah.

#### Bulldogs.

C. H. Mason, Judge.

The competition for best in challenge class was interesting and Saleni, let off her chain, pulled off the prize; King Lud ran her close, but dips behind shoulder, and is not so straight in forebone as the bitch; the bitch was much better shown than at New York. In open dogs, Romance and Wal Hampton took the money, and Argonaut, reserve, should be deeper in muzzle and more out at shoulder. African Monarch, vhc., was at Chicago. In bitches, first went to Lucy Glitters, a Dudley nosed one, the judge when asked about it, maintaining that as the rest of her color was in keeping, she should not be penalized in such a class. The club standard says Dndley nose is a disqualification and it is so held in England. Lucy in shape of head beats Katisha easily in depth and squareness of foreface. Careless, reserve, is too long in face and not broken up enough. Saleni took the specials for best in show and best bitch. Best bitch in open classes, Lucy Glitters.

#### Bull-Terriers.

C. H. Mason, Judge.

A very nice lot altogether faced the judge, but as so many of the winners have been on the circuit their placings will be sufficient to record. Cordona won in challenge dogs, but Kit beating Starlight and Attraction in challenge bitches, considering the former's condition, was scarcely the thing, as the latter's bag was down and she was not in her Saratoga form. In open dogs Duke of Rochester won again, followed by Topsparkle, whom he beats in head and front. Harborne King, third, is cheeky, light in eye and stop too defined. Billy Bulger is coarse compared to winner. Admiral Mello is throaty and not long enough in face. In bitches Edgewood Tipsey, Lady Carrabrook and Thelma took the money, with Edgewood Topsey reserve. Topsey should have been second, better type than either of the other two, although she did not show so well. Lady Carrabrook's light eye and short neck are against her.

Light-weight dogs and bitches had Tarquin a winner again; his head pulls him through. Lady Rochester I like better in front and body. Rookery Boy was in his right place here. Pearl Rochester, third, her quality and nice model throughout being rightly recognized. F. F. Dole took the kennel prize and Cordona the cup for best in the show.

#### Dachshunds.

A. C. Krueger, Judge.

In open dogs, in spite of condition, Jay had no difficulty in beating Dash, a plain, light tanned one. In bitches Jargonelle beats Jessie Victoria in length of muzzle and front; both show lots of type and quality.

#### Beagles.

A. C. Krueger, Judge.

A number of the familiar names were absent, but with the Hornell-Harmony dogs and Consolidated Kennels on hand, quality was good. They were well handled. In challenge dogs, Sherry, a dog we have always commended beat Forest Hunter especially in head and front. Royal Kreuger and Tricotrin were not for competition. In bitches, the sweet little Ava W. scored over the rather coarse Twintwo, the latter has many good points, but is not the showy bitch she was. In open dogs a clinking good one just under size came to the front, Bauman, a little wide and bowy in front and feet could be better, outside of that he is a "cracker" for type and substance. Directum, second, is coarse headed. Roger W. gets his tail over; third has been seen before, Keith is faulty in front though nice type. In bitches, Daisy Corbett, scored from a good fronted one in Popsey, she is pinched in muzzle and even longer than Daisy in back. Actress, third, is wide in skull and shown thin. Rockland Nellie gets it in front from Actress, but is a little long faced, still I prefer her to the other. Gypsy A. is well known, loses in head, and body too long. In open dogs, small sized, Paderewski, not a very good one, loses in front to Little Wonder; he has, however, more substance. Young Royal, third, has a very poor muzzle, good otherwise. In bitches, Evangeline a bitch of sweet quality, beats Hia in head but not in body or legs. Queechey gets her feet out, nice type and better than average in muzzle. Smut is not straight in front. Velvet, a very nice stamp of pup won in her class, Rose Graham losing in head and coat, being third, the others I did not see as they went home early. Best kennel Hornell-Harmony Kennels; best in open class Daisy Corbett; best in show Royal Kreuger, Bauman reserve.

#### Fox-Terriers.

James Mortimer, Judge.

Outside of those of the Rutherford Kennels and one or two others the quality here was not such as one could go into ecstasies over. Grouse II. was the only challenge entry. Warren Tip Top and Warren Layman, the latter losing in skull and muzzle, were the winning dogs, followed by Baby Nigger, also well known; so are Arrondale Mixture, Hillside Royal and Poverino, who looked improved since his return. In bitches Warren Captious and Duty were again placed as named, and they looked very well, too. Lady Roseberry, another familiar face, third. Trim, vhc., loses in front, and muzzle and ear. In puppies, Warren Regent, a nice-headed one with full skull yet, won from the nice-headed Mister Great Snap. Mere Jollice, he, is a big dog but has many good qualities; for his excellent front he should have had more notice; his coat is soft. Triton won in the local class—a son of Raffle, rather good front and head. Philadelphia, second, should be longer in neck and squarer in muzzle. In wire-haired open dogs Mister Great Snap scored, his half brother Brittle Bright, whom he excels in coat and head, coming next, the coarse-headed Ebor Larchmont third and Jack Prompter, coarse in head and faulty in ear and front, vhc. A very nice-headed and fronted bitch with excellently-carried ears in Roche Tacit, scored easily from Jess Frost, beating in length of head and front. Mistress Betsie, third, loses to both in carriage of ear, front and coat, but is a nice type though. Rutherford Kennels took the kennel prize. Best American bred dog in the open class, Warren Tip Top. Best in open class (2), Warren Captious. Best in local class (2), Triton. Best in show, Warren Captious.

#### Irish Terriers.

C. H. Mason, Judge.

Jack Briggs and Jackanapes again in challenge class. Brickbat, Jr., had no competition in open dogs and a rather nice-headed bitch, Kathleen, won in open bitches without competition.

#### Black and Tan Terriers.

C. H. Mason, Judge.

Gypsy Girl, fresh from her Chicago victories, in Broomfield Sultan's absence, had to beat Glenwood; but for the

latter's coarseness he should win, better color and body, shape and ear. In open dogs Perfection, a son of Black Earl, was alone and, of course, took the blue; he is the best pup I have seen in many a year, his style, head, neck, body and carriage of tail could scarcely be beaten; good bone; eye a little light, badly breeched and scarcely true in front feet, are the only faults one wants to pick out yet. If he is lucky he should have a winning career, and George Bell is his owner.

#### Scott Terriers.

C. H. Mason, Judge.

Not a very good class, just three, with the moderate Merry Call first, followed by Glenelg and Glenshea; Glenelg easily beats the other in coat and style.

#### Skye Terriers.

C. H. Mason, Judge.

Plenty of quality and all of them well known, in fact here in the Quaker City is the main stronghold of this breed. Queen of Skyes and Endcliffe Maggie came together in challenge class and the Queen won before; her color could be improved. Barnaby Rudge was the other competitor. Elphinstone again captured the open dog ribbon, and in bitches Belle Stafford and Princess May was the order, followed by Islay, all well known, the latter beaten in coat. C. A. Shinn took the kennel prize.

#### Yorkshire Terriers.

C. H. Mason, Judge.

A small entry in the three classes, but a choice lot and well known. Young Ted in challenge class; Prince beating Jacks in color and size in open dogs, while Judy, a nicely colored one of nice size, was alone in her class. In toys Little Plimmer, a very fair little terrier, won, Snap not being considered eligible for second.

#### Pugs.

Dr. L. C. Sauvour, Judge.

A rather nice lot altogether. Bob Ivy, looking tip-top, was alone in challenge class. Ivy Boy, a little on the leg, took the next class prize, followed by Capers, who loses in front, depth of muzzle and curl to him. Pomona Fritz loses in muzzle and skull to winner. In bitches Pansy G., a very smart sort, might be a bit squarer in muzzle, but excellent legs, body and curl, as I saw her running naturally. Little Ruth is a very pretty little one, not the depth of body of the other. Lady Treasure loses by length of face and body and curl. Dr. Cryer took the kennel prize and Bob Ivy best in show.

#### Toy Spaniels.

James Mortimer, Judge.

The short-faced King of the Charlies won from Romona Nina in the class for King Charles, Nails, vhc., losing in skull, color and coat to the others. In any other toy spaniels the Jap, Mamie won, Rhoda being given an extra prize, the Jap, O'Kikusan getting second. Kobie, vhc., I liked for this; shorter faced and better size. Tamak, Princess Colonna and Looloo well deserved their letters. Best Japanese in show, Mamie; best toy spaniel, King of the Charlies; best kennel, Mrs. F. Senn. Spring was the only Italian greyhound.

#### Miscellaneous.

James Mortimer, Judge.

A poor lot. Bey and Turk, basset hounds, were the winners in the heavy division; Turk loses much to the other in forelegs and head. In small size a little sort of black Pomeranian, won from Dewr, the Welshman, a fair Maltese coming next. Toodles we don't know what she is.

H. W. Lacy.

#### LIST OF AWARDS.

MASTIFFS.—CHALLENGE—1st, Dr. C. A. Lougest's Lady Diana.—OPEN—Dogs: 1st, Dr. C. A. Lougest's Emperor William; 2d, J. V. C. Roberts's Bruce Cauton. Bitches: 1st, Woodbury Kennels' Cerne; 2d, withheld.—LOCAL CLASS.—Prizes withheld.

ST. BERNARDS.—ROUGH-COATED.—Dogs: 1st, Swiss Mountain Kennels' Eboracum; 2d, Hall & Burgess's Ardmore; 3d, A. L. Martin's Nero D. High com. J. T. Barnes's Bruce, Jr. Bitches: 1st and 2d, Swiss Mountain Kennels' Sunray and Harmony; 3d, Dr. T. S. Carrington's Lady Juno Jacques. Puppies: 1st, A. Burgess's Madam B; 2d, F. Reichard's Columbus. Reserve, Swiss Mountain Kennels' Voodoo.—SMOOTH-COATED.—CHALLENGE.—Dogs: 1st, Swiss Mountain Kennels' champion Scottish Leader. Bitches: 1st, Col. Rupert, Jr.'s Empress of Contocook.—OPEN.—Dogs: 1st, M. A. Thiman's Chester; 2d, Swiss Mountain Kennels' Castor of Contocook. Bitches: 1st, Swiss Mountain Kennels' Sunol. Puppies: 1st, Swiss Mountain Kennels' Castor of Contocook.—LOCAL CLASS.—1st, Hall & Burgess's Ardmore; 2d and reserve, Swiss Mountain Kennels' Rosabell and Empire State. Very high com. E. Loeb's Rector. High com. J. T. Barnes's Bruce, Jr., and E. B. Beaumont's Ma Queen.

ENGLISH BLOODHOUNDS.—1st and 2d, Dr. C. A. Lougest's Kaveen and Belhus.

GREAT DANES.—Dogs: 1st, W. L. Deegen's Thesusus; 2d, P. Clapstone's Stanley; 3d, J. H. H. Maennner's Victor. Very high com. E. L. Kraus's Cesar. Bitches: 1st, F. H. Klauder's Fay; 2d, J. H. H. Maennner's Cora; 3d, E. L. Kraus's Dora.

RUSSIAN WOLFDHOUNDS.—CHALLENGE.—1st, H. W. Huntington's Champion Argoss.—OPEN.—Dogs: 1st and reserve, C. S. Hanks's Col. Dietz and Sorvanets; 2d, H. W. Huntington's Odrooski. Bitches: 1st, Hornell-Harmony Kennels' Olivia; 2d, H. W. Huntington's Riga. Very high com. C. S. Hanks's Lady Dietz.

DEERHOUNDS.—Bitches: 1st, A. L. Page's Minna.

GREYHOUNDS.—CHALLENGE.—1st, A. W. Purbeck's Gem of the Season. Reserve, W. G. Triton's Master Rich.—OPEN.—Dogs: 1st, F. P. Smith's Baltic; 2d, W. S. Gibson's Norway Star; 3d, P. J. Walsh, Jr.'s Crested Charlie. Bitches: 1st, Maybrook Kennels' Miss Dollar III.; 3d, A. E. Willis's Nellie.

AMERICAN FOXHOUNDS.—CHALLENGE.—1st, Seminole Kennels' Ranger II.—OPEN.—Dogs: 1st and 2d, Lima Hunt Club's Buck and Skip. Bitches: 1st and 2d, 3d, Whitlitt & Higgins's Belva, Queen W. and Maranny Cook II. Very high com. Lima Hunt Club's Nip.

CHEESAPEAKE BAY DOGS.—Dogs: 1st, B. A. Smith's Cleveland. Bitches: 1st, B. A. Smith's Bigelow Rose.

POINTERS.—CHALLENGE.—Dogs: 1st, Hempstead Farm's Duke of Hessen. Bitches: 1st and reserve, Hempstead Farm's Woolton Game and Hempstead Pearl.—OPEN.—Dogs (50lbs. and over): 1st and 3d, Hempstead Farm's Sandford and Hempstead Drake; 2d, Springside Kennels' Ridgeview. Reserve, Col. Parke Longnecker's King of Hessen. Very high com. Frank H. Fleer's Gamster. Bitches (50lbs. and over): 1st, Springside Kennels' Kent's Belle. Dogs (under 50lbs.): 1st, Netherwood Kennels' Ridgeview Tenny; 2d, Springside Kennels' Ridgeview Donald; 3d, Hempstead Farm's Hempstead Carlo. Reserve, Leonard Finletter's Aspiration. Very high com. M. L. Evanson's Doc Tanner. Bitches (under 50lbs.): 1st, Hempstead Farm's Hempstead Blossom; 2d, Springside Kennels' Springside Nell; 3d, C. E. Connell's Fan Fan II. Reserve, Eldred Kennels' Graciel II. Very high com. Dr. J. G. F. Holston's Fannie Kirk and J. B. Baker's Westminster Zoe. Puppies: 1st and 2d, Springside Kennels' Springside Pax and Springside Lill. Reserve, H. W. Gouindie's King Croxeth. Very high com. John E. Fox's Cricket, Jr.—LOCAL CLASS.—1st, Dr. Parke L. Longnecker's King of Hessen; 2d, Frank H. Fleer's Gamster. Reserve, Leonard Finletter's Aspiration.

ENGLISH SETTERS.—CHALLENGE.—Dogs: 1st, J. E. Dager's Toledo Blade. Bitches: 1st, Jas. W. Wood's Donna Juanita.—OPEN.—Dogs: 1st, Blue Ridge Kennels' Antonio; 2d, S. Murray Mitchell's Sandy Gladstone; 3d, J. Taylor Williams's Paul Hill. Very high com. Victoria Kennels' The Earl, John Mink's Rock Noble and Arthur E. Davis's Kent III. High com. Fox & Sells's Dion C. and Wm. E. Caldwell's Aldine Com. W. H. Walston's Kenwood. Bitches: 1st and very high com. Blue Ridge Kennels' Countess Ruth and Gossip; 3d, Chas. A. Rathbone's Toledo Queen; 3d, J. Taylor Williams's Flight of Riverview. Reserve, Phil. Demmel's Belle of Brownstown. Very high com. E. J. Myers's Prima Donna, Jos. E. Borden's Edgemark's Nellie and John Denver's Victoria D. High com. S. Murray Mitchell's Nanon, J. E. Dager's Lady Beatrice, W. L. Kidwell's Modest Girl, H. D. Ogden's Queen of the Elms and Jacob Schroth's Fannie

Noble. Com., J. E. Dager's Doris C. Puppies: 1st, B. F. Lewis's Cincinnati Pride; 2d, Wm. G. Register's Pop Monarch. Very high com., W. P. Mercer's Ben Barlow.—LOCAL CLASS.—1st, S. Murray Mitchell's Sandy Gladstone; 2d, G. W. Hunter's Edna.

IRISH SETTERS.—CHALLENGE.—Dogs: 1st and reserve, Seminole Kennels' champion Tim and Pride of Fatsy. Bitches: 1st and reserve, Seminole Kennels' champion Laura B. and champion Alfreda.—OPEN.—Dogs: 1st and 2d, Seminole Kennels' Young Tim and Elcho, Jr.; 3d, E. H. Brennan's Mark Anthony; extra 3d, J. J. Scanlan's Pemberton. Reserve, C. G. Alexander's Don. Very high com. C. G. Alexander's Bang, E. H. Brennan's King Idle and Dennis the Gossoon. Com. G. O. Smith's Young Signal. Bitches: 1st and 2d, reserve, Seminole Kennels' Fly, Delphine and Biddy; 3d, W. L. Washington's Ruby Glenmore II. High com. N. McIntosh's Maid of Borstal. Puppies: 2d, N. B. Young's Maggie Moore.—LOCAL CLASS.—1st, P. Guckes's Speedaway; 2d, S. J. DeLany's Roscoe II.

GORDON SETTERS.—CHALLENGE.—Bitches: 1st, J. Graham's Lady Gordon.—OPEN.—Dogs: 1st, W. O. Lindley's Homer S.; 2d, O. W. Schaffer's Wang Ivanhoe; 3d, J. E. Clark's Archibald. Bitches: 1st, L. S. Green's Tessie; 2d, P. E. Matthes's Daisy Ivanhoe; 3d, C. Y. A. Thompson's Belle.

IRISH WATER SPANIELS.—1st, B. F. Lewis's Kitty of Cork.

FIELD SPANIELS.—CHALLENGE.—Dogs: 1st, B. F. Lewis's Newton Abbott Torso.—OPEN.—Bitches: 1st, Hempstead Farm's Midnight III.; 2d, Woodbury Kennels' Maid. Dogs (other than black): 1st, Hempstead Farm's Colehill Rufus; 2d, C. A. Watts's Brownie; 3d, L. B. Bajer's Romeo.

COCKER SPANIELS.—CHALLENGE.—Dogs: 1st, Swiss Mountain Kennels' champion Middy. Reserve, E. W. Fiske's Jay Kay. Bitches: 1st, Swiss Mountain Kennels' champion Miss Wagles Reserve, E. W. Fiske's I Say.—OPEN.—BLACK.—Dogs: 1st and 3d, Swiss Mountain Kennels' King Raven and Douglass; 2d, E. W. Fiske's King Kole. Reserve, W. T. Payne's Donovan. High com. E. E. Miller's Cloudy Mid. Bitches: 1st and very high com. A. Laidlaw's Rideau Reine and Cere; 2d and reserve, Swiss Mountain Kennels' Lady Fidget and Raven Belle; 3d, E. A. Wilson's Miss Phyllis. Very high com. E. W. Fiske's Fashion. High com. T. S. Harris's Blossom and E. W. Fiske's Eugenie.—OTHER THAN BLACK.—Dogs: 1st, E. W. Fiske's Brantford Rufus; 2d, J. Calvert & Son's Wang. Bitches: 1st and very high com. A. Laidlaw's Tonita and Fannie; 2d and reserve, Swiss Mountain Kennels' Ruth and Cherry Blossom; 3d, Pomona Kennels' Red Niobe. Puppies: 1st and 2d, Swiss Mountain Kennels' Midshipmite and Zuleika. Reserve, A. Laidlaw's Cere.—LOCAL CLASS.—1st and reserve, Swiss Mountain Kennels' Jay Kay II. and Kathleen; 2d, J. Calvert & Son's Wang.

COLLIES.—CHALLENGE.—Dogs: 1st, Chestnut Hill Kennels' Wellbourne Charles. Bitches: 1st, Chestnut Hill Kennels' champion Flucy II.—OPEN.—Dogs: 1st and reserve, Chestnut Hill Kennels' Christopher and Chesterford Marvel; 2d, 3d and very high com. Hempstead Farm's Woodmansterne Troiloff, Conrad II. and Hempstead Chief. Very high com. W. R. Outburt's Bruce Christopher and William Benner's Ben Nevis, Jr. High com. J. H. Shepard's Lad. Com. Arthur Black's Scot. Bitches: 1st and reserve, Hempstead Farm's Elmskirk Lady and Woodmansterne Deborah; 2d, Dr. G. W. Caldwell's Nellie. Puppies: 1st and 2d, Hempstead Farm's Hempstead Rex and Hempstead Bess. Reserve, H. B. Fry's The Squire II. Very high com. Maybrook Kennels' Maybrook.—LOCAL CLASS.—1st, W. R. Outburt's Bruce Christopher; 2d, C. J. Maxwell's Du Pont. Reserve, William Benner's Ben Nevis, Jr. Very high com. P. Muller's Prince Charlie.

POODLES.—CHALLENGE.—Dogs: 1st, Meadowmere Kennels' Milo. Bitches: 1st, Meadowmere Kennels' Dinah.—OPEN.—CORDED.—1st, M. C. Work's Duke; 2d, Dr. S. N. Duer's Bismarck.—CURLY.—Dogs (black): 1st and 2d, Meadowmere Kennels' Sidi and Girofle; 3d and reserve, J. D. Bush's Titel and Dophan. Very high com. J. L. Woolston's Negro, A. G. Barrie's Jean Jacques Rousseau and Meadowmere Kennels' Romeo. Bitches: 1st, 2d and very high com. Meadowmere Kennels' Bess, Gerofia, Snowball and Juno. Reserve, Mrs. G. A. Freeman, Jr.'s Frou Frou. High com. J. B. Ellison's Stella and Countess. Dogs (other than black): 1st, H. H. Hunnewell, Jr.'s Diamant; 2d, E. E. Borie's Ton-Ton.

BULLDOGS.—CHALLENGE.—Dogs: 1st, Woodlawn Park Kennels' Saleni. Reserve, J. H. Congdon's King Lud.—OPEN.—Dogs: 1st, Toon & Thomas's Romance; 2d, Woodlawn Park Kennels' Wal Hampton. Reserve, J. D. Bush's Titel and Dophan. Very high com. F. Dole's African Monarch. Bitches: 1st, R. D. Winthrop's Lucy Glitters; 2d, J. L. Congdon's Katisha. Reserve, J. D. Bush's Careless.

BULL-TERRIERS.—CHALLENGE.—Dogs: 1st, R. S. Huidekoper's V.S. Capless. Bitches: 1st, R. S. Huidekoper's Kiki. Reserve, F. F. Dole's Starlight.—OPEN.—Dogs: 1st and reserve, J. W. Higgins's Duke of Rochester and Billy Bulger; 2d, F. F. Dole's Topsparkle; 3d, J. D. Patterson's Harborne King. Bitches: 1st, G. P. Runtion's Edgewood Tipsey; 2d, A. Thomson's Lady Carrabrook; 3d, Dr. G. D. B. Darby's Thelma. Reserve, F. F. Dole's Edgewood Topsy.—LIGHT WEIGHT.—1st, G. P. Runtion's Tarquin; 2d and 3d, W. J. Higginson's Lady Rochester and Pearl Rochester. Reserve, T. S. Craig's Rookery Boy.

DACHSHUNDS.—Dogs: 1st, Windrush Kennels' Jay; 2d, R. Konigsbauer's Dash. Bitches: 1st, Windrush Kennels' Jargonelle; 2d, Dr. Moischenbacher's Jessie Victoria.

BEAGLES.—CHALLENGE.—Dogs: 1st, Hornell-Harmony Kennels' Sherry. Reserve, Consolidated Beagle Kennels' Forest Hunter. Bitches: 1st, Hornell-Harmony Kennels' Ava W.—OPEN.—Dogs (over 13in.): 1st, Consolidated Beagle Kennels' Bauman; 2d, Wm. Rebmann's Daboch; 3d and very high com. Hornell-Harmony Kennels' Roger and Keith. Bitches: 1st and 2d, Hornell-Harmony Kennels' Daisy Corbett and Popsey; 3d, J. C. Weeks's Actress. Reserve, E. L. Stine's Rockland Nellie. Very high com. Consolidated Beagle Kennels' Gypsy A. Com. W. P. Simpson's Topsy T. Dogs (under 13in.): 1st, Consolidated Beagle Kennels' Paderewski; 2d, Hornell-Harmony Kennels' Little Wonder; 3d, Frank B. Bolton's Young Royal. Bitches: 1st and 3d, Hornell-Harmony Kennels' Evangeline and Queechey; 2d, Charles D. Bernheimer's Hia. High com. E. L. Stine's Smut. Puppies: 1st and 3d, Hornell-Harmony Kennels' Velvet and Rose Graham; 2d, Consolidated Beagle Kennels' Clarion of Glenrose.

FOX-TERRIERS.—CHALLENGE.—1st, Charles Steadman Hanks's Grouse II.—OPEN.—Dogs: 1st and 2d, L. & W. Rutherford's Warren Tipton and Warren Layman; 3d, E. A. Cook's Ruby Trigger. Reserve, H. L. Roy Jones's Arrandale Mixture. Very high com., James Ferris Bell's Hillside Royal and Dr. Geo. D. B. Darby's Poverino. Bitches: 1st and 2d, L. & W. Rutherford's Warren Captious and Warren Duty; 3d, Toon & Thomas's Lady Roseberry. Very high com. Dr. Geo. D. B. Darby's Trim. Com. E. H. Cook's Scarrott Assart. Puppies: 1st, L. & W. Rutherford's Warren Regent; 2d, G. W. H. Ritchie's Mister Great Snap. Very high com. John T. Peacey's British Prince. High com. Mere Kennels' Mere Jollice and Dr. Geo. D. B. Darby's Diego.—LOCAL CLASS.—1st, Dr. Geo. D. B. Darby's Triton; 2d, J. G. Tomson's Philadelphia. High com. John T. Peacey's Prodigal and W. T. McAlees's Vic Prompter.—WIRE-HAIRED.—Dogs: 1st, G. W. H. Ritchie's Mister Great Snap; 2d, H. T. Foote's Brittle Bright; 3d, J. C. Weeks's Ebor Larchmont. Very high com. L. A. Rice's Jack Prompter. Bitches: 1st, Maybrook Kennels' Roche Tacit; 2d, Woodlawn Park Kennels' Jess Frost; 3d, G. W. H. Ritchie's Mistress Betsie.

IRISH TERRIERS.—CHALLENGE.—1st, Toon & Thomas's Jack Briggs. Reserve, Woodlawn Park Kennels' Jackanapes.—OPEN.—Dogs: 1st, Toon & Thomas's Brickbat, Jr. Bitches: 1st, Wm. C. Dulles's Kathleen.

BLACK AND TAN TERRIERS.—CHALLENGE.—1st, Toon & Thomas's Ophrey G. Reserve, S. D. Ripley's Grouse.—OPEN.—Dogs: 1st, Manchester Black and Tan Terrier Kennels' Perfection.

SCOTTISH TERRIERS.—1st, Toon & Thomas's Merry Call; 2d and reserve, T. H. Garlick's Glenelg and Glenshea.

SKYE TERRIERS.—CHALLENGE.—1st, C. A. Shinn's Queen of Skyes. Reserve, H. K. Cauer's Endcliffe Maggie.—OPEN.—Dogs: 1st, C. A. Shinn's Elphinstone. Bitches: 1st and 2d, C. A. Shinn's Belle Stafford and Princess May. Reserve, P. & H. Smith's Islay.

YORKSHIRE TERRIERS.—CHALLENGE.—1st, F. Senn's Young Ted.—OPEN.—Dogs: 1st, F. Senn's Prince; 2d, Pomona Kennels' Jacks. Bitches: 1st, F. Senn's Judy.

TOY TERRIERS (OTHER THAN YORKSHIRE).—1st, Jas. Patterson's Little Plimmer.

PUGS.—CHALLENGE.—Dogs: 1st, M. H. Cryer's Bob Ivy.—OPEN.—Dogs: 1st, M. H. Cryer's Ivy Boy; 2d, Mrs. J. F. Sinnott's Capers; 3d, Pomona Kennels' Pomona Fritz. Bitches: 1st and 2d, M. H. Cryer's Pansy G. and Little Ruth; 3d, C. J. Mischler's Lady Treasure.—LOCAL CLASS.—1st, M. H. Cryer's Ivy Boy.

KING CHARLES SPANIELS.—1st, F. Senn's King of the Charlies; 2d, Pomona Kennels' Pomona Nina. Very high com. Mrs. H. B. Cox, Jr.'s Nails.

TOY SPANIELS (OTHER THAN KING CHARLES).—Extra 1st, Merry View Kennels' Rhoda; 1st, Mrs. F. Senn's Mamie; 2d, Mrs. F. A. Atwood's O'Kikusan. Very high com. Mrs. F. Senn's Kobie. High com. Mrs. F. Senn's Tamak, Mrs. C. H. Buzby's Princess Colonna, Mrs. S. J. Spooner's Looloo.

ITALIAN GREYHOUNDS.—1st, Joe Lewis's Spring.—OVER 30lbs.—1st and 2d, J. T. Richards's Bey and Turk.—UNDER 30lbs.—1st, Mrs. Robt. Glendenning's Mirtza; 2d, Woodlawn Park Kennels' Dewr (Welsh terrier). Very high com. A. Wood's Toodles, L. E. Bixler's Pride of Malta.

## POINTS AND FLUSHES.

[By a Staff Correspondent.]

## Clubs and Handlers.

FROM some remarks made on my recent writings on handlers and club membership, I am led to infer that some of the readers may think that there was something personal in the objection. It is difficult to handle any subject in which personality is concerned without seeming to have a personal motive, either open or concealed. But the objections raised were not on personal grounds at all. The whole matter rested entirely on a principle of equity which always has been and is recognized in all competitions. No man is allowed to judge his own dog or horse in a competition, nor is there a sentiment in favor of a contestant taking part in both sides of a competition; that is, in the judging or managing and in the competition. The sentiment is against it in all competitions, whether the action or influence be direct or indirect. The feeling that it is improper to have even a remote personal interest, in both the judging or management and the competition, has been shown a number of times at trials when a judge withdrew from judging a stake in which was a dog of his own breeding. This I consider as being an act of over-sensitiveness and unnecessary, since no sportsman would be suspected of prejudice in favor of a dog from such a commonplace and unimportant incident as being the breeder. A gentleman who has the standing and qualifications which induce a club to give him an invitation to judge certainly has stability enough to judge in a competition any dog he may have bred.

This matter is presented merely to show to what an extreme limit the principle is recognized when the circumstances are all direct, and not concealed by apparently innocent and detached interest, as, for instance, club membership.

To bring out my meaning clearer, the protest made by Mr. Avent in respect to the matter of the alleged tampering with Topsy's Rod in connection with the running of the absolute heat of the Derby at Grand Junction, Tenn., in February last, will serve for illustration as to the manner in which complications may arise which affect the equity of a competition. Mr. Avent when he made the protest was a member of the board of governors and for that matter he is now a member. He entered a formal protest while the heat was being contested in his capacity as a handler and owner. As a member of the board he had a perfect legal right to pass on his own protest in his capacity as such member. The club has no rule against it nor has it any usage to the contrary to appeal to. Mr. Avent did not attempt to pass on his own protest, nor do I mention the matter as implying that he would do so. My purpose is simply to show the complications which arise when a competitor is also one who gives the competition and passes upon it, and to show the imprudence of organizing a board on principles which are antagonistic to a perfect equity of competition.

It may be said that members of clubs who are handlers would have too high a sense of courtesy and propriety to ever act as a member on a matter in which they are directly interested as a competitor, but that simply reduces a broad principle of equity to a matter of individual discretion. I do not believe that the handlers who are now club members would do anything which would impair the equity of a competition, but, as I explained at the outset, there is absolutely no intention to discuss persons. The broad principle of equity is sufficient. Moreover, the membership of clubs is not a fixed quantity. It changes more or less from year to year. What a member or members this year might not do this member or members next year might do if there be no law against it.

Again, a member of a board of governors should be able to perform all the duties to the office. If he cannot do so for private business reasons or interests which disqualify him, he is not eligible to the office, particularly when there are numerous members who have no disqualifying interests, who could be elected to the office. A member of a board of governors, at the same time being a competitor, might not pass on his own protest, but he might be called upon to pass on the protest of another competitor in the same competition, or to interpret a rule, or to rule on some circumstance for which no rule was provided. He thus would have an advantage over his fellow competitors, since he had privileges as a competitor, though under color of his office or by virtue of his office, whichever term is most pleasing, which the other competitors could not enjoy, and which he as a member was free from; that is, his fellow competitors could not pass on any of his protests or interpret rules or rule on unusual cases.

To this it has been replied that all handlers have the same privilege to become club members and thus enjoy the appertaining privileges alike. All handlers cannot afford expensive club dues, nor take the responsibility which comes to a member, of standing an assessment for a deficit. Then again, if all handlers belonged to a club, they would control it in every respect, and it is necessary, to give the competition proper prestige, interest and importance, that the club be managed by sportsmen who are not interested as handlers.

In my opinion, handlers are in a manner opposing their own interests when they become club members. It is not to their interest to have a voice in the competition. The non-professional sportsman, who pays his dues from mere fondness of the sport, likes to have the arrangement of the competition himself. He is an important factor from every standpoint. It is not to the best interest of the handlers to arrange and maintain, as members, a competition. If they are members they will be present in force at the club meetings, and will gradually get possession in managing the club's affairs, this the more easily as they will practically be a unit in their action. The other club members will never be at a trial or club meeting in force, and they will hold entirely different views, in all probability, as to the policy of the club and will not act in unison. As they lose control of the club's affairs they will lose interest, and everybody knows what happens when a member loses membership interest.

In presenting this somewhat novel idea, I feel quite sure that time will prove the soundness of the principle that it is to the mutual advantage of the clubs and the handlers to remain in their respective special domain. I have not much belief that the foregoing will be accepted at present as good reasoning, but I feel confident that it will be in time. It will be of interest if some of the handlers will express their opinions on this subject; and also club members might have some opinions worth perusing.

The Manchester Kennel Company was very unfortunate at Grand Junction. Both their entries, Glean's Sport and Glean's Pink, were very sick and consequently unfitted to start in the stake of the U. S. F. T. C. Both dogs are excellent performers, and it was a great disappointment to their owners that they were incapacitated to compete.

It would be wise for any club to engage four judges, one of whom could be held as a reserve. At nearly all trials one or two of the judges fail to appear or cannot act for some reason. With a judge in reserve, the vacancy could be filled without loss or annoyance. In case of a vacancy the usage is to engage the most available man on the grounds or one of the reporters, often against their inclination and judgment. Often, too, against their convenience. Often, again, to their discomfort after the decisions are made.

## The Heat System.

There was some little advocacy of a return to the heat system in the competition at field trials, or at least a modification of it. That is, the heat system was to prevail, accord-

ing to the views presented, till first place was decided, after which the spotting system would be used in placing the rest of the winners. The heat vs. the spotting system is already a twice told tale, and needs nothing more in the way of argument. The theory that a dog which beats another dog beats also all the other dogs which the latter has beaten is a fallacy. It is unsound in theory and produces false results in application. The reasons are that no dog's work or his ability to do work is a fixed quantity. He may do perfect work one day and may be "off his nose" or sick the next, or he may be headstrong and bolt or chase in one heat and not in others; in short, he may do a thousand things to lower his work, and at best the average performance of a dog is not made up of uniform detail, nor are the opportunities or conditions alike one heat after another.

But I promised to present the subject for an expression of opinion, and for that purpose it is written.

Any set of rules which are intended to serve the double purpose of bringing the best dogs to the front and at the same time placate the vexation or temporize with the owners of poor dogs or defeated dogs are a failure in conception and must fail in practice. The time limit is one of the farcical details of the rules at present. The dogs are in the competition to win or lose. When a dog is beaten or wins, he has completed all that, in common sense, the competition affords or is intended for. But it has been decided to give the owner a fixed amount for his money right or wrong, thus at every trial can be witnessed the solemn farce of a brace of dogs being run over any kind of ground to kill time, because they have not merit even to make a creditable competition.

B. WATERS.

909 SECURITY BUILDING, Chicago.

## "Vicissitudes of the Judging Ring."

Editor Forest and Stream:

In your issue of March 17, under above heading, I gave the true happenings of the judging of the cocker Barefoot at the New York show and asked the question, "Did Mr. Wilmerding change his style of a cocker in less than ten minutes?"

In your issue of the 24th, under same heading, Mr. Wilmerding, in answer to my question, says: "The inclosed letter covers the one which appeared in your last week's issue under above caption signed F. M. Thomas and needs no comment from me." I fail to see wherein Mr. Wilmerding answers my question, the only one I asked, viz., "Did he change his style of cocker in less than ten minutes?"

Mr. Pidgeon says: "I am surprised to find what was contained therein under the head 'Vicissitudes of the Judging Ring.'"

His being surprised was unnecessary, as I wrote him saying that I had sent the facts to you. As to connecting him, even inferentially, with "a train of circumstances" which he says are said to have occurred, and of which he knows scarcely anything of his own knowledge, I will say plainly that he knows fully of all I wrote in regard to Barefoot's judging and I have proof of this, or at least that he did know before he left the show. It being news to Mr. Pidgeon of Barefoot being sent out of the ring because Mr. Wilmerding did not consider him cocker type surprises me, for it was Mr. Pidgeon who told this to me and my friend.

I am not in error as to handling Barefoot for the special, but I was not with him in the ring during the whole of the judging for the special. Mr. Pidgeon says further, "Being only eligible to the classes he was in—probably got all he was entitled to—from the judge's point of view." What a change in his opinion and choice of words. At the time of the judging I remember well his being just the reverse and having a much different feeling toward the judge and an organization not necessary to mention here.

FRANK W. THOMAS.

CATSKILL, N. Y.

[There are certain parts omitted in the above letter that are not relevant to the case.]

## Denver Dog Show.

THE fifth annual dog show which opened at the Coliseum Hall, Denver, on March 21, as in former years, did not prove a financial success, and we are sorry to hear that the members will have to dip into their pockets to make up the loss. The lack of a suitable building in the central part of the town, together with bad weather for the first day and a big fire near the show on the second day which cut off the electric lights, have much to do with the failure. The show was well advertised and the dogs, while few in number, were of very high quality. The show was kept open on Saturday and the shortage reduced to about \$250.

The management was excellent in every respect and great praise is due the committee, and especially to the superintendent, Mr. H. C. Withington, who did all in his power to make the show pleasant to both visitors and exhibitors. Messrs. F. F. Dole and J. Naylor were on from the East with big strings and captured most of the prizes, the former winning the prize for largest number in best condition.

There was scarcely any competition in any classes excepting the St. Bernard and collies, and as the winners are all well known criticism is unnecessary.

In St. Bernards the Argyle Kennels and Mr. A. C. Shallenberger captured the blues, and in collies the local dogs were well able to hold their own, the Carlwrie Kennels winning both open classes with two very nice puppies of their own breeding.

A few sales were made during the show. The St. Patrick Kennels sold a good young greyhound by Monk Bishop ex Lady Graham Gladys, six months old, to Mr. Jarrett. The Argyle Kennels sold the well-known smooth St. Bernard Pratt's Belle, for \$500, to Messrs. Wyant and Bishop. The Carlwrie Kennels sold a collie dog pup, litter brother to the winner in open class, to Mr. Jarrett, also a nice young dog by Maney Trefoil, to Mr. Mitchell Harrison, who is staying at Colorado Springs, and who came to the show to see his deerhound Douglas win first prize.

## Hogs as Bird Dogs.

Editor Forest and Stream:

I read in your Chicago contemporary, in an article from "Tar Heel," that in an English book published some sixty years ago it is recorded that a sow named Slut was trained to trail, point and retrieve game birds, and you have no idea how sorry I am that this bit of English history has been unearthed, for I am afraid that the arms akimbo coterie, in their great desire to be "Henglish you know," will be after all the sows—razor backs—in the South to put into their field trials and therefore handicap still more, and if possible set aside entirely our truly useful and practical field dog. I fear the danger still more on account of its being so well known how fleet these sows are; they can easily outrun any pointer or setter in the country. Our setters that are so intelligent, so tractable, that have so often sat up before us for the purpose of divining and anticipating our every want, have been snubbed and set aside long enough by the high class men by calling them names in derision—such as plugs, scrubs, etc., etc., and upon second thought I am not sure but it would be well for them to transfer their premeditated devotion from our lovable setter, who is capable of fully understanding and doing our bidding, without becoming sulky and inactive, like those that run wild because they will not stand training, to the sow, for there is no question but the sow could get into the next county quicker and the race among the horsemen would be so much more exhilarating and exciting. Let her come!

Feb. 12.

## Flaps from the Beaver's Tail.

TORONTO, Can.—Mr. "Andy Laidlaw," he of cocker fame, has added the Irish water spaniel bitch Marguerite and a son of hers to his string, and we shall never probably see more of the bitch on the bench which she has frequently adorned with honor to herself and her late breeder, Dr. Nicoll, of Montreal.

Mr. S. C. Stevens, the manager of the Montreal exposition, informs me that a show will be held in Montreal this fall probably the week following Toronto. If Ottawa hangs on and one or two other places come into line, forming a brief fall circuit, it would do much to strengthen the fancy here.

Mr. Jno. B. Carmichael, of Victoria, B. C., has bought the smooth fox-terrier bitch Blemton Rapture, bred by Mr. August Belmont. She has been in California for some time and in 1888 was first in the puppy class at Syracuse, and in 1890 vhc. reserve at Boston and vhc. at Buffalo. She is in whelp to Blemton Reefer (champion Venio—champion Rachel).

An executive meeting of the C. K. C. was held in Toronto on March 30. Present: Dr. J. S. Niven in the chair, Dr. H. S. Griffin, Messrs. E. W. Boyle, T. G. Davey, C. A. Stone, H. B. Donovan, secretary; Mr. Richard Gibson was also present. The minutes of last meeting (as published in *Gazette*) taken as read. In the matter of the agreement between C. K. C. and A. K. C. the articles of agreement, letters from the secretary of the A. K. C. and Mr. F. S. Wetherall read. It was resolved to amend C. K. C. rules to agree with those of the A. K. C. Moved by Dr. Griffin, seconded by Mr. Stone, that report of committee be received and adopted by this executive. Carried. On motion of Dr. Griffin, seconded by Mr. Stone, the secretary was instructed to communicate with A. K. C., informing them of action taken by executive, but that financial ratification must be referred to the club at the next annual meeting (in September), but that notwithstanding this delay we trust that awards at shows in Canada this year under C. K. C. rules may be recognized.

On the reading of evidence sent in the club found it had no jurisdiction in the Melac—Minerva's Fawn case. A grant of \$43 was made the president for his expenses to New York in connection with official business for this club.

Both Messrs. Gibson and McEwen were in Toronto this week attending the spring stallion show, where Mr. Gibson judged. He informs me that he will judge the smooth fox-terrier classes only at the Toronto spring show, having declined to take the wire-haired classes.

The special prizes, both cash and kind, offered at the Toronto show, to be held on April 13 and 14, are both numerous and valuable, and it is hoped the entry may be more than a merely local one.

[Mr. Donovan forwards a list of the specials, but unfortunately space does not permit of publishing a tithe of them.]

## The Specialty Show.

FOREST AND STREAM was the first journal to give news of the coming specialty show to be held in New York, and in fact provided all the news so far given on the subject. The first official notification of the affair, however, comes to us with the premium list. The show will be held in Madison Square Garden, New York, in connection with the Hempstead Farm display. The breeds that will be represented are St. Bernards, collies, rough and smooth, and bobtails, fox-terriers (smooth and wire), spaniels and bulldogs.

St. Bernards and collies and smooth fox-terriers get \$20 and \$10 in challenge classes, \$20, \$15, \$10 and \$5 in open; puppies and novices, \$15, \$10 and \$5. The other breeds get \$5 less in each class than the above-mentioned breeds. Clumbers and Irish water spaniels do not have separate sex classes. The specials are very numerous. St. Bernards, collies and fox-terriers get \$25 cash from the Madison Square Garden Co. Other cash specials of more than ordinary value are given, besides the numerous trophies and other specials donated by the different specialty clubs.

Entries close April 20, and the fee is \$5. Mr. Jas. Mortimer will superintend.

The show will commence May 1, and continue till the 4th. The bench show committee will be composed of W. H. Joeckel, Jr. and J. A. C. Johnson, of the St. Bernard Club of America; J. D. Shotwell and Thos. H. Terry, of the Collie Club of America; John E. Thayer and H. W. Smith, of the American Fox-Terrier Club; A. C. Wilmerding and Rowland P. Keasbey, of the American Spaniel Club; J. H. Matthews and E. Willard Roby, of the Bulldog Club of America.

Judges will be: For collies, Robt. McEwen, of Canada; fox-terriers, R. F. Mayhew, of New York; spaniels, E. M. Oldham, of New York; bulldogs, James Mortimer, of Hempstead, L. I. The St. Bernard Club hopes to secure the services of Mr. Sydney W. Smith, of Leeds, Eng., as judge.

Dr. H. Clay Glover will be the veterinarian.

## Red Cockers.

Editor Forest and Stream:

It is far from my intention to meddle with the storm of criticisms Mr. Wilmerding seems to have stirred up through his judging at New York, preferring to leave this to the old hands at the game. What strikes me as peculiar in their many spaniel controversies during past years is the fact that while a great deal of interesting reading is afforded, there is little real information to be gained that would help a novice like myself to breed on the right lines. Lately I have been very much impressed with the fact that the red or dun cockers seem almost invariably to be well-made, active-looking dogs, higher on the legs and much straighter than the black ones. Now, in going through the aisles at New York it was almost the exception to find a black cocker straight in the forelegs. Many of them were wretchedly crooked, and "Uncle Dick's" pat simile of "crocodile fronts" occurred to me.

I have never been fortunate enough to breed a red cocker, but I am told that they will often come in litters whose parents are pure black. How is this? And how is it that they are so straight in front compared to their black brothers and sisters. In breeding reds to reds can one be sure of getting all that color, or must the breeding be persisted in until a strain is formed? These may seem foolish questions to the veteran breeders, but I think many others will concur in my statement that too much of dog breeding is taken for granted nowadays, and the new ones, like myself, that is, new from a show point of view, must glean their knowledge by casual remarks dropped at the bench side, or worry along as best they can and find out for themselves, which is an unsatisfactory process at the best. I don't want to interfere with this judging controversy, but I would like to know about those red cockers.

RED COCKERS.

MOUNT VERNON, N. Y., March 23.

We learn that in the early part of the New York show, Mr. Oldham, the spaniel judge, was walking near the Post-Office and saw an Irish terrier with a show tag on going full speed down Broadway. In speaking of the loss of Sharqar, the Irish terrier, from the New York show, to a Broadway policeman, the latter stated to Mr. Oldham that he also saw the dog below Fulton street, and had it not been for his belt, that impeded his quick stooping, he would have caught the dog as it passed him on the run. The police were caught the dog for it. The dog has not been seen since. He was evidently frightened at the noise and bustle of the streets.

## DOG CHAT.

It seems that Ben Lewis won the handler's prize at Chicago show after all, as considering the dogs he actually took and handled at the show he had much the best of the record. Geo. Thomas, we understand, was second, but in view of his contention that the dogs named in the catalogue as handled by him constituted a claim to the prize, the club generously made up the difference and he got the \$100 too. These prizes as we have stated, give rise to a lot of talk if nothing else, and some other plan should be adopted to secure the dogs these handlers can command. It would be better for the club to pay them so much according to the number and value of the dogs they can bring personally to the show.

At Philadelphia the manager of the Woodlawn Park Kennels, "Jim" Robinson, purchased the well known bulldog The Graven Image from Frank F. Dole for \$200. She will be bred to their Wal Hampton to get the proper degree of "Chiarascuro," we suppose.

During the Philadelphia show the collies owned by James Corbett were placed on exhibition. They are Bert and Mollie; Bert is by Christopher and came from the Chestnut Hill Kennels. They showed lack of training and needed a bath. Since the show we learn that they have been sent to Mr. Jarrett's kennels to be put in shape for the Specialty show at New York next month.

There is to be another show at Saratoga at the end of August, under the management of the Saratoga Kennel Club. The show will be held in the same hall as in January, and preparations will be made to accommodate 500 dogs. It is expected that as Saratoga will be crowded at that time, enough may be realized to reimburse the club for its last failure, and as the Hiltons will be interested in it there is every likelihood of the visitors showing up in force.

Mr. H. T. Payne came up to Philadelphia to see how his New York sensation, Donovan, fared. He was disappointed, but like a good fancier will try again and will now send the "any other color" Tonita along, having purchased her at that show.

Mr. Tallman severed his connection with the *Turf, Field and Farm*, April 1. Probably his work as manager of the Springside Kennels of pointers demands most of his time. "Billy" is quite proud of the record the pups by Ridgeview Donald out of Lady Tammany have made this season. At New York they took 1st and 3d in dogs, and 1st, 3d and reserve in bitches. At Philadelphia, 1st and second with different pups, Springside Pax and Springside Lill, these two he sold at the P. K. C. show to Mr. Joseph L. Woolston, of Germantown, Pa. He also sold some pups at home to Mr. Thos. McKean, of Philadelphia. The kennels still have two more of this litter which will come out at Boston, and we hope with the same good luck that their brothers and sisters have had.

Mr. Jarrett, of Chestnut Hill Kennels and Frank F. Dole, arrived in Philadelphia from Denver at 5 A. M. on the morning of the show, having been under full sail since the previous Friday night. They both looked tired and their dogs more so, the big ones especially being affected by the journey. The Denver show people were unfortunate, as on the first night of the show a building on the same block as the show hall was burned down and the electric light connections destroyed. This necessitated the closing of the show the evenings of the early part of the show. Mr. Jarrett sold a cocker to Mr. Smythe, of the Swiss Mountain Kennels and bought a collie from Mr. Dole at a very short figure.

Mr. R. H. Burr, of Middletown, Conn., an old reader and advertiser of *FOREST AND STREAM*, writes us that he has just received word from a party in Bridgeport, Conn., who has found a red Irish setter bitch with a collar with his name on, and writes to know if she belongs to him. She does not, but probably belongs to some one who had purchased her from his kennel, and he gave the collar with her. The collar has been sent to Mr. Burr for identification, but he cannot make out from this who owns her. It has attached a dog show brass tag, No. 473, which looks as if she had been at the New York show; she has been around Bridgeport two months or more, but he has only just received word in regard to her.

The Swiss Mountain Kennels lost their smooth bitch June about a fortnight since and nothing has been heard of her. Information as to her whereabouts will be gladly received.

A rather amusing incident occurred at Philadelphia. A lady exhibitor was very much displeased with the secretary because, having gone to the trouble of writing out a long pedigree for her spaniel she very much wished to have it printed in the catalogue for "It has such an influence on the judges, you know." It was not printed.

## Sales at Philadelphia.

C. S. Wixom of the Hornell-Harmony Kennels sold his beagle Keith to Mr. E. L. Stine, who is getting together quite a nice kennel.

John M. Lewis, the well known and "smiling" field dog handler, sold the English setter bitch Jennie L. by Roi D'or ex Countess Christina to Dr. J. W. Kent of Philadelphia during the show.

Mr. Wixom struck while the iron was hot and Olivia's honors were thick upon her, selling her to Mr. Mortimer of the Hempstead Farm Co. She should make a very useful bitch bred to a good-fronted dog.

On the last day of the show Dr. Sauvour sold a collie pup by The Squire out of Gypsy Maid to a gentleman in Reading, Pa.

Mrs. Smythe, of the Swiss Mountain Kennels, sold to Mr. Mundy, the owner of Tattersall's building where the show was held, the smooth St. Bernard Castor of Contoocock, winner of first in smooth puppies.

Mr. Robinson of Woodland Kennels sold three Irish terrier pups to Frank Dole.

## Red Cockers.

Mr. C. M. Nelles, of Brantford, Ont., was busy with his red cockers at Chicago, and while he did a fair share of winning he also was successful in disposing of some of his stock. To Mr. Julian Ramsay, of Chicago, he sold Red Prince, winner of first in open and puppy classes. Mr. H. Lester, of the same city, bought a red dog pup, and so did Mr. Roger Williams, the greyhound judge. Mrs. J. L. Oustott and Mr. H. J. White, both of Chicago, bought a dog and bitch pup respectively. From indications at late shows it would seem as if the red cocker is running the black a close race for popularity, and justly so, for we quite agree with "Red Cockers," whose letter will be found in another column, that the reds show uniformly better in front and are of more active proportions than the blacks, and for that reason, if nothing else, they should be encouraged, though breeding in for color may hurt them in the same way the black has suffered in the controlling of type.

## Los Angeles Show.

The Southern California Kennel Club's premium list comes to hand at the last moment. With the exception of mastiffs, St. Bernards, greyhounds, great Danes, pointers,

setters and fox-terriers which, in addition to challenge prizes of \$5 and \$8, have also \$3 and \$2 in open classes, nearly all of the breeds have the money \$5 and \$3, only, in challenge classes and open get merely honors in the way of diplomas. Since the premium list was printed the judges' list has been changed and now Mr. G. L. Waring will pass on bull-terriers and fox-terriers and Mr. A. C. Waddell of Coffeyville, Kas., on all other breeds. A number of specials are given and 214 classes are provided in all. Entries close April 7.

It looks very much as if the Glenrose and Forest Beagle Kennels had joined forces, the Consolidated Beagle Kennels being the result. We were told to look out for beagle news in the P. K. C. catalogue and this may be it, unless it refers to their new dog Banman.

Mr. E. H. Moore does seem to have had luck not only sometimes with his dog; but now we hear that his house has been burned down again. This was a handsome residence. We have no further particulars as to the fire or its origin.

The Rinada Kennels are selling out their stock. They have already sold Musette, by Chancellor ex Dauntless; also Dauntless, by Arkos II, ex Cora. The bitch Solitaire, by R. Panie ex Ridgeview Revelation, is also sold. A number of good bred ones yet remain in the kennels.

In the *Pall Mall Gazette* of March 20 the following editorial paragraph appeared, "Walter Wellman's Polar expedition, in an order to Spratts Patent (Limited) for biscuit supplies, has included 'Armebis'—a concentrated meat biscuit—and wheat meal biscuits similar to those the company has for some years furnished to the English Government departments." This shows confidence, for it does not pay to run any risks in food supplies for those regions.

We acknowledge the receipt of an excellent photograph of Dr. Younghusband's Prince Cola, the winner at Detroit and Chicago. It shows his head and body off to perfection.

Dr. Cryer has practically dropped out of the active showing fancy in pups, but still keeps up a lively interest in the breed at home. He showed us a team, naturally off the chain, at Philadelphia that is hard to beat. There may be others in the country with better individual members, but for sortness, with the possible exception of Ivy Boy, who is a little on the leg to the others, he has four that would take some pulling down anywhere. Bob Ivy, Pansy G. and Little Ruth are a very pretty trio.

The National Pointer and Setter Field Trials will be held April 24, on the estate of Sir W. O. Corbet, near Shrewsbury, England.

Mr. Jos. Evans, some time connected with *British Fancier*, and who, we understand, was the amusing writer known as "Diogenes Up to Date," is seriously ill.

Whippet racing seems to be taking hold in the London (Eng.) districts and several important handicaps are on the tapis. The racing is very simple. Men "runners-up" go beyond the winning mark, and when the pistol has been fired and the dogs slipped the runners-up wave handkerchiefs and whistle to attract the attention of their favorites, who are trained to run to them as straight, and almost as swift, as an arrow. Any dog that quarrels with a fellow-competing *en route* is disqualified. Whippet dogs can cover the ground—grass, clatter path or any other—at a surprising speed, the champions running 200yds. in twelve seconds or nearly 17yds. in a second.

Collie breeders are looking forward with more than usual interest to the specialty show to be given by the Collie Club in connection with the Hempstead Farm show, May 1 to 4. The amount of cash prizes offered far exceed any heretofore offered by the club. The premium list will be exactly the same as that of the late Westminster Kennel Club show, and in addition there will be six or eight special cash prizes of \$20 each, with same number of silver and bronze club medals. The Collie Club trophy and the President's cup will be competed for. Thos. H. Terry and J. D. Shotwell constitute the dog show committee, and Mr. James Mortimer will be the superintendent. The specials are all confined to collies owned by members, and to get a piece of the good things those who are not members had better get in as soon as possible.

Edward A. Smith, The Florence, N. Y., offers \$25 at the Specialty show for the most level team of four cockers, weight 18 to 23lbs.

## KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

## BRED.

**Prepared Blanks sent free on application.**  
*Brummy*—Clyde. A. D. Fiske's (Worcester, Mass.) beagle bitch Brummy (Fitzhugh Lee—Lady Noddy) to B. S. Turpin's Clyde (Frank Forest—Sue Forest), March 2.  
*Little Girl*—Murland Ranger II. C. T. Brownell's (New Bedford, Mass.) Gordon setter bitch Little Girl (Sam—Chloe) to his Murland Ranger II. (Murland Ranger—Beulah), Jan. 5.  
*Cromar's Vic*—Bathos. Dr. Blodgett's (New York city) bull bitch Cromar's Vic to J. B. Matthews's Bathos.  
*Wake*—Clyde. A. D. Fiske's (Worcester, Mass.) beagle bitch Wake (Fitzhugh Lee—Lady Noddy) to B. S. Turpin's Clyde (Frank Forest—Sue Forest), Feb. 20.  
*Skylark*—King of Lynn. F. G. Lefavour's (Beverly, Mass.) pointer bitch Skylark (Frank W.—Snipe) to R. Leslie's King of Lynn (Tempest—Nady of Nado), March 7.  
*Wanda*—King of Lynn. G. W. Lovell's (Middleboro, Mass.) pointer bitch Wanda (Graphic—Vinnie) to R. Leslie's King of Lynn (Tempest—Nady of Nado), Dec. 19.  
*Tona Wanda*—King of Lynn. F. M. Nash's (Somersworth, N. H.) pointer bitch Tona Wanda (Bang Bang—Underhill's Jane) to R. Leslie's King of Lynn (Tempest—Nady of Nado), July 19, 1893.  
*Dorothy Ann*—King of Lynn. T. C. Wilson's (Ipswich, Mass.) pointer bitch Dorothy Ann (Duke of Beaufort—Man'zelle) to R. Leslie's King of Lynn (Tempest—Nady of Nado), Oct. 17, 1893.  
*Olie B.*—Tribulation. B. M. Stephenson's (La Grange, Tenn.) pointer bitch Olie B. to his champion Tribulation, Jan. 18.  
*Sue*—Tribulation. C. A. Morgan's (Columbia, Tenn.) pointer bitch Sue to B. M. Stephenson's champion Tribulation, March 1.  
*Cora C.*—Tribulation. F. F. Capers's (Greenville, S. C.) pointer bitch Cora C. to B. M. Stephenson's champion Tribulation, March 17.  
*Croxie O'Bannon*—Tribulation. E. L. Atherton's (Louisville, Ky.) pointer bitch Croxie O'Bannon to B. M. Stephenson's champion Tribulation, March 26.  
*Midget Nellie*—Happy Toby. Eberhart Pug Kennels' (Cincinnati, O.) pug bitch Midget Nellie (Lord Clover—Sister) to their Happy Toby (Spokane—Nellie T.), March 23.  
*Dolly Tester*—Bathos. J. H. Matthews's (New York city) bull bitch Dolly Tester to his Bathos, March 27.

## WHELPS.

**Prepared Blanks sent free on application.**  
*Dafoodil*. J. M. Fronsfield, Jr.'s (Wayne, Pa.) English setter bitch Dafoodil (Roderigo—Maud Val Jean), Feb. 4, six (four dogs), by his Trickster (Buckelwell—Minnetonka).  
*Tricie H.* E. R. Thornburgh's (Jamestown, Pa.) fox-terrier bitch Tricie H., March 16, four (three dogs), by W. F. Porter's Woodale Drive.  
*Blackrock Belle*. Newton Kennels' (Elmira, N. Y.) fox-terrier bitch Blackrock Belle (Vesuvian—Rescue), March 22, five (three dogs), by their Starden's Prince.  
*Mabel E.* Eberhart Pug Kennels' (Cincinnati, O.) pug bitch Mabel E. (champion Kash—Lady Thurman), March 23, six (three dogs), by their John Bull (champion Louis—Ray Queen), March 23.  
*Colleen Bawn*. Eberhart Pug Kennels' (Cincinnati, O.) pug bitch

Colleen Bawn (Spokane—Lady Verne), March 25, five (three dogs), by their Bradford Ruby II. (champion Bradford Ruby—Puss B.).

## SALES.

**Prepared Blanks sent free on application.**  
*Hillside Rosalind*. White and black fox-terrier bitch, whelped June 18, 1893, by Starden's King out of Hillside Model, by Hillside Kennels, Lancaster, Mass., to Dr. W. W. Varick, Jersey City, N. J.  
*Hillside Beakon*. White, black and tan fox-terrier dog, whelped Sept. 1, 1893, by Starden's King out of Lady Reckon, by Hillside Kennels, Lancaster, Mass., to F. A. Littlefield, Bedford Park, N. Y.  
*Hillside Rhoda*. White, black and tan fox-terrier bitch, whelped Aug. 20, 1893, by Starden's King out of Hillside Ruth, by Hillside Kennels, Lancaster, Mass., to J. O. Davis, Fall River, Mass.  
*Hillside Decision*. White, black and tan fox-terrier bitch, whelped Aug. 14, 1893, by Dusky Trap out of Verdict, by Hillside Kennels, Lancaster, Mass., to F. J. Nolan, Albany, N. Y.  
*Hillside Royalty*. White and tan fox-terrier dog, whelped June 4, 1893, by Starden's King out of Princess, by Hillside Kennels, Lancaster, Mass., to H. A. Tuthill, Easton, Md.  
*Hillside Pitcher*. Black, white and tan fox-terrier dog, whelped April 23, 1892, by Pitcher out of Princess, by Hillside Kennels, Lancaster, Mass., to John Wren, Columbus, O.  
*Hillside Royal*. White, black and tan fox-terrier dog, whelped June 30, 1892, by Starden's King out of Hillside Freda, by Hillside Kennels, Lancaster, Mass., to J. F. Belt, Wilmington, Del.  
*Hillside Nymph*. White and tan fox-terrier bitch, whelped Aug. 21, 1893, by Starden's King out of Lady Newforest, by Hillside Kennels, Lancaster, Mass., to C. R. Kennedy, New Orleans, La.  
*Hillside Sparkle*. White and tan fox-terrier dog, whelped Aug. 6, 1893, by Starden's King out of Richmond Dazzle, by Hillside Kennels, Lancaster, Mass., to W. C. Freeman, Cornwall, Pa.  
*Yeddo*. Silver fawn pug bitch, whelped May, 1893, by Happy Toby out of Midget Nellie, by Eberhart Pug Kennels, Cincinnati, O., to F. E. Goodman, Waco, Tex.

## ANSWERS TO CORRESPONDENTS.

A. C., Fort Niobrara, Neb.—We do not recommend kennels, but you will find Irish setters advertised in our business columns.  
V. B. M., Raleigh, N. C.—For canker in the ear, wash the ear out daily and blow powdered boric acid into the ear twice a day.  
F. B. E., New York.—You had better write to Mr. A. C. Wilmerding, the president, 163 Broadway, New York. The annual dues are \$5.  
C. D. B., Hartford, Conn.—Write to W. Phillips, corner of Forty-ninth street and Broadway, New York, about clipping. Spaying a bitch is not a dangerous operation.  
A. H. M., Central Valley, N. Y.—I have a valuable St. Bernard that has a kind of sprain in the left hip. Ans. This is a case that requires the personal attention of a veterinarian.  
P. W. B., New York.—First season of oestrus comes on when the pug is about ten months old. She could be bred then, but it is better as a rule to wait till the bitch is fifteen or sixteen months old.

## Hunting and Coursing.

## FIXTURES.

April 17.—South Dakota Coursing Club's inaugural meeting, at Mitchell, S. D. Entries close April 16. S. S. Batley, Sec'y; Fox Kenney, Judge; Joseph Dodd, Slipper.

## Beagle Pedigrees.

*Editor Forest and Stream:*  
Can you or any of your readers kindly give me through your columns the pedigrees of the following beagles:  
1. Pet (dog). All I can ascertain concerning him is that he was imported from the pack of Mr. Trefrey, Cornwall, Eng. 2. Imported The Hermit (dog). 3. Rosey (bitch), bred by Gen. Rowett. 4. Beauty (bitch).  
J. P. T.

NEW YORK, March 24.

## HUNTING AND COURSING NOTES.

A meeting of the New England Beagle Club will be held at Mechanics' Building, Boston, April 19, at 2 P. M., during Boston dog show.

The Brunswick Fur Club will make an exhibit of fox-hounds at the dog show of the New England Kennel Club at Boston.

Mr. A. B. F. Kinney, president of the Worcester Fur Co., has purchased Mr. F. M. Whipple's noted hounds, Ned and Spot, and has presented them to Mr. John M. White, of Millbury. This addition will make Mr. White's celebrated pack stronger than ever, both on the bench and in the field.

## Yachting.

3. New York Y. R., Ann., N. Y. 10. Schoodic, Sail-off for Cup.

With the shipping home of Valkyrie's racing spars and gear, and the formal letter from Lord Dunraven notifying the New York Y. C. that she will not be raced here, the last chance of further racing is at an end. As yet the fact is unappreciated by American yachtsmen that the loss is almost entirely on their side, and that a serious blunder has been made in declining tacitly but none the less positively a bold and sportsmanlike challenge.

The advantages to be gained by a continuance of racing in the large class are two-fold; in the first place, the putting in commission of Vigilant, Colonia, Jubilee, Navahoe and Volunteer would infuse life into a season that now promises absolutely nothing in the way of racing, and would give just the stimulus of which American yachting is now in dire need.

In the second place, it is only through a further continuance of the experiments of last year that any adequate return can be had for the immense amount of money wasted in the construction of the Cup defenders. As matters are now, the large class is dead, and its members will sooner or later go the way of all Cup defenders, to be sold for what they will bring and be converted into more or less inferior schooners; in which case the results of this most expensive experiment will be almost nothing. The sole fact brought out last year is that Vigilant is a very fast yacht, but how fast for her size and cost or how much superior in model to the others, is not known. The others are but half-tried experiments, and their failures are due to clearly defined causes, such as the faulty rig of Jubilee and the deficient draft of Colonia; no one can say to-day that the fin-keel or the conventional keel boat has been proved a failure on its merits apart from obvious faults of design and construction.

The further racing of these yachts is necessary to the realization of a fair return in the shape of authentic data for the amount of money expended. Every year the competition of the designers is keener, and with the prospect of a challenge for the Cup in 1895, American yachtsmen cannot afford to lose almost two years of experiment, and to rest content with the incomplete and possibly misleading conclusions of the last trial races, while their rivals are busy building, altering and racing in every class.

It would seem that the immediate demands for a season of racing and for a further knowledge of the new boats were reasons sufficient to set the fleet afloat, but there is still another and stronger one. The reasons for not racing their yachts again may be clear and satisfactory to the members of the Vigilant syndicate, on whom the matter chiefly hinges, and in fact may be good and valid; but they will never be understood on the other side of the Atlantic; and, rightly or wrongly, they will create a feeling that will only increase with years, and which will never be removed. American yachtsmen are not likely to forget soon the cowardly backdown of the owner of the Arrow from his open challenge; and although the circumstances in the present case are entirely different, in the minds of British yachtsmen the two cases are apt to be classed in much the same category.

However unjust this may be, it is not unnatural from the standpoint of British racing. There the class racing goes on year in and year out, with ups and downs it is true, but still with twenty to forty races in a season for the regular classes. When a new yacht is built, it is not for a special service of a couple of months, to be sold for a song or laid up to rust afterward, but for regular racing for a series of years. The owners of Valkyrie, Britannia and Satanita are as busy this spring as they were last, and just as Meteor is still in the racing though outclassed, the new yachts are likely to fly their racing flags for many years. So accustomed are British yachtsmen to this regular racing, that they fail to comprehend that in America there has been for some years no regular racing of large cutters or even of 70-footers; and that when yachts are built of hitherto unknown size and cost, it is but for a few months or weeks of racing for some special event, and not for a long and honorable career as winners. Under these circumstances, it is only to be expected that the failure of this peerless fleet, headed by the victorious Vigilant, to meet a direct and open challenge from Valkyrie, is laid solely to a fear of defeat.

The reasons given by the American press, and which are mainly derived from various "prominent" but anonymous yachtsmen, are neither convincing nor creditable, and not calculated to remove such an impression. One, which has been ascribed to Mr. Iselin, but which, in default of confirmation, we are loath to believe is really his, is that Lord Dunraven has not challenged Vigilant to a race. Such a quibble as this hardly needs an answer; the open declaration of Lord Dunraven that he would leave his yacht here and race her in all races up to July, and the testimony of her new spars and rig, should be all the challenge necessary for the owners of the American yachts of her class. In the same connection it is argued that if Lord Dunraven really wishes to meet Vigilant he can do so for a stake of twenty thousand dollars. American yachtsmen have been slow in the past to look to money prizes as compared to fair and chivalrous sport; only a few years since they condemned freely the financial instinct which came to the surface after a grand ocean race, and such sordid excuses as this but misrepresent the general feeling. The whole conduct of Lord Dunraven last year, with his liberal expenditure of money individually in opposition to three wealthy syndicates, places Americans in a very bad light when they ask for money before giving another race.

The other excuse that Vigilant might be beaten (by a fluke) should she venture to meet Valkyrie again speaks for itself; it is a strange thing if Americans are afraid of a yacht they profess to have beaten with the utmost ease.

DEAR to the heart of every true American yachtsman is the good old story of how the famous Dauntless once sailed up and down the English Channel with a board in her rigging bearing in big letters a challenge to all British yachts, which, of course, was not accepted. Are they prepared now, in this Valkyrie episode, to provide their rivals with material for a similar story, no less apocryphal, but just as hale and vigorous, to be handed down to future generations, of how Valkyrie challenged the whole fleet of Cup defenders, from Vigilant to Volunteer, of whom none dared to meet her? This is the way that history is made, and American yachtsmen have only themselves to blame if their British cousins retort "Valkyrie—Vigilant" whenever they say "Arrow—Mayflower."

The action of the New York Y. R. A. last week in dropping the amendments which have created so much ill feeling, and in restoring matters to their original condition, is likely to have a good effect in restoring harmony among the clubs. Just now, when the larger yachts are not racing, is the time for the clubs which concern themselves with the smaller craft to do the most good. There is a chance for plenty of racing in yachts under 40ft. this year, as there are no new yachts or trial races to attract attention from local events. The New York Y. R. A. is now in a position to aid and encourage local races, and to do good work for yachting about New York.

LORD DUNRAVEN, after ill success last year in the 20-rater class, has purchased the fastest 20-rater, the third Dragon, designed and built by Will Pife, Jr., and will fit her with a centerboard. He has also a design of his own for a 20-rater, which he will build from the work being done by Summers & Payne.

New York Yacht Racing Association.

The most important meeting ever held by the New York Yacht Racing Association was that of last Friday evening, March 30. At 8:30 the meeting was, in the absence of the president and vice-president, called to order by Secretary George Parkhill. Com. J. T. Hitchcock of the Columbia Y. C. was then elected chairman. The roll call showed that the following clubs were represented at the meeting: Columbia, Harlem, Hudson River, New York, New Jersey, Pavonia, Tappan, Zee, Yonkers Corinthian, Ocean, Kill von Kull, Canarsie, Bayonne, Audubon and Tower Ridge yacht clubs (15).

The minutes of the previous meeting were now read, and a motion made to approve them brought out rather a heated discussion between Com. Prime and several of the other members, the former gentleman claiming they were incorrect and Secretary Parkhill insisting that they were correct. The minutes were finally corrected to every one's satisfaction. The secretary reported that he had chartered the iron steamer Cygnus for the Labor Day regatta of the Association on Sept. 8.

Com. Prime, chairman of the dinner committee, now submitted his report, after a canvass of the clubs, when it was found that but a little more than 50 had signified their intention of being present at the dinner. To April club meeting the second greatest number, a suitable decorative flag souvenir for the club room. 3. To the Commodore of the club reporting the third greatest number, a suitably engraved medal souvenir.

The secretary then read the resignation of the Brooklyn Y. C. After various motions had been made to accept, lay on table and to postpone action until the meeting of April 13, the resignation was finally accepted. The discussion of this resignation took up much of the valuable time and in the various phases of it Com. Prime, who was in favor of its acceptance, managed to hold the floor for a great part of the time. There is no doubt that Com. Prime made a great fight, and he finally carried his point.

Immediately following the acceptance of the resignation, a letter from Com. Sutton, the president of the Association, was read, declining to accept the resignation on the ground of his inability, because of the withdrawal of the Brooklyn Y. C. It was the unanimous opinion of the delegates present that he be requested to remain. As the Commodore is a member of the Pavonia Y. C., in the event of his consent being obtained, the matter of eligibility can be easily fixed.

On the last cruise, prizes were offered by Admiral Sutton as follows: 1. To the club reporting the greatest number of yachts (irrespective of size) at the rendezvous, a complete set of the annual directory. 2. To the club reporting the second greatest number, a suitable decorative flag souvenir for the club room. 3. To the Commodore of the club reporting the third greatest number, a suitably engraved medal souvenir.

The first prize went to the Brooklyn Y. C., the second was a tie between the Pavonia and Yonkers Corinthian clubs, which was decided by lot and Pavonia obtained the second prize; the third went to the Yonkers Corinthian.

It now being nearly half past eleven, Com. Prime moved to adjourn. The chair declared the motion out of order as the principal business for which the meeting had been called had not been taken up. The decision of the chair was now appealed from and sustained. Judge Simms immediately obtained the floor and moved the following amendments to the constitution, which were respectively passed by a two-thirds vote. To amend Article VIII, by striking out the following: "And any club failing to be represented at any meeting of the Association shall be fined the sum of \$1."

To Article VIII, by striking out the following: "Any yacht club in the Association giving a race or regatta open to one or more clubs in the Association under any rules contrary to the Association shall be fined such sums as the delegates of the Association shall determine."

"But nothing contained in this constitution shall be deemed to make it obligatory on the part of any club in this Association to hold any regatta open to one or more clubs under the rules of this Association, provided that such club shall state in the invitation to or notice of such regatta that it is to be sailed under other rules."

As the opponent to the adoption of these amendments had just left to go to the train, very little if any of the discussion was had, and their adoption followed, as previously stated.

By striking out the two amendments to Art. 8 it leaves it as in the original constitution, which is as follows:

"Assessments.—Funds for defraying the current expenses of the Association shall be raised by an annual assessment on each club of ten dollars, which shall be due and payable in advance, and the financial statement shall be read at the date of the annual meeting. No other assessments shall be levied except by a two-thirds vote of all the clubs present at a meeting called for that purpose."

The other amendment adopted is to Article II., which defines the objects of the Association. The meeting finally adjourned at midnight.

YACHT NEWS NOTES.

The fixtures of the Cleveland Y. C. for 1894 are: May 30, squadron sail to Rocky River; July 4, ladies' day; Sept. 3 (Labor Day), fall regatta. At the meeting of the board of directors, held on March 28, bids were opened for the construction of a new club house, at the foot of Erie street, but action on them was deferred for two weeks to allow the stock subscription committee more time to push their work of raising the money required to finish the building. Mr. G. W. Luthmeyer was elected as the representative of the club in the new Interlake Yachting Association, which was formed in Cleveland on March 19, and of which Mr. E. W. Radder, of 104 Superior street, Cleveland, is secretary and treasurer.

At a meeting of the Minneapolis Model Yacht Racing Association, held March 27, it was agreed to form two new classes, 35in. l.w.l., and 30in. l.w.l., the latter taking the place of the 27in. class. Its officers for 1894 are as follows: Com., C. H. Mehlin; Vice-Com., G. M. Hosack; Sec'y-Treas., John Hadden, 100 Washington avenue, N. The Minneapolis Saturday Evening Journal has promised its support to the club in the city, for which a large list of thanks was extended. The club has taken in six new members since the last report.

The Schoodic (Me.) Y. C. has arranged the following events: May 30, clam bake, Sandy Point, club and guests; June 13, special regatta, De Monts, club yachts; June 27, fish chowder, Robinson, club and guests; July 12, first cup race, Robinson, club yachts; July 30, second cup race, De Monts, club yachts; Aug. 13, open race, St. Andrews Bay, all comers; Aug. 27, third cup race, St. Andrews Bay, club yachts; Sept. 10, sail off for cup, De Monts, club yachts; Sept. 25, clam bake, Sandy Point, club and guests. Measurement rule: Load waterline plus one-fifth of the after overhang. No restriction on Mr. G. W. Luthmeyer's yacht, the above regattas must be between 15 and 30ft. waterline length. Prizes in the Mosquito Fleet class, comprising all boats under 15ft. waterline length, will also be given on some of the above dates.

An important meeting of yachtsmen was held on March 23, at the winter quarters of the Massachusetts Y. C. in Boston, representatives being present from the following clubs: Hull, Hull Cor., Winthrop, Dorchester, Massachusetts, Savin Hill, South Boston and Quincy. Mr. Percy Hodges, Savin Hill Y. C., presided, and Mr. Barclay Tilton, Hull Y. C., acted as secretary. The principal object of the conference was to arrange suitable dates for all open regattas of the clubs under whose auspices they are to be held. The extreme limits of boats to be allowed to enter the races were fixed at from 12 to 25ft. waterline inclusive. The matter of classification within these limits was discussed and was finally left to the clubs for settlement. The question of waiving club events in case they conflicted with the dates set for the open races was also left to individual preference.

McBride Brothers' fast steam launch Yankee Doodle was taken out of dry dock yesterday, and in the afternoon her boiler was put in place. To-morrow her engines will be put in and if the weather is favorable the little flyer will take her first trip up the river to-day. Nothing more has been heard from the Kingdom Company or the English yacht Hibernia, so the Yankee Doodle is open to a match race with anything afloat.—Philadelphia Record, March 25.

Coronet, schr., A. C. James, was at Wilmington N. C., on March 28. The Philadelphia Times of March 25 contains an interesting article on the Philadelphia Model Y. C.

Messrs. Waterhouse & Chesbrough have an order for a 21ft. c.b. knockabout, 30ft. over all, 21ft. l.w.l., 9ft. beam and 2ft. 6in. draft, with 1,600lbs. of iron on the keel. She will have a cabin and water-tight cockpit.

Vandua, cutter, the steel 80-tonner which made Mr. Watson's name in the large classes of 1890, has been renamed Madrigal by her present owner, Mr. T. B. C. West. Vandua, with her old rival, Sacra, is now a historic vessel, marking nearly the highest point in British racing, just before the advantages of the lead keel and of improved construction were sacrificed to extreme narrow beam. Her name has been a familiar word in yachting for many years, and it is a pity that she should now be deprived of it, and her identity obscured under a more commonplace appellation.

Some statements have recently been made that Lord Dunraven could have as much racing as he desired with Valkyrie against Vigilant, Colonia or Jubilee. We believe this is perfectly correct, only the races would have to be for very large stakes in order to make them worth the doing or to make them of great international importance. However, this is not what Lord Dunraven desired, but rather to race Valkyrie in the regatta matches of the New York Y. C. and other clubs. For these races it is doubtful if Vigilant will be fitted out; at any rate, she would not be if Valkyrie took part in them. We said some time ago we did not see how the owners of the Vigilant could be blamed for their decision; by racing Vigilant against Valkyrie in open matches they had everything to lose and nothing to gain in point of prestige, and, however much we may regret that Valkyrie will not have a chance of turning the tables on Vigilant, we can scarcely find fault with the discretion which keeps Vigilant out of the way.—Field, March 24.

Mr. A. E. Abbott, of Montreal, has ordered from A. G. Cuthbert a yacht for the 18ft. class of the St. Lawrence Y. C., to be 27ft. over all, 17ft. l.w.l., 2ft. 6in. draft.

The Keystone Y. C., of Woodsburg, L. I., have elected the following officers: Pres., Frederick K. Walsh; Vice-Pres., Joseph Rotho; Sec'y, Counsellor William E. J. Treas., Benjamin Lyon, Governing Committee: Frederick K. Walsh, Dr. Edward C. Smith, Dr. George A. Wilson, Edward L. Mailler and Charles A. Frost. It was decided by unanimous vote to change the name of the organization to the Woodsburg Club. Outdoor sports and social amusements will be the features.

In the United States District Court to-day Judge Brown granted a decree to Rinaldo D. Braley against John Bell for damages done by the defendant's yacht Growler to the plaintiff's yacht She. Both men are members of the Pavonia Y. C., and on the night of Sept. 13, 1893, their yachts were anchored outside the club house at Communipaw. A severe storm arose during the night, which caused Growler to drag her anchor and foul She, doing her serious damage. The rules of the club did not prescribe the limits of anchorage ground, but Judge Brown holds that the anchorage ground of Growler was unsafe. The place was soft mud, so that anchors could not take a firm hold, and reliance on them in case of a storm was at the risk of the owner. A decree is therefore given to Braley. A referee will compute the damage.—New York Evening Post, March 24.

The Horseshoe Harbor Y. C., of Larchmont, has elected officers as follows: Com., J. H. Sterling; Vice-Com., George S. Towle; Sec'y, Frank A. Moore; Treas., George C. Murray. Trustees: Edward F. Caldwell, Frederick C. Hilliard and Chas. A. Singer.

Natalie, steam yacht, has been sold to Hippolyte for \$25,000, and the blood-curdling yarn of the capture of the yacht and the massacre of her crew proves to be without foundation.

The Toronto Mail of March 24 contains an excellent illustrated article on the Royal Canadian Y. C., with portraits of the officers.

The following are the season's fixtures of the Knickerbocker Y. C.: June 16, opening regatta, open; July 14, club regatta; Aug. 25, club regatta; Sept. 23, ladies' day, club.

Enona, schr., has been sold by Col. Hugh Cochrane to Mrs. G. B. Thompson, owner of the cutter Indra. Mrs. Thompson last season had the schooner Orynthia under charter.

The Philadelphia Y. C. has extended the courtesies of its anchorage grounds and club house at Tincum, to the officers and members of the New York Y. C. for the season of 1894.

The New Jersey Y. C. held its annual meeting on March 29, the following officers being elected: Com., Frank S. Ketchum, ship. Chrm., Vice-Com., Alfred Wenzel, ship. Warden, Rec-Com., George E. Gart and Treas., Edward V. Ketchum, Fin-Com., Bernard A. de Edin. Cor-Sec., Louis Wunder; Meas., Frank Springling. Regatta Committee: Alfred Wenzel, John W. Dickinson and William Sherman. Trustees: Edward W. Ketchum, Edward A. Stevens, Frank S. Ketchum, John W. Dickinson and Alexander Berry. The following delegates to the Yacht Racing Association were appointed by the commodore: George E. Gartland, Daniel O'Brien and Louis Wunder. The opening day was set for May 1, and the annual regatta for Tuesday, June 12.

Atalanta, schr., F. W. Savin, was launched at New London, March 27, after a thorough re-building, including the addition of 5 tons to her after overhang. Messrs. Sawyer & Son will fit her with new sails.

Barracouta, steam yacht, J. R. Fell, has been reported at St. Jago de Cuba, on March 21, whence she was to sail two or three days later for Jamaica, St. Thomas, Martinique and Barbadoes.

Lapwing, cutter, has been purchased by Morgan Wolcott, of New York, giving in part payment Nayade, cutter. Mr. Wolcott is a keen Corinthian and a cruiser. The yacht is at Manning's Basin, to overhaul and fit out.

The proposed race of model yachts at City Point on the large pond of the Marine Park, yesterday did not amount to much as a race. One intrepid Mark reader, Capt. Giles, arrived on the scene at 2 o'clock with his boat carefully tucked under his arm, but the rest, Capt. Sherslock, Frisbie and Perry, were not in evidence. Capt. Giles displayed the excellent qualities of his Ruthe H. to a knot of spectators for half an hour, then rapped her fin in paper and went home. About 3 o'clock Capt. Frisbie and Perry arrived, and the latter's new boat, with her aluminum fin and fittings, was given her first spin. She manifested a strong tendency to fall off and refused to go to windward. A few alterations were necessary, and she was then sent out as a full-fledged racer. Capt. Frisbie's boat, a beamy fin, did great work to windward in a heavy breeze with topsail set, and proved herself an able boat. Capt. Giles' boat is a 40in. fin, drawing 16in of water. She is built on the plan of the Jubilee, with fuller lines forward, she carries 9lbs. of ballast and is named for Capt. Harding's daughter.—Boston Morning Journal, March 27.

The Savin Hill Y. C. will give an open sweepstakes race April 19, for boats of 15ft. over all or under. There will also be a class for open boats or tenders. Entrance fee will be \$1, and full particulars will be given later.

Mme. Lebaudy, the owner of Semiramis, steam yacht, has given the amount received from the sale of the yacht, \$90,000, for the care and education of children who are left by their parents to their own devices.

Wenonah, centerboard sloop, has been purchased by John G. Mehan of Brooklyn through Hughes's Agency.

Smuggler, cutter, has been sold by Mr. Morgan to Messrs. Peebles & Moore of New York through Manning's Agency.

Talisman, steam yacht, has been chartered through Hughes's Agency to S. A. Maxwell.

Herald, steam yacht, has been sold by E. B. Harvey to the Venezuelan Government, and after fitting out at New London she will sail for Venezuela. The yacht was designed by J. Beaver-Webb and built by Lawley in 1884.

The racing boat designed by Stewart & Binney and building for W. De Graw of Red Bank by Thos. Biddle, will be 31ft. over all, 26ft. l.w.l. and 1ft. 6in. draft, with centerplate and rudder of Tobin bronze. The mast will be 42ft., boom 35ft. and gaff 19ft. She will be jib and mainsail rig, but with topsail.

Polly, sloop, is at Poillon's yard, where a new and larger stern is being added.

Anacanda, sloop, designed by Philip Ellsworth and owned by John G. Prague, has been sold to Com. A. J. Prime, Yonkers Corinthian Y. C., who will convert her into a schooner, Sawyer & Son making the sails.

Vamoose, steam yacht, has been sold by the Munro estate to F. T. Merrill for \$17,500, as stated.

Licia, steam yacht, H. M. Flazler, has returned to New York, being ordered home suddenly from the Southern cruise on which she lately sailed.

Intrepid, steam yacht, was at Barbados on March 17, having encountered rough weather on the passage out.

The newly organized Lake Yachting Association, of Lake Erie, will hold its first racing meeting on July 17, 18 and 19.

The Sodus Bay Y. C., of Sodus Bay, New York, on Lake Ontario, a new club, has elected the following officers: Com., A. O. Bartle; Vice-Com., F. J. B. LeFebvre; Sec'y-Treas., Wm. LeFebvre.

The race of March 27, off Nee's, was won by Britannia, beating Valkyrie by 17 minutes. On March 29, Britannia again won. Only three yachts started the steam yacht race. Roxana being first, Eros second and Forosa third.

## Cruising in the Cy-Pres-1893.

(Continued from Page 279.)

Wednesday July 12.—We were in no hurry to start, so took things easily, and it was eight o'clock before we got under way. The breeze was light from N. W. and had been growing lighter for an hour before we started, but we thought we could stem the last of the flood tide, and cross Quincy Bay before the turn, which would be about ten o'clock, and then it would be a very easy matter to drop down on the ebb to Hull, our next stopping place. We passed around the northern end of Thompson's Island, about midway between Sunken Ledge Beacon and Hanganman's Island, where there is 10 ft. of water at low tide, our course being S. S. E. by chart. The breeze gradually died down till we could not tell whether there was any air stirring or not, but as the water was as smooth as glass, we kept moving slowly along.

The chart shows a very irregular depth of water over this course, the figures for low water off Moon Island being 9 ft. A short distance further on there are three fathoms, then it shoals again to 9 ft. and quickly sinks to 3½ and 4 fathoms just before reaching Sunken Ledge. We kept the lead going constantly all the way from Moon Island to Sunken Ledge, partly because we had nothing else to do and wanted to check our work by the chart, and partly by way of practice. We found the soundings exactly as they were marked on the chart, allowing of course for the stage of water which was now about full flood.

Quincy Bay is a beautiful sheet of water, 2¼ miles long from Moon Island to Nut Island on the N. E., and about 1½ miles deep. It is well protected from easterly winds by numerous islands and reefs, and the

Hull Y. C. House.

HULL—FROM OUR ANCHORAGE.

shores are hilly and picturesque. There is an average depth of water of 7 ft. at low tide and a prettier place to sail of an afternoon would be hard to find.

The tide turned just as we passed between Hanganman's Island and Sunken Ledge Beacon, and we began to drift off to the eastward of our course, or in the direction of Nantasket Roads. We thought the ebb tide would probably run pretty strong down both sides of Peddock's Island, as the water was from four to six fathoms deep all around it, and that if we could squeeze past Nut Island we would find the tide then setting us in the direction in which we wanted to go. We therefore bore away to the south all we could and still clear the island, but for some time it was very doubtful which would prevail, the wind or the tide; and we were just debating whether it would not be best to anchor where we were and wait for more wind, when the breeze began to increase perceptibly and continued, from that on, to fan us gently along.

We ran close to Nut Island (which is not an island at all, but a comical little hill on the extreme end of Hough's Neck, which separates Quincy Bay from Hingham Bay), keeping in the shallow water between it and Pig Rock Beacon, so as to avoid the tide, which was running to the westward strong; when we got well over into the stream of Weymouth Fare River we turned N. E. and ran directly toward Hull, which was in plain view a little over two miles away. As the wind continued very light we headed for the center of the high land, wishing to be carried through Hull Gut by the swiftly rushing tide. (We found afterward that this was the correct way to do, as the best anchorage is well to the eastward of the two big spindles shown on the chart.) The sail from Nut Island is very delightful as we had enough breeze to make us slip nicely through the still water, and the tide being with us, we glided by the islands and land marks very rapidly. We were surprised and delighted at the extent and beauty of Hingham Bay and enjoyed the quiet blue water and green rolling hills. It was full of early history of this region and had many interesting things to say about nearly every prominent landmark.

We reached Hull at 1 P. M. and dropped anchor in the club house of the Hull Corinthian Y. C. As I was expecting letters here, we went on shore immediately, taking our water jug and market basket with us. We pulled up to the landing of the club house, but a big sign telling us in language more forcible than polite to keep off, stared us in the face, and we were forced to row quite a distance to the landing at the old town. We hauled our dinghy up on the float and took a look around us. The large hill is at the end of the main street, which winds around between two hills that rise quickly up from the water's edge. The western one is almost completely covered with rather plain summer cottages. They are close together and those on the water front have long stairs leading down to the beach, where there are a few bath houses. The eastern hill has very few houses on it and the top is used as a signal station, where a square white flag over one of similar size of black was flying.

We walked up the main street a short distance and found a fountain of good, cool water, that we were told was pumped from Hingham, several miles away. We left our jug at a little booth near the fountain, which was presided over by a tiny girl not more than eight years of age. The post office is a little further up the street, and on the left-hand side. It is a little one-story cottage kept by a very old woman who had some clock knacks for sale. When I asked her if she had any letters for me, she handed me a pile to look over and see for myself, remarking as she did so that that was the last mail. I told her I was expecting to get a letter here, and possibly it had come by an earlier mail, whereupon she handed me another pile, very like the first, but much dirtier, from frequent thumbing. I was disappointed at not finding anything, and, leaving my address, asked her to forward whatever might come to Plymouth or Provincetown.

The walk from the landing to the stores was long and hot. There was no breeze at all between the hills, but the sun searched out every nook and corner, and the perspiration rolled from us. The grocery store is on the right hand side of the street and over on the northwest side of the point. We could stand in the shade of the store and see George's Island and the Narrows Light almost immediately in front of us. After laying in a stock of bread, butter, eggs, cherries and ginger ale we trudged back to the fountain, where we filled our jug and bought a glass of birch beer of the little girl at the booth to pay her for taking care of the jug for us. We found we had all we could carry, and were glad to get down to the landing where we could drop our burdens.

We noticed on getting on board again that the barometer had fallen quite a little and about 4 o'clock we had quite a squall from the northward, with dark, lowering clouds and occasional spiteful bursts of rain. The wind was so strong that we thought it best to take down our awning, which shook and flapped in a very disagreeable manner, and were therefore forced to seek shelter from the storm in the cabin. We had a hot supper at 6 o'clock, and were about to turn in when we heard strains of sweet music issuing from the club house. As the rain had ceased we came out on deck and listened to the music for about an hour. It was very good, indeed, and we were close enough to hear all the more delicate passages, and to join in the applause. We were greatly annoyed by the swells from the passing steamers, which ran quite close to us, and we decided if we ever came here again that we would anchor off the landing at the foot of the main street, where we would be more out of their way, and closer to our base of supplies. We turned in about 9:30 and slept soundly and quietly. There were occasional showers during the night, but none of much violence.

Thursday, July 13.—We were up at daybreak, and while taking our morning wash on deck were treated to a most gorgeous sunrise, as old Sol crept up behind the hill at whose foot we were anchored. We made an early start, Hingham being our objective point, as we wanted to take advantage of the young flood tide. The channel is crooked, and we knew we would be liable to get around. We passed along close to the west side of Bumpkin Island keeping a sharp lookout for the red buoy midway between it and Crow Point, so that we should not run on to Crow Point flats, where there is but one or two feet of water at low tide. The wind was light but steady, just exactly right for an exploring expedition, and it would take us anywhere we wanted to go; while we were not obliged to tend sheets, but had all our time to devote to navigating our craft in the narrow channel.

Crow Point, or Downer's Landing, is a high headland covered with cottages. There is a large hotel near the docks with a covered walk out to the pier. The steamers from Boston to Hingham stop here, both coming and going. There are boat and bath houses, and the place seemed to us a very attractive one. We ran close to the docks and straight on past them to the black buoy near Ragged Island, where we turned eastward and ran between the buoy and Chandler's

Island, keeping the island close to and on our port. We held this course till we were past Sailor Island, the third of this little group, where we turned south sharp round the end of it and at right angles with our former course. We kept close to the edge of the island till we came to two large piles, when we again turned to the east, passing between the piles. The channel from this point was more crooked than before, but plainly marked by piles and brush, for the benefit of steamboats that run up to Hingham several times a day; one of which passed us, going up, in this narrow channel.

There was scarcely room for us, our boom just grazing the buoy or mark on one side with not more than twenty feet between us and the steamer. This steamer and her mate caused us lots of trouble at Hingham and for a few moments we afforded their passengers considerable amusement. As we got up close to the docks we noticed that one steamer was just getting ready to leave, and that the other was lying in the channel just beyond waiting for her to get out of the way that she might back round the end of the pier, so as to be ready to start bow first when it should be time for her to leave. We kept well over to the right, so as to be as much out of the way as possible, and were just about to pass the first steamer when we ran aground on what proved to be the edge of a deeply dredged channel. We took in our sails at once and threw out a light kedge to prevent drifting on to the dock should we suddenly lose loose.

While we were doing this the outgoing steamer left the dock, and it seemed to us purposely, ran close to us under a full head of steam, her big sidewheels churning the water into a froth. Her rapid motion caused us to take a quick lurch toward her and brought our rail on that side close to the water's edge. As she passed us in this helpless

condition, her big swells completely drenched us, and it took all of F's strength to keep the dinghy from coming bodily on board of us; for it had drifted round broadside to us as soon as we had struck the ground. Just ahead of us there lay a big and three or four mud scows all hard aground. A dredge was at work close into the docks, deepening and widening the channel. As soon as the stage of water would admit, the tug took a loaded scow out toward the open water to dump it, and the crew of the dredge hauled one of the empty ones alongside and began filling it with the black, odoriferous mud from the bottom.

In about half an hour from the time we went around the tide had risen sufficiently to float us. The wind and the tide both being fair, we got the foresail on her and ran down past the end of the docks, anchoring in 8 ft. of water. After watching the dredge for a few minutes, we went on shore and inquired what time the next steamer would leave, as we did not relish the idea of being again caught in the narrow channel just as she was about to leave her dock. We wandered about till half past 3, when we returned to the yacht and got up our mainsail. We set the jib in stops, and were just about to break out our anchor when we noticed that the crew of the dredge were hauling another scow across the channel, and had a rope stretched right in our course.

We waited till they had things fixed to their satisfaction and then weighed anchor, breaking out the jib as it came up out of the water. The breeze had freshened somewhat, and we found we could just lay our course clear of the ends of the dock and down the channel to the first buoy or stake. We tacked back and forth, keeping in the channel most of the time, and following the same course we had come by, although there was plenty of water for us anywhere, it being nearly high water. We had a delightful sail back to Hull, the breeze freshening as we got further out into the more open water. We felt that we had explored waters not commonly sailed in, by the yachmen along the coast, and this feeling of discovery, added to the charm of the perfect day, made it, on the whole, one of the most delightful trips we had undertaken. On reaching Hull we dropped our anchor abreast of the landing at the foot of the street—spread our awning and ate our lunch.

The weather had been fine all the morning, and as far as we could see there was every indication that it would continue so, but the

SITUATE MAIN STREET—LOW TIDE.

barometer had dropped a tenth by noon. We took things pretty easily after dinner; F was below writing up the log. I was on deck reeving a new pair of jib sheets and doing other little odd jobs, of which there are so many on a yacht, when my attention was called to a rushing sound to the eastward. Looking up from my work I saw a white streak coming rapidly toward us, and in a moment we were struck by a hard gale which slatted and banged our awning about at such a terrific rate that I called F. out on deck to help me furl it. Near us lay a large catboat that had been out in the morning. The owner had gone ashore without furling the sail, leaving it down in a heap on the cockpit floor. The wind caught this loose canvas and threw the gaff up, then blew the whole sail overboard, where it thrashed and whipped about in a frantic manner for some time before the owner came out and secured it.

There were several small boats at sailing and some of them had a hard time of it. We were very sorry for two poor fellows who were out in a skiff, over near Peddock's Island and heading toward us. They luffed up in the squall when it first struck, and finding that it was "full of business," turned a reef in their single sail. They tried to beat under this reduced rig, but could not make any headway at all against the wind and ebb tide. After struggling against fate for a few minutes they took down sail, mast and all, and began to row. By this time the wind had kicked up quite a little chop in the channel, and every sea flew clear over them. It was a long hard pull and a wet one, but by persevering they finally got over to the club house landing. It took fully an hour to accomplish in that wind what they could have done in ten minutes with ease under ordinary circumstances.

All the boats in sight turned in from one to three reefs, and even then they had all they could stagger under. We were so close to the landing that we lay in perfectly still water and enjoyed the fun. Numbers of boats started out from the club house with parties on board, but all were oilskins or waterproofs of some kind. The wind died down about 6 o'clock, and by sunset it was perfectly calm. There was not a cloud in the sky of any kind, and the only indication we had

had of a change in the atmosphere was the rather sudden drop of one-tenth of an inch in the barometer. There are two large beacons or spindles off Hull that mark two rocks, the best anchorage for small boats is to the eastward of these, as the tide runs less swiftly there and the swells from the passing steamers are not so annoying.

Friday, July 14.—We arose with the sun and hurried our breakfast, as we wanted to get out through Hull Gut before the tide began to flow. The breeze was very light from northeast and we knew that if we waited until the tide got to flowing that we could not beat out at all. We weighed anchor at 5:45 and expected to find it slack water in the Gut, but were surprised to find the flood tide already running and to see how swift the current was. The tide tables gave 5:40 as the time for low water and we were not more than ten minutes late, if we were that much.

We stood across the current on starboard tack and succeeded in just clearing the point of Peddock's Island, although for a few minutes it seemed as though we would have to go about and cross the current again. We held on the starboard tack till well over to Fort Warren (George's Island), when we went about and laid our course to just clear the black buoy off Point Allerton. The breeze was a little fresher as we got out from among the islands and the seas were quite large, evidently the result of the squall we had had the day before. The Cy-pres slid up and down the big rollers in a very exhilarating manner, as the brisk breeze drove us swiftly along. We had studied the chart a good deal and thought we could find our way into Cohasset without any trouble, but on nearing the entrance to the channel we could not tell where the buoys were, and the Glades House was outside of the rocks. We could see the breakers in several places and did not dare to go in very close, fearing in the old sea then running that we might strike. We therefore ran on by all the buoys till very near to Minot's Ledge Light, when we went about and ran back, picking up the buoys in turn and following the sailing directions as laid down in Stebbin's guide book. Shag Rock is a small rocky islet plainly visible at all stages of water and the Glades House is the only large building in sight on the left hand side of the harbor. Keep the Glades House well open from Shag Rock till you pick up the Black Buoy on Jack Rock, then port your tiller and run across toward White Head. As we ran in before the wind we spoke to a fisherman in a dory and he told us to pick up a white keg buoy near White Head, which is the prominent land on the right hand side of the entrance as you go in. We found the mooring without any difficulty and slipping the bitts over the bitts were at rest once more.

I was anxious to hear from my family, so jumped into the dinghy without changing my clothes and rowed ashore. I had on an old soft felt hat, a flannel shirt, white cotton duck trousers (not very clean) and "sneakers" on my feet. The shore along which I rowed was very pretty, and wooded down to the water's edge. Numerous summer cottages occupied the point of White Head, the grounds extending back toward the village. I was surprised to find a picturesque little harbor up at the village, completely landlocked, but unfortunately dry at low tide. This little basin was full of sailing craft of all sizes, from 15 to 30 ft. long, all of the shallow centerboard type. There was a little yawl of about 35 ft. l.v.l. that particularly pleased me, and I spent some minutes rowing around her and admiring her beautiful proportions. After landing I had a long walk up to the Post Office, through a delightfully shady street. The fact that I was a stranger in a strange country was impressed very forcibly upon me. I thought to drop a postal card to my wife, but found on putting my hand in my pocket that I had no purse, and furthermore I had no knife, no trinkets, no finger ring, no scarf-pin, not even a scarf or a handkerchief to exchange for a postal card, and was forced to turn away and retrace my steps, not knowing a soul that would be willing to lend me even one cent.

The exercise of pulling the dinghy to the village was a pleasure, but I found it quite a different matter to pull back. The tide was running up the channel like a mill race, and the old sea sailing in, helped on by the breeze, made it very hard work. It was a good mile or more from the dock to the yacht, and when I reached her I was nearly played out, my hands were swollen and I was shaky in the legs. We were anxious to get out of this open harbor or cove before night, so I could not stop to rest, but got under way at once.

We had to beat out against a sharp chop and swift tide and found it very tedious doing so. Twice the breeze left us almost entirely, and we thrashed and tumbled about amazingly till we turned back to pick up the moorings again, when, just as we were ready to do so, we got a puff and decided to try it once more. We finally managed to creep out between the buoys we had passed when going in, and found more wind as we stood off shore. We seemed to ride the waves much better on the starboard tack so held on in a northwesterly direction till we could clear Minot's Ledge on port tack. This made a sail over two miles further than necessary, but, as we held a good wind off shore, we thought that we gained by it in the long run.

We rounded the breakwater at Scituate at 1:30, running over the bar in a breaking sea. The harbor is small and well protected by an artificial breakwater that runs in a S. E. direction from the old octagonal tower on the point. The channel is curved and narrow. After rounding the end of the breakwater it follows back nearly parallel with it and then turns in an easy curve off to the left and toward two spindles or beacons—one of which is on either hand. The deepest spot or pool is about two-thirds of the distance from the tower to the beacons, and in it there is about 7 ft. of water at low tide, and room enough for three or four boats to swing at their anchors. As we rounded the end of the breakwater we noticed a good-sized schooner at anchor and concluded that she was in the pool, so ran down near

her and dropped our anchor. We got into the dinghy immediately and sounded all around, and found that we were just on the edge of the pool, so got out our kedge and warped into a better position.

About an hour before low tide we were astonished to see a fleet of dories pull out past us into the shallow water just outside the bar. On inquiring what they were after we learned that they were "mossers" and were raking moss of the edible kind. They had each a long-handled rake and some of them had a long fork. They go out as far as they can at low tide and work back with the incoming tide, pulling the moss off from the rocky bottom as they go along. In two hours they can gather about one barrelful, worth \$3.50 when bleached and dried. The women and children do their share of the work, washing the moss, turning it over and over to dry and bleach, and gathering it up in piles at night or before a shower, and covering it with canvas. The gathering of the moss is the principal occupation of the seafaring folk during the summer months, and is, on the whole, a very profitable one. We counted twenty dories in the fleet and all were painted or decorated in some peculiar manner, so that they could be easily recognized by any one at all familiar with them.

We had not been in the harbor very long when a small schooner about 27 ft. long came down from the village and dropped anchor near us. She was a dilapidated-looking craft, with dirty and torn sails and a smashed trail. Her crew was made up of a man and his two sons. The father proved to be an old soldier, and was very talkative; we invited him on board and he amused us for an hour telling about his army experience and his adventures on the water. He purchased the little schooner without knowing a single thing about sailing, and his description of the various scrapes he got into was very funny. After eating our lunch we went up to the village, a very quaint, old-fashioned town, the principal street winding along the water. Hand-some old residences are mixed in with fish houses and coal yards. I took several pictures of the town from the water and a few of the surroundings of the harbor.

## "Forest and Stream's" Yellowstone Park Game Exploration.

IN February of 1887, in the face of, or on the heels of, the disastrous Schwatka expedition, the FOREST AND STREAM dispatched Mr. Elwood Hofer, as a special commissioner, to make a snowshoe exploration of the Yellowstone Park. Commissioner Hofer accomplished his mission successfully and with much credit; and his account of the exploration with its results was contributed to our columns in a series of extremely interesting chapters describing "Winter in Wonderland." The story was extensively copied by the daily press, and we believe had an important influence in the making of public opinion favorable to the Park. So rich was the store of information then obtained, so valuable the facts ascertained, so fascinating the story of adventures amid the tremendous scenery of the Park—that it was determined to repeat the undertaking whenever the occasion should arise to demand it.

That occasion came with 1894. For with the assurance of raids on the territory of the Park by conscienceless money-hunters in the United States Congress, there came to us rumors of projected raids by no less conscienceless head-hunters on the game of the Yellowstone. In view of these things the expedition was sent out.

The events of the past few weeks have abundantly justified our prevision. The Park has been assailed in Congress. The buffalo butchers have committed their depredations. Now, if ever, there is need of direct, authentic, first-hand information about the Park and its game. Now, if ever, the time has come to sound a call which shall awaken anew public interest, and direct the attention of the public to those priceless possessions of the public which can be protected only by the activity and the voice of the public.

Last month the FOREST AND STREAM'S Yellowstone Park Game Exploration party was equipped for an extended snowshoe expedition, and set out upon its work, Mr. E. Hough, our Chicago and the West staff correspondent, and Mr. Elwood Hofer, of the Mammoth Hot Springs, being equal in command. Comradeship in the Boone and Crockett Club Cabin of the World's Fair had tried and proved their camp compatibility; and no two

men ever put on snowshoes for a wilderness tour better equipped than they with lively interest in their cause and alertness and intelligence for its successful prosecution.

The first fruits of the exploration have already come to us in a personal letter from Mr. Hough telling of the diminution of the buffalo of the Park and of the raids of trophy thieves. Extracts from this letter are given on another page. When the whole story shall be told, as it will be with every detail, the facts will demonstrate anew the crying urgency for action by our apathetic Congress.

We need not add that the new pictures of "Winter in Wonderland," which are in store for readers of FOREST AND STREAM, will be awaited with high expectation. The graphic pen of our versatile correspondent has never had a worthier task than the picturing of the Yellowstone in the time of its winter enchantment. And if all shall go well there will be some big-game photographs, taken by FOREST AND STREAM cameras, which will prove notable additions to the series already published in our columns.

## SAVE THE PARK BUFFALO.

IT is but a short time since we announced the capture of a poacher in the National Park, and the fact that he had killed eleven buffalo, and this announcement greatly surprised and alarmed all who are interested in the National Park and all public-spirited citizens as well.

In another column we quote statements contained in a private letter received from our staff correspondent in the National Park, and these statements show that the condition of things there, so far as the buffalo are concerned, is infinitely worse than any one had supposed. Besides the buffalo known to have been killed by Howell, Messrs. Hough and Hofer, of the FOREST AND STREAM Yellowstone Park Game Exploration, discovered in another place eight buffalo carcasses scattered over the hillside and buried under 4ft. of snow. The date at which these were killed has not yet been determined, as it was impossible with the means at hand for the travelers to get to the carcasses.

There seems now to be little doubt that within the last year or two a wholesale slaughter has been taking place among our buffalo preserved in the Yellowstone Park. It was believed that these, if they had been protected, would by natural increase have reached four or five hundred by this time, but if the herd has been preyed on by poachers in other years as it has in the winter of 1893-4, we can well imagine that two hundred or two hundred and fifty is the outside limit for the buffalo in the Park.

As we stated a few days ago, Congress has put a premium on the head of every one of these great beasts. Any man is free to enter the National Park and kill them, and knows that—even if taken in the act—no punishment can be inflicted on him. The chances against his capture are considerable, and even if he is taken, the only inconvenience that he suffers is a confiscation of his outfit, amounting to but a few dollars in value, and a few weeks discomfort in the guard house. Against this there is the prospect of selling for \$200 or \$300 the head of every buffalo which he has killed, and in the deep snows of winter there would be no difficulty in killing in the course of three or four days, all the buffalo in the Hayden Valley, which, as our correspondent reports, are now not more than from seventy-five to one hundred head.

It is not surprising that sportsmen and many of the newspapers of the country are stirred up about this matter, nor that a number of police bills have been introduced in Congress to remedy the existing state of things. Most of the bills introduced thus far are entirely inadequate, partly because they have been drawn by persons who are not familiar with the condition of things in the Park, and so are ignorant of what is required in such a bill. It is somewhat absurd to provide the penalty of a fine of \$100 for killing a buffalo, when it is perfectly well known that if a man kills one and succeeds in getting its head out of the Park, he can obtain for it three times the amount of the possible fine. On the other hand the penalties should not be so severe as to excite sympathy for the law breaker, and so to render the law inoperative.

We have already said that these animals are Government property, and that injury to them should be punished in the same way as injury to any other Govern-

ment property. The Yellowstone Park has by law been distinctly set aside as a public Park or pleasuring ground for the people, and the natural objects in it, whether animate or inanimate, belong to the public. It is the business of the Government, which acts for the people, to protect this property which belongs to those whom it represents. The executive branch of the Government has done and is doing all in its power to furnish this protection, but the legislative branch has failed and continues to fail to do its duty, for it refuses to provide methods and means for enforcing the protection which it has authorized in the organic act establishing the Park.

We suggest that every reader of FOREST AND STREAM who is interested in the Park or in natural history, or in the things pertaining to America, should write to his Senator and Representative in Congress, asking them to take an active interest in the protection of the Park. In no other way can Congress be made to feel the force of public opinion, and be induced to enact the necessary laws for the protection of the National Park.

## SNAP SHOTS.

If you visit the Greatest Show on Earth you will observe that of all the brute performers, horses, donkeys, bears, lions, dogs, monkeys, elephants, the dog is the only one that shows any recognition of the audience. All the rest go through their tasks as stolidly as if they were in the solitude of the wilderness, with never a look to the right or the left, from the time they enter the arena to the moment of going out again. But no sooner does the dog come in than he looks about the vast auditorium; with eye and ear and wag of tail—and all the canine modes of expression—he recognizes the thousands who are looking at him; and never through all the performance does he forget that he is going through his part in the presence of spectators. In the intervals of the acts, the trick elephant stands stolid, an inert mass; but the dog improves the opportunity to glance about at the people and to give them a wag which is canine for a wink. Thus the animal show of the circus exhibits anew the human companionability of the dog above that of all other brute creatures.

FOREST AND STREAM'S yachting editor, Mr. Stephens, has a little Scotch-Yorkshire-Skye terrier about four months old. Last week, while playing in the road in front of the house, this puppy was run over by a passing wagon and lay in a rut, unable to move. He had been playing with a fox-terrier, which, seeing another wagon coming along, and evidently appreciating the disabled condition of his young friend, deliberately put his nose under the puppy's body and pushed him out of the rut before the wagon passed. Then the fox-terrier ran to the house door and barked until he attracted the attention of the inmates, who at once hastened to rescue his disabled friend. The two legs on one side were found to be broken. These were put in splints, and the puppy is now in a fair way to recovery, for on Sunday he walked twenty feet and down a flight of stairs on the remaining two sound legs. The fox-terrier cannot boast a pedigree, but this is little consequence when his heart and head are evidently in the right place.

Carrier pigeons are employed in the lake fisheries to some extent. Cleveland (Ohio) companies are said to supply each of their boats with two birds, the first of which is set free after the nets have been drawn. This bird bears a note announcing the size and character of the catch in order that the necessary preparations may be made for receiving it at the wharf and for communicating with the buyers. The second pigeon is held in reserve to give notice of any accident or danger.

Senator Lindsay of Kentucky having been removed to a higher sphere of usefulness, the Legislature of that State has at last adopted the long-fought-for measure to forbid the seining of fish in inland waters. Now that there promises to be an end of indiscriminate destruction there will be some encouragement for the stocking of Kentucky streams with fish of old and new varieties.

The Russian Government is about to found two chairs for instruction in pisciculture. One will be at the Forestry Institute of St. Petersburg and the other at the Rural Economy Station at New Alexandria.

## The Sportsman Tourist.

DANVIS FOLKS.—XXVII.

Under Clear Skies.

AS with swift strides that seemed too slow to carry home the good news to its inmates Sam topped the crest of a pasture knoll, he became aware of a familiar odor of rank tobacco too late to avoid its source, for in the next moment he was confronted by Antoine making a short cut homeward from his day's chopping.

"Hill-o, Sam. Dat was you, don't it. Wal, Ah 'll ant s'pose probly you'll felt for went huntin'. Wal, you do pooty good for gat dat fox. Say, Sam, ant he too bad baout dat Bascoms howe up everee body an' run hesef away. Dat was too shem. Dey say dat poor hol Buttle gal mos' crazy in hees head for loss hees two honed dollar, an' de widder Needham mos' as crazy for glad she ant marree it, and, seh, dey was tol' dey was constubble you all up, an' was goin' for sol' you all aout. But it was mek you felt good yet for gat dat fox ant he? You was look pooty good nachel, hein? Ah tol' you, Ah was felt bad for you, Sam, an' all of it. What all we goin' do if Onc' Lasha broke off hees shaup for loafin' place, hein? Mees Purintim say he'll gat for go on taown, an' Aunt Jerushy. O, dat was too shem. Ah tol' you Sam, if Ah 'll can fan all de money dat hol feller bury Ah 'll len' you of it an' set you all up."

"I'm b'legged to ye, Antwine," Sam answered at the first opportunity given him, "but I guess I'm goin' to git things straightened aout an' I shouldn't wonder ef we c'd continner right on a-hevin' settin' in the shop. But I've got to be a-moggin; good evenin'," and he pushed on, leaving the Canadian staring after him, for once in his life speechless with wonder, till he ejaculated with a deep-drawn sigh:

"Ah b'lieved he was be so troublesomed it mek it crazy in hees head. Ah dat was too bad for heem." Overwhelmed by a sudden suspicion he exclaimed, "By tunder! Ah bet he fan dat money. Dat too bad for me."

When Sam saw his own house light shining through the early autumnal gloaming, chimney and roof taking form against the hazy sky and nebulous glimmer of re-lighted stars, and traced the dusky slopes and swells of meadow and pasture, they had never seemed so dear as now with the sense of re-established possession.

Now he could see Huldah appear at one of the kitchen windows whose welcoming light he had seen on the hill afar, and knew she was looking out for him as she doubtless had done for countless times since the shadows began to blend with the hazy twilight, and the crickets, warmed to life again, chirped faintly in farewell concert.

Huldah's face, sadly sobered of late, brightened at the sight of her husband's, and its brightness was mingled with surprise when she noted its unexpected cheerfulness.

"Why, Sam, you must ha' had 'stor'nary luck a-huntin' erless you faoun' a better farm 'an what you expected to, up in the maountain."

"I hev hed a streak o' luck in the woods ag'in, Huld," he said; and when he had hung up his gun and kissed his boy, he beckoned her to the bedroom and told her his story.

Aunt Jerusha's face, sober almost to sadness, yet calm with the peace conquered in many trials, met his in questioning surprise and caught a reflection of its renewed cheerfulness as he passed her, saying:

"I've fetched home good news, Aunt Jerushy, Huld 'll tell ye;" and going into the shop he imparted it to his father and Uncle Lisha.

Before the evening was far spent, Pelatiah, Joseph Hill and Solon came in, assuming a cheerfulness of speech that their funeral faces belied. Influenced by the happy, care-free manner pervading the shop, the old comrades drifted into the familiar channels of discourse. At length, unable longer to restrain his curiosity, Solon said:

"Samule, we come in to express our symptoms, it bein' understood quite gin'ral 'at you had got revolved pecuniary w' that aire Bascom, an' him hev'in' absquated."

"We've felt dreffly 'baout it up to aour haouse," Joseph broke in with his deliberate drawl. "I tol' Mari 'at I do know 's I ever hearn father talk so much about anythin' thaout 't was Ticonderogue, an' he 's cussed Bascom baout as bad as he ever did Tories. Seem 's 'ough, but I d' know."

"By gin'ral hints," Solon continued, "sence we here assembled I've gathered 'at you've ben reimbusted. Be we so to understand it, an' ef so wherefore an' whyfore?"

Sam tilted his chair backward, stretched his legs straight out before him, clasped his hands behind his head and fixed his eyes upon the dingy ceiling.

"Mebby," he said after a considerable pause, during which the hum of the women's voices, his father's careful feeding of the stove and the clatter of the baby's playthings could be heard in the kitchen, "Mebby I've got a rich uncle 'at you never heard on, an' mebbey I've busted into a bank an' mebbey I've faoun' a ore bed hendy to the Forge, an' mebbey I've diskivered perpet'al motion. Bimeby you 'll know, but take my word for 't, things is all right an' we're goin' to keep right on a-visitin' in this ere shop. But the's one thing we do want'er fergit, the fust run o' sleddin' at we git, an' that is to tu all han's turn aout an' draw up them Buttle's gals a big wood pile. They've lost all the savin's an' haint got no rich uncle. An' now I've got to git that boy to sleep."

The lives of the Danvis Folks resumed their ordinary tranquil course.

For me, Time has touched them as lightly as it has the crowns of their own mountains, which centuries have not changed.

I find myself forgetful of the lapse of fifty years, thinking of my old friends as yet alive, preserving the quaintness of speech, the homely pastimes, the simplicity of dress and manners and above all the neighborly kindness that belonged to their day and generation, untouched by the strifes and ambitions and changes of the busy world that chafes and beats around them, and without a desire for a part therein.

The uneventful day is spent. The shadows of the mountains and the early twilight creep across the quiet valley. Out of the dusk and deepening gloom homestead lights

shine forth like stars in a nether sky and after a time go out, one by one.

I cannot say farewell as if the lights of my old friends were extinguished forever, but only good night.

ROWLAND E. ROBINSON.

FERRISBURGH, Vt.

## ALONG THE MINNESOTA RIVER.

YEARS ago, when the "Twin Cities" were infants in swaddling clothes, when Fort Snelling existed in much of its primitive picturesqueness ere the incoming tide of immigration had peopled the surrounding territory, drained the sloughs and marshes and transformed the boundless prairies into cultivated farms, when ducks in countless numbers swarmed on lakes and ponds that were found in every valley and hollow along this river, when the "scaipe" of the gamy little snipe was heard at almost every footstep as we tramped the marshes, when our pointers and setters could still find prairie chicken within the low limits of the two cities.

A bright day in October, in this halcyon time, my friend P. and myself set out for one of our favorite resorts, on the Minnesota River. Leaving home on the C. M. & St. P. R. R. we were soon at Fort Snelling, where the Minnesota merges itself in the "Father of Waters."

Crossing on the old ferry we soon had out our birch bark canoe, bought on a previous trip for the munificent sum of four dollars from a degenerate son of the noble redman, whose tribe had their lodges at the nearby village of Mendota, the long-time home of the late General Sibley, a pioneer famous in the early history of Minnesota and afterward Governor of the State. Its resting place had been in the old ferryman's poultry house. A careful examination showed us that before trusting ourselves in our frail bark sundry repairs would be necessary, but we were prepared for this emergency, sad experiences in the past having taught wisdom, and with the pitch and tow brought for the purpose we soon had the cracks and seams patched and our craft was pronounced seaworthy.

Launching the canoe, after filling it about half full of straw upon which we spread a rubber blanket, lunch basket and other traps were snugly stowed away, and with guns handy for a chance shot, our voyage up the river began. The Minnesota River is a pretty stream as it winds its way with many a twist and turn; its banks are low and fringed with bushes and trees; most of the foliage is gone now, but the bare trunks and limbs are almost concealed by the tangled mass of vines and creepers; an overhanging tree is encircled by a huge wild grapevine, and from the limbs hang immense quantities of grapes. The sunshine and frost have given them a delicious flavor, and we have but to steady our boat and reach up to gather all we wish. The hardy scrub oak still retains its dark green leaves, which mingled with the clusters of berries of the bittersweet form a pretty picture. Wild plums, cherries and the brilliant red of thorn apples, add to the beauty of the scenery and afford feasts for countless birds of all varieties, that, thronging their branches, give life and music to the charm of our surroundings.

The profusion of berries had tempted here many of the most rare and beautiful birds. The tanager, who had changed his spring jacket of scarlet, was still beautiful in his summer tints of green and yellow; an oriole clothed in bright orange and black still lingered; the golden-winged woodpecker, the belted kingfisher, the gaudy but disagreeably noisy bluejay, tiny warblers of all kinds, were here, while from the adjacent marshes rose thousands of blackbirds, from the common every-day, plain blackbird to red-winged starling, and the yellow-headed, the handsomest of all varieties. Animal life was not confined to birds alone. Every now and then the stillness of the river was broken by the plunge of a muskrat; squirrels, gray, black and red, chattered defiance, and as we silently rounded a bend, an otter was seen gracefully sliding down the bank into the water. The stream is sluggish, and our light boat moves so easily that I have dropped my paddle, leaving the work for P., who is an adept in the business, and have been lazily smoking my pipe and enjoying the many pleasant sights and incidents, but we are to leave the river, and have some hard work before us.

A tiny little brook comes in here, too small to float a boat at its mouth, but up it we must go. The beauties of a birch bark are now shown; a quarter of a mile up, the stream widens out and is deeper and for a short distance a boat will float. A short carry along an old wood road, with a corduroy bridge across the stream is soon made, the lightness of our boat making it an easy one, and we are again afloat but with so little water under us that the boat will only carry one, and that one will have to wade and drag the boat half the time. P. kindly volunteers and is generally allowed the honor; with my gun I stroll through the woods for perhaps a mile as the creek winds and turns, though really our destination is less than a mile from the river. Coming again to the boat at the end of the woods I re-embark; the stream is now swift and deep, running through vast beds of wild rice with many a turn that brings us at last into an open bit of water, dotted all over with clumps of grass and wild rice. Before leaving this spot we push a pole into the soft mud and tie a handkerchief to it, as without this landmark the opening to the creek may be sought for unsuccessfully for hours.

Selecting a well known spot, in the usual line of flight, our little boat is pushed well into the rice, the broken and bent stalks are straightened up and bent around and over the boat until our blind is perfect.

The day has been bright and warm so far, but as the morning grows into afternoon there comes a little cloudiness, a suspicion of what later in the season might be snow; all the better for ducks we think, for ducks are what we are after, and, as the sequel proved, ducks we were to get. We had not long to wait; they came early and stayed late. First came a flock of blue-winged teal; a right and left from P. with a miss and kill from myself brought three of them to bag, and the ball was opened; then for an hour or more flock after flock of teal flashed by, the air was full of them and they fell to the right of us and to the left. As there came a lull in the flight, we moved out from the rice and picked up the dead birds, and a goodly number we had.

Hardly had we regained the shelter of our blind before the birds began coming in again, and now came mallards, bluebills and black ducks. We were more particular now and picked out the birds we wanted, leaving the rest to pass by unharmed. Large flocks of the lesser ducks would settle in the water near us, only to take wing

again as our guns spoke to some of their more aristocratic brethren, but although "man may make the forenoon, God makes the afternoon," as a dear old hunting companion used to say, and we have got to get through the creek before dark, and the river is a long way off, so we hasten to gather up the last birds shot and find our way to the head of the creek. We cannot see our pole, but we go to where we know it is, and it is not there; the openings all look alike to us and we paddle from one to the other, every now and then sure that we have found it, but after paddling a while only bringing up in a *cul de sac*.

The twilight is short and we know that darkness will soon overtake us. Something must be done. The shores are entirely surrounded with a dense growth of wild rice through which we cannot get our boat, neither can we get ourselves through without the boat. The dismal prospect of spending the night in the little canoe begins to force itself upon our minds; we have about given up hope of finding the creek, thinking as it proved that our pole had fallen. Looking toward the west the reflection of the dying sun enables us to see some objects, but around us it is rapidly growing from dusk to darkness, still we somewhat mechanically keep our paddles going while the situation is discussed. Guiding the boat close to the margin of rice, hoping to find some opening through which we can reach solid ground, our hopes are partially realized; we find a rock way out in this marsh, a rock large enough to land upon, and our long confinement in the boat makes us mighty glad to stretch our limbs on this bit of ground.

Landing, we pull the canoe up and secure it, then explore a little. We seem to be on an island, three sides are surrounded by water, the fourth seems to be a very wet meadow, over which in daylight we could probably make our way, but it is not to be thought of at this time as these wild meadows, marshes, which at times are dry enough to cut the grass upon, are treacherous; water holes abound and the upper crust is thin, you may stand upon it in places and shake whole acres, but not far from us we see a haystack; this we will reach. We go to it and find it in rather a wet place, so return to our rock of refuge, each with a large armful of dry hay; we light some of it, and by the blaze see the extent of our dominion, and also that a fallen tree, the only one probably that ever stood there, will furnish us fuel. A fire is soon built, the coffee-pot put to boil, a couple of ducks skinned (as the easiest way of preparing them) and broiled. After the inner man is satisfied we feel better and set about providing beds; another trip to the haystack and enough is provided to soften the rock; a crevice some two feet deep and a foot in width in our rock furnishes us with a fire-place, into which the remains of our fire are swept; the rock has been heated by the fire and our beds soon occupy the spot; our only blanket, the rubber one in the canoe, is fastened up about two feet high over our beds and we crawl in, first replenishing the fire and providing more wood, for the night is cold.

Our work has taken time; it is nearly 11 o'clock and we are weary; we do not have to woo the drowsy god, he is waiting for us and folds us in his arms and wraps his mantle around us, and we sleep as quietly as an infant in its mother's arms; but after a couple of hours I awake with the sensation that my feet and legs must be frozen. As I rouse up and rebuild the fire, I notice that a quantity of loose flat stones where our fire has been have become thoroughly heated. With thick gloves I secured a number of them. Then building up a good fire I returned to bed, and placing the heated stones around me become warmed through and sleep soundly until morning. The thick white frost over everything in the morning gives evidence of the coldness of the night; but we have not suffered. Our breakfast, a repetition of our supper, is prepared and finished before daylight.

Long before the eye can discern them the whistling wings of the early incoming ducks make music for our ears, and ever and anon countless shadowy forms darken, for a moment the faint line of color which appears heralding the coming of the day god, and slowly widens and spreads over the horizon until the whole eastern sky becomes one mass of rose-tinted flame. The water beneath us, covered with myriads of birds, reflects the colors of the heavens, and the twilight of early morning is dispelled by the glories of the rising sun. We lie and watch the birds silently as we smoke our pipes, and find as much enjoyment in noting their ways as we had the day before in bringing them to bag. The true sportsman is not a game butcher and does not find all his pleasure in the mere killing of game, noting the many different varieties, studying their habits and learning of nature its part, if not the highest part, of his enjoyment.

It is Sunday morning. We do not usually shoot on Sundays and do not care to this morning; we have birds enough, and the charm of everything about us seems too sweet to be rudely broken. After a time we silently unfasten our boat, and hardly ruffling the water, glide softly over it, but our appearance is the signal for alarm, and with great commotion and fluttering the birds are on the wing. We readily find the creek in the daylight, and are soon through it and back in the river; the slow current carries us quietly along, and we reach the ferry about noon. We have loitered idly by the way, and consumed much time, but the hours have not been wasted, and we shall never regret them; we have been alone with nature's God and have learned lessons that will not be forgotten; we have gained in health by our outing, and can take up the battle of life with new courage and faith. If we have done no good, we have at least done no harm, and is not that day well spent wherein we can say "we have nothing to regret?" Go thou, reader, and do likewise:

"If thou art worn and hard beset  
With sorrows that thou wouldst forget,  
If thou wouldst read a lesson, that will keep  
Thy heart from fainting and thy soul from sleep,  
Go to the woods and hills!—No tears  
Dim the sweet look that Nature wears."

EVERETT O'DONNELL.

## The Better Way.

Editor Forest and Stream:

Bravo for Rowland E. Robinson! To have the true-hearted hunter, Sam Lovel, escape his threatened ruin in the fragrant forests of his beloved mountains is a far better ending to his troubles than to pursue the man that wronged him, and with "ol' ore bed" and the chase with a homicide.

HORACE B. DERBY,

ALBANY, N. Y.

Natural History.

THE STRANGE ANIMALS OF THIBET.

THIBET has long been a land of mystery, it is only quite recently that any reliable information on its physical features and natural productions has reached the outer world, and to this day it continues to be the least known section of the globe in all senses. It is such an immense region, so isolated by natural and artificial barriers, and so peculiar in its conditions that it would indeed have been a wonder had its zoological productions not proved new and strange in a degree unknown since the discovery of America and Australia.

It was in fact a virgin field for the zoologist when in 1869 the Catholic missionary, Abbé Armand David, went to live in one of the valleys of the district known as the Moupin, and there collected in a few months the specimens that were forwarded to Professor Alphonse Milne-Edwards, of Paris, and formed the material for the studies that he afterward published in his "Researches on the Mammals of Eastern Thibet."

Attention is directed anew to the fauna of this region by the paper on the collections made recently by Prince Henri of Orleans, read by Prof. A. Milne-Edwards at the International Zoological Congress, at Moscow, in 1892, and recently published. While the results of l'Abbé Armand David's explorations are known to zoologists, to many readers they will be wholly new.

Prof. Milne-Edwards proceeds to examine in detail the various mammals that the indefatigable missionary discovered in less than a year. In all there are forty of these; some thirty odd are new to science and the rest are extremely rare; many are types of new genera, while not a few represent new families, and this among large mammals. What a naturalist's paradise! Truly Thibet is to the world just now what Mexico is to America.

The attention of the general observer of this collection would at once be arrested by the coon-bear, on account of its great size and extraordinary appearance.

This animal, *Ailuropus melanoleucus* (till now unknown to science), looks much like a large black and white bear; but according to Prof. Edwards it is structurally not a true bear at all. In its dentition it approaches rather to the hyenas and the cats, while its feet remind one of the panda or Asiatic raccoon (*Ailurus*), whence the name that it has received—*Ailuropus* or "Ailurus-footed." The cranium, again, differs extremely from the types of *Mustelidae* as well as from that of the *Hyena*, and supports the claim of a new group for the species. Its feet, as seen below, are not truly plantigrade, as in bears and coons, but resemble the semi-plantigrade feet of the panda. The fur is like that of a bear, and the curious coloration is the same in all ages and sexes.

"The *Ailuropus* inhabits the most inaccessible mountains of eastern Thibet, and never descends from these retreats to ravage the fields, as does the black bear, and the chase of this animal presents very great difficulties. It feeds principally on roots, bamboos and other vegetables.

"According to the information furnished to the Abbé David by the hunters of Moupin, it attains to a very great size; but the adult male, of which the museum possesses the skin, is not so large as our Pyrenean brown bear. He measures from the point of the nose to the base of the tail (following the curves of the back) 1.50 meters [about 4ft. 9in.], and his height at the withers is .66 meters [about 25in.]."

Not less curious to the zoologist will be found the beautiful little *Nectogale elegans*, a sort of large shrew with the habits of an otter.

"The Abbé A. David discovered this curious insectivore on the margins of the fierce torrents which descend from the mountains of Moupin. In these it swims and dives with remarkable ease in spite of the rapidity of the current, and gives active chase to the smaller fish. Although it is not rare it is difficult to secure specimens on account of the peculiar manner in which it lives; it is necessary to

drain the little stream and pursue the animal into the bottom of the holes in which it takes refuge.

Another curiosity is the weeping muntjac or *Cervulus lacrimans*, a tiny deer only 16in. in height at the withers. It has remarkably long pedicels for its horns and almost no horns at all, so that in a sense it may be said to shed only the tips of its antlers. Its immense tusks are another remarkable feature.

The budorcas (*Budorcas taxicola tibetana*) is characterized by Milne-Edwards as one of the most remarkable animals of the Thibetan fauna. "It is one of those animals with mixed characters, which seem to have borrowed the peculiarities of their organization from several very distinct types; it has affinities at the same time with the antelope, the sheep and the bovine families.

"The budorcas, far from being an animal of light and elegant shape, formed for speed, as are most of the ante-

lopes, is thick-set and low on its feet. Its head is heavy and its neck short; its chest is broad, its body massive and its limbs extremely robust; it seems to be organized for climbing on steep declivities and to rush upon its enemies after the manner of the Cape buffalo and the musk-ox, rather than to bound lightly and to save itself from danger by flight. In short it is seen only on the high mountains, and the hunters assert that it is very formidable. \* \* \*

"According to the information which they gave to the Abbé David this species lives on the steepest and most densely wooded declivities of the highest mountains. It

ROCKY MOUNTAIN SHEEP OR BIGHORN.

does not go far from these excepting during the night to feed. In winter, when all the mountains are covered with snow, it retires to the highest naked summits, where at this season the snow never falls, and where it finds abundance of long dry herbs on the steep banks exposed to the sun, which has melted the snow which fell in summer and autumn.

"The budorcas seems to be quite common on all the great mountains of eastern Thibet; it ranges as far as those of western Se-tchouan. It lives generally alone or in small bands. However, it seems that in the month of June they are found in large herds.

"Its strong and sharp horns inspire the hunters with

POLO SHEEP.

dread, and they prefer to take the animal in traps rather than to pursue it with firearms.

"The cry of the budorcas is a low, very deep bellowing; it snorts loudly when it is alarmed. Its dung is hard and round, like that of sheep and goats, and not confluent like that of cattle.

"The total length of a young male, following the curves from the end of the nose to the base of the tail was 2.13 meters [about 7ft.]; height at the withers 1.02 [about 40in.]."

Other animals of great interest are one or two species of flying squirrel, one of these *Pteromys albo-rufus*, a giant measuring in total length some 40in., being in fact the size of a small fox. Several species of true *Mus*, at least three species of *Lagomys*, or tailless dwarf hare, deer, marmots, martens, etc., corresponding in a measure with our own, as well as monkeys, leopards and pheasants, of which we have no representatives. Other animal wonders of this vast landlocked continent, not encountered by David, are the pale, or snow, tiger, the white, or snow, leopard, the Thibetan bear, the yak, or grunting ox, and the ailurus, or Asiatic raccoon, with its wonderful rainbow fur, and several large species of mountain sheep and goat, some of them somewhat like our bighorn; but the monarch of them all, the king of the bighorns, the great Polo sheep, is worthy of more than merely categorical notice.

This magnificent animal was discovered and described by Marco Polo several centuries ago when he made his famous journey into Asia. But nothing more was heard of the creature, and in time men came to believe that the great Polo had been indulging in a traveler's romance and had founded his account of the fabulous horns on the very poor foundation presented by the horns of a Himalayan wild sheep. Recently, however, the further exploration of western Thibet has led to the re-discovery of the great sheep. From one of the specimens brought by Messrs. de Breteuil and Ridgway from the Pamir I made the herewith drawing, and from a specimen alongside in the same case I made the sketch of the American bighorn. They are drawn to the same scale and the reader who knows the Rocky Mountain species can make comparisons for himself.

In 1840, Mr. Blyth read before the Zoological Society of London, a paper on the genus *Ovis*, in which he introduced to the scientific world the great Polo sheep. He makes the following remarks:

"*Ovis polii*, nobis (the Pamir sheep). In the narrative of the celebrated Venetian traveler, Marco Polo, we read (in Marsden's edition, p. 142), that upon the elevated plain of Pamir, eastward of Bokhara, and which is 16,000ft. above the sea level, 'wild animals are met with in great numbers, particularly sheep of a large size, having horns, three, four and even six palms in length. The shepherds form ladders and vessels of them for holding their victuals. They also construct fences for inclosing their cattle, and securing them against the wolves, with which they say

the country is infested, and which likewise destroy many of the wild sheep or goats. \* \* \*

Mr. Blyth had nothing but a pair of horns to found his description on, but a second pair was found, and in 1860 a third pair found their way to London. It was not, however, until 1874 that a complete skin was procured and described by Dr. Stoliczka in the Proc. Zoo. Soc., with a colored plate of the animal.

Travelers and sportsmen have added to our information from time to time since then, and recently in a work on the "Mammalia of India," by Sterndale, we have the following facts: The weight of an adult Polo sheep is from 576 to 612lbs., the head and horns weighing over 72lbs. He also mentions a pair that was 48in. from tip to tip, 14in. girth at the base and 73in. "round the curve." The last measurement evidently means of one horn, which would give 12ft. 2in. as the total length of the pair. Another pair mentioned were nearly 5ft. from tip to tip, and 16in. in girth at the base seems common, while Stoliczka mentions a pair that were each 18in. in girth.

The concluding paragraph of the describer is as follows: "Large flocks of *Ovis polii* were observed on the undulating high plateau to the south of the Chadow-Kul, where grass vegetation is abundant. At the time the officers of the mission visited this ground, i. e., in the beginning of January, it was the rutting season. The characters of the ground upon the Pamir and upon the part of the Thian Shan inhabited by these wild sheep are exactly similar."

From this it would seem that this is not an Alpine species like the American bighorn, but rather an inhabitant of the plateaus and foothills outskirting the great backbone of Asia on the north.

The original describer having nothing but the horns, supposed a much larger animal than it really is, but still it is considerably larger than our bighorn, while the great size of his majestic horns renders them a fitting crown for him as king of all the bighorn race.

ERNEST E. THOMPSON.

The paper above referred to, read by Prof. A. Milne-Edwards before the International Zoological Congress at Moscow, enumerates a great number of species contained in the collection of Prince Henri of Orleans. On the slopes of the Tien-Tsin Mountains of Chinese Turkestan are found many large mammals very different from those of Europe and also different from those of Thibet. There are wolves, bears, deer, roe deer, tigers and panthers, while on the elevated and arid desert at the foot of these mountains gazelles are very abundant, as are also foxes, a cat somewhat resembling one of the smaller cats of northern Africa, and wild camels in small herds.

On the higher land between Turkestan and Thibet are the great Polo sheep and the burrell sheep, gazelle, wild yaks and wild asses.

Southwest from here in the mountain country, covered with forests of coniferous trees, monkeys are abundant, some of them with long, thick fur, and living even up among the snow. Here, too, are found many species of cats, the panthers being the largest. Wolves and wild dogs, foxes, skunks and martens are all common, and there are at least two bears, as well as one species of raccoon-bear. *Ailuropus*, however, is not found in this region. Among the rodents are many squirrels, a ground hog, several mice and hares, as well as two species of *Lagomys*.

Ruminant mammals are also numerous here. Two of them are wild yaks, another is a large antelope which belongs to the same group with the American white goat, two musk deer, a roe buck and a rusa deer.

The collection is one of extreme interest, and the species contained in it show more or less resemblance to many Chinese forms, while also possessing certain peculiar characters which are not found elsewhere.

An American traveler, Mr. W. W. Rockhill, now residing in this country, has several times penetrated into the very heart of Thibet, and indeed has traversed it from end to end. As Mr. Rockhill is not only an explorer and

BUDORCAS.

WEeping MUNTJAC.

geographer, but a sportsman as well, it is to be hoped that before long he will give his countrymen the benefit of some of his experience with the big game of Thibet.

[It is to be remembered in considering the great polo sheep and comparing it with our bighorn, that it is by no means certain that the latter is an "Alpine species." It is true that at present it lives high up among the bare rocks of the mountain tops, and we are disposed to regard it as "Alpine" in the same sense that we call the white goat or the white-tailed ptarmigan Alpine, but there is very grave question whether this designation was originally applicable to the mountain sheep. On the contrary we are inclined to believe that this habit of life is one which has been recently acquired and which has resulted from its persecution by hunters. Richardson mentions that a member of his party found them living on the slopes at the foot of the mountains. We ourselves

have seen them out on the plains at considerable distances from the mountains. Until killed or driven off they were abundant in rough bad land country far from the mountains along the Platte, Yellowstone and Missouri rivers. We have known of an individual of this species being seen on the sand plains as far east as Birdwood Creek in Nebraska, not very far northwest of North Platte City. Moreover, Indians and white hunters who traveled the plains fifty years ago have often told us that in those days sheep were common on the plain—though perhaps at no very great distance from the mountains. The late Hugh Monroe, who went to the foot of the Rocky Mountains in 1813, has often described to us the great abundance of sheep on the rough buttes in the plains country of northern Montana, and the Indians' method of hunting them. In those early days, when sheep skins were needed, the Indians on horseback would surround one of these buttes where sheep were abundant, and after the circle had been made complete, one or two men would climb to the top of the butte and drive the sheep off, when they were easily killed by the mounted hunters below. Though the settlement of the West, with the activity of the hunter, is of comparatively recent date, quite enough time has elapsed for these changes of habit in the game.

#### Size of Mountain Sheep Horns.

BILLINGS, MONT., April 2.—*Editor Forest and Stream:* In reply to "Mountaineer" in your last issue, I will say that as a taxidermist I have mounted hundreds of mountain sheep heads. The largest one I ever got hold of measured 17½ in. around base of horn. I do not call this a world beater. Old hunters will look at a head and will say they have one 2 or 3 in. larger, but when they send it in it generally measures about 15 in.

While I am on the subject of large heads I would like to mention one I have in my possession. It is of a black-tail buck, killed in Wyoming. It has seven perfect points on each side, not counting the spike point. It measures 33 in. spread. I think this is a record breaker for spread, and will so consider it until I hear of a larger head.

GEO. SOULE.

#### A Pennsylvania Cinnamon Bear.

*Editor Forest and Stream:*

• A friend writes me from Ralston, Lycoming county, Pa.: "Two bears have been caught in traps and two shot this winter. I had a choice piece of one and it was very fine. Two of them were cinnamon bears, a very rare thing in this country. I saw both of them and can vouch for them being cinnamons."

Please note what is said about the cinnamon bears. I thought the cinnamon bear was not found east of the Rocky Mountain region.

[The cinnamon bear—so-called—of the Rocky Mountain hunters, is a brown color form of the grizzly (*Ursus horribilis*), while the brown color form of the black bear (*Ursus americanus*) is the cinnamon bear of the books and of the East. It is not uncommon to find cubs of both colors in a single litter.]

#### A Woodchuck in Distress.

BENJ. BEVIER, of Highland, N. Y., in company with others, one day heard a continuous chirping sound and he concluded to ascertain whence it came. On approaching it, great was their astonishment at seeing a young woodchuck wedged in the jaws of a snake—blacksnake I think it was. The animal was about half engulfed, the head protruding. The snake was killed, and on withdrawing the chuck it was seen that its posterior parts were shrunken to a pitiable degree, as if their dimension had been reduced by compression and the extraction of the juices of the body.

### Game Bag and Gun.

#### HUNTING WITH A DOG.

SHASTA MOUNTAINS, CAL.—*Editor Forest and Stream:* In your issue of March 3 I note "El Comancho's" dissertation upon still-hunting without a dog. I differ with him in his estimation of still-hunting, but in the one particular—that I prefer a dog. I have also known the Indian hunter of admirable sagacity to use them.

Whose soul "proud science never taught to stray  
Far as the solar walk or milky way;

But thinks, admitted to that equal sky,  
His faithful dog, shall bear him company."

My dog, however, must be a good one, and he is not for the purpose of hounding deer into runways or lakes. Indeed, I use him much as poor "Lo" does—as a friend and companion in the mountains and forests, and upon many a lonely ramble into obscure and distant nooks.

I have done a great deal of deer hunting, and upon the grounds I have hunted I have always considered a good dog almost indispensable. In the mountains, heavy timber or dense brush, deer usually have their haunts, and if "El Comancho" and "B." read this they may make exceptions in denouncing dogs for deer.

In order to give my definition of a good dog I will describe the best dog I ever had for deer. He was named Johnny, because he was presented to our house by a Chinaman when he was a very small puppy. He grew and proved to be a yellow, short-haired dog, without any known pedigree. I think he had some hound, some shepherd and a great deal of ordinary kind of dog in him. He was fond of hunting, and after a few trips to the woods he proved easily trained and intelligent. When in his prime, Johnny's companionship on a deer hunt was for me almost a guarantee that a deer

COON-BEAR.

would come to grief before dark. He was the best still-hunter I ever knew. He did the hunting, and I following, did the rest. His position in the hunt was about 10 ft. in my advance, and he was compass, chart and director-in-chief. His judgment of the proper locality in which to find game was almost infallible, and as soon as he located deer his every movement announced the fact.

When the scent was warm his excitement would be intense, but he rarely broke or uttered a sound other than a low whine. Sometimes he broke at the crack of the rifle, but not if I kept cool enough myself to check him.

He found many deer for me, and frequently they would

Hindpaw.

COON BEAR.

Forepaw.

be in the very last places I would have expected to find them without his guidance.

With him I usually had the advantage of being fully prepared for the game, and was often able to select from a number and avoid shooting does or animals out of condition. Even with his aid snap shots were often necessary, and snap shots, as deer hunters know, often result in wounded deer. In case I wounded a deer, slightly or seriously, Johnny knew it, and would follow a cripple or bleeding deer as long as there was a hope. It was seldom indeed that he failed to stop one that was at all disabled. After stopping a cripple his baying would always announce the state of affairs. Upon one occasion he took me three miles on my back track where I found a buck dead that I thought was but slightly wounded. A heavy wind was blowing and I could not hear his cry, and had finally set off for home without him. When he overtook me I was fully three miles from the deer, but his actions "spoke louder than words," and following his lead I found the buck lying dead one mile from where I shot him. Upon another occasion I shot a deer just at dark. It was a "snap shot," and broke the buck's foreleg between the foot and the knee. Johnny stopped and bayed him no less than a dozen times in going two miles over a brushy mountain, but when I approached he could not hold the frantic animal, which proved to be a 200 lbs. "forked horn," and it had become so dark I could not see dog or deer. Guided by the dog's baying I followed over rocks, brush and mountain, and finally found myself in the stage road but half a mile from town. It was pitch dark and the dog and deer were fighting in the road not 10 ft. from me. I could see neither of them, and could only locate them by their pantings and strugglings. Of course I could not shoot, and I lost my gun by laying it down to help the dog. It was midnight when I at last groped my way near enough to get the buck by a hindleg, and by twisting him around a bush threw him to the ground. The dog was so near exhausted he could not bite the deer's throat, and I had a desperate time before I could use my knife.

There—I got started on that yarn, and had to finish it. I have told it to a great many people, but never wrote it out before. But it was a memorable struggle with an almost uninjured and formidable animal upon his own ground during a very dark night. I learned afterward that a man drove up in a buggy while the struggle was going on in the road, and he immediately turned back and stayed over night in town. He predicted to the sheriff that a desperate tragedy had taken place in the road, but the morning light only revealed a "mighty big buck" hanging in a bush.

I have deviated. I intended to spread myself on Johnny's good qualities in particular, and upon those of other dogs I have known. But I must add that the selfish object of getting the game is not the only charm in hav-

ing a good, properly trained dog upon a still-hunt for deer, as well as other game. I never enjoy a hunt of any kind alone. Some companions are better to have along than a dog—but none are more faithful—none can be more silently sociable.

In regard to the study of "little things in detail," as "El Comancho" has it, study a good dog. Note his wonderful instinct, his sensitive nose, his faithful zeal, his anxious quest, his excitement when game is found, his joy when it is secured, his unswerving fidelity in any event!

As I recall to mind many long and lonely tramps in all sorts of wild thickets, dense timber, on mountain sides and in deep ravines and cañons, many a long and wearisome chase, or short and sharp struggle with game, I recall, as part of every mental picture, the faithful dumb animal that was always ready to go and never failed to do his best—always the same in storm or shine, good luck or bad. He never complained; he never grew weary or discouraged. He never answered a cross word with a surly reply. To a kind word he never failed to manifest good fellowship with a wag of his tail and a brighter gleam from his eyes. Besides the companionship of a good dog, he is often the means of giving alarm if danger is met with in the wilderness, and many a beast of prey would be now playing its vocation but for the alertness of man's closest dumb friend.

To sum up briefly, I prefer a dog for almost any sort of hunting, and most of all in still-hunting or deer stalking. I want a dog to find game, but not to chase it away; a dog that will obey orders and not break; a dog well enough bred to retrieve if there is occasion for him to do so, or fight if necessary; above all, a good, mannerly, sociable and amiable dog who will stay with me under any and all circumstances upon an expedition. Such dogs are by no means rare, either.

With all deference to "El Comancho" and "B." I beg to record my differing opinions, and believing I am one of a majority I would suggest that they reconsider their declarations and try a good dog once. Many a deer has limped off to die in thicket or ravine, and was lost to the sportsman who hunted without a dog. He is an exceptional hunter in the mountains, who does not lose two out of five deer shot if he hunts without a dog. This may seem surprising, but think it over.

RANSACKER.

#### EVIL OF SPRING SHOOTING.

CHICAGO, April 5.—*Editor Forest and Stream:* Upon leaving home this morning, on my way to the office I was accosted by a man carrying a large bunch of mallard ducks; he offered to sell me a pair for twenty-five cents. I asked him where he got them, and he said, "I purchased them on South Water street." When asked if that was all he had, he said no, and pointed to an express wagon standing in the middle of the street. Being a sportsman and naturally interested in the preservation of our game birds and fishes, I was anxious to find out what was in this wagon, and so went to it. I found it contained fully 250 to 300 wild ducks, among which were mallards, bluebills, pintails, ringbills and a few widgeon, and a number of smaller ducks, such as teal, butterball, etc. And upon further inquiry I found that they could be purchased anywhere along our principal market thoroughfares, ranging in price from 75 cents to \$1.50 per dozen, being classified according to size.

It seems to me that when our game birds are getting to be such a common commodity that they are sold on the streets of this city as any one would buy garden vegetables; and at about a proportionate price, that it is about time that we, as sportsmen, should use strenuous efforts to stop this wholesale slaughter of ducks in the spring, when they are on their way to the breeding grounds of the Dakotas and the British possessions. A large number of birds that are shipped to this market for sale cannot possibly find buyers, as they come in such quantities that they only spoil on the hands of the commission merchants, and are thrown away when they become unfit to be placed on sale. There has been a great deal written upon the subject of game protection, and they pitch into the market-hunter and lay all the blame at his door. I do not, however, believe that this much abused individual is the only source upon whom we are to turn our attack; he is not so much to be censured as the "gentlemanly" spring shooter; and I have personal knowledge of several who have been shooting along the Illinois and Kankakee rivers, and at Fox Lake and other points, who have made bags averaging from 35 to 100 birds each day. If this will not exterminate game, for goodness sake what will? And I think that our National Association for the Protection of Game Birds

"OTTER-SHREW."

and Fishes would do well to turn their guns upon the greatest of all evils found in this line of game extermination, namely, spring shooting. The experience that the writer had this morning was enough to set any man thinking who has the interest of game at heart, and if he was ever inclined to do any spring shooting would, I think, turn back from his purpose and see the folly of his certainly evil intentions.

On March 3 I wrote a letter to one of your esteemed contemporaries upon the subject of an emblem for sportsmen, and I observe that Mr. A. M. Weinhardt has taken up my suggestion and submitted a long article, with illustration, upon the subject, forgetting, however, to credit the original idea to the writer. I am not particularly anxious for "glory," but to use an old-time expression,

"Give the devil that which is due him," and therefore I ask Mr. Weinhart to "bring back my smoke." That, however, is neither here nor there; the main object of my communication is to call your attention, and that of sportsmen in general throughout the United States, to the universal outrage of spring shooting, by citing this forcible argument in favor of its abolition. BLUEBILL.

Apologies of this is this vigorous expression of opinion by Mr. G. R. Peck, printed by him as an editorial in his paper, the Auburn, N. Y., *Advertiser*: "Thirty years ago the wild pigeon was so common around Auburn as to be an easy mark for even a flint lock. To-day there is not one left to tell the story and in fact there were not any left to speak of in 1870, ten years after 1860. Reason: No protection, robbery of nests and butchery of squabs to enrich marketmen.

"It will be the same way with ducks if they are to be killed for the market. Years ago battery shooting came near killing all the ducks. That was checked and prohibited and now ducks are quite common again and to-day are mating and nesting in the Seneca River, tame and at peace because the shooting season was shortened to March 1. The effort to lengthen it again to May 1 means death and destruction. Ducks do not wait until May 1 to pair. They pair earlier than that. But does not the continual chasing of them and shooting at them retard development of young? Certainly. A prominent politician of this city informed us the other day of the fact that his fowls which were laying 20 eggs a day dropped to 4 and 5 a day in one day, caused by fright at a couple of fox-terriers which broke into the coops one night and killed 4 or 5 of them. If that will disturb egg laying in fowls, what will a continual chasing of ducks with shotguns do in their mating season? Why, retard the production of ducks, of course. Some sportsmen act like a pack of wild pigs or ignorant boars in regard to the protection of fish and game."

The *Washington Post*, in a paragraph about spring snipe shooting, says:

A word of advice right here should be remembered. Let every gunner after snipe make up his mind that he would as soon shoot his best friend as a woodcock at this time of the year. The finest birds that fly are now mating, and one killed now means two or three less in August. You are liable to flush them any time along the edges of the marshes, where the underbrush and thickets begin, and when you see them rise and flutter in the air and drop almost immediately, you will be a brute to raise your gun and give it to them, for they are either with young when they take flight as described, or are about to become proud parents. Don't forget this warning if you have a drop of sporting blood in your veins.

What is the difference between woodcock shooting in spring and snipe shooting in spring? Both "are about to become proud parents." Why should the "drop of sporting blood" be the salvation of one any more than of the other?

#### A VIRGINIA WILD TURKEY HUNT.

LEAVING home before daybreak I was soon at E. T. V. & G. R. R. depot with faithful Max and my little hammerless and a few shells loaded with No. 6 shot, and also some with No. 8, besides a couple of buckshot shells.

Just at daybreak I leave the cars, deposit my overcoat and gun case at a house and hasten toward the turkey range two miles away. On my way Max points a bevy of quail scarcely moved from their last night's roosting place, and I tarry long enough to bag a brace. Moving on I cover a large area and find turkey signs very scarce, more so than ever before in my acquaintance with those woods. I decide that the turkeys are in the pine thickets. So I leave the woods and soon Max shows signs of game. I judge that they are quail, exchange 8s for 6s, follow him till he crosses a large gully, and when I get over miss him, but he soon comes back to me. I go forward and finally decide that it must be a cold trail for turkeys. Replacing a shell of 6s I notice that Max quickens his gait; I do the same, and soon he is out of sight, when his rapid barking tells the tale. I hasten noiselessly forward as one large old gobbler has flown up into a pine tree. Getting about 35yds. from the tree I search for, locate him, step aside to get a better view of him, he sees me and is about to take wing when I quickly raise my gun and down he comes, killed outright. Max is on to him before I can reach him, and how he enjoys it.

Waiting thirty minutes or so I begin to call, but the wary old gobbler will not reply, and though I have waited an hour and a half no response to my yelping cheers me. About that time some hounds on the creek below me are making the woods ring, and soon a beautiful doe passes 100yds. below me. I quickly exchange buckshot for 6s and step up to see if she will come my way, but she is out of reach and I am disappointed.

My turkey hunt is broken up, so I return to the railroad station and await a way freight train which is four hours delayed. The deer-hunters in the meantime have gone three miles below on Savage Creek, jump a two-prong buck and run him up the creek. I hear the dogs at their near the station, but did not dream they would come near to me. My gun was taken apart, put in its case and lying on a bench near me. A negro boy steps up on the porch near by and listens to the dogs. Suddenly he cries, "Look at that deer! Look at that deer!" In a few moments the buck leaps the fence around the park, runs a few yards, suddenly stops and wheels to his right. The boys and Max take after him, while Col. G., of Macon, who is awaiting the train like myself, slips in a shell of small shot and fires at him, only to accelerate his speed. Oh, how I wished my gun had been ready, then I would have had both turkey and venison to carry home.

Deer are accumulating rapidly, the game law for the last few years being favorable; the open season Sept. 1 to Jan. 1, but was very recently changed Oct. 1 to Jan. 1. So ended my turkey hunt and we had two Christmas turkeys.

Birds were plentiful last season and we made some nice bags. OLD SUBSCRIBER.

#### The Mt. Vernon Deer.

WASHINGTON, D. C.—The quail shooting of 1893 across the Potomac in Virginia was fair, but not anywhere near as good as it was last year. It is all on account of the bad laws, and moreover because the few good laws are not enforced.

Out at Gen. Washington's old home, Mt. Vernon, there is a herd of fine Virginia deer, there are twelve in number; last year there were twice that number, but the other half were sent up to John Wanamaker's place up in Pennsylvania, VIRGINIA.

#### BUFFALO SLAUGHTER IN THE PARK.

In a private letter from Mr. Hough, now with the *FOREST AND STREAM's* Yellowstone Park Game Exploration, comes this story of the raid by the head hunters on the buffalo of the Park. Fuller details will be given in the report of the expedition. The letter was written on March 29:

I am afraid you are all wrong in your belief that there are now 500 buffalo in the Park. Capt. Anderson admitted last night that he feared 200 would cover it now. I do not believe there are over 200 or 250 buffalo left alive. There may be a large band up at the head of the Pelican Creek hot country, but unless this is so the herd is not half as large to-day as it was last year reported. The hay was largely cut on the Hayden and other valleys two years ago and also last year. Unquestionably this sent the elk out of the Hayden Valley, and it is to be hoped it also sent the buffalo, though the latter have not yet been located elsewhere. Capt. Anderson thinks the elk are in large bands on the upper Pelican, and argues that the buffalo must be in there, too. The man Howell had been camped in that country since September, and I do not believe he ever stopped at eleven head.

We counted 75 to 85 head of buffalo in Hayden this trip. Hofer was surprised at the scarcity of buffalo and elk. Sergt. Parker makes the Hayden and Nez Percé district buffalo 81 head. Capt. Scott counted 103 head in Hayden Valley one day three weeks ago. One band of 6 and another of 7 head were seen in the Pelican country, 20 miles, say, from Hayden Valley. This comprises the total winter report of buffalo seen. We saw three head in Nez Percé Valley.

The worst of it all is, Hofer and I found where a killing had been made on Trout Creek, in the Hayden Valley. The carcasses were under four to five feet of snow and the animals may have been killed in January. We noticed the unusual number of coyotes, and found at length a hillside covered with coyote and fox tracks. We saw also tracks of a mountain lion, a wolverine, a lynx and a large bear. We then found six deep pits in the snow, which we investigated, and I saw two others which I did not go to. From the bits of hair, the bones, contents of intestines, etc., we knew there was buffalo at the bottom of each hole dug by the animals that were feeding there. The bodies were all on a quarter of mile of ground and it looks like a killing, of course. The snow was packed and icy and we had no way of digging down, so we could not tell whether or not the heads had been taken, though we thought the skins were. We could only see a little of the stripped bones and the fresh meat torn by the feeding animals. We reported this to Capt. Anderson. He sends out a party to-morrow to investigate. I think he will find that 6 or 8 head of buffalo were killed here. This is 15 miles from the Howell killing.

I think forty buffalo have been killed this fall and winter, and no one knows how many more. While exactness is impossible, and while I am still new in the Park, I do not feel as though there were over 200 or 250 head left alive. I could have killed 60 head one day. Any man could do that in the snow. It is a big country. You are right in saying that ten troops could not protect the buffalo. The Park can be patrolled, but until there is a penalty established, how can the poachers be stopped from taking the 1,000 to 1 odds? Howell boasted to me that all he could lose was \$26.75 (the cost of his outfit), and said that if he had been left alone he would have cleaned up \$2,000. I do not believe the extent of this year's killing has been learned as yet. That it is 20 head, at least, is sure. I would not want to be an alarmist, but there are no 500, or 400, or 300 head of buffalo in the Park alive to-day. Congress will delay making a law until there are not a score left. The present system puts a premium on their heads, and invites their destruction. Capt. Anderson knows this Park thoroughly, I am sure, and he is energetic and positive to a delightful extent, but either or any other man is working against awful odds when he has the short end of 1,000 to 1.

I hope that a later and better count will show up the rest of the herd elsewhere, but Captain Anderson tells me this moment that we may quote him as saying that without further information he will not report over 200 or 250 buffalo in the Park in his next annual report.

#### The Yellowstone National Park.

(From Garden and Forest.)

MUCH indignation has naturally been kindled by the stories recently published of the slaughter of the few buffalo which were nominally under Government protection in the Yellowstone Park. A late number of *FOREST AND STREAM* contained a circumstantial account of the capture of one miscreant in the very act of skinning one of the five buffaloes which lay dead about him, and there were evidences that he had been quite as successful in his murderous work on former days. The situation is made more depressing by the knowledge that this is probably a representative case, and that other poachers are engaged in the work of exterminating the few surviving individuals of the countless herds which once ranged over the plains. More aggravating still is the reflection that no law exists for the punishment of such crimes. The fact that Yellowstone Park and the adjacent reservation have been set apart for the use and enjoyment of the people forever, is really no protection to its forests or its game, but rather an advertisement to every outlaw that he can steal the timber, or set the woods on fire, or slaughter the game, without fear of punishment. Obviously the first duty of Congress in this matter is to pass laws for the government of all our parks and reservations and then administer them in such a way that they will command respect. It is a national disgrace that property which belongs to all the people should be more unsafe than property that belongs to any one of the people.

#### JACKSNIPES SHOOTING.

In my opinion, of all the game birds of America, there is none which affords more genuine sport to the gunner than the Wilson snipe, more commonly called jacksnipe.

Here in California, or at least in this section of the State, some snipe can be found almost any time during the open season (Sept. 15—March 15), but I have always found them in greater numbers during the last month of the open season. In fact, the open season should extend to April 1, at least, as none of the birds breed here, and the season closes just as it is at its best.

I enjoyed exceptionally fine sport with the snipe at the last of the past season. The preserve which I shot over was a cattle pasture, of about four or five hundred acres in extent, devoid of all cover save a small growth of wiry grass and a few patches of cockle burrs here and there, and with just enough water in it to afford a splendid feeding ground for the jacks, but not sufficient to make it tiresome walking; in fact, it was an ideal snipe ground. It was to this meadow that I came one day in the latter part of the season in quest of snipe.

In hunting snipe, it is better not to commence shooting until about 10 o'clock, as the birds will rise closer after the sun has warmed things up a little than earlier in the day. But on the day in question I had been hunting duck all morning on a nearby lake, and had bagged a few brace of those showy birds, cinnamon teal.

So, changing my No. 6 shot for No. 9, I walked on over to the meadow. I had not walked far, after arriving at their feeding grounds, when three of the long-billed gentlemen got up with their peculiar, quavering cry, and I threw up the gun, only to miss with both barrels. But that did not phase me, for as every one knows they are very hard birds to hit.

On the next rise, however, I did better, and had the satisfaction of doubling up a single in great style. I always make it a rule, in snipe shooting especially, to load my gun immediately after shooting, keeping my eye on the fallen bird, if any, because it is a very easy matter to lose snipe, as they are almost exactly the color of the grass in which they hide.

It is well I did so in this case, for as I stooped to pick up my bird, another rose almost under my nose, and I promptly knocked him down. Walking on a little way, I found myself in the thick of them, with birds popping up from the grass on all sides, most of them beyond range, however. They would only circle about for a short time, and then suddenly pitch into the grass again.

I only took the most promising shots, and managed to tumble them over with pretty fair regularity after having gotten warmed to the work.

At one time I was in a predicament: I had brought down three successive snipe without moving from my tracks, and as the birds had all fallen some distance apart, and added to that, there was a provoking sameness about the ground, I knew that if I moved to retrieve the first, I would stand but a slim chance of finding the other two. As I stood there trying vainly to find some mark by which I could find the second and third, suddenly a brilliant idea suggested itself; I laid the gun on a convenient tussock, with its muzzle pointed toward jack No. 3, and while I made a mental calculation of the relative position of No. 2, I walked over and picked up No. 1. In this way I found all three.

It certainly was delightful sport. The day was a perfect one, with not a cloud in the sky, and just warm enough to make one feel lazy. Presently a bird rose about 10yds. ahead of me, and commenced tacking lazily across the meadow. Bang! bang! *Scap! scap!* and not even a feather to show for my burnt powder. He kept on his erratic flight until he was a mere speck outlined against the deep blue of the sky, at intervals uttering his squeaking cry, which seemed very much like a derisive laugh at my expense, and finally pitched down beside a rail fence.

I decided that I would have that snipe or burn some more powder in the attempt, at least. So I lined him by a distant windmill, and walked on over to the spot where he had lit. I followed the fence along knowing that often the snipe run for quite a distance after alighting, but this one did not materialize. Becoming impatient I uttered a sharp "Get out of here," and sure enough he rose some distance ahead of me, and as luck would have it, on the opposite side of the fence. He skimmed along quite near the ground, and I caught only a glimpse of him over the rib of the barrel as he appeared for an instant between two fence rails, but as I pulled the trigger I felt that he was my bird. Nor was I disappointed, for there he lay on his breast, with his wings spread as if in flight.

After a few more turns around the meadow, knocking down a snipe now and then, my supply of No. 9's gave out, and I was compelled to stop, although the birds were still plentiful.

On my way to the buggy I made a handsome double on two mallards which rose squawking from a pond ahead of me.

When I straightened out the contents of the capacious pockets of my shooting jacket, I counted just one more snipe than an even two dozen, which, with the cinnamon teal and brace of mallards, made a very fair showing.

CULPEPPER.

#### A Bewildered Wild Swan.

WHILE Mr. E. G. Pendleton, of Washington, D. C., was hunting wild turkey in the mountains of Virginia, 2,500ft. above tide mark, he saw a large white swan stumbling along over the rocky ridges nearing the summit of one of the highest peaks. The day was extremely foggy, and the swan evidently desired to get above the heavy mist before starting off in its flight. When within 35yds. the hunter fired, only intending to wound the bird if possible. As luck would have it, only a few shot took effect in the neck, and running forward he caught the swan up in his arms and carried him to the foot of the mountain, placing him with a tame goose in his pond on his beautiful preserve there. The wounded neck soon healed up and the swan seemed quite contented with his lot. He became perfectly tame, in a short time answering to the call of the keeper and running along with the tame goose to be fed. WM. W. HART.

#### New York Grouse.

LESTER, N. Y.—Grouse have wintered splendidly and are more plenty than for years at this season. H. W. B.

## IN DIXIE LAND.—VI.

[From a Staff Correspondent.]

## After Canvasback.

In the account of a Southern trip near Galveston last winter I spoke of the excellent snipe shooting we had. Dick Merrill and I hoped to find the jack snipe in plenty about Rockport, and usually one can do so. The present season was so extremely dry, however, that the coast marsh was quite dried up. So extreme was this drouth in the southwestern part of the State that crops were failures. In Starr county much of the range stock perished and the people were in want. At Paisano, Texas, the summer drouth and the cold northers of the winter combined caused the people to issue a public call for aid, to which Corpus Christi responded nobly. The water courses and lagoons of a large section of the country were utterly dried up. It is to be supposed, therefore, that the present was hardly a fair season to judge of the snipe shooting, the marsh duck shooting or even the quail shooting of that part of the State. Under the circumstances Dick and I concluded not to try for quail or snipe, but to stick to the deep-water duck shooting. Moreover, we wanted something even better than the fine redhead shooting. Nothing but canvasback would do us. So one day we went aboard the Novice and started for Puerto Bay, some twenty miles or more distant from Rockport, where our guides told us there were a great many canvasback, and where they had been less disturbed than at Hines Bay, still further east along the coast, at which latter bay most of the heavy market-shooting had been done, until the drop in the market made it profitless to kill the ducks for shipment.

"There is celery in the Hines Bay," said Johnnie, "and there isn't any in the Puerto Bay. Hines Bay is very shallow, and it is hard to get in there with a sailing boat. We can get part way into the Puerto Bay with our boat. There is no place to stop at Hines Bay nor at the Puerto Bay either, unless Mr. Kemp will take you in." (We had letters to Mr. Kemp, who lives on the shore of Puerto Bay, but never found opportunity to present them.)

It was noon when we got out of Rockport, and the air was so light and baffling that it was sundown when we got around the horn of the long and beautiful Live Oak peninsula around which we had to double. We crawled on in the dark, the boys following the tortuous channel among the shoals and keys by instinct. Once we went hard and fast aground on a reef in the dark, and it took us an hour to kedge off, but finally we made our way into the wide waters of the Puerto Bay, dropped anchor, cooked a rattling good supper on the gasoline range in the cabin, and slept soundly till early dawn.

## Plenty of Birds.

In the night a stiff wind came up and it was much colder than on the day before. The face of the bay was covered with white-tipped waves, enough to make a man look twice at a sink box. Johnnie and Jimmie said it was all right, though. After breakfast our two parties took a skiff and a sinkbox apiece and pulled out for the head of the bay with the wind directly astern. The boxes towed all right, and the wind helped us so kindly that we made two or three miles over the rough water almost before we knew it.

Johnnie and I were ahead, and as we went we could see great bodies of ducks on all sides of us, floating out in the open. Most of these were redheads, with some bluebills (dos-grés). We saw a few canvas flying about. At length, as we passed the mouth of a shallow side bay, we saw a great body of birds whose white backs were so apparent, that we looked twice at them. Once in a while one would sit up on his tail in the water and shake himself; also, we could see how high and straight they held up their heads. There was no doubt of it, it was a raft of those rare and much prized birds, the canvasback ducks. There were acres and acres of them, bobbing around and feeding in a great long line. We thought there were probably 2,000 at least in that one body, and more were continually dropping in.

Dick and Jimmie were about half a mile back of us, and at length we saw that they had located the same body of birds. We decided to pass on and let Dick have that lot, as he had had poor shooting on the Shellbanks trip. Presently we saw them put up the birds, put out their decoys and get in position. "Yes, and he'll kill 50 canvas in there before noon," said Johnnie, "if the birds begin to work at all."

Johnnie and I kept on further toward the head of the bay, passing innumerable brush blinds which had been made by the market-shooters out in the open water. The great bulk of the birds put up by Dick had left the bay and gone out inshore.

"There's a big dam and a tank of fresh water up at the head of this bay, on the Fulton Ranch," said Johnnie, "that's what they call the 'port,' or 'puerta' of this bay. Some call this 'Purdy Bay,' meaning Puerta Bay. The ducks go over to that fresh water once a day, and if a fellow had decoys and cover there, he might get shooting, though they come in high, and mostly at night when they are disturbed a good deal. A canvasback duck is going to have fresh water once a day, somewhere or other. Those birds'll come back from there pretty soon, and they'll come in here high. If they go back to the bay where we put them out, your friend will have good shooting. We may get a few down in here. Anyhow, we'll put out and try it."

So we did put out, and Johnnie left me tied to a stake, out in the middle of the ocean, with the wind getting higher, and the waves growing whiter, and the pitch of the rolling sinkbox so sharp that I wouldn't have sworn I could have hit my decoys with a rest.

## Decided a Question.

I was square in the course of the incoming flight, but the birds would not decoy. Canvas and redheads crossed over me, but said only "ha-ha!" chucklingly as they passed. It was a perfect duck day, but the ducks wouldn't do their share. They went on by and massed up in great bodies on the other side of the bay. Dick's gun spoke back of me only rarely. Johnnie's blind showed only an occasional puff of smoke. In despair I began to shoot bluebills, and every time I unhitched and went out after a dead bird I had ten minutes of fight trying to get back against the wind to the vague spot where my wooden anchor was awash. Only one canvasback came in to me, a solitary, desolate old hen which conceived an affection for my decoys. Flickering up and down the water with

uneven wing along the water, she evidently meant business. I lay low, and she lit among the decoys. With a slow, careful motion, I got a bead on her long, snaky neck, which she raised to its full limit as I sat up. Then I joyfully swatted her as she sat, and taking no chances, swatted her again, for I thought maybe she moved a leg after the first time. Then once more I rode the sidling sea-horse of a sneakbox out, and picked up a very dead canvasback. I was in no mood for foolishness. The question whether it is even right to shoot a duck on the water may now be considered settled. It is right, when it's a canvasback, and they're working as badly as they were that morning.

## November the Best Month.

Johnnie and I now laboriously pulled back against the wind to where Dick and Jimmie were located. We found them complaining bitterly and with only half a dozen canvasbacks in their boats. They said the birds had all gone across the bay and banked up in great rafts, not working at all.

"That's the trouble," said Johnnie, "it's too late in the season for good canvas shooting now, unless you hit a very hard norther. The birds have been shot at so much by this time that they are educated. This whole bay is full of feed, and if you put them up out of one cove they just go over and light in another one as good."

"You may think it odd," he continued, "but the best time to get canvas shooting here is from Nov. 16 on for thirty days, just about when you are having your shooting in the North. It doesn't take the birds long to cross the country clear down to this place. When they first come in they are not wild and will work to the decoys nicely. Very heavy bags are then made here and at Hines Bay on canvasback. I have known of one gun killing 167. Jimmie and I have between us killed some pretty good bags in this bay, 60 to 100 a day."

"The total number of canvas shipped out of Rockport every winter is very large. Over 50,000 were shipped last winter in less than two months. I suppose there were 30 or 40 market-shooters shipping then. This season there was no price at all for birds, and the shooters all quit shooting. One man told me he shipped 430 canvasbacks to New York at one time this winter, and he only netted \$5 above the ice and express. Of course he quit shooting. Nelson, of Galveston, one of the best market-shooters there, came over here to shoot, because their best water was closed up there, but he's gone back home now. I think Nelson is the best duck shot that ever shot here. He made the big bag I have told you about, 167 in one day."

While we sat in the boats and talked, Jimmie, quiet, faithful Jimmie, had pulled clear back to the Novice and cooked a fine fat canvasback for lunch. In about an hour and a half he came skating down over the white-topped water with a basketful of good things to eat. Then we concluded we would all go back to the Novice, as there was no flight at all. This we accomplished at the cost of a good deal of labor, for the wind was dead against us and increasing. In the middle of the bay I broke an oarlock on the sinkbox I was rowing, and was helpless till Johnnie picked me up, after which we found it all we could both do to row the skiff and tow the box. Dick was still worse off, for he was taken suddenly indisposed and had it not been for Jimmie's tough young muscle he would have had a sorry time in getting his iron ship home against the wind and sea.

We rode out a roughish night, all snug and warm below. In the morning Dick did not feel well enough to go out again, so we left him to keep ship, Johnnie going toward the head of the bay, while Jimmie went back toward the foot, into a cove where we put out fully 5,000 birds. On all sides we could see great rafts of birds, over 1,000 in a bank, apparently, and among them many rafts of canvas, but though the weather was good and rough, we got no work out of them and only killed a few stragglers. The best fun I had was in running the little sinkbox, in which I had now gained the greatest confidence as a sea boat. It always kept right side up, and even the heaviest seas broke harmlessly around the coaming and did not come inboard. With a proper apron, one of these boats would be practically unsinkable. It sits so low in the water that at a distance it looks as though the occupant were sitting flat on the water, and rowing himself without any boat at all.

It now seemed to us that we could have more certain and satisfactory shooting at the Shellbanks than in the Puerto Bay, we weighed anchor and made for town, going under reef, and tearing along at a great gait, which landed us home early in the evening.

## Sailing and Shooting.

In one of the two following articles of this series I wish to describe the sporting situation at Rockport fully, as I believe it is a point to which the attention of Northern shooters may well be turned. It will be well to make brief the personal experience of my friend and myself there, the which could be indefinitely expanded.

It did not take us long to learn that we could easily have all the duck shooting we wanted if we cared to go after it. One day we heard of a bag of 61 redheads made off the peninsula point, only three miles from town. Another day we learned of one gun killing 88 redheads on the channel below the quarantine station. One evening we and the two Bludworth boys picked up 52 fine redheads in about an hour down at the Shellbank, most of them on a pass, not over 300 yds. from Johnnie's house. Sometimes we would take the sneakboxes and drag them around on some of the shallow flats of that locality, and get some rapid fun of a morning or an evening, while maybe in the middle of the day there would be no birds moving at all. Then there would be whole days when everything was quiet, and when the birds kept bunched up on the flats, not stirring a wing. One squally day Jimmie and Dick and I took the Novice and sailed 20 miles down the coast to the Shamrock Cove, at the edge of Corpus Christi Bay, hoping to get heavy shooting there. We got very little shooting, though we passed flats where thousands of pintails and redheads were feeding. We sailed down in half a gale of wind, making the 20 miles in less than two hours, the Novice apparently needing every ounce of her 6,000 lbs. of ballast, but traveling like a witch, with her rail under. We had a wildish night that night at anchor, and the next day had to reef down four points. How Jimmie ever kept her in the narrow, crooked, dredged channel I can't say, but Dick and I exulted in the way Novice ran and handled. We

only put out the decoys once for the ducks that day, and again they were disinclined to come to us. That day I again had the misfortune to break an oarlock on my sneakbox, though fortunately to windward of the Novice. Dick and Jimmie couldn't for a long time make out why I didn't row, but at length Dick put out with a skiff and saved my life. If I had missed the Novice in my drift, I should have had six miles of wild water to cross before striking land, and hungry as I was, should have starved to death before I got there. You can't paddle one of those sneakboxes when it is loaded down with decoys, because it would only turn around, and there was no way to scull it. All a fellow could do was to hold her straight with the one oar, and let the waves do as they liked about it. Dick sat off in the skiff and laughed at me, and since I couldn't get to him, I had to stand it. The next day we fixed those rowlocks.

## A Lazy Country.

We found that the experience of going out and killing a whole lot of birds every day was not the only possible pleasure to be had on a winter resting trip. When we found the shooting was so easy and so good we soon lost the edge of our shooting appetite. We ceased to get up at unheard of hours in the morning, or to work all day long in hunting, and confined ourselves more and more closely to the neighborhood of the Shellbanks, where we put in the last five days of our stay. We told Johnnie he would have to keep us, so Johnnie smiled and consented, and there we larked and loafed away the laziest, precious week two mortals ever knew, shooting tin cans and bottles when we got too lazy to go out after redheads, but mostly lying in the sun and letting the universe run itself without our aid. If anybody had told me that I would ever lie an hour on a board and watch a hermit crab, I should have thought him much mistaken, but such I found to be a possible thing for me under the warm sun of a Texas "winter"—which isn't really any winter at all.

We just loafed, and said "to-morrow." We let the great banks of white pelicans alone, and didn't even wish to break the law by murdering the gulls. When the evening flight of redheads began to scurry over the bank we would pull across the channel, just ninety-five measured yards, and knock out a few of them as they crossed. The rest of the day we watched the porpoises and the hermit crabs, and the gulls, and ate oysters, and wished it was time for the next meal. Dick began to have cheeks like a ground squirrel, and both of us had long since been baked and burned to a red-brown color.

## Good Commissariat and Good Fun.

We discovered a bed of oysters in a little bayou not a biscuit toss back of the house—Johnnie just happened to mention it, they cared nothing for oysters and could not realize why any one should—and from that time on Dick and I always had a job on our hands when nothing else was urgent. We would go over to the bayou and pull up a double armful of the great oysters, and carry them over to the edge of the beach, where a shell ridge broke off the wind, and build a little fire of chips and blocks. Then we would roast the oysters till they fizzed, take them out and have a morsel fit for the gods. Sometimes it was toward midnight, and everybody else was in bed, when Dick and I would be sitting out in the dark, beside our little fire, roasting oysters and telling stories. Sometimes the Dago fishing craft would come to Johnnie's shipyard to haul up, and very often they would have a deckload of oysters aboard, for all the Aransas Bay country is full of oysters. The custom in such case seems to be to help yourself. One fisherman, who was repainting at the yard, stayed there for three days, and one of her crew, Pietro, the most villainous-looking—and the most obliging—black pirate that ever was, whatever may have been his nationality, used to open oysters for us. One time we caught him we noticed him sort of wiping the oyster knife on his bare foot, and—though maybe it was very foolish of us to mind a little thing like that—we somehow didn't care for any more just then.

We fell in love with the Novice and made many trips on her, exploring the country about Rockport thoroughly and sailing in all probably between 150 and 200 miles along the shallow waters of the adjacent bays. Mr. Everett and Mr. Fulton made plans to take us on a long voyage up to Hines Bay and over to St. Joseph Island, where we could surely have killed a deer, but the naphtha launch engaged for this journey proved unfit and the project was abandoned. Lack of time also compelled us to give up at the last moment our intended visit to the home ranch of the great Fulton property, near Gregory station, where Mr. George Fulton was expecting us, and where we should almost certainly have seen turkey and deer, and have had some good duck shooting. We learned all too thoroughly and to our sorrow that one can not go down there and see that country thoroughly, and go into all the branches of the sport which is offered, in the space of two or three weeks. One should give himself far more time if he expects to do the subject thoroughly in all its diversity. We worked hard to get a fair knowledge of the country, but found it impossible to engage in all the sorts of sport. For instance, we did not fish at all, yet Mr. Everett, who is an ardent fisher, always got a good catch of trout (weakfish) and other sorts of sea-fish when he went out with us. Mr. H. B. Smith, of Whitewater, Wis., who was at Rockport while we were there, has the best theory of it. He will stay there until next April.

Dick and I realized that we couldn't do everything we wanted to do, so we did what we could. When not engaged in a half-Nelson hold on some husky oyster we were trying to open, we were sailing, or shooting, or just thinking. I can't remember what I thought. Of course, we progressed in able seamanship, and Dick, whom at first we had to correct for calling the starboard locker "that right-hand little cupboard downstairs," developed into a great crew, so that he and Jimmy could take Novice anywhere in any weather.

There are several of these sailing craft at Rockport, and they get a good deal to do in the winter taking out hunting and excursion parties. They charter usually at \$8 to \$10 a day, sometimes as low as \$6 for a mere sailing trip. The passengers furnish their own provisions and the boat company will cook for the party. Some decoys go with the boat, but none of them have sneakboxes but Novice. One of these boats, a schooner-rigged one, is called "Enaid," and the story goes that her owner named her after his daughter, but I'm sure there's a mistake somewhere if that's what his daughter is named. It was this

misfit freak of nomenclature, by the way, which made fast at our wharf down at the Shellbanks one day, and she had on board a merry party from up in Texas—Col. Wm. Kelihor, Mr. G. W. Mendel and two friends from Taylor, Texas, and Mr. B. W. Hunter, of Austin, Texas. Col. Kelihor is a devoted sportsman and spends his winters fishing for tarpon at Rockport, and his summers away North in the Wisconsin pine woods. It is thus that extremes meet in the sportsmanship of to-day. Naturally Col. Kelihor and I had a pleasant time comparing notes. He assured me of the excellence of the tarpon fishing at the Aransas Pass, to which he said Florida tarpon fishing could not compare.

#### Homeward Again.

There was enough of interest to keep us busy, aside from the industry of duck shooting—a village fandango in the Mexican quarter, one evening, for instance, or a trip inland after doves, here rightly classed as game birds, or a stroll up the beach after willets or curlews—but to all of it there had to come an end. Dick could have stayed longer, but my time was already overdrawn. Dick promised the boys to be down again next winter, saying that he would bring a party and spend two or three months in the State. I promised to come again if I ever could, and then we said good-bye to Johnnie and his kindly young wife, and left the Shellbanks for the sail to town, with Jimmie as ship's master and ourselves as crew.

Novice came gracefully around as we left the channel and rounded the point and leaned over gently to the insistent breeze. Then she heeled sharply as we caught it fair, and the water whitened under her bows. As we passed the little gray dwelling where we had spent so many pleasant days, we manned the rail and gave a salute of four guns. At the door Johnnie and his wife were standing, and at once he reached inside the door for the old 40-gauge and answered our salute. This we acknowledged as we wore ship and raced off on the starboard tack. And then the fluttering of the handkerchiefs grew fainter, and we knew that we were faced toward home.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

### STOP THE SALE OF GAME.

A PLATFORM PLANK.—The sale of game should be forbidden at all times.—FOREST AND STREAM, Feb. 10.

Editor Forest and Stream:

I am an "impecunious fellow sportsman." To make it more plain, I am a poor man; I make this honest confession right on the start or I will be accused of "utter selfishness in this."

I enjoy a day's sport with dog and gun. I can't shoot as well as the market-shooters with whom I am acquainted and don't kill as many birds; and from my own observation am prepared to say that the market-shooters in this country kill more birds than all the enthusiasts, sports, pot-hunters, dudes (call them whatever name you choose), put together. One of your correspondents says, "The utter selfishness on the part of your correspondents is very sad to me." Now the selfishness of the market-shooter and fisher is very sad to me.

Upon my neighbor's farm and back of my house is one of these nice little warm covers where the woodcock come early in the spring, and by the middle of July have their little brood. Further up this run and where the cover is thicker, the grouse (partridge) frequently rear their young. Through the cover runs a trout brook; the open season for trout fishing begins April 15, and as soon as it is light on that morning you will find the man on hand who catches fish to sell. He fishes all day, while I am obliged to work for my dollar; at night or in the morning he starts for the town with the catch and sells them for \$2.50 or \$3.50 according to his catch. When the day comes that I have no work or can leave to go fishing, the fish are all gone. Where? Sold. And the money is in the pocket of this friend to the poor man, the market-fisher. While fishing, he is looking for the signs of game birds; and before the season opens he knows just where every brood of partridge and woodcock is located for miles around, and how many there are in each brood. As soon as the day dawns on the morning of the open season, bang goes a gun. My little boy jumps up; "Isay, Father, do you hear that? I guess they are after our partridge." Sure enough they are, and it is "in no distant well-stocked region," but right by my house; with a good dog and being good shots they clean up the brood, never leaving the cover until all are killed; if by any chance one or two escape, you can rest assured that they will come again another day and continue coming until all are brought to bag and "sent to market as sweet as a nut."

You can talk, preach and write, but you cannot convince me that a man who hunts for the market isn't looking for the dollars there are in it. And I believe the market-shooter is more to be dreaded by the poor man pot-hunter, the man who shoots and enjoys it, and takes home the game for his family to enjoy, than all the sports and wealthy shooters in the country. They are as a rule men who have trades, but when the season opens they can make more by hunting and at the same time enjoy the sport. If there was no place to sell the game, do you suppose for a minute they would do it? No. Take away the sight of the dollars and they will not have that "genuine sporting instinct in their hearts" that the gentleman from Dansville writes about.

This reads well: "The gun cracks, the little puff of feathers announcing the dead shot delights the sportsman's eye; the grouse falls, is retrieved by the setter, fondled by the shooter and put in the game pocket. Now what?"

To the market-shooter another seventy-five cents added to the receipts, "Now what?" To the poor man, the pot-hunter, it means that he can go home to his family (after the day's sport) and have for his dinner what money can't buy, what isn't on sale in the market. "Now what?" for the wealthy gunner? "He shoots for the same reason that he takes a hand at draw poker or drives a fast horse—for the excitement of the thing." What stuff! The wealthy sportsman to-day is more of a friend to the poor sportsman than the market-shooter, and is doing more for them.

I am in favor of clubs and game preserves, for the reason that wherever such a preserve is located all the woods in the vicinity are benefited; and many a poor man may have an opportunity to shoot on the preserve. Not many miles from where I live there is a small game preserve,

and you ought to see the wild duck in there this spring. Some poaching has been done, but with the present law no shooting ducks after March 1. We have more than we ever saw before, and can it be possible that these men who are clamoring to shoot ducks in the spring can't see that every duck shot now will make from ten to twelve less to come back in the fall.

"There is a growing sentiment to-day among farmers looking toward the preservation of game." You are right, "Dansville," there is; we have got the same growing down here; all breaking out with it; got it bad; a regular epidemic. But say, you don't think they are going to preserve it and have market-shooters come in and kill it off and sell it? Oh no! they want it so that their own boys can have a hunt and have game for them and their tables. Farmers' boys don't sell game down this way and they don't intend any one else shall take it to sell. Let a farmer post his land, put up signs "No trespassing or shooting here," who will do the most growling about it? Who will be tearing down the signs? Will it be the wealthy sportsman, the poor pot-hunter or the market-shooter? Who does it hurt the most? Stop the sale of game and you stop the snaring of grouse, the catching of game in traps, the netting of ducks and all the shooting devices that send tons and tons of game to market daily.

I read the other day that President Cleveland came home with a wagon load of ducks; I don't know but he sells ducks. Take away the selling of game and the continuous slaughter of ducks we read of last fall in FOREST AND STREAM, why, some of the clubs would be stopped. I understand they sell ducks to help pay running expenses.

I can readily see how a law prohibiting the sale of game will deprive many of the enjoyment of eating it. But such a law is only anticipating by a very few years what will be the inevitable result of the wholesale slaughter of game that is going on now. Our game birds will follow in the path of the buffalo, and but a few years will have passed when there will be scarcely enough left for specimens in our public institutions.

I am for the new plank.

BUSHWHACKER.

TAGEKIANIC, N. Y.

SANDERS, Pa.—Editor Forest and Stream: Twenty years ago deer were quite plenty. I was acting as guide for hunting parties, and it was very rare for a party to go out empty-handed. There was no easy way of getting game out, as the inhabitants knew nothing of commission houses. There was only the love of sport to induce a killing of the game. But as our roads became better, outside parties came in hunting for market, buying all they could as well, and deer were slaughtered at all times and in all ways. In the fall and winter of 1882 more than 200 deer were taken out of the East Fork alone, and it was computed by those competent to judge that over 700 deer were taken out of the county. If there had been no market it is safe to say that half that number would have been left for future needs. Now there are very few left, and if something is not done to stop the hounding, a year or two more will clean them out entirely.

The same story holds good with trout. In 1881 I was guiding a party from Philadelphia. It was the early part of the season; the weather was unsuitable; trout had not been taking the fly. The party's time would be up on the Saturday; they had not had enough to eat in the eight days they had been in. On the Friday about noon the fish commenced to take the fly, and in three hours I caught 17 lbs. of dressed trout, all over 6 in. Now, thanks to the count fisherman and dynamite fiend, you can not catch that weight in a week. Our streams are lined as soon as the season opens by those who fish for market, and nine-tenths of their catch will be under 6 in.

If you stop the sale of game it will do away with the inducement to snare grouse. We have stopped the spring shooting of woodcock and grouse to a great extent by appeals and threats.

The bad man "H. C. S." censures in your paper is frequently met with. As an instance, a few years ago we planted 7,000 California trout in our streams. The residents all promised to return all caught. The streams were posted to that effect. A party of men from a neighboring county were in that summer, and on looking in one of their creeks I saw 14 little rainbows, not over 3 in. long. When I spoke to the owner of the creek he said, "Oh, yes, I saw the notice. But they all count." These men all claimed that they belonged to a fish and game club.

R. F. M.

Editor Forest and Stream:

I have had it in my mind a dozen times to tell you how heartily I am in sympathy with the FOREST AND STREAM's plank in favor of doing away with the marketing of game. It has been my own notion for years and a matter which I have talked over many times with brother sportsmen. On the principle that constant dropping wears away the hardest stone, I believe that a frequent reiteration of the views you hold upon this subject and constantly keeping the matter before the people will eventually result in bringing about the desired end. To my mind it is the true and only solution of the game protective question.

In common with hosts of others of your readers, I look forward with eagerness to the day which brings me the weekly copy of your paper, which after reading I send up into the country to some friends, who pass it from hand to hand, and in this way it does a vast deal of missionary work.

ROBERT J. MIX.

ST. LOUIS, Mo.—Editor Forest and Stream: Your arguments for suppressing the sale of game are logical and have my cordial indorsement; but logic and politics have little in common. It is true that the markets are responsible for most of the slaughter of game. But if any individual should undertake to fight the traffic single-handed, you know just how he would fare. If I understand your editorials aright, they urge sportsmen to help educate public sentiment in this direction, but do not call upon us to try to influence legislation at present. That is all right. There are some sections of our country, and this is one of them, where there is field enough for plucky work in the educating line alone. St. Louis is one of the greatest game markets in the world, and the Southwest, from which most of the supply comes, is largely peopled by professional market-hunters. The man who should go down into the Ozarks, where I recently camped, and preach your crusade, would probably stay there. Here in the city he would only be laughed at as a harmless crank. So, I repeat, there is plenty to do in the educating line,

especially since such game laws as we now have are openly defied by dealers and restaurants. To undertake more than this at present would spoil the work already done.

But, alas! by the time public sentiment is willing to back a movement to prohibit the sale of game, there will be no need of it.

What we need out here is an association of sportsmen who will raise money to prosecute every violation of the present game laws right here in St. Louis. When there are no more "snow birds" served at the restaurants to "the best people in the city," then the association can go a step higher and enlist in your work. I would be glad to join such an organization and contribute to it my pen and purse—such as they are—but I would give precious little for our chance of influencing legislation against the sale of game in this State, so long as there is any left to sell. I hate to say this, but I must, for I believe it true.

HORACE KEPHART.

GREENE, N. Y.—Editor Forest and Stream: I think, with W. W. Castle and "H. W. D. L.," that while the "platform plank" would, without doubt, stop a good deal of game-killing both in season and out, that it is not quite fair. If we could have a game warden or commissioner in this county supported by a tax on guns and dogs, and further stimulated by a fee for each case won and be appointed by some non-partisan power, our game would be better off than with the "platform plank" in force, for there is no one who makes any pretense of enforcing the law.

F. B. S.

AUBURN, R. I.—Editor Forest and Stream: I certainly believe the "platform plank" to be a move in the right direction and I am in hearty sympathy with the idea expressed and all else that will lead to the same end.

Why don't you make your paper twice as large? I don't have enough reading in one to last until the next is out. It is so good that when I begin I do not want to leave off until I have read it through. I think it grows better and better every week.

A. B. C.

IRVING, Mich., March 26.—Geese were very plentiful here, but I have heard of none killed. I tried several times, but could not get within range; cover was poor and a blind would not answer, as they fed in a dozen places. If a man had decoys and a call he would be all O.K. Birdshave wintered well. I have talked with several sportsmen regarding your platform plank, and like myself they are with you. I have been out but one day with my gun in a year, with a bag of six rabbits, so you see what a game destroyer I have become. But I never am weary of reading of the deeds of my brethren recorded in FOREST AND STREAM.

BRIAN THE STILL-HUNTER.

HOLLAND, Mich., April 4.—Editor Forest and Stream: Inclosed find stamp for postage on 100 each of "A Platform Plank" and "The Absolute Prohibition of Game Traffic" if you can spare me that number. The game and fish protective clubs of the State will hold a convention at Lansing some time in May, with the object of recommending to the Legislature such laws as may seem best. We will see what we can do with the "Platform Plank."

ARTHUR T. BAUMGARTEL,

Sec'y Rod and Gun Club.

#### Pennsylvania Quail.

WAYNESBURG, Greene County, Pa.—Editor Forest and Stream: I am a regular reader of FOREST AND STREAM and have been for years. Having read "A. G. B.'s" letter from Holland, Mich., I can say that the same conditions in regard to the quail exist here. The last day of the season of 1892 myself and companion found as many if not more quail than on any day we were out, and nothing short of a ball and chain—if I am well—will keep me out of the field on a fine day during the open season. We could find any day in walking distance of our town anywhere from four to ten beavies. As soon as the snow and cold weather had left us I went over this same ground, where, as we went home on the evening of the last day of the season of 1892 we left them calling and getting together on all sides. I believe it a low estimate when I say we saw over one hundred quail on the "Old Tamen Taylor place" that day, and could not find a single quail. I was out several times last fall after grouse, and in all my tramping I found but three small beavies.

The last bevy I found had among them one with his right wing shot off close up. The wound was almost healed up. I brought it home and have it yet. It is a female, has recovered and is bright and lively. I shall try and find its bevy if any are left and turn it out with them as soon as all danger from cold and snow has passed.

The grouse will soon be a thing of the past in this county, and squirrels are getting very scarce. You can find a portable sawmill on every run or stream in this county and the woods are fast disappearing. This has been a very favorable winter for game in this section. We had the heaviest snow fall of the season in the last twenty-four hours; from 10 to 12 in.; but it has not been cold and will soon disappear. I can just recollect the winter of 1855 and '56, and last winter was the worst since that time here.

W. L. A.

#### Buttons.

LITTLE SIoux, Ia., March 31.—Editor Forest and Stream: I am heartily in accord with Mr. Weinhardt's suggestions outlined in his letter to FOREST AND STREAM under date of March 22, and would suggest that all sportsmen throughout the country give their views on the subject in the columns of your valuable paper. If the badge is adopted generally, as I hope it will be, I think some one of our game birds should be selected for the centerpiece of all the badges worn, and not left to the fancy of each individual wearer, as suggested by Mr. Weinhardt. I am in favor of the quail, as it is found in all parts of our country, and to my mind is the gamest of all our game birds and the most fitted to adorn an emblem that will be worn by men who love the birds and the grand sport they afford, and who will protect and not wantonly destroy them. I also think that the badge should be made either of silver or gold exclusively, so that they may be uniform in all respects; and will say I am in favor of the silver badge, as I believe it would be more generally worn by sportsmen throughout the country on account of its small cost as compared with gold.

P. G. HICKS.

Editor Forest and Stream:

Mr. Weinhardt's button is the nucleus for an organization that will be of great benefit to the people. Let its presence on the lapel of a man's coat be his indorsement of the purest principles of sportsmanship. Let it be the emblem of principle, a badge of honor, the talisman of a friend. And render it impossible for fish and game boys, market-shooters and fishers, or men who illegally or in close season capture or kill fish or game, to wear this button. Let it be a guarantee of good behavior, and may the farmer understand that a man wearing this button will not injure his crops, break his fences, shoot his hens or tame doves, or commit any act unbecoming a sportsman.

BERT KNAPP.

### Massachusetts Game Interests.

DANVERS, Mass.—*Editor Forest and Stream:* The Fish and Game Protective Association of Massachusetts have, I think, taken the right step to protect some of our game birds by securing a law to make the whole of the year of 1894 a close season on quail. I feel very sure that the sportsmen of Massachusetts will be pleased to hear of this and will heartily thank the Association for introducing the bill. There is now but one thing to do to improve the situation, and that is stop the sale of quail in this State for this year and I feel sure that the open season of 1895 will give to the sportsmen as good shooting as they have had for many years. There are a good many small flocks of quail in the vicinity of our town that have escaped the gunner and have survived the winter. The flocks have from 4 to 10 birds in them, and I have heard of as many as 5 of these flocks that have been seen within a few days and all of them within two miles of town, and there must be many birds besides. These birds if not killed will restock this part of the country in pretty good shape, and I sincerely hope that they will all be allowed to live. But if quail are allowed to be sold at all times of the year I am afraid that there will not be as many birds another year as there would be otherwise. If marketmen are to be allowed to sell quail that come from other States, how is any one going to tell how many of the birds come from other States and how many from Massachusetts?

The men who like to shoot have to contend with the snaring of partridge. There is one man not 10 miles from this place, who during the last season snared and sent to market over 1,000 partridge. This is a good many birds, but I am told this by men who are so situated that their word can be taken as authority. We have no game wardens in this part of the State; and as I understand the law it is very hard to stop the snaring, as it allows a man to snare on his own land and can allow any one else to do so if he chooses. This is very nice for the man who snares, but is rather hard on the man who likes to shoot once in a while and goes into a piece of woods where he knew there had been a brood of partridge all summer, only to find when he gets there that there is only one bird left. And there are lots of twines hung up on the bushes and perhaps this on the first day the law is off. It makes a man feel that the game laws as they are intended are good things, but as they are enforced are very poor things and no credit to the ones that make them, nor any protection to the game; but I think the Game Protective Association of Massachusetts is doing some good work, and I am satisfied that the only way to accomplish good results is to accomplish it through these Associations. A.

### When George II. Reigned.

OGDENSBURG, N. Y., April 7.—*Editor Forest and Stream:* In turning over the leaves of the second volume of "Laws of New York from 1792 to 1793," I find that upon Dec. 16, 1758, in the thirty-second year of the reign of King George II., the General Assembly of the Colony of New York passed a law entitled "An Act More Effectually to Prevent the Killing of Deer and Firing the Woods Within this Colony." By the first section of this law it was enacted that if any person should kill or destroy any wild buck, doe or fawn, "or any other Sort of Deer whatsoever" in the months of January, February, March, April, May or June, such person should forfeit the sum of three pounds for every such buck, doe, fawn "or other deer" so killed or destroyed. And by Sec. VI. it is provided that "One act entitled 'An Act to Prevent Killing of Deer,' passed in the twenty-fourth year of His Majesty's reign, shall be and hereby is repealed," which indicates that the killing of deer was regulated by law in the Colony of New York at least as early as 1750.

Section III. of this act of 1758 tells a sad story, and perhaps furnishes an authority in favor of the passage of the bill introduced during the present session of the Legislature for retaliation upon our Canadian neighbors. It reads as follows:

"And whereas several idle strolling persons come out of other Governments into some parts of this Colony and continue lurking about in private in the woods, and kill and destroy the deer for the sake of the skins only, leaving the flesh in the woods to rot, and at the same time firing the woods, to the manifest injury of the inhabitants of this Colony. For remedy whereof, Be it enacted, \* \* \* That from and after the publication of this act if any person or persons, not being an inhabitant residing in this Colony, shall come into the same and kill or destroy any wild buck, doe, fawn or other deer, and being thereof convicted as aforesaid, every such person shall, for every such offense, forfeit and pay the sum of Five Pounds," etc.

Verily "the wisdom of our ancestors" is in the policy of game protection. Let us continue to exercise the same wisdom, and may "the absolute prohibition of the sale of game" be not far distant! OSWEGATCHIE.

### Shad Run and Snipe Flight.

"I HAVE always noticed," said Dick Jones, the pressman, who is the best authority on wing shooting in this section of the country, and who knows every good piece of sport-giving ground within forty miles of Washington, "that when the first big run of shad comes up the river there is always a good flight of snipe. I don't know the reason for it, but in years of observation I have never known the snipe to fail to come with the shad. During the last year or two," he concluded, "there have been more snipe killed near this city than for many springs previously, and I reckon we'll have pretty good sport this year."

For the information of sportsmen not familiar with good shooting ground for the jackies near Washington, a few pointers may be given. The marshes in Eastern Branch and the meadows along it above Banning's Bridge are always apt to give a snipe dog rewarded work during the season, and the marshes in the Potomac at the foot of Seventeenth street and from there up toward Georgetown have also been prolific of good bags to sportsmen who hunt with sense and system.—*Washington Post.*

### Camp Notes from the Minnesota Woods.

PELAN, Minn., April 2.—*Editor Forest and Stream:* I have just returned from the Big Ridge country, twenty miles east of here, the intervening stretch of country being one vast muskeg, in which are small patches of quaking asp. These large muskegs and aspen thickets are a favorite feeding and hiding ground for moose. The Big Ridge I refer to has been for many years past

a favorite range for deer and bear especially. I have occasionally found there moose and caribou. On the present trip, however, I found two saw mills running there, and a gang of men cutting and hauling logs. This has spoiled our hunting in that locality. The gold fever in the Rainy River country has brought a great many people into that region, and thus the game is being hampered and cornered. It will be but a few years, at this rate, until this whole northeastern Minnesota forest will be cut up with settlements, and the moose and other game will have to emigrate toward Hudson's Bay, in order to find an undisturbed range. The black bear will come out of their winter quarters now within a week or two, and I shall be prepared to meet a few of them half way.

BURTON HARRIS.

### Birds' Eggs are Free.

THE Wilson Bill puts on the free list eggs and yolks of, and eggs of birds, fish and insects.

## Camp-Fire Flickerings.

"That reminds me."

### Enforcing the Game Laws.

ABOUT three miles out from town on the road to Willboro lives Barney McLane, on a little well-kept farm of sixty acres.

Of what nationality Barney is would be hard to say, and what the fashion of his attire still harder.

In appearance he is of medium height, with an open countenance and bright blue eyes. He has no regard for style whatever, and utterly abhors that offensive creature, the dude. His long hair floats unkempt in the wind and his sun-burned face is ornamented with a ridiculous spattering of rusty beard, reminding one of a stubble field in August. He invariably wears in summer and winter a Scotch cap with the vizor turned to the back, a long woolen outing shirt hanging outside his trousers like a butcher's frock, and heavy rubber boots. He was at one time employed by the Hudson's Bay Co. as a hunter and trapper, and it is undoubtedly from his wild life that he has adopted most of his peculiarities.

Barney is inclined to be garrulous, and his drawing voice is to be heard on all occasions. When in 1890 he was appointed special police for the enforcement of the game laws his importance knew no bounds. Late into the night, seated on an empty cracker barrel at the village store, he would harangue to an open mouthed audience of sturdy sons of the soil on the necessity of enforcing the game laws.

Not least attentive among his audience was Dennis Holland, who though to all appearances serene, was inwardly boiling over with envy. The two had never been on friendly terms, and now that one had risen to such distinction among his fellows the other was filled with fierce jealousy and bent on his downfall.

One bright spring morning as Dennis was passing by he espied his rival down by the edge of the pine woods sawing kindling-wood. Instantly a plan flashed through his brain whereby he could entrap the old man. What an opportunity! Stealing into the woodshed he appropriated a discarded soap box and crept down by the barn into the woods. When within fifty feet of the siz, siz, of the bucksaw, placing the box upon the ground he began drumming upon it with his fists in imitation of a grouse, slowly at first, then increasing into a prolonged rumble. Instantly the saw ceased, then came a muttered exclamation and the sound of departing footsteps. Soon the worthy game-keeper appeared returning with his trusty Queen-Anne musket. Assuring himself that no one was in sight he began beating about for the supposed bird. At the end of half an hour, seating himself on a fallen tree to rest and mop his brow, he exclaimed, "By gum, that war a rousin' big pa'tridge. I wonder where he is."

"Right here," exclaimed Dennis, stepping from behind a hemlock and presenting the box.

"What are you a-doin' here!" cried the huntsman in surprise and alarm.

"Enforcin' them game laws," was the demure reply.

Poor Barney! His chagrin was too keen for description. Of course Dennis promised never to tell, but you may rest assured, kind reader, that within twenty-four hours the story had been the rounds with sundry embellishments which strict adherence to the truth would have rendered unnecessary.

If you ever happen to be passing through Belleville and stop at the store to chat, don't mention the subject of game protection if Barney McLane is there, for he is sensitive on this point. B.

### A Washington Trapper.

WASHINGTON, D. C., Feb. 24.—Until a few mornings since my mental picture of a trapper had been such a man as Cooper puts in his stories, living on the outside of civilization alone amid numerous dangers, with long hair, a long stride and a long rifle. But recently I have discovered one doing an active business inside the city limits of the capital of the United States. I got in my boat a few mornings since for a pull down the river before business hours, and while rowing along saw an old negro man pull out from under one of the wharves a steel trap with a muskrat in it. Pulling up I found him to be a venerable specimen of the "Ole Virginny nigger" type, and consequently very friendly and talkative. He has twenty-four traps which he sets under the wharves and along in the holes made in the bank of the river by the numerous rodents. He averages a dozen each morning, he tells me, the hides of which bring fifteen cents apiece, at a local furrier. This is not such a bad financial return for four hours' work each day.

"I had a funny 'spierence down yander by the bridge dis winter," said he. "I sot a trap in a hole and I guess I didn't fasten de chain tight 'nough, kaze de nex' mornin' when I come down de trap was gone and I could see where de rat had dragged it in de hole. Dat was las' winter. Well, a few mornin's ago I was passin' dere and I could see where de trap was still bein' dragged in and out de hole, so I went home and got a spade and after two hours' hard work I dug out dat rat."

"Well," said I, "was the trap still on it?"  
"Yes, boss, it was on its tail; and dat aint all, it was a she rat, and dere was four little ones in dere and each one of dem had a little steel trap on its tail."  
He got his quarter. ROE FULKERSON.

## Sea and River Fishing.

### IN BILLY BOWLEGS' LAND.

PALM BEACH, Fla.—This region, from its ease of access under present conditions by an all rail route and the excellence and variety of the fish caught in the lake and in the ocean, must become a very great resort for those who love variety in sport. Besides the lake and the ocean which swarm with so many varieties of salt-water fish, you have to go but a little way to the westward to come to the fresh-water lakes, which abound in bass. The result has been that those coming for a few days have lengthened their stay into weeks, because when one man has caught a kingfish weighing 30lbs. the other man feels that he cannot possibly leave until he has done as well; and a string of fish caught may consist of red snappers, kingfish, groupers, with any number of the smaller fish.

A few days since a party had an interview with a large whale which rose quite close to the boat, and not one of the little black whales so often seen along this coast either, but one whose size would have made an old whaler's eyes flash. A harpoon, however, was not part of the fishing tackle, nor were any of the party ambitious to capture a whale, and so a rapid retreat was made for the shore. In the eyes of all the party his size was prodigious, while to the gaze of the colored boatman he seemed like a veritable monster of the deep.

Going westward from the lake you soon come into the country of the Seminoles, where there is no lack of game.

As almost all the fish caught are shown on the lawn and weighed, the stories told have an element of veracity that is quite charming, and the only romance allowed is in the tale of those who got away, when the imagination must be allowed some play or half the charm of fishing would be gone.

We have a summer sea, where the rowboat can be safely launched from the shore and a day's sport enjoyed on the open ocean, without a thought of danger, amid schools of fish eager to take almost any sort of bait. So pass the days away, and the tired man of business goes back to his desk browned and tired, but well and able once more to take up his toil refreshed and invigorated, and with a memory stored with pleasant recollections of sea and shore and lake and woods.

Billy Bowlegs is a frequent visitor at the hotel, where he finds a ready market for his skins, etc. He dresses in true Indian style and is quite an attraction. "Tiger" is another Seminole brave who often visits civilization. I send a photo of Billy Bowlegs, that your readers may know how our red brethren of the Everglades appear.

April 2.—How does this account show for the fishing at Palm Beach for one day? To-day three parties were out on the ocean fishing for what are here known as kingfish.

Col. Clow and Mr. Royce of Chicago caught 57, averaging over 20lbs. each.

Mr. Merrill and Mr. Dornier of New York caught 77, averaging 17½lbs. each. Mr. Vandergriff and Mr. Arms caught 62, averaging 20lbs. The day was fine, the sea smooth, and the boats sailed merrily along with lines trolling and the fish following, apparently eager to be caught. The flying fish arose in flocks as they were chased by the larger fish, and often were caught while in the air by the frigate bird, which swoops upon them like a flash. Although the fishermen were not more than three hours engaged in the catch, they all returned thoroughly tired from what proved the greatest day in numbers caught in the history of Palm Beach. None of them needed to tell but the plain, unvarnished tale, for the fish were there to speak for themselves. The three boats certainly did remarkably well. W.

### ON THE NORTH SHORE OF LAKE SUPERIOR.

(Continued from Page 289.)

THE morning was not much improvement on the evening, for there was every indication of a continuance of the unpropitious weather. The wind blew fiercely, the waves pounded the rocks with terrible violence, and a thick fog arose from the valleys, that soon sought the waters and began to creep outward, much to the dismay of mariners as well as anglers. It was evident there was to be no trout-ing soon, and, as a necessity, we hugged the snug quarters of our tent, played "crib," read and made observations on the weather, as if that alone had been the business of our lives. The half-breeds busied themselves in improving the comfort of our tent by a generous spread therein of foliaged branches. Rain, which had been threatening all the morning, soon came, and then we were prisoners indeed.

After dinner the fog disappeared, the sun came out and the massive clouds which had filled the heavens suddenly broke and charmingly wreathed the summits of the mountains, now settling below or hanging in patches on the sides, again soaring above, displaying a long line of irregular peaks lying far and brilliant in the streaming light, and anon taking on gorgeous colors from rosy pink to glowing red, as if ablaze with internal fires. Although a northwest wind was blowing and the waves tossing in froth, we concluded to try a little bay just opposite our quarters that gave us a very comfortable lee. It was a half mile through a decidedly lumpy sea to the desired locality, but confinement in camp had become so irksome that morning that any change we thought would be for the better, so we took the boat and started for the land of promise. It was a hard row o'er a sea that was festooned in froth, but as it was a short distance the boys heeded not the bounding billows. Now, if there were any place that looked like an ideal spot for trouting, it was along the rugged shore of this little bay. The entire bottom developed one continual line of broken and upheaved masses of granite and trap-rock, and with such generous cover for the *fontinalis* you'd declare they were here in countless numbers.

Arriving at the bay we pulled to a rugged rock which had but recently toppled from the cliff above, as an unbleached side of it evidenced, and around which the waves were curling in anything but whispers or dimples. We were confident we had reached a promising spot where wary trout must lie, eager for some dropping or passing prey. As light as the first flakes of snow, so we flatteringly thought, two choice flies, a Parmacheene-belle and a scarlet-ibis, were sent from my rod into the tempting waters, but the only response, the spreading circles where the artistic lures so silently fell, Ned was a

close second with two of his fanciful creations, and he also failed to arouse a fin.

The first dropping of the flies does not always receive a rise, though it may attract some far away trout to the place. Again and again they fall and flutter, until every foot around this huge rock, and every crevice that displayed a darkened line, had been completely covered. It was futile, for no trout rippled the surface; so we moved along, casting as we went, and not till we had reached a small gravelly beach did our lures attract, and then a half-pounder snapped at my stretcher and was caught on the fly. Peter, on taking him out of the landing net, discovered several gill-net marks upon him, and that alone told the entire story of their paucity here. The pot-hunting savages had been ahead of us and had captured about all the trout in the neighborhood.

We fished an hour or so more without receiving a response, and then returned to camp with a wind that was fast dying out. Ned, as he stepped from the boat, said in despairing tones, "If we can't catch trout we can take in the exhilarating ozone, and that at least is some solace."

He thought at one time that it was entirely too early in the season for the trout to rise well to the fly, but now he was positive we were entirely too late, it being simply another instance of the early bird (savage) getting the worm. We had now come about seventy miles and it was evident that the entire coast so far had been about depopulated of the beautiful game fish. Our only hope in striking the quarry was to move ahead and try to find waters that the cunning barbarians had not netted, or fished to death with their set lines. As the weather had been very unpropitious for the angle, the lake being either too smooth, too rough or too foggy, we concluded to remain another day and try the shore line westward.

Ned could hardly comprehend such a total absence of the trout, for this place last year was decidedly the best we had fished. He, however, consoled himself as far as he could, with the idea that the pure water and healthful climate still remained.

I thought this an opportune time to remind Ned that W. C. Prime, the accomplished author of "I Go A-Fishing," said that "there is always that distinction to be kept in mind between going to get fish and going a-fishing. There is no possibility of convincing the general run of people that the old angler has his enjoyment in the going for fish, and that the getting of fish is but a minor part of the day's pleasure."

"That is exactly the way I look at it, and though I may be somewhat disappointed in returning without the quarry, I always feel as if I had had much real enjoyment from the simple pastime."

"I am delighted, Ned, that you take such a pleasant view of it, but listen to what he further says:

"But as you grow older, we learn more and more to appreciate the innumerable joys which dwell on the banks and in the waters of the rivers and lakes, and which are surely to be taken when one goes a-fishing. And, therefore, the old angler always has a successful day, catching that which he went out to catch with great certainty, and coming home with a load of beauty to talk and tell about, though there be not a fish in his creel."

"That is delicious, and when I return to civilization again, I shall certainly take infinite pleasure in reading Prime's 'I Go A-Fishing.'"

"Do, and you will revel in a book that will recall the delightful memories of the gentle art and fascinate you from its first page to its last."

After supper, the stiff breezes having fallen to mere zephyrs, we sent the boys over to the main shore to gather some fragrant balsam boughs for our tent, while Ned and I had our usual rubber of "crib." In about an hour the boatmen returned with a liberal supply of the green foliage, which, when spread in the tent, filled it with a fragrance, the inhaling of which was akin to draughts of enlivening tonic.

The early dawn brought a bright sky and a southeast wind that tossed the water in dancing waves of silver, just the thing for fishing. Ned sang, as sweetly as a lark, while he was putting his tackle in order for the prospective angle, and was so eager for the start that he fairly bolted his breakfast and did not care whether he had hot cakes or not as the final dish. Not satisfied with his own haste, he hurried the boys for the departure, as he was fairly aching to cast his flies, some upon which he had made a slight improvement which he thought no trout with curiosity or appetite would fail to attack with tiger-like ferocity.

Out from the canal-like harbor, between the two islands, we shot into the green waters with a balmy air as exhilarating as new wine. It was but a short time before we reached the main shore and commenced the work of enticement. Every moment I looked to see some beauty of the deep pounce upon a lure, but it was a full hour before I aroused and fortunately hung one, but unfortunately he released himself after being indulged in the most careful and delicate handling. The fates evidently seemed to be "for'ninst" us, for we had now been on the pursuit for the past five days and had not caught over that many fish. It was a case of do or die with us, and, as time was not to be considered, we became more earnest than ever in our search for the redcoats. Again the strife is continued, and the flies from bow and stern fell upon the water with an unflagging industry and patience deserving generous reward. At last one small trout, under a half pound, was the victim; and then satisfied that further advance would be profitless, concluded to return, break camp at once and go to Aguawa, some five miles ahead, where we were confident of meeting with better success. Word was accordingly given the half-breeds to head for camp, and in less than half an hour the boat entered the narrow channel to our quarters and the work of dismantling and loading immediately commenced.

Once more we are off, with a gentle breeze that about filled the sails and started a tender and tuneful cadence from the bow as we slid o'er the silver surface with a silvery blue sky above. The wind held till we reached the river, for which the boys were duly thankful, as rowing on a hot day, which this was, was not a very agreeable occupation. On landing, the tents were at once pitched and dinner prepared, which was partaken of with keen appetites, it being far beyond the noon hour.

On making arrangements for the trip up the river, Ned discovered that he had left his Frankfort reel at the island, and the result of it was the boys had to return for it, which going and coming consumed the remainder of the afternoon. We reluctantly abandoned the trip till

the morrow and then concluded to make a day of it on the famous river.

After supper I caught a fine trout in front of the camp, in an arm of the river that extended some distance parallel with the lake. He was a crimson warrior that fought fiercely for his freedom, but his brave efforts were in vain. After his first fierce dash he suddenly leaped from the water shaking the diamond drops from his spangled sides, and then plunged violently to the bottom where he struggled till his vital forces were sadly demoralized. Having no landing net with me just then, I worried him till I was satisfied I could safely land him on the beach. Carefully I drag him along, and so completely subdued and exhausted was he that when his scarlet side pressed the shining sand there was not a quiver in him that was perceptible. He was a royal beauty, "in vestures of silver and azure and gold, just out of the swirl of the veering stream," and justly proved the dish *de résistance* at the matutinal meal.

This raised our hopes to a high degree and led us to believe that after all the rippling river would yield us an abundance of exciting sport. With this feeling, we retired that night to dream of the prospective pleasures of the gentle art, and the beauties of wood and dell through which we would have to tramp *en route* to the famous pools.

The morning for which we were so impatient came at last, with a cloudless sky and with the amber sunways

BILLY DOWLESS.

glinting and spreading on all sides, and everyone astir and eager for the departure.

As we were to make a day of it at the first big pool, we had a lunch prepared in which was included the inevitable tea, which of course necessitated the taking of pot and kettle, and as the boys suggested that a fish fry would be agreeable, a frying-pan was also included. These, with the lunch, were put in a sack for convenience of carrying, as we would probably have some fallen timber to climb over as well as thickets to breast through.

As the road through the woods to the pool would save us at least two miles, we wisely, as we thought, concluded to take it. But here was a dilemma, for not one in the entire party knew it, though Kenosh said he was confident he could pilot us to the place. Placing confidence in his statement, we took up the line of march, single file, and entered the deep wood just back of the Indian settlement called Aguawa, and which, strange to say, did not that day contain a single inhabitant, as they were all at Mamase engaged in the fisheries. We here struck a narrow path which was well defined for about a mile and a half, and then it suddenly ended. Here we went into an untrodden forest, making detours here and there, around fallen timber and through tangled thickets. It was hard work now, for when we were not circling around the dead timber we were climbing over or crawling under it. In addition to this, the black flies were very numerous and pestered us not a little. At last the half-breeds called a halt and suggested that we remain where we were and they would go ahead and endeavor to find the trail that led to the pool. This satisfied us that our guides were all at sea relative to the correct route, but as the suggestion was a sage one, were satisfied with it and told them to go ahead, and then we sat down upon a fallen tree and commenced fighting the multitude of flies and mosquitoes with some foliated branches.

We were somewhat fatigued, not with the tramp, but the constant climbing and creeping, and began to think after all that the sylvan beauties we anticipated were not a bit entertaining. Discomfort and admiration are not harmonious companions at all. If we became enthused with the brilliant plumage of some forest warbler as he came in view, the feast of the flies upon our exposed anatomy would soon recall us to protective duties. Anon,

a red squirrel would race along, and just as soon as we began to take interest in its graceful movements, a fly or two with venomous fangs would alight upon our nose or some other tender spot, and make the blood trickle and the flesh tingle. Here we sat for at least two hours, listening to the hum of our tormentors, with the agreeable variation of a bird's sweet note, awaiting the return of our guides, until at last we began to think that they, too, had lost themselves in their wanderings. Ned suggested a return to camp, and here another embarrassment struck us very forcibly. It was a disagreement about the correct direction to our quarters, Ned insisting that it was to the right of us, while I claimed it was to the left. While we were thus arguing the points of the compass and looking for the trail we had come over, a shout was heard from our boys, to which we gladly responded. On joining us they gave the lamentable information that they could not find the path, though they had found the river and dipped from it one small trout.

As we did not feel like tramping all day in the sultry insect-infested woods, we returned to camp somewhat disgusted with the morning's venture.

Immediately after dinner we took the boat and went up to the river to the first shallows, where we got ashore and commenced casting. I picked up two or three small trout here, and not being satisfied took Kenosh and walked up the river about a mile, fishing each pool as we came to it, from the bank, and with very good results. The last pool, and the best, required considerable wading to properly fish it. I really did not feel like getting wet, but as I gazed into the sheet of limpid water I saw several trout leap from it in sportive play, and that determined me to venture, though a case of rheumatics immediately ensued as the result. Kenosh smiled encouragingly as he saw me wade in, and remarked, "Now we get 'em." And sure enough, we did "get 'em," for at nearly every cast a trout sprang for the lure.

At the upper end of the pool where the ripples ran merrily, I was fortunate enough to hang two at once, both of which Kenosh succeeded in adroitly netting. My next cast brought a half-pounder, and then the next victim just about reached the legal limit. There was then a cessation of the sport for a few minutes, but when I cast by a submerged tree near the opposite shore, I received a savage response, but being a little off my guard, missed him by about the fiftieth part of a second.

"Big fellow, that," says Kenosh, looking somewhat disappointed at my failure to connect with the greedy trout.

"Yes, big and active; but I will change my tactics on him," I replied. And then I waded ashore and put on a larger fly for my stretcher, and also increased the size of my dropper. I had been using a No. 9 sproat, not expecting to find such a large fish at this part of the river. A No. 4 gilt-coachman was now on my dropper and a No. 3 silver-doctor on my stretcher; and with these I again waded in and sent them to the very spot the inquisitive trout had so suddenly disturbed. There was no response to this invitation, so I sent another with an R. S. V. P., and this time the gilt-edge allurement was accepted with an impolite but fatal greediness. The little Chubb rod gracefully bent and the reel hummed as the gameful trout dashed down the stream with a rapidity born of desperation.

"Full well was strained the silken braid,  
By swift retreat and sudden tack;  
At last one furious lunge was made,  
And then the line lay slack."

I saw a golden gleam, and then it appeared to me very much like an entrancing dream. He was gone, and a bird on a swaying limb caroled a note of serene joy, while Kenosh and I looked at one another so despairingly and so hopelessly that words were unnecessary to picture our great disappointment. It was already graphically expressed; the handwriting was on the wall.

Without a word between us, I commenced casting again, and after a few droppings of the lures I had another proposition, which I accepted, and had the infinite satisfaction of seeing the dotted darling safely in the net. He was a half-pounder, and was a victim to the coachman in gilt.

Again and again the flies dance on the crystal pool, but no trout breaks the rippling water. I move along to some shelving rocks tinted by the rays of the sinking sun, and here I snatch four more lovely 10in. trout from their secluded lurking-places. A tempting spot a few yards ahead, where some clustered cedars were casting their fanciful shadows on the quiet waters, now attracted my attention. Wading carefully and quietly up the stream, I soon have my lures dropping amid the lines of sun and shade, and was duly rewarded with the capture of three more of the pretty specimens that gleam in gold and scarlet, crimson and purple. Changing my base once more, I tramp silently on till I reach the head of some rapids whose tossing waters are running over the shallow beds of glistening pebbles to as merry a tune as the woodland piper plays. It is the same old story of the successful angler's pursuit, and so it continued as we wandered along the banks of this sinuous stream to the evening hymn of sweet-throated birds.

I fished for about an hour more in this lengthy and translucent pool, and having caught sufficient during that time for the entire camp for a day, I concluded before returning to reel up and rest on a fallen tree that had been undermined by the rapid current. Now that my pleasures of the angle had been fully satisfied, I became an enraptured admirer of the picturesque landscape, which surrounded me on all sides. The very water at my feet rippled in tinkling tones over glistening beds of gravel and along banks bordered by ferns and flowers, shadowed by birch and balsam, and rife in evergreens and sedgy grass. It is impossible to write in terms which will not seem extravagant, of the unbroken forests which cover the sugar loaf mountains on the immediate west of this racing river. Here we see familiar shrubs grown to stately trees; towering pines piercing the upper air, tapering cedars in strange confusion, somber hemlocks with their spreading arms, while beneath, the lesser growth of birches and tangled thickets hide the flinty rocks among which they grow. Beautiful berries gleam, strange wild flowers shine like stars, ferns run riot in luxuriance, velvet-like mosses cover every rock and fallen timber. Innumerable rills, clear as crystal and cold as ice, drop into the parent stream in musical whisper, while at infrequent intervals small lakes sleep in silent beauty on the level plains. It is an Arcadia of an icy region serenely and peacefully reposing in the long

light and deep slanting shadows of the fading afternoon; no angler eager for nature at her best could ask for more:

"And here, where the eddies so pearly white  
Sink away into gloom or wheel into light,  
Where the trunk of decaying pine tree doth throw  
Its leaning bridge o'er the current flow,  
The patient angler, with rod and line,  
May cast his flies and his tackle so fine;  
And soon his basket a treasure will hold  
Of azure fishes o'erspangled with gold."

Rested and content, I take up the tramp for Ned and the craft, crossing and recrossing the river a dozen times or more on the trip before I stumble on my comrade fast asleep in the boat, with the balmy air moving his gray locks and the sun browning his rugged and expressive face. He said he had grown weary of fishing as well as disgusted with the size of his victims, and concluded to enter the Land of Nod. Peter, who had remained, went into the woods while Ned was napping and gathered a large supply of balsam boughs for our tents. This is a luxury that princes may envy, for its inhalation is as healthful as the most coveted balm, and possesses the magnificent virtues of lulling to the most restful slumber. We would sooner have missed our meals than not to have had our tent redolent with it. Balsam was the first and the last thing thought of in camp, and we had it in generous quantities, fairly reveling in it; and so fragrant were we with it that we began to feel as if we were closely allied to the odoriferous tree.

It was but half a mile to camp, which we reached in the glow of a luminous sunset that filled the western sky with a golden curtain of alternating bands of the most lovely hues—purple, violet, gold and amber.

"Falling dew with spangles deck'd the glade,  
And the low sun had lengthen'd every shade."

We found on reaching our quarters the lilliputians of the insect world, with their tiny spears sharpened and their little knives whetted, ready for the gore of human. Like all their pestiferous tribe, they stood not on ceremony in their greetings, but fell upon us in such clouds and with such ferocity that we were bleeding at many a pore before we could find the misplaced repellent. Once in our possession, we routed them with the subtle mixture as if it carried death in its very fumes.

These malignant hummers being disposed of, for the present, I at once disrobed myself of my damp clothes, and after a vigorous rubbing with a crash towel was soon enrobed in dry garments that were then a positive luxury. Now, if I could only escape from the penalty for my rashness in wading, all would be well, but as one of my knees was already aching I was satisfied I was in for a case of rheumatics or something akin thereto. The adolescent angler who has everything to his advantage, may wade without so much danger of ailment, but when it comes to an old man attempting it who has nearly three score and ten to his account, it savors somewhat of idiocy.

That evening after supper a couple of Indians from Michipicoten, who were in camp with their families on the opposite side of the river, made us a visit, and hearing of our failure to find the big pool, offered to pilot us to the place for \$1.50. Our boys were averse to our engaging them, stating at the same time that they were positive of finding it on a second attempt. They were fearful of falling in our estimation if we engaged a guide, but as we did not wish to have a repetition of the morning's wanderings, concluded to take one of them and make an early start at dawn for the distant pool. The bargain being concluded they took their canoe and crossed the stream to their quarters, decidedly pleased with the prospect of so easily earning a little money with a lunch and supper in addition thereto.

I was so worn out that evening with my piscatorial pursuit of the afternoon, that I sought an early couch and was soon lulled to slumber by the sweet song of the sea and the gentle rustle of the forest.

ALEX. STARBUCK.

[TO BE CONTINUED.]

### THE TORCH-FISH.

ONE of the most noteworthy and striking facts of animal life is its adaptation to the conditions of its environment. Study any animals or groups of animals, and it will be seen that its leading physical characteristics are in exact adaptation to its habits and conditions. A very interesting illustration is afforded by the torch-fish (*Linophryne lucifer*), a cut of which, taken from Schorer's *Familienblatt*, Berlin, is given herewith. The torch-fish

is a deep-sea fish carrying on his nose an organ which he can illuminate with a phosphorescent light or extinguish at pleasure. *L. lucifer* does not use his lantern to guide him on his pathless course in the dark depths of ocean, or to enable him to look around him; but, when meal-time comes, he lights up to attract small fishes, which, mistaking the lantern for a phosphorescent insect, dart straight for it, only to find their way into the capacious jaws of *L. lucifer*. The mode in which the lantern is lighted and extinguished is not yet clearly understood. The illustration appeared originally in Haacke's "Schöpfung der Thierwelt."—*Literary Digest*, New York.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

### ANGLING NOTES.

#### Fraser River Salmon Pen.

THE most comprehensive picture that I have seen of the artificial spawning of salmon—and at best there are precious few of these of any sort—is one that was sent to me from Vancouver, B. C., of the Fraser River salmon pen belonging to the Dominion Fish Commission, and reproduced in this issue of FOREST AND STREAM.

The Fraser River hatchery is on Harrison River, a tributary of the lower Fraser, and the salmon pen shown in the picture is on Morrison Creek. At the time the photograph was taken the hatchery was in charge of the late Mr. Thomas Mowat, a son of the veteran salmon fisherman, John Mowat, of New Brunswick. In the picture Mr. Thomas Mowat is the second figure from the left, holding a female salmon over a pan, on a box. In the foreground is the pen, filled with salmon, where they are retained until ripe, and from which they are dipped to be artificially spawned. After the fish are handled by the spawners they are put into the raceway at the extreme right and rear, from which they find their way back to the river. The operation of spawning is clearly shown. With one hand gloved in a worsted glove the fish is firmly held by the tail over a pan, and the other hand is pressed along the belly of the fish, forcing the ova into the pan. The man standing between the two spawn-takers holds a male salmon by the tail ready to be passed to the spawn takers that the milt may be taken in the same manner that the eggs are taken, and in the same pan, and thus the eggs are impregnated. The male salmon is indicated by the hooked jaws. A reading glass will aid one to see how solidly they are packed in the pen. As a whole the photograph is remarkably clear, and FOREST AND STREAM has made a reproduction fully as clear and well worth preserving by those interested in the process of artificial breeding.

#### Feeding Bait Fish.

A correspondent in Meriden, Conn., writes: "What is the best food for bait fish (shiners)? They are kept in a tank that has water running through it all the time." As boy and man I have dealt extensively in bait fish, and as a rule fed the fish nothing at all, because the "bait box" was generally placed in a small stream, so the water ran through it and the fish got enough out of the water to keep them in condition until they were used, this being soon after they were put into the bait box. Such feeding as I have done has been with corn bread crumbs in winter and earth worms in summer. On one occasion I fed a lot of bait with chopped raw liver that had been pressed through a wire sieve and then mixed with water until it was of the consistency of syrup. This treatment fouled the water more than bread crumbs or earth worms, and the bait box required frequent cleaning, which it must have, no matter what the artificial food may be that is introduced into the box.

Overcrowding a bait box with shiners and the consequent development of fungus is more fatal than starvation from lack of food. That water contains minute organisms to sustain life in a given number of bait fish confined in a given space is illustrated by an experience of my own. In April I bought a lot of suckers as bait for lake trout trolling. I was obliged to buy more than I wanted in order to get any. Those that I did not use at the time were put into a spring in the cellar of the man from whom I bought them. I forgot all about them until late in the fall when I wanted bait fish, and then for the first time I saw the spring. It was about as large as a bushel basket and the fish were all alive, but very thin, and it was cruel to have left such a number of fish in such small quarters without feeding.

To furnish an ideal bait box or tank for keeping such fish, my idea would be to construct it large enough to introduce some of the water mosses from Caledonia Creek, N. Y. There are four mosses found in this famous trout spring in which natural food breeds abundantly. They are the moisture-loving, river-bank, fern-branched and rusus-like mosses. See the advertisement of Mr. James Annin, Jr., in FOREST AND STREAM and write to him, and I have no doubt he will furnish the water mosses and a water cress too, if desired, and with the mosses will come a supply of natural food that will reproduce itself to feed shiners or trout.

#### Westwood's Angling Books.

How many anglers in New York city know that the rare library of angling books collected by Thomas Westwood, author of "The Chronicle of the Compleat Angler," "Bibliotheca Piscatoria," etc., etc., is to be found in the Lenox Library? I did not know it until long after Mr. Westwood's death, although on more than one occasion he mentioned in his letters that his books had come to New York. Once he said to me: "If I go on I shall be setting up an angling library again, I, that renounced the luxury years ago and scattered my thousand volumes over the world. New York got the best of them. I think New York gets the best of most rare and curious things nowadays. I have never ceased to regret having parted with my collection."

Yet I never happened to ask him where in New York the collection went to. He had every edition of Walton up to the time he parted with his books.

#### Surface Fishing for Lake Trout.

As indicated in a note in this column last week, Lake George, N. Y., is now entirely free from ice. From the Narrows, at Bolton, to the Canoe Islands the lake was clear as early as March 19. On March 31 a steam yacht came from Ticonderoga to the Sagamore Hotel at Bolton, but not until the afternoon of April 1 did the last of the ice between Caldwell and Diamond Island disappear. Even with April 1 as the date it beats the record. Previous to this year the earliest that the ice has entirely left the lake within the memory of any one now living was in 1873, when it went out on April 4. Already local fishermen and local newspapers are predicting that there will be no surface fishing this year, as the trout will have come to the top and returned before the season legally opens, on May 1. Should this prove true, it will be a great disappointment to many anglers, for of late years fishermen from all parts of the country have visited Lake George on or about May 1 to troll on the surface for lake trout, and the success has been such as to extend the fame of the lake as a fishing resort. The first week in April trout were seen in large schools at the surface of the water near the Sagamore Hotel dock, and on the east side

of Green Island. This is where the fish gathered for some reason last year as they never were known to do before, and where tons of them were caught, as I related last season.

I have had several letters of inquiry about the prospects for fishing after May 1, and presume I shall have more. I can only guess at it, and may not be a good guesser, but it may prove of comfort to some of my correspondents if I give some facts from my journal instead of guesses as to what may be. In 1878, the year the ice went out on April 4, I reached the lake on May 2, going direct to Bolton. On the 3d I trolled at the bottom, as I believed that the trout had been at the surface and returned to the bottom. Alec Taylor was my boatman on that day (and he is considered the best professional fisherman at the lake), while his father, who was my regular boatman, went for bait. The next day six boats started for Hague, and most all the trout were caught at the surface. It was the same on the 5th, 6th and 7th. The night we reached the hotel at Hague, our six boats displayed such a catch of trout as may not have been seen there since. Coming out of Hague I caught three trout one after another, at the surface, that weighed 5lbs. each. Our total catch was not as large as might be made now that the trout are more plentiful and run larger, but it was the banner year of that period before the lake was restocked with trout by the State. A. N. CHENEY.

### FROM WORM TO FEATHERS.

ASBURY PARK, N. J.—*Editor Forest and Stream*: After three weeks of continual disappointments, we three busy men, Counsellor John E. Lanning, Dr. H. S. Kimmouth and myself, set out Friday, 23d ult., for a trial at the trout, which were reported to be very plentiful in the streams tributary to the South Shrewsbury. We were accompanied by Caesar Riley, the Doctor's man of all work (who, by the way, in spite of the fact that his name is suggestive of Celtic origin, is as black as the proverbial ace of spades; and Lanning says he can prove that Caesar is the only negro ever born in Ireland).

After a disagreeable ride of 12 miles in the face of a drizzling rain we arrived at what the Doctor was pleased to term the right spot. Calling out the aged colored man who lives near by the stream, we managed to secure comfortable quarters for our team; and having adjusted our suits were ready for business. "Now, you fellows," exclaimed the Doctor, "just watch me pick out a fine fish, right down here in this little pool. I took three from there one day last spring in less than as many minutes; and it wasn't a very good day for trout fishing, either."

With bated breath we stood still and watched his stealthy approach to the bank and admired his faultless cast, but, alas, no reward attended his efforts. After a kindly remark from the Counsellor that anybody could do as well as that, we proceeded down stream about 100 yds. below our starting point, and while I was passing around a cluster of alders I was startled by a wild whoop-ee from the Counsellor, and ran out in time to see his right leg retire from active service down a convenient muskrat hole, and his left assuming gyrations *à la* Midway Plaisance. In his hurry to have the thing over he had carelessly tossed his hat into the top of a bunch of alders, leaving his head (which is entirely devoid of its crowning glory) bobbing around like an animated billiard ball, the black, adhesive mud returning his unexpected call in the form of a patch about the size of a full-blown pancake square in the face. Borrowing a rail from an adjacent fence, we pried him out and laid him tenderly on the grass. While I was removing the mud from his face, making my leather cap perform the double service of washbasin and towel, I heard the Doctor, who was carefully examining the wreck, murmur something about "Compound fractures of the Third Commandment." However, we were soon moving on down stream, the Doctor almost immediately taking two fine fish from a small pool, while I caught three from near the foot of a small run emptying into the stream.

Being desirous of saving all fish taken for stocking purposes we pressed into service two barrels found in the meadow, which were water-tight. In all we got twenty-seven fine fish and transported them in safety to a brook which we had prepared in advance for their reception; and we will see to it that they are well protected.

A heavy rain now setting in, we were compelled to return to the house where we had left our rig and lunch. The Doctor soon began negotiating with the old dorky for some articles suitable to move our fish in, and was thus employed, when he was surprised to feel a heavy tug on his rod, which he was holding behind him. A glance was sufficient to reveal all. An inquisitive old hen spying the worm dangling at the end of his rod, had swallowed it, hook and all, at a gulp. It is hard to determine which of the two were most surprised when the situation became apparent, the Doctor or the hen. Starting off with a rush to join her fellows in the barnyard, she was soon brought to a full stop by a dextrous motion of the Doctor's rod, known only to expert anglers. And now the fun began in earnest. The more she realized her position the more determined she became to get away. Around and around the wood pile went the old hen, her gait broken now and then by a wild flop of the wings, instantly followed by a gleeful somersault as the line would tighten, the Doctor maintaining his position as a good second in the race and continually receiving encouragement from the rest of the party. "It do beat terrifyin' snakes, an' she was my best layin' hen," exclaimed the old dorky mournfully. "See here," at last broke in the Doctor, "this thing has got to stop some time. Catch her, some of you roaring idiots, will you!" And as we surrounded and secured her we all agreed that decapitation was necessary, as the hook could not be secured. So toward the chopping block we started, one carrying the hen, another the axe, the Doctor holding on to his rod and the dorky bringing up the rear.

Yesterday when I asked the Counsellor confidentially if he didn't drive the hen up to the hook purposely he got mad. LEONARD HULT.

### Warren County Association.

WARREN, Pa.—Thanks to the praiseworthy efforts of the Warren County Fish and Game Protective Association illegal fishing has been greatly lessened. Several arrests have been made and heavy fines imposed on persons caught spearing fish through the ice. Many spearing tents were also seized. Some time ago German carp were

introduced into these waters and everything goes to show that the stocking will prove fruitful, some big ones of 8 and 9 lbs., and many smaller ones having been caught. The anglers here are eagerly waiting for April 15, when the open season for trout begins, and as much stocking has been done the fishing promises to be fair in what few streams that have not been ruined by sawmills.

W. A. V. O.

THE GRASSHOPPER-LOVING TROUT.

It was once my luck to be one of a party who were the second to drop line in a certain lake of British Columbia for the trout which there did abound. It happened thus: Some section hands on the railroad told me of the place, which was a pond of spring water which had only been discovered after a recent forest fire. The pool was about a quarter of a mile in diameter and nearly round, with indications of considerable depth.

Now the funny part was that the steep mountains which hemmed this pool in swarmed with grasshoppers, and every time a grasshopper hopped, five times out of six he went down hill, thus most of them in the end brought up in the pond, where they were at once taken care of.

I tried these trout with a fly, but only the small ones would notice it, and they rarely. But a grasshopper they would take every time. In the stomach of one which I caught I found twenty-five hoppers in a nearly perfect state, and I should judge as many more partly digested, still he evidently wanted at least one more, which landed him in the great hereafter.

On our return to the car we laid out as many trout as would go on the bottom of an old trail wagon and had them photographed, as you see by the illustration. On the back of photograph I find written, "One-quarter of six hours' sport." The interesting thing about it was that the trout evidently knew where they could find plenty of grasshoppers at that season of the year, for in the river

can be reached without too much labor after leaving the railroad and where we can find at least good fishing, you will confer a favor on all of us and on a few of your subscribers. Trusting to receive an early reply, I remain, truly yours,

HORACE E. KISTLER, President J. O. C.

Angling Incidents.

PORTLAND, Oregon.—*Editor Forest and Stream:* After reading all the articles pro and con in regard to killing snakes, I want to say that I never would do it until last summer. While we were on the Molalla one afternoon, I was fishing the riffles, my curiosity was aroused by something on the shore. There I was surprised to find a harmless snake about 20 in. long fishing. A fellow feeling caused me to stop and see how it was done. He would let his head down to the surface of the water and let his tongue down, and about one-half inch under; the trout fry, about two inches long, would gather and begin nibbling at it; then a splash and Mr. Snake drew back with a fish in his mouth. I saw this repeated three times and still he was not satisfied, so in the interest of future anglers I picked him up by the tail and thumped his head against a rock.

WM. J. NEWMAN.

On one occasion while fishing at night on the banks of the Appomattox River, in Virginia, with a companion, while we were sitting with a light between us, my friend remarked, "Don't move, there is a moccasin ready to strike at your back." I did not stir, but cold chills began to run up and down my back. He got up very quiet, but as his hand reached for a stick the snake let fly and I jumped to my feet like one galvanized, and at same time he hit it with the stick as it some way stuck to my back. The rubber coat I had saved me, but the blow with the stick almost knocked the wind out of my body. The snake had struck with such force that his fangs were imbedded in the rubber. Well, we tried fishing again,

FRASER RIVER SALMON PEN.

and streams within a mile of the pool they were by no means plenty, so must have purposely gone up to have a fine, extensive lunch party.

When a grasshopper struck the water from three to four dozen trout would go for him. None of these fish were large, not one in ten reaching the weight of one pound. They were of the red-throated variety.

WILLARD NYE, JR.

Johnstown Outing Club.

JOHNSTOWN, Pa., March 13.—The Johnstown Outing Club is composed of thirty members—business and professional men—and its objects are, as stated in the constitution, as follows:

"SEC. 2. The objects of this club shall be the protection and propagation of all game and fish; co-operation with the authorities in enforcing the game and fish laws; to provide an annual outing for its members, and to encourage in them the true sportsman spirit."

The club was organized in April, 1892, and our first annual outing was held about three miles above Confluence, Somerset county, Pa., on the Youghiogheny River, and our sport was chiefly catching the gamy black bass. For its size and weight the black bass in the Youghiogheny and Castleman rivers, just above their confluence, will afford a true sportsman more genuine enthusiasm and pleasure than any black bass in any other waters that I have fished or read of. They are game. I have had one jump over my head; and they weigh only from  $\frac{3}{4}$  to  $1\frac{1}{2}$  lbs., yet they have more fight in them than a 4-pound lake bass.

Last spring several articles appeared in the FOREST AND STREAM referring to Indian Lake, near Huntsville, Logan county, Ohio. Our club sent a committee of two to Indian Lake to investigate, and their report corroborating the articles referred to, we decided to camp there.

We left Johnstown on July 16, 1893, in two special cars over the B. & O. R. R., and camped for two weeks on the shores of Indian Lake, and had a very satisfactory outing, excepting that the bass would not bite. We tried to make up for our disappointment by making large catches of ring perch, sunfish and calico bass, making sport by using light, springy rods.

We have a first-class camping outfit worth \$500, and we go out to enjoy ourselves. Some members are satisfied with ordinary camp life, but the majority want to hunt and fish. Owing to the fact that our outing takes place in the latter part of July or the first part of August, you can see how we are handicapped. Now, if you can suggest a place within 600 or 800 miles of Johnstown which

but there were so many of those spotted devils about that we gave it up and went to killing them. But hunting snakes by lantern light is not very quieting to one's nerves, so we got out of the brush and tall grass in double quick time.

BRIAN THE STILL-HUNTER.

Carp in Cayuga Lake.

ITHACA, N. Y.—A good many large pickerel were caught here last fall, together with some pretty big carp. A few years ago one or two carp ponds, located at Ludlowville and Sheldrake, I think, gave way, emptying their contents into Cayuga Lake. Since then carp have been taken in considerable numbers annually. Ham Spicer holds the record of '93 for heavy-weight carp, having taken one which weighed 23 lbs. The fish, at the first tug on the line, pulled Spicer, who was not looking, though perhaps longing for leviathans, into the water and mud knee-deep, and it took a lively and exciting two minutes to land the beauteous bouncer of the sluggish inlet. Spicer thinks about the proper carp tackle is a barn raiser's pike pole and a steamboat's anchor rope, with a modern Hercules at the land end of the outfit.

A large consignment of pike for Cayuga Lake is shortly expected here. Two or three consignments of trout fry have already been placed in neighboring streams. For good trout fishing the angler should visit the vicinity of Speedsville, Hartford Mills, Slaterville, McLean and Cortland. The present outlook indicates clear running streams for opening day on brook trout.

M. C. H.

Suckers Survive Freezing.

ITHACA, N. Y.—As bearing on the question recently discussed in FOREST AND STREAM relative to the injuries sustained by fish from freezing, allow me to say that a local angler cut cakes of ice from along the west shore of Cayuga Lake the past winter in which suckers were found frozen solid. The fish were chopped out of the ice, put in water and in a few hours were swimming about with as much animation as usual. The gentleman who gives me the above item also tells me that recently one of a pair of goldfish he has long possessed escaped from the tank in which it is kept, and, although diligent search was made for it, some six hours elapsed before it was found. The fish was returned to the water as an experiment, all signs of life having vanished, and to the wonder and delight of the family, it soon assumed a lively and spirited air, apparently none the worse for its exhausting experience.

M. C. H.

Fishculture and Fish Protection.

The Trout Netting Case.

SHEFFIELD, Mass.—*Editor Forest and Stream:* In my FOREST AND STREAM of March 24, I notice your article on the action brought by the Commonwealth of Massachusetts against R. E. Follett, Fish Commissioner of Connecticut, for the illegal taking of trout, and his conviction and fine of \$150 for same. As I am a resident of this town, a lessee of part of the same brook, and have helped stock the same for the last nine years, I want to give you a few notes on this matter that your correspondent omitted.

A friend of Mr. Follett's or he himself in a letter to the Hartford Times, states that the sportsmen here have from the start antagonized the hatchery and Mr. Barnum's interests in the same. The man that made that statement knew it to be false, and only said it to try and create a little sympathy for the Fish Commissioner. The sportsmen around here know Mr. Barnum to be a sportsman and a gentleman, and one who would not knowingly violate the law nor have any one in his employ do so. He leaves the full management of the hatchery to Mr. Follett, who resides here, while Mr. Barnum lives in Lime Rock, Conn. This Lee Brook is about five miles long, and has always been noted as a good trout brook, and has been stocked for the past ten years regularly by fry furnished by the State of Massachusetts. Mr. Barnum leases the upper portion of it, about two miles in all.

Mr. Follett was arrested for netting trout in the close season last fall in this running brook, and his defense is that because he turned some trout out of his ponds into the brook last June because they were not doing well—turned right in among the wild trout—he had a right to net them, and on the witness stand under oath he testified that four months later when he netted the stream he could easily identify his fish from the wild ones, and I want to add right here that there isn't a single fisherman up here believes such a thing, nor have I met one anywhere in my travels who does. He says he knew them by their peculiar color, because he fed them some liver nearly every day. But by far the greater part of their nourishment was derived from the natural food in the brook, and besides it is a well known fact that trout adapt their color to their surroundings.

It is a mystery to the sportsmen around here why it is that Mr. Follett went the two miles of the brook to net his trout, when he only fed them in one place. Fish generally congregate where they are fed. His sole defense was that because he turned the trout out in January, '93 and fed them, he had a right to net them.

How does he explain his action in netting that brook some nine months before? He netted the brook in September and October 1892, long before he turned any fish into it, long before he bought any trout to put in his pond. In fact his first pond was stocked with the wild trout netted from the Lee Brook and its tributaries in September and October of 1892. Here a man, who holds the office of Fish Commissioner of the State of Connecticut, who says that "From his earliest recollections he has been interested in fishculture; and for years has been in the fish hatching business." He above all others should be posted in laws pertaining to fish and fishing; and in netting as he has, he must have known he was going contrary to law, and for such deliberate and willful violation should be fined the extreme penalty. There might be some excuse for a man who had not made a study of fish, fishing and fish laws, but none for this commissioner.

Mr. Follett has appealed the case and the decision of the higher court will be awaited with interest by all sportsmen in Berkshire county.

HARRY S. ANDREWS.

The Kennel.

All those who love a dog because it is a dog and not merely a medium for the accumulation of dollars and cents, are invited by the editor to consider this department as one in which they can discuss amicably any subject that is of interest to the canine fancy, without fear of their communications being subjected to personal comment or ridicule.

FIXTURES.

DOG SHOWS.

April 17 to 20.—New England Kennel Club, at Boston, Mass. D. E. Loveland, Sec'y. Entries close March 31.  
April 18 to 21.—Southern California Kennel Club, at Los Angeles, Cal. C. A. Sumner, Sec'y.  
May 1 to 4.—Special show of St. Bernard, Collie, Spaniel and Fox-Terrier clubs, in connection with the Hempstead Farm show, Madison Square Garden.  
May 9 to 12.—Louisville Kennel Club, at Louisville, Ky. St. Marc M. Munday, Sec'y.  
Sept. 10 to 14.—Toronto Industrial Exhibition Association, at Toronto. C. A. Stone, Sec'y.

FIELD TRIALS.

Sept. 5.—Manitoba Field Trials Club, at Morris, Man. R. J. Gallaugher, Winnipeg, Sec'y.  
Nov. 6.—International Field Trials, at Chatham, Ont. W. B. Wells, Sec'y.

Don't forget that the Specialty show entries close April 20, with James Mortimer, 44 Broadway, New York.

Shooting Dog vs. Field Trial Dog.

VIRGINIA.—*Editor Forest and Stream:* Would a gentleman's shooting dog—a good ranger, staunch, and a first-class retriever both from land and water—stand any show in a field trial with a regular field trial dog, broken and handled by a professional?

Does retrieving count for anything in a field trial or is it objectionable? and is a dog required to drop to shot?

S. W.

[There are ten chances to one that the dog would not under the conditions you state. This is the hub on which the whole argument about the way field trials are conducted at the present day is turning. The better the amateur's dog is trained the less chance he would seem to have in present competitions. It depends chiefly upon the handler, and until the adept professionals, who seem to have things all their own way and are allowed to break up an opponent's dog as much as they choose, are put into a class of their own and amateurs are allowed to compete with amateurs, the amateur's dog per se, however well trained, stands little chance for the money. We cannot explain our meaning better than to quote the words of a veteran shooting dog handler who competed this last fall in the Southern trials: "They're too fast for me; it isn't field work, it's racing." Retrieving, in the principal trials, is not recognized. If the dog is steady to shot that is sufficient; dropping, of course, is preferable.]

Mr. Andrew Laidlaw has purchased the crack Irish water spaniel Dennis Marguerite from a party in Montreal.

## POINTS AND FLUSHES.

[By a Staff Correspondent.]

## The Migration of the Handlers.

I QUOTE one paragraph from a letter by Mr. J. M. Freeman of Bicknell, Ind., which contains cheerful information concerning game prospects at Bicknell, and therefore favorable for field trial interests, that place having been fixed upon for the next trials of the U. S. F. T. C. It also contains mention of the homeward flight of several handlers. He says:

"There is not much dog news here at present. Birds have wintered well and there will be an abundance left over for seed. Mr. John T. Mayfield is expected home here this week from Mississippi. Mr. Geo. E. Gray will also stop off here a few weeks on his way home from Mississippi.

"Mr. Andy Gleason expects to locate here permanently, so that in the future we will be decidedly doggy around Bicknell."

## A Chance for a Trainer.

From that delightful Morris, Mon. city which is yet fortunate in being both in civilization and a great game country, comes information of the need there of a field trial trainer. There is a good business opening in that country for a good man. It is useless for any other kind to go there. An unskillful or negligent trainer would not succeed. Mr. R. J. Gallagher, secretary of the Manitoba Field Trials Club, writes me as follows:

"Canine matters are not making the rapid moves anticipated a short time ago, but they are not at a standstill by any means. Every now and then a new youngster is brought on for the express purpose of sweeping everything in the Derby. I trust that some of our people will succeed in reaching the money this year.

"The latest addition which I have had the pleasure of taking out of bond was a nice bitch puppy from our friend Mr. L. W. Smith, which I sold to Mr. Borrodale, of this place. It is by Orlando—Atalanta, and looks like a mover. Another is the young dog Gladiator, by Gladstone's Boy—Queen Novice, purchased from the Manchester Kennels by Mr. F. W. Scott. Mr. Young speaks highly of this young dog and I have hopes that we will hear from him later on.

"In reference to the obtaining of a good trainer for this locality, we are still in the same position as when I wrote you last—nothing decided upon. \* \* \* I have not much hesitation in saying that if a good, honest trainer came here there would not be the slightest difficulty in his getting at least fifteen dogs in a short time. The prices which have been paid here in the past are about \$50 each dog.

"By the way, I might say to you that I had a letter from Mr. White, of Florence, Col., asking if I could get a good trainer here for his dogs, and that if we could do so, he would enter them in our trials. I do not know how many he has, but wrote him that we were endeavoring to get a good man specially for field trial work. I asked him what number he wished to send, everything being satisfactory.

"Don't you think that if you writers were to point out the advantages to the Eastern trainers of training out here on the prairies, that some of the owners would send their dogs West to run in our trials and work their way East to the other trials later on?"

Many of the field trial trainers and others know the advantages of the chicken country, but few of them know the magnitude and value of the canine interests in Manitoba and adjacent provinces. These interests are destined to be much greater in a few years. It is a great and growing country with business interests of great value.

## Dog Training.

Mr. J. B. Stoddard, of Thomasville, N. C., writes: "There are not so many birds about here as there should be to insure a good crop." A scarcity of birds entails much greater work on trainers and dogs. Mr. Stoddard further states that he has concluded to continue dog training, and to that end is prepared to negotiate with parties who desire to engage the services of a trainer.

## In the Alligator District.

From a letter received from Mr. W. S. Bell, of Pittsburgh, who is well known to sportsmen, I infer that he had a pleasant trip while sojourning recently in Florida. It will be remembered that Mr. Bell, while judging the Irish setter trials, was suddenly called home from Thomasville, N. C., on account of the severe illness of Mrs. Bell, who was in a critical condition from pneumonia for many days. In his pleasant way, Mr. Bell in a private letter to me writes:

"I have taken Mrs. Bell to Florida, stopping at all principal places and points of interest down the east coast to Palm Beach, on Lake Worth, which is truly the garden spot of the earth. We took in the climate—although expensive, we enjoyed it very much, having indeed a most delightful trip, and best of all, Mrs. Bell has returned in full health, looking ruddy and healthy.

"While I was at Palm Beach I met Mr. Wallace, a judge many times at the Central field trials, and we had a long chat on field trials, etc., which was to the effect that a sportsman's field trial club should be formed with a purpose to cater more to the sportsman or the 'one-dog-man' entry than to the professional handler. They have to come in to advertise and dispose of their produce, and need not be fondled. A club of this kind would prosper and have more support from more people than is engendered by the present mode of conducting trials."

The cumulative appetites, described by Mr. Hough in his charming articles on Dixie Land, which he and Dick Merrill took from the North into the inoffensive State of Texas, supplemented by the appetite which permeated the entire hollow gloom of a dog six feet long, into which they threw vanishing sandwiches, a bag full at a time, to check his appetite, was all right in a way. Still, it was not treating the dog with that consideration which is due man's best friend. It was too much after the manner in which newspaper men eat their lunches in Chicago. This dog, being six feet in length, could stand longer on a point than any other dog in the business, therefore he was, by virtue of his longing, entitled to have his food handed to him with deliberation and attention, instead of throwing it down his neck into the recesses of his inner consciousness. The sandwiches of railroad commerce are made primarily for durability and to resist torsion strains or sudden flexure. They might do to throw at a strange dog, or as a test of the dog's stamina; but with such a scrap-iron diet for a dog of which yeoman service is required, how can he be expected to do good work with a barrel full of disks? I know that Mr. Hough has a novel and, with dogmen in a degree, obsolete theory about setters and pointers. For instance, he unwaveringly maintains that a dog with a long pedigree and fine figure should be able to work, as well as to look pretty; and to be properly up to his standard the dog must not show any annoyance or self-consciousness when run over by a loaded wagon. He must eat like an Indian, jump any fence, or crawl under it if he has to lift the fence to do so, etc. But this is by the way, it is the appetite which caused me to think. At first I thought it might have been a case, not of a new appetite, but an old one under a new environment, a case as it were of unconscious gastric opportunity; but I was in error—I believe it was the climate. Of that trip Mr. Bell writes:

"Tell Mr. Hough that I have waded through 'Dixie Land,' Nos. 1, 2 and 8, and have laughed, cried and been thrilled by his experiences. By way of sympathy, let me state that Mrs. Bell's appetite was something alarming while down in Dixie.

It was beneficial, however. I assure Mr. Hough, if he lives in Chicago with his increased appetite, it will be more expensive than in Dixie's Land, as I found in Chicago it took more cash to the square inch to supply the demand than any other place I've been."

There is no one whose opinion I esteem more than I do Mr. Bell's, but in the case of Chicago he seems to have formed an erroneous but popular opinion. That Chicago is peculiar I will admit. Only that and nothing more. If a visitor comes here with an intention to be a citizen, or an alderman, or a newspaper man, etc., he is welcome. Chicago will give such a dimpled smile of welcome. But if he comes here with an appetite—well, he is a transgressor, and the way of the transgressor is not easy.

B. WATERS.

## Specialty Club Dog Show.

FROM numerous letters which have been received by Mr. Mortimer, the superintendent, it seems there is an impression prevailing that the coming show of St. Bernards, collies, spaniels, fox-terriers and bulldogs given under the auspices of the specialty clubs devoted to these breeds, is open only to dogs owned by members of these clubs. This is entirely wrong. The show is open to all exhibitors and owners of dogs of the above breeds irrespective of membership. At this show the prizes given by the different clubs are more than ordinarily valuable, and are sure to bring together some of the best dogs in the country. While, as stated above, the competition in the regular classes will be open to all, there is, or should be, an *esprit de corps* that will result in the different specialty club members showing their best and vying with each other for the prizes and specials so generously offered.

In St. Bernards the winning kennel will capture \$25 from the W. K. C., and the best St. Bernard will also win \$25. Silver cups for best dog and best bitch are also given. Then there are the St. Bernard Club medals, and such works of art are well worth winning. Spratts Patent's 50lbs. can of

MR. J. H. WINSLOW.  
President Philadelphia Kennel Club, 1894.

pepsinated meal is a particularly happy and useful contribution. A glance through the collie special list makes one's eyes fairly bulge at the array of cash specials, and we are pleased to see that a good deal of the money will go for American bred stock. The W. K. C. again gives \$25 for best kennel, and the best collie gets another \$25; these are open to any one. Open to members of the Collie Club are the Collie Club trophy, value \$300, for best American bred, and the president's cup, value \$500, for best in show. The best stud dog with two of his get will win \$20 and a silver medal; the best brood bitch will take \$20 and a medal under the same conditions. Another interesting competition, for which \$20 is given, will be the exhibit of the best four American bred collies. Then \$20 each are given for best American bred dog, best bitch and also best pair in open classes, of the same breeding, owned by one exhibitor. The best dog and best bitch in novice classes get \$20 each and bronze medals. The bobbails are not forgotten; the best will win \$10, so will the best smooth. Such specials help to pay expenses.

The owner of a good fox-terrier kennel can start a new banking account. If he has the best four and the best brace he will win \$25 in each competition. The American Fox-Terrier Club has come to the front in a very open-handed way. There is the Grand Challenge cup, value \$300, for the best in the show. The Apollo Challenge and stakes for 1894 will be worth winning, too. Then there is a \$5 sweepstake for the best stud dog shown with four of his get; and the same conditions apply to the Matron Stake. The old "boys" are not forgotten, for those over seven years old can "chip in" for a \$5 sweep, or rather their sponsors can for them. Specials of \$25 each are given for best dog and best bitch, both wire and smooth, in the show. The best in open classes and the best under two years of age in either sex can also win \$25. The four best American-bred will also get \$25; so will the best dog and bitch puppy and the best brace under fourteen months. This is probably the most valuable list of cash specials yet offered and should provoke keen competition.

Spaniels are also very well looked after and an encouraging fact in this connection, showing the broad principles of this club, is that with three exceptions, these being the club trophies—the Cocker Cup, Dr. Smith's silver trophy and the oil paintings presented by Mr. Bell, the competitions are open to all, irrespective of membership. The best kennel of particular colored cockers gets \$25. Then \$5 is given for best brace of each breed the club fosters. The best five red cockers will win \$25 and the W. K. C. also gives \$25 for the best five over 25lbs. weight. Dr. Smith, to equalize matters, offers \$25 for the most even kennel of four cockers. The best brace of puppies, any breed, gets \$10 from Mr. H. Brooks, and Mr. Oldham provokes an interesting competition by offering \$10 for best stud dog, any sporting spaniel, with three of his get; \$5 each for best black cocker dog and bitch in open classes

owned in N. Y. State, and \$5 for best any other color, same conditions, comes from Mr. Fiske.

The owner of the best brace of field spaniels has a chance at a case of champagne, and Spratts Co. wishes to encourage the breed by putting up another 50lbs. case of Pepsinated Food for best puppy any breed. Cameras are also given for field spaniels and Clumbers.

There is little doubt that the Bulldog Club will not allow their breed to fall behind either in enthusiasm or the value of specials donated, but particulars of the latter we have not yet received. It is reported that the Rev. W. H. Wallbridge, owner of the Cointooock Kennels, will, in the event of Mr. Sidney W. Smith's not officiating, take the difficult task of St. Bernard judge. This will be the well-known breeder's debut in this rôle and he should be well supported. Entries close April 20, with Mr. James Mortimer, 44 Broadway, New York, and the fee is \$5.

## Cocker Truths.

## Editor Forest and Stream:

A big little dog is a good dog to look at, but a larger one or one in proportion for the work he is required to do, is better. Big bone in a little dog is rot, and a big head on a little dog is worse. A cocker never had a big head or big bone out of proportion to size until he was crossed with the field spaniel, that cross gave him a long body, crooked legs and a big head. They have bred out the long body, have raised him up a trifle, but the bad legs and big head remain. Every one who knows a cocker admits that they are a general purpose dog or the dog for all kinds of work; an all day and every day in the season dog. In a day's work he may be called upon to retrieve a duck, flush grouse and woodcock, run a rabbit, tree a squirrel, scatter a covey of quail, sample a tramp's trousers, etc., etc. Can a 20lb. dog with a big head and crooked legs do all the above? I have fourteen dollars all saved up in copper that I'll bet he can't do one-quarter of it, and that he will have to be carried after working five hours in this county, even if he lasts so long.

Men and women who get their ideas about a cocker from seeing him on the bench; those that never bred one or even saw one at work; men that know as much about a gun as a cow does about a telescope, are those who do the most harm to the breed. They think because they have seen pictures of big-headed, crooked-legged dogs that were champions in England, that they are the kind of dogs that the sportsmen of America want, but surely men who shoot only over cockers should know the kind of dog best suited for their work. Of course I know the old cry "if we can't beat you on the bench we can in the field," but it does not apply to me, for I always bred for work and guarantee every dog I sell to be a natural hunter and retriever. When the craze for the "long and low" set in, I just quit exhibiting. I fought that worst of all fads alone and killed it as dead as Caesar's grandmother. A 20lb. dog may do for England if he has a small head, good legs and feet, but nothing under 24lbs. will do for the Alleghany hills of Steuben Co., because the work, the game and the men are different. I was very sorry to see the attacks on Mr. Wilmerding because no man has done as much as he has for the Spaniel Club. At New York he only aimed at correcting great abuses that have crept into cockers in the last few years, the toddling infants with legs going like a boy's drumsticks were rank libels on any sporting dog, and the man who undertakes with determination to stamp out this evil, will certainly raise a storm of adverse criticism. Such a reformer cannot possibly "stick to type," as "type" sticks to monstrosities closer than mutton gravy to the roof of your mouth. Emphatic condemnation, turning down type for decent physical ability, and making it stand out in the most glaring light that ability to do his work is the main thing in a sporting dog, with type a secondary consideration, is the only way the effect can be produced.

J. OTIS FELLOWS.

HORNELLSVILLE, N. Y., March 31.

## Antidote to Strychnine.

## Editor Forest and Stream:

"Dog Berry's" allusion to the strychnine poisoning in Feb. 10 issue of FOREST AND STREAM, recalls my experience with a pointer of mine. "Dog Berry" calls dog poisoners the meanest of men. We who love dogs think he has told "the truth, the whole truth and nothing but the truth." And there are the meanest of women, for one threatened, in my hearing, to poison my dog, and he was poisoned. It was with strychnine, for I had before observed its effect upon dogs.

Noticing one day that my dog Mack acted strangely, I observed to my son that I feared he was poisoned. I tapped him on the back to ascertain the fact, but there was no nervous excitement as the result. My son then went downstairs, Mack standing at the top, looking down. I thought I would watch him, for if it was strychnine poisoning an attempt to go downstairs would induce a fit. I guessed rightly, for on taking the first step he straightened out in an instant and plunged to the bottom of the stairs with violence enough, it seemed, to break every bone in his body. I told my son to stay with him while I went to the doctor's office. "Give laudanum and tannin." I didn't stop to pay him, neither did I pay the druggist (at that time), for my dog's life precluded all thoughts of promptness in anything else. When I returned Mack was on his feet. I poured a teaspoonful of laudanum and about as much tannin down him, followed by a little water to take the bad taste out of his mouth. He had two fits after this—it may be more, but I went to bed hardly expecting to see him alive in the morning; but he survived, although he was a rather sorry-looking dog that day. He got along well, but some months after that as he lay in his box I saw that he had a fit. I knew, however, that it was not like that caused by strychnine. These fits he would have two or three times a year. On this account I sold him, informing the purchaser, however, that he was subject to the malady. The dog slept in my house a good deal, and I suggested that if he was kept more in the open air he might not have any more attacks. He was then four years old. The man has had him six years, and I think the dog is in good health. I have never heard him say the dog had a return of the fits.

N. D. ELTING.

## The Amateur Trainer.

A NEW work on dog training has recently been presented to the public by Mr. Ed. F. Haberlein, of McPherson, Kan. The special claims of the author for the system is that it teaches the "force system without the whip," and defining it more fully in the text as "Force system, omitting saunas and the whip, applying the force collar to effect attention and obedience, words of praise and caresses to encourage and reward." The author claims that the treatise is a plain, concise, yet thorough guidance in the art of training, handling, and in correcting the faults of the bird dog in his work to the gun. While much of the matter in it is not new, there are all the training subjects treated in a brief yet pertinent manner, the whole giving the beginner a succinct course of instruction in his art of training. There is some doubt as to the wisdom of basing a system on the use of the spike collar, since that useful article should be used as little as possible, and not at all as a corrective instrument. For instance, it is useful in forcing a dog to retrieve, an act he dislikes to perform; but, if he commits a fault, it is not a proper instrument to use for the sole purpose of punishment. At the best, the less it can be used consistently with perfecting a few accomplishments, the better for all concerned. Many good ideas can be gotten from the work, however. It is bound in paper and contains 73 pages of reading matter. Price \$1. For sale by Forest and Stream Publishing Co.

## DOG CHAT.

All spaniel men will regret to hear that Mr. Geo. Douglas, who has been exhibiting quite actively this spring, had the misfortune to lose his black cocker Black Duke, Jr., on the way home from Chicago show. His dogs were compelled to lie over Sunday at Detroit and the exposure induced pneumonia, from which this promising young dog died. The express agent there had orders to release the dogs, but failed to do so.

The new agreement between the express companies and the railroads regarding the transportation of dogs to shows has already led to much loss and no end of annoyance to the dog owners, as the cases of sickness and poor condition of the dogs, owing to the neglect of the express officials during transit, have never before been so numerous as during the past circuit. We have heard nothing about the petition so numerous signed at New York show, but something should be done before the fall season comes around or the shows will surely suffer. Unless some guarantee is given, owners of valuable dogs will not intrust them to the careless care of the express companies.

We understand that Ed Warner, who had charge of Mr. T. G. Davey's dogs at the shows out West this spring, has accepted a position as kennel manager to Mr. George J. Gould, who owns Forest Rex, the English setter, and several Russian wolfhounds.

Squire Naton Walters, Winimac, Ind., has the reputation of being one of the oldest hunters throughout this part of the country, and was always accompanied by his dog Pink Mink. Along in the latter part of the winter of 1893 he started out one early morning to hunt in the marshes that adjoin his farm upon the sand hills. The Squire had a splendid streak of luck, and his game bag was soon filled with game that fell under his steady aim, with the assistance of his dog. As the sun slowly disappeared in the west the Squire started home, but his dog was missing. The Squire now tells the story of how he found his dog. He says: "A few days ago I was down on that patch of grubs figuring if it would pay to clean them out. I found his skeleton standing with his right forefoot in the air, tail straight out, and his nose on a point on the skeletons of six prairie chickens that were hid in the wire grass." And that is how the Pink Mink Marsh derived its name. IVANHOE.

[FOREST AND STREAM will offer a substantial reward for an authentic specimen of one of these skeletons.]

There seems to be a good deal of "inside" feeling in kennel circles on the Pacific Coast just at present, and the San Francisco press is showing some jealousy over the Los Angeles show, directing their attention more especially to one of the judges chosen—Mr. A. R. Crowell. We should think that Mr. Crowell was quite capable of judging at such a show. He officiated acceptably twice at Taunton, Mass., and Lewiston, Me., shows, and followed our principal shows for some years, besides having, while in England, exceptional opportunities of seeing the very best in every breed. In this respect we should think he is better equipped than any one we know of on the coast, and especially so in St. Bernards and spaniels.

We notice that the Mere Kennels have placed their new purchase, the smooth fox-terrier Ripon Stormer, at stud in our business columns. This dog has had a successful career since he came to this country, and has done well as a stock-getter. Bred to light bitches wanting in bone and coat properties he should produce good results. They also offer a choice of other well bred terriers.

A little bird whispers that Mr. Mortimer did not keep Olivia, the Russian wolfhound that bowled the champions over at Philadelphia, very long. Olivia will now grace Mr. Hanks's team and will probably try again at Boston under her breeder's judicial eye.

We have received a number of inquiries lately regarding toy spaniels for sale and especially King Charles spaniels. One received this week comes from an American now in England. We feel certain if the breeders of these dogs will advertise their stock in our business columns it would result in considerable benefit.

We hear of a crack Irish terrier pup to come out at Boston. It has, or is said to have, no faults. Eureka!

We have received from Mr. Frank Pidgeon a rejoinder to the note from Mr. Frank W. Thomas in our issue of last week, emphatically denying "generally and specifically his allegations so far as my knowledge goes." As by this time most folks have forgotten what it is all about we must consider the "incident closed."

The San Franciscans do not intend to be done out of their show altogether, but will look to Oakland for a venue. A show will be held under the auspices of the Alameda County Sportsmen's Association. The association intends to apply for membership in the A. K. C., to be passed upon at the May meeting, and the show held as soon after as practicable. A dog show committee has been elected, and it is expected that the show will be held in the Tabernacle, which is said to be well adapted for the purpose. A good deal of ill-feeling has been occasioned by the appointment of other judges by the Los Angeles show people, than those advertised in the premium list, and to say the least, it does not seem to have been a very wise move. It is not always well to bow too much to the disgruntled.

We are particularly pleased to publish a portrait of one of the most popular fanciers in the country, Mr. J. H. Winslow, president of the Philadelphia Kennel Club. Mr. Winslow has been identified with dog shows as an exhibitor and judge for many years. In fact, there are few men in the country who talk so far back knowingly and personally as our Philadelphia friend. In 1873, if we heard rightly, he led the bull-terrier Tarquin into the ring at Birmingham. The first time we remember seeing Mr. Winslow judge was at the "cattle shed" show held by the P. K. C. in connection with the agricultural fair out at Germantown Junction, Pa., in 1885, when he judged spaniels. Since then he has donned the ermine several times, but to officiate in another breed-pointers. Owing to business engagements he has refused a number of invitations to judge, but where he has officiated he has invariably given satisfaction. As a *bon camarade* the "only Bert" is unsurpassed and he is one of the few of whom one can say, he has not an enemy in the fancy.

## Louisville Dog Show.

At the last moment we receive the premium list of the Louisville dog show. We cannot give it more than cursory notice this week. Mastiffs, St. Bernards, great Danes, pointers and setters get \$15 in challenge classes and \$15 and \$5 and diploma in open classes; novice and puppy classes are given with \$7, \$3 and \$5 and diploma, respectively. Other important breeds get \$10 in challenge and \$10, \$5 and diploma in open classes; puppy and novice prizes the same as above where provided. Terriers, except fox and bull, get from \$8 and \$4 to \$5 and \$3, the latter also for toy spaniels and Italian greyhounds. Kennel prizes of \$15 are given in many breeds

and a large number of cash and other specials are offered. Handlers' prizes of \$50, \$40 and \$30 are given for having the largest number of dogs. The judges are: Mastiffs, St. Bernards, bloodhounds, Newfoundlanders, collies, poodles, dachshunds, bulldogs, all terriers (except fox-terriers, smooth and wire-haired), pugs, Italian greyhounds and miscellaneous. Mr. James Mortimer, Hempstead, L. I.; great Danes and all spaniels, Mr. George Bell, Toronto, Can.; pointers, English, Irish and Gordon setters, American and English foxhounds, Chesapeake Bay dogs and beagles, Major J. M. Taylor, New York city; Russian wolfhounds, deerhounds, greyhounds and whippets, Mr. Roger Williams, Lexington, Ky.; fox-terriers, smooth and wire-haired, not decided. We heard that probably Mr. Fred Hovey would take these if he could get away from business. Entries close April 23 with Mr. St. Marc M. Mundy, Louisville Legion Armory, Louisville Ky., and the fee is \$3.

Breeders are making room for spring pups, and what more natural than they should advertise their stock in the best medium. Here are a few of the new ones: Undershot Kennels offer a well-bred bull pup, by King Lud; C. T. Brownell, Gordon setter pups; Donald Munro, very well-bred collies, house broken, etc.; A. E. Seidel, pointers and setters, etc.; W. Strawbridge, young Irish setter dog; A. W. Page, setter bitch pups; Becker Bros., beagle pups; H. Abegg, three mastiff dogs; Geo. Douglas, dispersal of noted cockers; W. B. Stafford, two broken pointer bitches; Fox and Coon Hunter, fox and coon dogs; H. D. Ogden, well-bred English setters; Neill Apps, England, Bleenheim and King Charles spaniels. Trainers: "Trainer" wants position; J. T. Mayfield, dogs for field trials; W. B. Stafford, dogs on chickens and quail. These three men are well-known handlers and reliable.

## Boston Dog Show.

This should be a banner year for the N. E. K. C. It is many years since they scored such an entry as they have done this year. Somehow, Boston is always a popular show, and in spite of rather economic arrangements in past years never ran much below 700 entries. This year there are 902 entries and \$84 to be benched, divided as follows:

	'93	'94		'93	'94
Mastiffs.....	59	16	Basset hounds.....	2	2
St. Bernards.....	55	9	Collies.....	46	21
Great Danes.....	10	4	Poodles.....	18	41
Bloodhounds.....	4	7	Bulldogs.....	13	23
Foxhounds.....	16	51	Fox-terriers.....	61	58
Deerhounds.....	11	8	Bull-terriers.....	27	19
Greyhounds.....	14	22	Dandie Dinmonts.....	6	4
Russian wolfhounds.....	7	15	Bedingtons.....	0	3
Newfoundlands.....	2	4	Scottish terriers.....	15	39
Chesapeake Bays.....	2	11	Irish terriers.....	29	6
Pointers.....	84	75	Black and tans.....	6	8
English setters.....	73	72	Skye terriers.....	4	4
Irish setters.....	41	29	Yorkshires.....	3	5
Gordon setters.....	20	30	Toy terriers.....	7	7
Spaniels.....	47	68	Schipperkes.....	1	3
Pugs.....	60	60	Pugs.....	7	13
Dalmatians.....	0	1	Toy spaniels.....	11	16
Boxers.....	56	50	Italian greyhounds.....	0	5
Dachshunds.....	12	13	Miscellaneous.....	7	10

Last year's entry was 808. This year foxhounds, greyhounds, wolfhounds, spaniels, bulldogs, Scottish terriers and poodles show a decided increase over last year's figures. There is a falling-off in the sporting classes, pointers and setters, with the exception of Gordons, of which there were 20 last year. The large entry of foxhounds must be attributed to the efforts of the Brunswick Fur Club. Altogether the show promises to be a success if favored with decent weather.

We are told that Mr. John Read, who has been so long and favorably identified with our shows, has been chosen superintendent of the new arrangements for taking charge of the stray dogs in New York under the auspices of the S. P. C. A. This should be a happy selection as it is always well to have a man in such a position who knows a dog from a log of wood.

A regular meeting of the Pet Dog Club will be held at 105 East Fifty-seventh street, New York, Wednesday, April 11, at 3 P. M.

The Supreme Court of Nebraska has decided that dogs are property and their value can be recovered if made away with. To entitle the owner to this protection he must see that his dog wears a collar with his name and address on.

We are sorry to learn that since Detroit show, two of Dr. Hoyt's Italian greyhounds, Roma and Ingersoll, have died. The former was first at Detroit and the latter second. Knowing as we do now near to the doctor all his dainty pets are, we sympathize with him in his loss. His little bitch Irene has also been very sick.

The noted Dandie Dinmont Etrick King must be over by this time, but we do not know what kennel he will represent. Perhaps Mr. Brooks can tell us, if he would.

Maybrook Kennels have sold Roche Tacit, the noted wire-haired terrier, to Mr. Fred Kirby, of Philadelphia; and they have just bought the wire-haired dog Halifax Revival, winner of 13 firsts and specials at seven shows in England. He is an all white dog, by champion Jack Frost out of Nettle, by champion Carlisle Tack. He will be shown at the Specialty show.

*Sporting Mirror* wonders if Dr. Lougest keeps his dogs "in such hog-fat condition as we were used to see his exhibits on this side." A fat dog generally means a kind master, but the Doctor has evidently experienced a change of heart since his residence in the Bay State and now tempers his kindness with mercy, for we have never noticed any undue degeneration in that respect, the dogs having been almost invariably well shown. The above journal quotes *FOREST AND STREAM's* remarks on the New York show. The *Stock-Keeper* also finds our table of entries at W. K. C. shows of sufficient interest for extended notice and comparison with English entries in many of the breeds.

We have heard something like this before, but a good joke we find in the Toronto *Empire* will bear repetition:

A country vicar once went to fill the pulpit of a colleague who was temporarily absent from home. After the service he thought he would gauge the effect of his discourse by the opinion of that very fair index of public feeling, the parish clerk.

"Well Rogers," he said, "did you like my sermon?" "I did," was the reply. "I hope I wasn't too long?" he anxiously inquired. "No, you wasn't too long about it," rejoined Rogers. "Well, then," said the vicar, "I hope I wasn't too short." "No," answered Rogers, "nor yet too short neither. You were just about right."

The vicar felt relieved, and said, "I'm glad of that, because, to tell you the truth, while I was writing that sermon my little dog got hold of four of the folios and destroyed them, and I was afraid it would be too short."

Rogers looked very thoughtful for a moment, and very confidentially remarked: "Lor' now, did he? I suppose you wouldn't mind lettin' our vicar 'ome 'ere 'ave a pup o' your dog."

The *FOREST AND STREAM* is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

## One-Man Judge.

*Editor Forest and Stream:*

I ask the favor of a little space in your valuable paper to air what I think is a grievance that should be remedied, and that is the system of the one-man judge.

I would like to say at once that I am not a disappointed exhibitor, but a dissatisfied one. Following the ideas of one of the oldest and most successful breeders of my particular fancy, I have tried for certain results as being the most important and have obtained them beyond all dispute. Apparently they are not the vital points, and if I am on the wrong track I want to know it, but I do want more than one opinion on it.

There are but few shows after all that a breeder residing in the vicinity of New York can conveniently send his dogs to, and when these same few employ the same gentleman for the same classes time after time, there is no chance of taking an appeal as it were.

Judges of dogs are no more infallible than judges of law but if you don't like the decision of the latter you can try somebody else, whereas in the other one has either to enter his dogs under the inevitable Mr. — or keep them at home, and so remain uncertain whether the ideal you have adopted is undeniably the wrong one or not. Should such things be?

PERPLEXED.

## KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

## BRED.

Prepared Blanks sent free on application.

*Peckham Lass—Pathfinder.* C. P. Lawshe's (Trenton, N. J.) bull bitch Peckham Lass (Sir Garnet Wolsely—Kit) to E. K. Austin's Pathfinder (Nap—Mercedes II.), March 19.

*The Chimney—Fritz of Rockland.* M. L. Schneider's (New York) beagle bitch Theo Chimney to Turtle Bay Kennels' Fritz of Rockland, March 24.

*Mollie—Duke Dashaway.* W. C. Patterson's (Lookport, N. Y.) pointer bitch Mollie (Staunch Bob—Flash) to P. L. Nicholls's Duke Dashaway (Duke of Dexter—Dashaway), March 20.

*Pravie Belle—Rip Rap, Jr.* Jas. McAleer's (Emsworth, Pa.) pointer bitch Pravie Belle to his Rip Rap, Jr. (champion Rip Rap—Lonnie Bijou), April 4.

*Lucy Blade—Sig. Gladstone.* Jas. Aleer's (Emsworth, Pa.) English setter bitch Lucy Blade (Toledo Blade—Rod's Bessie) to Dr. J. A. Hartman's Sig. Gladstone (Gladstone Boy—Demon), March 18.

## WHELPS.

Prepared Blanks sent free on application.

*Countess Addie.* A. D. Fiske's (Worcester, Mass.) English setter Countess Addie (Count Noble's Boy—Clip Roderigo), March 26.

*Eight (five dogs), by A. B. Davis's Kent III. (Kent II.—Miss La Salle).*

*Nan—Lawn Gordon Setter Kennels' (Chicago Lawn, Ill.) Gordon setter bitch Nan (champion Argus—Laura), April 4, eleven (six dogs), by their Reginald H. (Leatherstocking—Smith's Rhoda).*

## ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

C. W. W., Center Pt., W. Va.—Champion Gladstone was by Llewellyn's Dan out of Petrel, Dan by Duke out of Rhoebe; Petrel by Prince out of Lill II.

E. F. G., Nashua, N. H.—Beagle Minnie (A. K. R. 5,717), whelped Nov. 7, 1883, by Marc Anthony out of Sand, by Punch; Marc Anthony by imported Major out of Diana, by Gay out of Old Lucy. This is as far as we can trace her pedigree, but you might write to her breeder, Gibson, Apollo, Armstrong Co., Pa.

F. H. H., Washington, D. C.—Gun was by Gladstone (113 Vol. I.) out of May B., by Rake (212 Vol. I.) out of Fanny (359 Vol. I.), Victoria Laverack by Tempest (1799 Vol. II.) out of Lily (2070 Vol. II.).

T. B. D., Kezar Falls, Me.—Cocker spaniels are not required to be trained in the manner set forth in the book named. You will find all information on the subject in "The Spaniel and its Training," for sale at this office, price \$1. A picture of a cocker spaniel will shortly appear in *FOREST AND STREAM*. A description of them will be found in the book mentioned above.

J. W. B., Danvers, Mass.—Dash III. was owned by A. M. Tucker, Boston, Mass. Whelped 1870, by Blue Prince out of Armstrong's Old Kate, by Old Blue Dash out of E. Armstrong's Kate; Blue Prince by Pride of the Border out of Lowlylly's Nellie. The only Rex we can trace is Rex (A. K. C. S. B. 3506) by Gladstone (113 Vol. I.) out of Donna J. (1954 Vol. II.). We are afraid these are not the dogs you mean, but they are the only ones registered under those names.

## Hunting and Coursing.

## FIXTURES.

April 17.—South Dakota Coursing Club's inaugural meeting, at Mitchell, S. D. Entries close April 16. S. S. Bailey, Sec'y; Fox Kenney, Judge; Joseph Dodd, Slipper.

## Beagle Challenges.

*Editor Forest and Stream:*

Not long since, I noticed a challenge in your valued paper directed at Mr. Dorsey by Mr. Wixom. The object of this challenge seemed to be to settle a claim as to who had the best kennel of stud beagles in the country, Mr. Wixom evidently being of the opinion that the point in question could be decided at a bench show. On this point Mr. Dorsey rightly takes exception, but makes a similar error in thinking the mooted question can be settled at a field trial.

As I understand it a stud dog, to be of any value as such, must show his ability as a sire, and the first question asked by the experienced breeder when contemplating the use of any animal is what has he sired? Even as the tree is known by its fruit, so is the stud animal of any kind known by his get, therefore it matters not so much that the animal in question be a champion on the bench or even a winner in the field. The point at issue is, what shall I be likely to get if I use this dog? What has he ever sired that have shown quality? I claim that on these lines and these only can a correct decision be reached and on these lines I claim that I myself have the best kennel of stud dogs, the same consisting of the two champions, Bannerman and Fitzhugh Lee. Each of these dogs has sired a long list of bench winners, and what is of far more importance, each has sired several field trial winners as well. If any one is inclined to dispute the fact of my dogs' superiority, I am willing to publicly compare records, and I now affirm that to the best of my knowledge and belief no other breeder in this country has any two dogs in his kennel whose progeny have equalled the field records of the progeny of Bannerman and Fitzhugh Lee. If any one has two or more such dogs let us hear from him.

F. W. CHAPMAN.

MALDEN, MASS.

English coursing men are much put out over the fact that Texture, the winner of this year's Waterloo cup, is to leave the country. *Land and Water* says: "Texture, Taste and another of Count Stroganoff's English team left this country for St. Petersburg, with the object of being bred from. The Russian rules having been recently altered, only greyhounds bred in the country can now compete in the principal events. In Count Stroganoff's Russian kennels are the English-bred greyhounds Troughend, Simonian and Monowana, and one of the first-named pair will no doubt be selected as Texture's mate. Taste will probably be mated with Monowana."

## The Foxhound Standard.

Editor Forest and Stream:

In answer to your letter asking me for my opinion on the Brunswick Fur Club standard I may say that at the first meeting of the American Foxhound Club, held at Saratoga, Jan. 19, it was unanimously agreed that each member draw up what seemed to his individual mind the proper standard from which an American hound should be judged, and present his views in writing to the secretary of the club, and the following is my letter on the subject:

Perhaps there is no breed of dog upon which opinion is so widely at variance as the foxhound. This fact will in a great measure account for the diversity in type, which as I understand the object of our club, is to attempt to overcome.

I think most of the members will agree with me when I affirm that the head is by far the most characteristic part of all animals—man not excluded. If I should ask your opinion of a certain man's nationality you would not look to see how he was bent in stifles or what sort of feet and legs he had. You would most likely look at his head and infer from that alone, for that only can tell the story. Therefore, I would particularly urge upon the members of the club that whatever we may decide to adopt as our standard for an American hound, let the head be so distinctly American in all that the word implies that even the most casual observer could not fail to recognize it as such. Now, inasmuch as the head is the most distinguishing feature, I would recommend that the head and throat be regarded 15 points in value in judging from a 50 point standard. My reasons for advocating the above would be to prohibit dogs with the English type of head from winning on the bench in a class for American dogs, no matter how good they might be at other points.

In presenting my own views of an ideal American hound, I must first say that I do not approve of a large dog. Experience has taught me that a small well-built hound has many advantages over a large and heavy one, among which may be mentioned running on crust and ice with less liability to footsoreness. We must bear in mind that something more than a set of long legs is required to run well. A dog must have plenty of bone and muscle, together with a fine large sound pair of lungs (facts which the advocates of the giraffe type are very apt to overlook). You may naturally ask the question, how is a dog of say 19 or 20 inches to compare in speed with the larger ones? To this let me reply, he does it in the same manner and from the same identical reasons that the fox does. He is much lighter and consequently more agile, takes better advantage of the ground over which he runs, and his muscle, wind and feet being equal in proportion to the larger one, we are very apt to find the little hound well in the lead, particularly if the race be a long one.

As the standard advocated and published by the Brunswick Fur Club, I am very well suited, perhaps with the exception of size and type of head. The fact is quite obvious to my mind that this so-called standard was made more to suit a certain strain of dogs owned by certain men, than for the advancement and welfare of the American foxhound.

Just imagine a nice, well-built dog with nothing discriminative in a head, which may be either domed or rounded, and with short ears—a head which might be taken by anybody for a cur's. Why not have the ears cut (à la bull-terrier)? At all events, the thing is just laughably absurd. There appears to be a sort of speed mania among the fox hunters of to-day, together with a theory that practical fox catchers can be bred, and in riding their hobbies the hound is entirely lost sight of. There we have a standard advocated describing a fine, speedy dog, with nothing particularly characteristic in head to indicate whether he is a foxhound or fox-terrier. The B. F. C. wisely reduce the valuation of this typical head from 15 to 10 points in 100. They might go still further and dispense with it entirely without doing American foxhounds the slightest injustice.

The following 50-point standard will express my own ideas of a model foxhound:

**Head and Neck (15 points).**—Head should be moderately long and narrow, slightly domed, with prominent occipital bone and entirely free from wrinkle. Eye, dark brown, full and expressive. Muzzle, moderately long, well developed and clean cut, without any marked or defined stop. Flews, shallow and receding from nose. Nose, black in color, with open nostrils. Ear, set well back on head and of good thickness; their length from tip to tip should correspond with the dog's height at shoulder. Neck, clean, muscular and tapering from head to shoulders.

**Body and Loin (10 points).**—Chest, deep and capacious, with close, well-rounded ribs, and back ribs well defined. Hindquarters and back strong and muscular. Thighs, well spread. Shoulders, firm, upright, strong and clean cut.

**Legs and Feet (10 points).**—Forelegs, straight, with plenty of bone and muscle. There should be a slight enlargement of bone at the pastern joint to give strength. Elbows should be let down well to give freedom of motion. Hindlegs, should spread sufficiently to clear front legs in running; hams should be straight behind. Feet should be round and compact, well cushioned and haired between toes, with high, prominent knuckles.

**Tail (5 points).**—Tail should be set on moderately high; large at base and tapering gradually to a point, and showing a decided brush.

**Coat (5 points).**—Coat should be long, dense, rather harsh to touch, perfectly flat and of a wet resisting nature.

**General Appearance (5 points).**—Dogs should stand 19 to 21 in. at shoulder and bitches 18 to 20 in. They should present in appearance a very compact, cobby little dog, symmetrical in shape, with the very best of legs and feet, and showing plenty of hound character.

**Color.**—This is a matter of taste, although I try in breeding to avoid any except black, white and tan.

## SCALE OF POINTS.

Head and neck	15
Legs and feet	10
Body and loin	10
Coat	5
Brush	5
General appearance	5
Total	50

DR. H. T. THURBER.

## HUNTING AND COURSING NOTES.

The San Francisco Coursing Club will close the season with a club stake for members only, on April 15. The club will add \$150 to the purses.

Several of the hunt clubs around West Chester, Pa., are losing a number of valuable foxhounds through distemper. Already eleven hounds have succumbed and others are badly affected.

Mr. J. F. Bartels, of Denver, Col., writes us that on March 23 some scamp out of his barn door and stole his well-known black and white greyhound dog Borderluffian. He thinks the dog may have been shipped out of the city and wishes to warn fellow coursing men to be on the lookout for him.

Mr. Winchell has forwarded the following letter to the Hornell-Harmony Kennels, and as the inquiry unwittingly opens up a new line for beagles, we publish the letter: "Dear Sir—Have you in stock the man-hunting beagle bound pups of pure blood? If so please send me a description of them,

stating price, age, size when matured and disposition. I am looking for dogs to use in detective work. If you haven't, etc." There is no reason why the beagle should not make as good a man trailer as any other hound. He has all the qualifications of perseverance, intelligence, nose and voice to fit him for the work.

Mr. Fred F. Merrill, of Milwaukee, Wis., is evidently getting together a pack of good working beagles, for we learn that he has just purchased from that rare good fancier and sportsman, "Johnny Dugan" Zimmer, as his chicken friends affectionately term him, the noted beagle stud dog Stormy, winner of third, and special for best voice at N. B. C. field trials of 1891. Says Mr. Zimmer, "When hunting qualities are desired I do not believe the dog lives that is more valuable as a sire, as I never knew of a single pup sired by him while I owned him but was a good hunter, and that he sired hunters previous to the time he came to my kennels you have the living proof in his daughter Snow. This bitch is also now, we believe, in Mr. Merrill's kennels. Mr. Zimmer reports his dogs as all in prime condition—fit to kill, we suppose—and trade was never better despite the "hard times." This is encouraging news.

## Yachting.

3. New York Y. R. A., Ann., N.Y.	
0. Schoodic, Sail-off for Cup.	

The English papers are now bragging over the exploits of two new Yarrow torpedo boats, Havock and Hornet, the latter having made a speed of 28.33 nautical miles. Measured mile and even sea trials may be all very well for effete Europeans, but if the builders of these boats want a "World's Record" which will stand, with unlimited free advertising thrown in, they must come to New York and race against the Monmouth and Sandy Hook over the shoals in the Lower Bay.

Since the latter part of last week the yachting world has been on the *qui vive* over a report which is alternately made and denied on unimpeachable authorities that Mr. James Gordon Bennett has purchased Vigilant from the Morgan-Iselin syndicate, and will race her abroad this season. Now that all hope is over of racing on this side the next best thing will be the sending across of the recognized representative of the Cup Defending class. While American yachtsmen have always been prompt and liberal in the matter of defending the Cup, they have for many years shown little disposition to assume the offensive rather than the defensive in international yachting, the venture of Mr. Carroll last season being the first serious attempt in many years. There is something bold and chivalrous in an expedition of this kind which places it on a far higher plane than any measure of mere defense, however well it may be carried out; and it will be a matter of general congratulation if the report prove correct, and Vigilant carries the flag of the New York Y. C. into British waters.

If such a venture is to be made, it could be in no better hands than the owner of Henrietta and Dauntless, one of the oldtime racing yachtsmen, a sportsman and athlete from his boyhood. Mr. Bennett is but one of many famous yachtsmen who have long since abandoned sail for steam, or yachting for other sports, and whose names are fast becoming only pleasant memories to sailors. The return of one such to active racing is a substantial gain to the sport, much needed in these days of syndicates.

Three times in the steam yacht races in the Mediterranean are slow, a matter of less than fourteen knots. However much American designers and steam yachtsmen may be disposed to scoff at such speeds, they may well make a note of the fact that two *bona fide* races between steam yachts have actually taken place in European waters, while the many alleged attempts at racing between thirty-one-knot flyers about New York have one and all resulted in discreditable failures.

It is the Commercial Advertiser of New York which is responsible for the report that Vigilant was "built without stanchions," and much work will therefore have to be done on her before she can cross the Atlantic. Such slipshod methods of construction are much to be repented, and it was really very wrong in the Herreshoffs to build her in this way.

The Toledo Y. C. has elected the following officers: Com., E. D. Potter, Jr.; Vice-Com., William Gates; Fleet Capt., H. S. Bissell; Fleet Surgeon, Dr. M. H. Parmelee; Sec'y and Treas., George P. Brayley; Meas., J. W. Hepburn; Directors: E. D. Potter, Jr., L. C. Van Vleet, William Gates, T. W. Childs, George P. Brayley, Ed Mitchell, J. W. Hepburn, L. Mathias, A. P. Crane.

## Capt. Bayly's Yachts.

We have several times had the pleasure of publishing the designs of Capt. Henry E. Bayly, of Exmouth, Eng., a veteran yachtsman and amateur designer. In connection with his latest design, for a bulb-fin cruiser of 1 rating, the *Weld* gives the following interesting particulars of his work as designer:

Of the many amateur designers Capt. H. E. Bayly, of Exmouth, has perhaps won most distinction, and has practiced the craft now nearly 40 years. He began with the 15-tonner *Ethel* in 1856, which had a lead keel of 1½ tons—a really wonderful thing in those days—and since then has turned out 32 designs. In these he has, of course, suited all the moods of fashion that could be traced from the beamy craft of 1856, to the plank on edge of 1880, and the broad, shallow, low-bowed bulb-keeler of 1894. Noted among the racers which he designed and built was the famous 15-tonner *Buccaneer* of 1865; the successful *Buccaneer* (19 tons) of 1879; the extreme 3-tonner *Spankallid* of 1882; and then after 1887, such well-known names in the racing classes of 2.5 and under as *Searamouth*, *Jack o' Lantern*, *Picarron*, *Thelma*, and *Soprano*, besides many cruisers, from the 50-ton *Wing* to the 30-ton *Murre*. His latest contribution to specimens of marine architecture is the 1-rater *Scourge*, which has been designed for cruising and handicapped racing. The rig is main and mizzenal of the fashionable leg of mutton lug type; the yard points in a line with the mast, and its heel is "jawed" to the mast; the boom is goose-necked to the mast. The leach of the mainsail has a round of about 1ft., which is steadied by battens. The mizzen is a simple "Mudian." The lead keel is "bulbed," and weighs about 14cwt.; through the bulb a good-sized center-plate is fitted, and there will be a small center-plate under the forefoot about 1.5sq. ft. The boat is being built by Mr. Hodge, of Dartmouth, and will be quite a stylish-looking craft; this feature, however, is common to all Capt. Bayly's craft.

## DIMENSIONS.—SCOURGE.

Length over all	25ft.
Length on l.w.l.	20ft.
Breadth	7ft.
Draught of water	2ft. 6in.
Displacement	1.9 tons.
Center of buoyancy aft center of length of l.w.l.	0.55 t.
Center lateral resistance ditto	1.4ft.
Center lateral resistance, including center plate	1.1ft.
Center of effort of sails about C.L.B., plate down	0.15ft.
Center of effort of sails (mizzen excluded) about ditto	1.8ft.
Weight of lead keel	13½cwt.
Sail area—total	296 sq. ft.

## Waterproofing.

Of late we have received numerous inquiries for receipts for waterproofing of all kinds, for clothing, tents and canoes; an evidence that our readers are preparing for a new season afloat or under canvas. Many of these have been published in the *FOREST AND STREAM* at various times in the past, but for the convenience of new inquirers we reproduce some of the best receipts. The following directions for finishing a canvas canoe were furnished by an amateur who has had an extensive experience and now turns out a boat that is probably as durable and serviceable as can be had in canvas, and that is saying a great deal.

The frame is first well oiled with boiled linseed oil, then, after the canvas is all on, I give it a good coat of boiled linseed oil, mixed with turpentine and dryer, and coat a wingless full of each to a gallon of oil. Some authorities recommend first wetting the canvas, as it then takes less oil. I do not do this, as the oil will not fill the grain so well, and it is cheap. The oiled canvas should lie for a couple of weeks to allow time for the oil to harden thoroughly, and once a day the canoe should be turned over and left for the next twenty-four hours with the other side up, as while the oil is fresh it has a strong tendency to run or "seep" down to the lowest part of the boat, where it collects in a thick, gummy mass that will not dry. When the oil is dry and hard, I mark off a line parallel with the deck and some 5 in. below it, where a bilge keel is placed later on; and the bottom below this line is then painted with black asphaltum varnish, thinned with a little turpentine. The bilge keel and the bottom line, as well as the decks and sides, are painted with linseed oil paint, in any desired color, and left to dry for ten days or two weeks, until perfectly hard, when another coat is put on. Even after this the canoe is left for a further time to dry before putting it in the water, by which time the canvas becomes a hard, tough, leathery skin that will stand unlimited scraping and knocking about; and that will be almost as good as new in its second season with use.

The oiled clothing, yellow and black, is made by patented processes known only to the makers, and the best is apt to be sticky on slight provocation. The materials used are linseed oil and dryers. A mixture of linseed oil and turpentine will make cloth waterproof without impairing its flexibility. A full account of the sugar of lead process was given in the *FOREST AND STREAM* of Jan. 10, 1890. If any of our readers have had success with home-made oil clothing we shall be glad to hear from them.

## Mosquito Boats and Mosquito Fleets.

Editor Forest and Stream:

The origin of the word "Corinthian" as applied to various sports, including yachting, seems to be pretty generally understood now by all interested in the subject. But the use of the word "mosquito" in relation to yachting does not appear to be as clearly understood.

A friend recently wrote me: "You are out of your reckoning on the mosquito question. The application of that 'insectism' (if I may use the term) to yachts or boats was first made by an association on Barnegat Bay. It has not as yet been adopted in England and is one of those crazy Americanisms that are permitted because we love really to waste time."

Now the gentleman is entirely at error, not only as to the origin, but as to national precedence.

The term "mosquito" I hardly need inform you, Mr. Editor, has long been in use in English waters, and one of their early famous flyers bore the name "Mosquito."

A glance at the etymology of the word will readily explain its application to the subject. But the use of the word "mosquito" in organizations which use the term. The Latin for fly is "musca" and the Spanish "mosca"; furthermore, the latter language, rich in diminutives, tacks on to "mosca" "quito," the diminutive for little, and gives us "mosquito," or "little fly."

By a very slight stretch of the imagination a mosquito fleet is an organization of little flyers, or single-handed boats.

There are as many ways of spelling mosquito as there are degrees in Masonry—thirty-three, I believe. So when we read of a yacht club calling itself the "Corinthian Mosquito Fleet" we realize at once, with a knowledge of these two terms, its perfect adaptability for the object in view.

F. S. GRANT, M.D.

Ex-Com. Corinthian Mosquito Fleet.

## Knockabout Boats in Boston.

Said George Lawley yesterday: "We are at work on thirteen knockabouts of our own design, besides a few others from local designers. Orders for this type of boat are coming in now quite frequently, and it looks as if there would be a big fleet out the coming season. The boats are fairly fast, are uncapizable, and, to my opinion, will make better and more comfortable cruising boats than the catboats. The yachtsmen ordering them will not be limited as to dimensions, but desire boats such as will be the best for cruising. Owners prefer to build these boats for their own comfort, rather than build a boat restricted in dimensions."

The average cost of a knockabout, with from 1,500 to 2,000 lbs. of lead on the keel, is about \$800. The cuddy, which is forward, is of good size, with transoms wide enough for berths. The sail plans are moderate, and can be carried comfortably in most of our summer breezes. The lug sail boat on Clyde is similar to the present knockabout, and this type is used a great deal in British waters, and is very suitable.

For letting purposes the knockabout will prove a safe boat, and with its growth the number of drowning accidents will be greatly lessened. Sailing parties can come and go in any weather, and under short sail they are absolutely safe. The boats now building by Lawley are very substantial, and put together, and for style and looks quite an improvement on the catboats.

The knockabouts are especially adapted to Buzzard's Bay, where the wind is strong and puffy. The knockabout is a fine boat for the young beginner.—*Boston Herald.*

O. Oliver Iselin, the chief owner of Cup winner Vigilant, is gradually recovering from his recent illness, but is not yet in a humor to make any plans for the coming season of yachting. Mr. Iselin recently told a friend that it was doubtful whether Vigilant would be put into commission this season. Had Lord Dunraven shown any disposition to race the English cutter Valkyrie against Vigilant, Mr. Iselin would have consented to put Vigilant in commission. At the present time there does not appear to be a sloop in her class to give her a race, and the bronze sloop may not be seen under sail this year.—*New York Advertiser*, April 4.

Com. Forbes has finally decided to fit out Volunteer, under the single-stick rig shipped late last fall in part that of Pilgrim. The yacht will take part in the New York Y. C. cruise, and the fact of one of the class being in commission may stimulate others.

STEAM YACHT "ELEANOR"—DESIGNED BY CHARLES R. HANSCOM FOR WM. A. SLATER.

### The New Steam Yacht Eleanor.

The Bath Iron Works of Bath, Me., have now under construction a large and magnificent steam yacht to be named *Eleanor*, and building to the order of William A. Slater, Esq., of Norwich, Conn., a member of the New York and Eastern Y. C.

The *Eleanor* has been especially designed to meet Mr. Slater's requirements, by Naval Architect Charles Ridgley Hanscom, a gentleman whose talents as a designer of all classes of vessels are well known throughout the country. The principal ends sought in the vessel are seaworthiness and strength, with large sail area and superbly finished interior.

It is Mr. Slater's intention to take a two years' cruise round the world, and it is with this object in view that Mr. Hanscom decided to build a yacht of large sail area, so that if at any time the engines or coal should give out, her commander would find himself with an A1 full rigged barque under his command, perfectly competent to withstand any weather, and also to show her heels to the majority of sailing craft.

The principal dimensions of the *Eleanor* are:

Length over all.....	231ft.
Length l.w.l.....	208ft.
Length keel.....	185ft.
Beam, extreme.....	32ft.
Depth of hold.....	17ft. 5in.
Mean draft.....	13ft. 4in.
Displacement.....	1,136 tons.

She is constructed of steel throughout, with water ballast tanks forming a double bottom forward and aft of the machinery spaces. The hull is minutely subdivided by transverse and longitudinal bulkheads into a large number of watertight compartments, and no doors are out in the bulkheads below the waterline unless they are absolutely necessary. The general arrangements of the vessel are shown in the accompanying engravings.

The cabin arrangements are ample and luxurious. The owner's stateroom and study are fitted up in the most modern and artistic style, with bed, wardrobe, writing desk, etc. of carved mahogany. The bathroom is fitted strictly from a sanitary standpoint and finished in polished hardwood and marble. Adjoining the owner's room is the nursery, complete in all its appointments. On the opposite side of the passage there is another suite of rooms, consisting of two staterooms, nursery and bath, which are equally well fitted and finely finished. These rooms, in connection with the linen closets and pantry, occupy the space forward of the main saloon.

The main saloon is finished in paneled mahogany, with polished floor; luxurious couches are arranged on either side, while an open fireplace lends its homelike glow to the surroundings. The saloon is to contain an elegant upright piano, cabinet, etc.; and oil paintings to the value of about \$60,000 will be added to please the eye. Aft of the saloon are staterooms and bath for governess, nurse and female servants.

The house on main deck is of steel, finished in paneled mahogany outside with brass rails and stanchions around top. Within the deck house is located the dining room, social hall, pantry, laundry, drying room, galley, captain's dining room and captain's stateroom.

The dining room is finished in mahogany and furnished similar to the saloon with open fireplace, sofas, an electric piano, etc. Aft of the dining room is the social hall, finished in harmony with the dining room. A stairway of elaborate design leads to the saloon below from this room.

On the starboard side there is a passage from the dining room forward, leading through pantry, galley, etc., thus maintaining communication between the after and forward part of the yacht without exposure to the weather. Between the boiler and engine hatches is located the laundry and drying room fitted with the necessary tubs, racks, steam pipes, etc. Forward of the boiler hatch is the galley, finished with white glazed tiles on the sides, and provided with range, ice chests, dressers, sinks, and all necessary dish-racks, etc. The captain's dining room and state room is tastefully finished in white mahogany.

On the forward berth deck immediately forward of the boiler room bulkhead, is the officers' mess-room and staterooms, two guests' staterooms and bath-rooms finished in ash, with front of berths, bureaus, etc., of mahogany and fitted with marble wash-stands. Forward of the officers' accommodation are the quarters for the petty officers, and the forecabin for the crew. The ventilating and plumbing systems are most complete in all details.

The propelling power consists of a vertical inverted direct acting triple expansion engine with cylinders 18, 28 and 45in. diameter by 30in. stroke. Steam will be supplied by two steel Scotch boilers, each 12' 6 1/2' long and 12' 5' diameter. The total grate surface 120sq. ft., and the working pressure 155lbs. The propeller is four-bladed 10' 4 1/2' diameter

and 11' 6" to 12' pitch. The yacht is also provided with a Hyde patent steam windlass, a Williamson steam steerer, and a distiller and ice machine. She is fitted with a complete electric plant including a powerful search light, and besides the ordinary signal and other lights, the deck will be illuminated and everything done to give comfort to the guests, officers and crew.

The vessel is bark-rigged, the area of her principal sails being 10,935sq. ft. The following are the dimensions of her spars:

Length of mainmast, deck to hounds.....	43ft. 6in.
mainmast, deck to hounds.....	51ft.
foremast, deck to hounds.....	49ft.
mizzen topmast including top gallant.....	40ft. 6in.
mainmast, including top gallant.....	53ft. 4in.
foremast, including top gallant.....	53ft. 4in.
spanker boom.....	56ft.
spanker gaff boom.....	34ft. 6in.
main gaff.....	18ft.
fore gaff.....	18ft.
bowsprit.....	47ft. 6in.
bowsprit outboard.....	64ft. 6in.
foreyard.....	64ft.
mainyard.....	64ft.
foretop gallant yard.....	43ft.
mainmast sail yard.....	48ft.
foretop gallant yard.....	33ft.
mainmast sail yard.....	33ft.

The *Eleanor* will carry seven boats, as follows: One steam launch 28ft. long, one naphtha launch 25ft. long, two 29ft. lifeboats with a capacity of twenty-eight persons each, one six-oared gig 28ft. long, one dinghy 20ft. long, and the catboat Willie, 19ft. 11in. in length, the latter being built for racing and pleasure sailing. The complement of the vessel will be as follows: Captain, first and second officers, physician, three engineers, carpenter, four quartermasters, four apprentice boys, boatswain, fifteen seamen, four firemen, two messmen, three oilers, six stewards, four cooks, barber, two Chinese laundrymen and two deck boys.

The vessel will be under the command of Capt. C. W. Scott, formerly of the *Sagamore*.

The workmanship and finish of the boat is of the highest order in every department, and reflects great credit on both the designer and builders, and without doubt will prove one of the finest pleasure yachts in the country.

### YACHT NEWS NOTES.

Yachtsmen will find plenty of entertaining reading in the last story of the America's Cup and the racing which has resulted from it recently published by the Outing Company, New York. The author, Capt. A. S. Kenely, is an old sailor man and with a long experience as a writer, his work on the *Herald* and various other New York papers being well known to yachtsmen. Old as the story is, his version of "Yacht Races for the America's Cup" is bright, fresh and interesting, including much in the way of anecdote and description to enliven the plain narrative of challenges and races. The development of yacht racing and construction in the last half century is incidentally described in connection with the various races, and of itself makes an interesting story; and the two chapters on the English cutter and the American sloop are worth special mention. The descriptions of the many Cup races are graphic and accurate, but in the portions relating to the challenges and negotiations which have accompanied each race, it is to be regretted that the writer has not made a personal study of the official views of the New York Yacht Club, and to waive all individual judgment. The "New Deed" in particular is handled tenderly and considerably, and the interesting history of its inception and execution is entirely omitted. Beginning with Maria and coming down to the end of last season, by Navaho's races included, and enlivened by many illustrations, the book is likely to find favor with yachtsmen, and the author's treatment is in most cases so fair and impartial that the omission we have noted is all the more unfortunate as leading to erroneous opinions in a very important piece of history.

A new club, by the name of the Forest City Y. C. has been organized in Cleveland with the following officers: Com., P. J. Martin; Vice-Com., J. Humphrey; Sec'y, Arthur Bryant; Treas., Anthony Cline.

We have received from the Millbay Engineering Co. of Plymouth, Eng., their catalogue of marine machinery. The company supplies engines and boilers alone, ready to be placed in vessels, and also builds launches, steam yachts, tugs and steam craft generally.

Murray & Tregurtha, South Boston, Mass., have recently completed or under way, the following orders: A 30ft. x 38ft. launch with 35in. Tregurtha boiler and 5x7 engine for W. L. Wood, Pawtucket, R. I.;

a 32in. Tregurtha boiler for S. E. Eldredge, York Harbor, Me.; a complete outfit for a 36ft. launch, comprising a 35in. Tregurtha boiler, 4 1/2 and 9x5 compound engine, steam pump, shaft, wheel, condenser, etc., for C. V. Sanders, Taunton, Mass.; a 10 horse power tandem compound engine for H. F. Castion, Newark, N. J.; a 4 1/2 and 9x5 compound engine for Giles Avery, Groton, Conn.; a 32in. Tregurtha boiler for Eugene Cowin, Medford, Mass., and a 10 horse power compound engine for Vice-Com. W. H. Russell of the Lynn Yacht Club, which will be placed in his launch Vanita, built by them last year.

The annual meeting of the Owasco Lake Y. C., of Auburn, N. Y., was held on March 30, the following officers being elected: Com., F. I. Allen; Vice-Com., G. C. Smith; Sec.-Treas., C. I. Avery; Meas., Douglas Beardsley. The Commodore appointed as members of the regatta committee W. E. Case, C. E. Thorne, Douglas Beardsley, N. B. Burr. The club resolved to hold three regattas during the season of 1894 upon dates to be decided by the committee. Among the additions to the club fleet are the two fin-keels El Chico, recently purchased by W. E. Case, and Nemadaj, C. E. Thorne.

The Seawanhaka C. Y. C. will give a musical entertainment at the town house, 7 East Thirty-second street, New York, on April 14, at 8:45 P. M.

LAKEVIEW, Mass. April 4.—The annual meeting of the Lakeview Club was held April 2 and the following officers were elected: President, C. M. Williams; Vice-President, C. A. Hanson; Secretary-Treasurer, H. E. Long; Directors—O. P. Dodge, G. S. Davis, E. T. Kirschbaum, C. E. Fay. The treasurer's report showed the receipts to be \$436.88; expenses, \$412.46; cash in treasury, \$24.42; increase in valuation, \$164.38; number of members, 46. A number of new sailing dories will be added to the club fleet the coming season.

The new Yale Cor. Y. C. has challenged the Harvard Y. C. to a race off New London during the week of the rowing race.

Fanchon, sloop, has been sold for \$35 and converted into a steam launch. A few years back she was one of the champions on Lake Erie.

The Seawanhaka Cor. Y. C. has extended the privileges of the Oyster Bay house and anchorage to the New York, Atlantic, Eastern, Larchmont, Corinthian of New York, American, New Bedford, Marine and Field, Massachusetts, Riverside, New Rochelle, Corinthian of Philadelphia, and Baltimore Y. C., and the Royal Nova Scotia Yacht Squadron. The club will give a musical entertainment on April 14, at 8:45 P. M.

A new edition, revised and extended, of W. H. White's "Manual of Naval Architecture," is announced by John Murray, London.

Ambassadors, schr., is announced for sale, after a short service in the fishing trade.

Waterhouse & Chesebrough have designed a fin-keel racer for Mr. Lynch, owner of the 25ft. Garlon. The yacht will be built by McIntyre and will be used about Greenport.

The Haverhill Y. C. has elected the following officers: Com., Augustus Kilby; Vice-Pres., H. A. Littlefield; Fleet Capt., George Ellis; Sec'y, Ralph O. Shapleigh, 44 Washington street, Haverhill, Mass.; Treas., A. I. Jackson; Meas., John Goodell. Trustees—John Goodell, Augustus Kilby, George Graham. Regatta Committee—Augustus Kilby, George Tuxbury, Wilfrid L. Houle.

Emerald, schr., J. R. Maxwell, is now at Tebo's.

Wacondah, sloop, Henry Doscher, is the first yacht in commission this season about New York, being launched on March 20. On March 31, when lying off New Rochelle, she was entered and robbed of a yacht cannon and other articles valued at \$500. Detectives have found part of the goods at Glen Cove, where they were hidden by Reuben Titus, of New Rochelle, who has been arrested.

The New Rochelle Y. C. at a meeting on April 3 adopted the Seawanhaka rule with the Larchmont table of allowances. The season will open on May 19 with a catboat race. Eleven members were elected.

Glendover will be the name of the schooner yacht designed by H. J. Gielow and building by A. C. Brown, Tottenville, Staten Island, for O. K. Dimock. She will be 70ft. over all, 53ft. l.w.l., 17ft. 6in. beam and 7ft. draft.

The South Amboy (N. J.) Y. C. has elected the following officers: Com., Leonard Furman; Vice-Com., Daniel C. Chase; Sec'y, Orlando Perrine, Jr.; Treas., Joseph A. Sexton; Meas., Thomas Baker; Regatta Committee: F. E. De Graw, Wilfred Smith, F. M. Parker, Joseph Smith and M. N. Roll. House Committee: C. B. Munday, Capt. J. D. Worth and C. J. Voorhees.

On March 23 the sloop Orion left Wallin & Gorman's yard, Bay Ridge, for Nyack, with her owner, Mr. Footman, and her skipper, Capt. James Fergusson, on board. When off Piermont a squall

struck the yacht, and she jibed, the boom striking Capt. Furgueson and knocking him overboard. He sank and did not rise, and the body has not yet been found. He hailed from Bath, Me., and was unmarried.

The steam yacht race for the Bennett prize of 5,000 francs, begun on March 29, was finished by a second race over the 52 mile course on April 4, Roxana winning, with Eros second, Poros third, while Marchessa withdrew. Mr. Bennett has offered three prizes of \$1,000 for 1895.

Thetis, sloop, has been sold by P. V. Stevenson to Edwin P. Baugh, Jr., of Philadelphia, through Waterhouse & Chesbrough. Capt. Perry, who has sailed her for some years, will retain command.

The new Allan 10ater has been tried under sail at Bristol and will soon be shipped to Glasgow. There is little doing at the Herreshoff shops and most of the men have been laid off.

Helen, 40ft. cutter, has been sold to P. C. Smith of Harvard.

Sultana, steam yacht, has been chartered by T. L. Park to John R. Drexel.

The frame of the 30ft. racing cutter for George Gooderham has arrived at Touhou and the yacht will be completed by a local builder. Mr. Watson made the design and had the frame got out and set up under his direction.

On Tuesday last Valkyrie was launched from Tebo's new floating dock, where she has laid during the winter. Her copper has been removed entirely except from the lead keel, and the bottom has been painted a dark lead color. On her arrival in the Clyde she will be newly coppered and the cabins will be upholstered. The dock gates were opened at about 9:30, the dock settling slowly for the first twenty minutes. When the floor was once under water the dock sank more rapidly and the keel soon disappeared, and after the water was some 8ft. deep over the floor a very few minutes served to set the yacht afloat. Capt. Cranfield and his crew were expected on Wednesday.

### Cruising in the Cy-Pres-1893.

(Continued from Page 302.)

Saturday, July 15.—As it was low water at half past six, and we could not get out of the harbor till nine, or ten, we did not hurry things any, but washed and stowed away all our breakfast dishes and made a trip ashore for water and bread. Just as we returned to the boat we met the "mossers" coming back from their morning work, and as the wind was fresh from the southwest we asked one of them if there was much wind outside. He said, "Yes, it blows hard and it is going to blow harder." We thought it would too, so tied down two reefs in our mainsail before hoisting it. We intended to cast her head to starboard, as the deepest water was on that side, and we could jibe round as we followed the channel out; but the tide was running swiftly, setting us well on our anchor, and while I was taking the stars off the foresail a puff struck us and we paid off on port tack, dragging our anchor out. We let the main sheet run clear out and set the foresail, sheeting it flat, hoping she would swing off in deeper water, but the anchor dragging over her bow prevented this and before I could get it up on deck we grounded in the mud. We lowered all sail at once and waited for a little further rise of tide.

In about half an hour we had enough water under us to float us, and hoisted the foresail, which was sufficient to drive her along slowly and carry us over into the channel. When fairly under way, we got the mainsail up and sailed out of the little harbor under double-reefed mainsail and foresail. We found the wind very fresh from S. W. and puffy, and were very glad that we had reduced our canvas before starting as the wind had increased to half a gale by noon and the sea rose very fast. We could not point as close as usual owing to our reefed mainsail and found that the best course that we could make would carry us five miles out from the Gurnet Lights. As this would take us clear of the Bartlett Rocks and Howland Ledge, it just suited us, and keeping a good full on her we plowed along till we could make out the Gurnet Lights, the westward of which the Steamer's getting heavy. We went here west by north. We were out about two and one-half miles from the nearest shore and the wind had a sweep of fully eight miles, blowing right out of Plymouth, or, more strictly speaking, out of Warren's Cove.

Standish Monument is the most conspicuous landmark on the coast after leaving Scituate. It is a tall, black looking shaft, and for a long time we took it for the chimney of a factory. As the Steamer's getting heavy every minute and the wind increasing, we thought we would find smoother water nearer shore, so went about on port tack and stood in, pointing our bowsprit right for the monument, and held on this course till we could fetch the Gurnet Lights easily, then we went about on starboard tack. We were flying through the water, pointing straight for the lighthouse, when we caught sight of a buoy, our port bow, a hasty glance at the chart convinced us that we were inside of High Pine Ledge. This is a large shallow spot almost due north of the Gurnet, and part of it has but 2ft. of water at low tide. We concluded that we had better keep outside of it, so slackened off our sheets and bore away, passing the buoy on our starboard hand. We hauled sharp round the buoy, and flattened down our sheets hard, as we had lost time by the unexpected change of course. By pinching a little we could just make the whistle off the Gurnet and passed it on port hand, but so close that our boom barely cleared it. As the wind had increased to a gale and had a long sweep here, we found a very sharp jump of a sea running past the Whistler, and watched anxiously for a smooth to put about in. When we got one we swung her around quickly and started up the channel on port tack. This was the roughest piece of water we had ever been in, but the Cy-pres behaved so nobly that we enjoyed the excitement hugely.

We had been told that the channel up to Plymouth was a "yeasty place," and we found it all we expected and more. The wind howled through the rigging and carried the spray over us in sheets, so that we had to wear waterproofs. Everything was wet the minute it was brought on deck. Our glasses, a new pair, were so sticky from the salt water that we could not focus them, and we had to get along without them for the rest of the day. We were able, by sailing close, to just clear the small lighthouse on Duxbury Pier, and as we passed it we eased off sheets and ran up the Cow Yard, dropping our anchor in 4½ fathoms, midway between the black and red buoys that mark this channel. We had made the run from Scituate, a distance of 19 miles, but by our course over 24 miles, thrashing dead to windward in a gale sea and half a mile of wind, in a little over three hours; and we felt proud of the little Cy-pres' seagoing qualities. She went dancing over the waves, and the bigger they grew the better she liked it. Until we reached the chop in Plymouth Channel we had not taken a drop of water on board, and we drove her all the time as hard as we could, as our quick passage shows.

Soon after leaving Scituate we saw a fishing sloop outside of us, with two men on board. They stood in for the smooth water near shore, passing near us, but astern, luffing to every puff and evidently carrying more sail than they could stand. Soon after passing them we saw them heave-to and take a reef in their mainsail. They followed after us, but we left them very fast, running out of sight of them by the time we reached the Gurnet Light. We were well pleased with the Cy-pres' performance under sail, but not at all pleased with her performance at anchor. We lay right in the middle of the channel and the tide was running out at a terrible rate directly in the teeth of the gale, which had a long sweep of over two miles. The seas were short and deep, their tops white with foam, and they flew past us with a hissing, rushing sound. The powerful tide caught our deep keel and swung us round irresistibly, stern to the wind. The gale drove us ahead so that our anchor was under us, and we heaved about, first one side and then the other. The seas at times striking us broadside on and rolling us down rail under, would break clear over us, then they would hit us under the counter with a hammer-like shock that made her tremble from truck to keelson. When she would take one up in the cabin, then she would take another, hear distinctly the chain dragging over the pebbly bottom, and when we hauled it up next morning it was for several feet polished as bright and smooth as though done with file and emery paper.

During all this time the dinghy was a constant source of care and even danger, the wind would drive it down upon us every few seconds and each shift of the yacht's position would bring it up in us in a new place, so that one of us had to watch continually and be prepared to fend off every instant. Once or twice a sea caught it broadside on, and we thought surely it would turn over; but fortunately it did not. Fearing that this might happen we got it alongside and removed the oars, baller, sponge and oarlocks. Later in the day we went on to the painter about 75ft. of good, stout line and paid it all out, so that the boat rode 50ft. ahead of us, and we had no more trouble from that source, the long rope acting as the water acted as a spring on her, and she was less violent in her motions.

At the turn of the tide the waves quickly subsided, and as both current and wind were from the same direction we lay quietly at our anchor, though straining the cable very hard. We took advantage of this change in the situation to get our supper and a little sleep, lying down with our clothes on, prepared to jump up at a moment's notice should our anchor drag or chain part. Just before sunset our cutter about 40 or 45ft. long came in under reefed mainsail and jib and anchored about a quarter of a mile to the westward of us, near a coasting schooner that lay there when we came in. We saw the schooner at anchor as we rounded the Duxbury Beacon but thought she was over in the channel that runs up Kingston Bay, or we should have followed her example and anchored near her. The party on the cutter seemed to know just where they wanted to go, steering in without any apparent hesitation, as if they had been there before.

As they went over what we supposed was shallow water, we got out

our chart to see why these two vessels should anchor outside the channel. We found they were inside a kind of basin or pocket, where they had from 13 to 24ft. under them, and with shallow water all around, and were not affected by the tide so much as we were. We considered the advisability of following them, but finally concluded that as our anchor had held us so well we would not break it out until we were obliged to, and hoped the gale would let up before another change in the tide.

Everything remained comparatively quiet until about 1 o'clock at night, when we were aroused by the violent pitching of the boat. On getting on deck we saw that the tide had turned and the wind if anything was blowing harder than before. The yacht was at her old tricks again, shooting across the channel, first one side, then the other, sometimes riding up over the anchor till the chain was slack, and then suddenly turning and shooting off at a tangent until she brought up with a jerk. We knew nothing short of a miracle could keep us from having a foul anchor, yet as near as we could tell, it seemed to be holding us securely. The night was dark as pitch, and we could not see a thing except the lights on the vessels near us, a light on Clark's Island about two miles north of us and of course the light on Duxbury Beacon. We thought the last two were in about the same relative positions as when we last looked at them and concluded that our anchor was still hanging on nobly. As our anchor light had gone out we re-lighted it, and as an additional precaution set another lantern on the cockpit seat, then went below again to get out of the chilly wind and flying spray.

Sleep was wholly out of the question, for we were tossing and pitching about in a very uncomfortable manner, and every little while would look out to see if our light was burning, or if we had changed

SCITTATE—LANDING PIER.

our position relatively to the beacon. After several hours of watchful anxiety we became hardened to our surroundings and would doze off into little cat naps, only to wake up with a start as a bigger wave than usual would give us a heavy roll, or some loose rope would slap against the mast with a crack like the report of a rifle.

At last, after what seemed to us the longest night we had ever known, the dawn began to appear and we strained our eyes to make out the two buoys between which we had anchored on the previous afternoon. I first discovered what I took to be the black buoy on the west side of the channel, but much to my surprise I could not find the red one which should be close by and to the eastward of us. I immediately began to think that our worst fears had been realized, that in the darkness and storm we had dragged our anchor, no one knew how far or whither, but the Duxbury Beacon was not far off and it still bore about the same position from Clark Island, so we could not be very far from our old berth. I called F.'s attention to these points and he suggested half jocosely and half in earnest that the red buoy must have been carried away during the height of the gale, and that we would find that we were all right as soon as the day was fairly begun.

I volunteered to stay on deck and keep a lookout while he went below and lighted the stove and put on dry underclothes. It was not long before I made out the exact situation in which we were, the buoy that I took for the black was actually the red, and we had dragged our anchor about an eighth of a mile or a little more, nearly due east, and were then in very shallow water, and just over the sand bar that extends from Clark's Island to the Duxbury Beacon, which is on its southernmost extremity. I called to F. to come on deck immediately, that I knew where we were, and that we must get under way at once. After getting our anchor we hoisted our double-reefed mainsail and

CY-PRES—AFTER THE STORM.

foresail and stood over by the two vessels, which were still at anchor where we had seen them the evening before. When our anchor came up we were not at all surprised to find the chain wound twice around one of the flukes. We were pleased to see how much more quietly we lay in our new berth than we did in the channel; the tide did not affect us very much, and the yacht lay head to wind as she should. We had learned a lesson that we would not soon forget, and determined in future not to anchor in narrow, deep channels when there was any other place available.

Soon after breakfast the white cutter went out of the harbor under double-reefed mainsail and jib, carrying two boats on her davits. We laid at our anchorage until about half-past 10, when, if being about half flood tide, we weighed anchor and sailed up to the town. The harbor is full of shallow places and we touched bottom twice before getting up to the docks, but, as the tide was rising, we were not delayed more than a few minutes each time. The channel lies very close to Long Beach for about a mile, and then turns at right angles toward the docks, meeting midway between the docks and the beach a narrow dredged channel. The proper place to turn is directly in front of a frame hotel, called the Columbian Pavilion, which is on Long Beach facing the harbor. In front of this hotel is a pier used by a ferryboat which plies back and forth carrying excursionists and picnic parties over to the beach, which is a famous place for clams. When going in keep close to Long Beach, following the curve of the shore till you are just past the pier in front of the Pavilion Hotel, and then turn sharp to the right, running straight for the docks at Plymouth, as the dredged channel is in a straight line with them. We were under double reefed mainsail and foresail as the wind still held fresh, and were delighted to find how easily the Cy-pres worked in the short tacks which we were obliged to take while beating across from Long Beach to Plymouth. We ran under the lee of the land as we approached the town, and found the water very still. Dropping our anchor in a pool as quiet as a mill pond, we could scarcely believe that we had for the past twenty-four hours been battling with such a vexatious sea out in the Cow Yard. The sun was shining bright and we got our blankets, cushions, etc., out on deck to dry, the whole boat being covered with them. As it was Sunday we did not go on shore but lay quietly at anchor and basked in the quiet, warm sun all the rest of the day.

Late in the afternoon the 30ft. centerboard sloop Zingara came in and anchored near us. She had on board a professional sailmaker and a crew of four young Corinthians. The captain told us that they started from Marblehead on Saturday for Plymouth and got as far as Cohasset when they were forced by the fierce wind and heavy seas to turn back and put into Hull, where they lay till Sunday morning. He said they were very anxious to make Plymouth, but their boat would dive into the heavy seas, stopping stock still nearly every time she struck a sea, and they made no headway for hours, but kept sagging off to leeward all the time. We felt quite proud when we heard this, for two of us had come along easily in the little 22-footer Cy-pres, under the same conditions that had forced the well-manned 30-footer back.

We lay side by side in a small basin at the end of the docks. Right in front of us, at the head of the slip, was Plymouth Rock, covered by a stone arch and surrounded by a high iron fence to protect it from curiosity seekers, who would soon carry it all away if left to themselves. The harbor is full of catboats ranging from 15 to 18 or 20ft. long. They are of the wide shallow type and well suited to the shallow water. The favorite sail is a lug and they seem to be too large for the boats, as the masts are very high, but they were out all day Sunday in the strong wind and are evidently able to carry them. One thing that struck us as peculiar was the fact that the barometer did not fall any during Friday or Friday night nor on Sunday till about 3 P. M. When we left Scituate it registered 30.04, just about the same as it had been all the previous day. The sky was clear and bright and there was no indication of the strong wind that we had on Saturday, or the gale of the afternoon and evening. On Sunday as the wind began to moderate the barometer began to go down and reached the lowest point, 29.68, at 2:30 P. M., at which time it was quite calm. This is the first time in our experience when the drop of the barometer followed the high wind instead of preceding it.

Monday, July 17, was a beautiful day, and we lay at anchor resting our tired bodies and thoroughly drying everything on board. We made a short excursion into the town, visiting old Burial Hill, Pilgrim Hall and other places of interest, buying among other provisions on our way back to the boat a huge watermelon. We found that water could be had at a fish house on the dock close to the landing float. In the afternoon about high tide we were hailed by some one on the dock to "get out of there," as a tug was coming in with a coal barge. There seemed to be plenty of room for anything to get by, but not wishing to have any row about it we took the kedge out about 100ft. further from the wharf, and paying out chain on our anchor, warped ourselves out of the way. When the barge (the Cohocent) was past, we hauled the kedge up and drifted back into our old position. The greater part of Plymouth Harbor is dry at low tide, and all the boats lie on the mud several hours each day, but we lay in a pool. Monday evening just at sunset we were somewhat startled by the *honk, honk, honk!* of a flock of geese that were flying low, just skimming along the surface of the water. We supposed they were wild birds at first, but after circling around the harbor once or twice, they settled down at the rear of one of the little houses on the shore, where we saw another lot just like them. They were not the ordinary white variety, but resembled very closely the wild fowl.

[TO BE CONCLUDED.]

### FIXTURES.

#### SEPTEMBER.

3. Holyoke, Ann., Holyoke, Mass.

WHETHER as a matter of merit or merely because they are new and fashionable, the two designs, "La Gloria" and "Scarecrow," published in the FOREST AND STREAM, have proved wonderfully popular, and a very large number of boats have been built from them. This year a number of new ones are under way in various places, and it is likely that the class will be well represented at the coming meet at Croton Point. An excellent opportunity will be presented for a test of these larger boats against the 16x30 canoes, and also for exciting and interesting races among themselves.

The accessibility of the camp by water alone should result in a large attendance of canoe yaws, Scarecrows, and all types of small craft and the racing of these boats may be made one of the attractive features of the meet. Of course, the canoe racing proper must claim first place, but no one will be better pleased than the canoeists at a chance to test the speed of the larger boats. Much has been said at times about the superior speed of the St. Lawrence skiffs and similar craft over the 16x30 canoe, but thus far the canoe has come out ahead in all trials that have been made at the meets. None of these, however, in the past have been thoroughly satisfactory; and the question of the speed of the canoe compared with skiffs and other wider craft is yet unsettled; but the meet of this year should place the matter beyond doubt.

### Red Dragon C. C.

On Saturday evening, March 31, the Red Dragon C. C. gave a smoker to its members and their friends, and after a pleasant evening all voted it one of the successes of the club.

One of the interesting features of the evening was a lantern slide exhibit, the slides appearing in principal order to come from the number were some taken from photographs of the club's meet at Delanco in 1899. Com. McCormick's explanatory description of the views was highly commendable. The music—and there was lots of it—was furnished by the R. D. C. C. Mandolin and Banjo Club.

The original poem by Dr. McFetridge upon the R. D. C. C. foot ball team, of which our Wilt was captain, was received with deafening applause. The "Goodbye Song" by H. Fleishman, in the chorus of which all present joined, added greatly to the merriment.

Although disappointed in the non-appearance of our wrestlers and some of the sparring talent, we fortunately had a few "clever ones" among our members to produce interesting events.

Amid the fumes of tobacco and the aroma of food for the inner man, impromptu speeches were made and songs sang till close to the advent of the first day, when the majority returned to the city with pleasant remembrances of another successful smoker. F. O. G.

### A. C. A. Membership.

ATLANTIC DIVISION: Dr. W. J. McFetridge, Philadelphia, Pa.; Reinhold Kulep, Newark, N. J.; Horatio S. Byrne, Inwood, New York city; E. C. Pressprich, New York city; Louis W. Wiese, Bordertown, N. J.

targets and not at "birds" as stated in the programme. Why people will persist in dubbing a piece of clay as a "bird" is beyond our comprehension,

The wind, as stated above, was brisk in the early morning and by the time a start was made in American handicap it was blowing about twenty miles an hour. On these grounds the traps face the northeast so that the wind was in favor of the birds, blowing directly from the shooter toward the traps.

It was about 10 A. M., when Referee Jacob Pentz called the first shooter to the score for the big handicap. Chas. A. Dellar of Brooklyn was the official scorer. Fred Hoy, who recently killed 97 out of 100 ducks, was the first to shoot. He was a very good marksman and possessed of skill equal to the best. Capt. A. W. Money, with the big goggles and usual gental smile; Noel G. Money, not as old in years as his father, but nearly as good a shooter; Fred G. Moore and Louis G. Moore, "the boys," these were the occupants of the big tents; and inside the big tents, as whole companies of ducks and strange (O) to some people intended to be in for first money.

When the great event of the shooting year, the grand American handicap, began it had an entry list of fifty-four, comprising the

### POSITIONS CAUGHT BY "FOREST AND STREAM'S" CAMERA.

*crème de la crème* of the shooting world. One man only, Charles Macalester of Riverton, N. J., failed to appear, this leaving fifty-three to shoot and making the moneys \$667.50 for first; \$400.50 for second and \$267 for third, this to be worn by the guns.

The sport opens with Dick Phister at the 88-yard mark and he made a fine kill of a right-quartering incoherer, using both barrels; Upson, Class, Morfey and Durvey killed down, and the first lost bird was scored to "Dutchy" Smith, this being a right-quartering driver that knew how to twist and made use of its knowledge. Kleinz, Spicer, Work, "Mack," Brewer and Simpson killed, and then came J. L. Smith, who lost a terribly fast right-quartering driver. Hoffman killed, as did Thompson, Dickey and Elliott, Timmons following with a w. s. N. D. Walford and Macbeth killed, Charley Young lost; N. G. Money followed with a loss, a hard driver; E. D. Miller killed, as did A. S. King, Meyer, A. W. Money, Ireland, Jones and Moore, when came along M. F. Lindsley, who made an excusable miss of a fast and tricky right-quartering driver, being followed by Neaf Apgar with the loss of a tricky bird taking the same direction as above. A. H. King then scored a kill and up stepped the intrepid young amateur Fred Hoey, on whom all eyes were centered; Hoey got a fast bird going straight away, but a little halt in his work caused him to lose it. Fenrose, Irvin, Wills, Helkes, Walters, Wolstencroft, and Penny killed, Connor lost but he was a hard driver; Drennon, and Cooper, Peacock and Weld killed, Little, Ross, Grand, Stewart and Helgasns killed; Edgerton lust and Besemer killed, this ending the first round.

The birds were a good lot of flyers, some being rattling fast and others fair to good. The wind being in their favor caused a majority of them to trend to the right and front and assisted them greatly in their flight. The light was erratic to an extreme and changed with a sort of monotonous regularity that aggravated the shooters.

On the second round Simpson, Dickey, Timmons, Miller, Lindsley, Willey and Canon lost. On the third round Lindsley and Canon again lost, this shuffling them out, as under the conditions three misses were out provided there was a straight score. The fourth round saw the elimination of Canon and Miller. On the fifth round Timmons shot himself out of the race, being followed on the same round by Hoey, who lost a twisting driver. The sixth round sent Ireland to the rear; the eighth round retired Heikes; on the ninth round Young was eliminated. On the tenth round the manager, Mr. Penrose, was making an excusable miss and W. S. King and Penrose stopped on the eleventh. The twelfth round was the last of the day, the manager having reserved the privilege of calling the shoot off for the day whenever in his judgment the light began to fail. In this instance his judgment was correct, for the sun was obscured by a heavy overcast whose growing years cause them to prefer daylight to twilight.

As stated in the report on the first day's shooting, the first 9 birds shot at in the handicap by those men who were in the 15-bird sweep started on Wednesday counted as the finish of the latter sweep. The 15-bird sweep was made up of 10 birds from the 10-bird sweep divided by Denny, Hyde, Upson, Kelsey and Wolstencroft on clean scores. For second money there were 11 ties; for third there were 16, and for fourth there were 11. The day's shooting was very interesting, and the men were very careful upon one another's traps, and were extremely careful, and resulted in a fine average for the shoot. After shooting in the handicap had been suspended for the day there came a

*Friday, the Third Day.*

At six o'clock on Friday morning when we peeped through the blinds to catch an idea of the weather prospects, the outlook was anything but encouraging. The sun was shining it is true, but there was a portentous haze in the air that boded ill for a clear day. Along with the sun, the "hot" prospects were accompanied by a heavy shower of rain. At seven o'clock it had clouded over and for a few moments the rain fell, then out again came the sun. The air was cold and raw, making heavy clothing a necessity and keeping in a shiver those who ventured out. At eight o'clock the sun had again disappeared and the clouds began to gather, the news of the good shooting to be seen having been scattered broadcast by the score of newspaper men who were present the day before. The shooters too were early on hand sizing up the weather.

prospect. The Thursday night when the handicap was stopped, there were ten winners with clean scores of 12 kills each; twenty-one who had missed one each, and eleven who had missed two each, the other eleven having been shot out with three misses each. Each of the professionals had one or two misses to their credit, and were practically out of the race so far as first and second money were concerned. Denny seemed to be the choice of quite a number in the selection of a probable winner, and he was named their faith and their money, their money, their money. Morfev, Capt. Money also had a considerable backing, as did Von Lengerke, Wolstencroft and Drake. The odds, however, were extremely light in all cases.

The number of spectators kept increasing steadily until at 10:30. When shooting was started there were fully 400 on the grounds and during the afternoon this number was nearly doubled. Nearly all the sport lovers of New York and New Jersey were there, as were a number from Pennsylvania.

At the above hour Referee Pentz called time and Frank Class went to the score, promptly making a quick second-barrel kill of a fast bird. Morfev, D. Smith, Kleinz, Spicer, Work, Mack, Brewer, Slup-

POSITIONS CAUGHT BY "FOREST AND STREAMS" CAMERA.

in a dozen directions to each yard. Weld, Arnold, Stewart, Edgerton and Bessemer killed and the round was ended. Allen Willey and Dr. Little who had scored two misses each on the previous day failed to appear when their names were called and they were scratched. During this round the shooting was good, the birds being several yards better than on the previous afternoon and having a strong, fluky wind

to assist them. On the twentieth round Upon lost a right-quarterer; Spicer lost a twister to the right and front, this making him a non-competitor, being his third miss; Mack lost a rather slow incomer; Hoffman lost a right-quarterer; and Stewart, who scored a miss, charged his miss on a right-quartering incomer that towered out of the charge, this threw him out of the race; Meyer lost a fast one that went to the front and then dodged to the left evading both barrels; Wolstencroft and Denny got each a fast right-quartering driver and scored a miss each; Stewart scored his second miss while Edgerton scored his third miss and dropped out. On the fifteenth round those to go out were Philster, Upon, Mack (lost one of the fastest birds of the day), Noel Meyer, Miller and Bessmer. On the twentieth round there were twenty-six in the race, Brewer and Welch having gone out on the seventeenth round; and Spicer and Stewart on the eighteenth and Meyer on the twentieth. At this point those who had clean scores were Morley and Capt. Money, all the others having scored one or more misses, although when the shooting began there were twelve with clean runs. Those with one miss each were Klein, Work, Simpson, J. L. Smith, Elliott, Fulford, Jones, Moore, A. H. King and Walters. At this stage the chances were that nothing short of 24 would get a place, and so it resulted, Morley and Capt. Money killing out straight, this leaving

third money for the 24, who were Kleinz, Fulford, Simpson, J. L. Smith, Jones, Moore and Walters.

still birds, more and more waters. The birds were driven on the first day, and were still better by the stiff breeze blowing directly from the shore toward No. 4 trap. Some few failed to get off quickly when the trap was sprung, but as a rule the pause was but momentary and once they caught their wings they were as good as any. Good as they were, however, they should as a whole have been much better considering the price paid for them by the shooters, who were obliged to pay 35 cents per bird. The standard price per bird at all pigeon matches, club shoots and tournaments is 25 cents each, and no higher price is paid for any bird unless it has been given a special prize. In this case, however, neither by word nor sign were the shooters given to understand that an advanced price would be charged. Nearly every shooter protested at the charge, but the protest availed them naught. Elmer Shauer said the management paid Louis Miller 32½ cents each for the birds, Mr. Miller getting the dead birds. This was a very neat arrangement for Mr. Miller, who gets from \$1.50 to \$1.80 a dozen for the dead birds, gets his profit out of 32½ cents and beside reaps all the benefit of a fat trade for four days. Even granting that the association paid 32½ cents for the birds, the price is still not justified. The charging the shooters 35 cents, as this object is not to make money for itself, but rather to spend money to advertise the wares of its subscribers.

As in the "luck of the birds," so-called," there was not a real deal of difference, the chances being nearly even. The really fine shots made on extra good birds by one or another of the 53 shooters were so many that to record them would fill a page. Each and every man did the best he knew how to kill every time he went to the score, although it must be conceded that some were playing in harder luck than others. The first bird shot by the first and second shooters, and Stewart of Rochester, killed every bird they shot at, and yet each of them were shot out because for each of them 3 birds crossed the boundary to die. Irvin of Red Bank, Von Lengerke of New York, Wolstencroft of Philadelphia, Drake of South Orange, McWhorter ("Mack") of Pittsburg, Noel Money of Oakland, and Miller of Springfield, each lost 2 dead out of bounds. Money's last bird was a awfully hard one, he was high in the air, and he shot at him, and he missed over the wire. Brewer of a screamer in his final round, hitting it hard both times, but it was tough enough to go over. Elliott's last bird fell less than a yard beyond the wire. Upson's last was a hummingbird driver, fell stone dead just past the wire. Noel Money and Miller got right-quartering drivers, both of which fell just a few yards too far out to score. Aggar stopped shooting when he had a twister in a couple of yards out. Drake's first fell 20, grass at 20 yards out; Edgerton's last was a swift and a low driver, dead 3yds. past the wire.

Below will be found detailed scores of the big shoot, the conditions being 25 live birds per man, \$25 entry, 25 to 33yds. inclusive, 3 moneys, high guns to win, \$1,000 guaranteed by the association. Referees, Jacob Pentz and John J. Hoey; scorer, C. A. Dellar:

## Property For Sale.

## FOR SALE

The property belonging to the estate of Gen. J. H. Baxter, deceased, situated on the southern bank of the Restigouche River, next below the fishing privileges of the New York Salmon Club, about six hundred acres of land with large dwelling, suitable for club house, and about a mile of river front for salmon fishing. Ad. O. H. FLATT, trustee, Washington, D. C.

## Salmon Fishing.

The privilege of one rod for sale in the Moisie River, one of the best salmon rivers in Canada. Inquire of F. E. TAYLOR, 103 & 111 Worth st., N. Y. 18

FOR SALE.—ONE OF THE MOST ATTRACTIVE salt water farms in Maryland. Fine game country. Address F. S. LOCKERMAN, 1501 Bolton st., Baltimore, Md.

## Excellent Salmon Fishing.

An unusual opportunity to obtain a very valuable fishing right at a nominal price. Address H. T., care of FOREST AND STREAM.

## A New Authority on a New Fish.

## The LEAPING OUANANICHE

## What It Is

When, Where and How to Catch It

BY EUGENE MCARTHUR.

The Ouananiche is rapidly coming into prominence, and is attracting the attention of anglers everywhere. Seven years' experience in catching and studying the Ouananiche has thoroughly fitted the author to speak with authority on his subject, and the work is a valuable one. The book contains a large number of half-tone cuts from photographs taken by the author, and a correct portrait of the fish itself. A line map of the St. Johns country, also made by the writer, is given. This work will be a recognized authority, and should be in the library of every angler. Paper, 66 pp. of t. xt. Price 10 cents. Published and for sale by

FOREST AND STREAM PUBLISHING CO.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

If he is a friend of yours; if he is interested in the gun or the rod; if he is not a reader of FOREST AND STREAM; if you would like to have him see it for three weeks; and if you will give us his name, we will supply him with one of the

FOREST AND STREAM'S SILVER BULLSEYE Cards, which will make it easy for him to send for the paper. . . . .

A STEP FORWARD.

At last Congress has taken action. On Tuesday of last week a bill, introduced by Mr. John F. Lacey to protect the birds and animals in the Yellowstone National Park, and to punish crimes in said Park, and for other purposes, passed the House of Representatives. Before the Senate there is a bill introduced by Mr. Carey, of Wyoming, which has the same purpose, and which will probably pass without opposition at an early day. These two bills will no doubt be considered in a conference committee of the Senate and House, and such committee should have no difficulty in agreeing upon a substitute embodying the best provisions of both.

Mr. Lacey's bill is printed in another column. The measure is a long step in the right direction, yet it does not specify all offenses which are likely to be committed by visitors to the Park, nor do its provisions apply to the forest reservation as they ought to.

Mr. Carey's bill is more full than Mr. Lacey's, and besides, covers some points which the House bill omits, by providing that any person violating any rule or regulation promulgated by the Secretary of the Interior for the preservation "of timber, mineral deposits, natural curiosities or wonderful objects within the said Park," or for the protection of birds or animals or fish, shall be deemed guilty of a misdemeanor. But here the penalties provided are too small, being only a fine of not more than \$100, or imprisonment not exceeding six months, or both, with the costs of the proceeding. Such penalties, while appropriate enough to certain offenses, are by no means heavy enough for some others. To kill one of the few remaining buffalo of America or to fire the forests of the National Park is a much more serious offense than to knock away a piece of rock from a hot spring formation, and while a fine of \$100 would be an ample penalty for the last offense, it would be absurdly inadequate for the first-named. There is, however, material in these two bills for a very satisfactory government and police law to protect the natural objects within the Yellowstone Park,

provided certain necessary amendments shall be made to their provisions.

It is very important that the provisions of any bill for the protection of the Park should be made to apply to the forest reservation on the south and east as well as to the Park itself; for this forest reserve, as we have often said, is practically, though not in name, a part of the Yellowstone Park.

However much opinions may vary on other points in connection with this great reservation, there can be but little difference of sentiment about the necessity of protecting it from injury. All can unite on a protective measure, and every vote in both Houses should be recorded in its favor. It is to be expected that the Senators from those States adjacent to the Park, who must feel an especial pride in it, will give their strongest support to such a measure, and a like enthusiasm for it may be looked for it in the Western members of the House.

The effort to protect the Park originated in the Senate. Senator Vest, of Missouri, was the first one to take up arms in defense of this reservation. He first entered on the struggle many years ago and carried it on long and successfully, and he may justly be regarded as the father of legislation for the Park. In his efforts he was ably seconded by Mr. Manderson, of Nebraska. For his promptness in drafting and putting through the House the first bill for protection, Mr. Lacey deserves generous credit, and Mr. Carey's bill, as we have said, is a wise one, provided certain strengthening amendments shall be incorporated in it.

The news printed in FOREST AND STREAM last week shows how rapidly the natural objects in the National Park are disappearing, and how vital to their preservation is the passage of a protective bill. A good beginning has been made, but it is of great importance that there shall be no slackening of effort in this matter. The Senate bill should be passed without delay, and as soon as possible thereafter a substitute which will afford adequate protection should be agreed on in conference. There can be no doubt that the measure, when passed, will receive executive approval.

FAMILIAR ACQUAINTANCES.—XIV.

WHEN the returned crows have become such familiar objects in the forlorn unclad landscape of early spring that they have worn out their first welcome, and the earliest songbirds have come to stay in spite of inhospitable weather that seems for days to set the calendar back a month, the woods invite you more than the fields. There nature is least under man's restraint and gives the first signs of her re-awakening. In windless nooks the sun shines warmest between the meshes of the slowly drifting net of shadows.

There are patches of moss on gray rocks, and tree trunks and fairy islands of it, that will not be greener when they are wet with summer showers, arise among the brown expanse of dead leaves. The gray mist of branches and undergrowth is enlivened with a tinge of purple. Here and there the tawny mat beneath is uplifted by the struggling plant life below it or pierced through by an underthrust of a sprouting seed. There is a promise of bloom in blushing arbutus buds, a promise even now fulfilled by the first squirrel-cups just out of their furry bracts and already calling the bees abroad. Flies are buzzing to and fro in busy idleness, and a cricket stirs the leaves with a sudden spasm of movement. The first of the seventeen butterflies that shall give boys the freedom of bare feet goes wavering past like a drifting blossom.

A cradle knoll invites you to a seat on the soft, warm cushion of dead leaves and living moss and purple sprigs of wintergreen with their blobs of scarlet berries that have grown redder and plumper under every snow of all the winter. This smoothly rounded mound and the hollow scooped beside it, brimful now of amber, sun-warmed water, mark the ancient place of a great tree that was dead and buried and all identity of its kind moldered away and obliterated before you were born.

The incessant crackling purr of the wood frogs is interrupted at your approach and they disappear till the wrinkled surface of the oblong pool grows smooth again, and you perceive them sprawled along the bottom on the leaf paving of their own color. As you cast a casual glance on your prospective seat, carelessly noting the mingling of many hues, the brightness of the berries seems most conspicuous till a moving curved and recurved gleam of gold on black and a flickering flash of red,

catch your eye and startle you with an involuntary revulsion.

With charmed eyes held by this new object, you grope blindly for a stick or stone. But if you find either, forbear to strike. Do not blot out one token of spring's awakening nor destroy one life that rejoices in it, even though it be so humble an one as that of a poor garter snake. He is so harmless to man, that were it not for the old, unreasoning antipathy, our hands would not be raised against him; and if he were not a snake, we would call him beautiful in his stripes of black and gold, and of graceful motion—a motion that charms us in the undulation of waves, in their flickering reflections of sunlight on rushy margins and wooded shores, in the winding of a brook through a meadow, in the flutter of a pennant and the flaunting of a banner, the ripple of wind-swept meadow and grain field and the sway of leafy boughs. His colors are fresh and bright as ever you will see them, though he has but to-day awakened from a long sleep in continual darkness.

He is simply enjoying the free air and warm sunshine without a thought of food for all his months of fasting. Perhaps he has forgotten that miserable necessity of existence. When at last he remembers that he has an appetite, you can scarcely imagine that he can have any pleasure in satisfying it with one huge mouthful of twice or thrice the ordinary diameter of his gullet. If you chance to witness his slow and painful gorging of a frog, you hear a cry of distress that might be uttered with equal cause by victim or devourer, for, as the Irishman said, "They both has rayson to squeal." When he has fully entered upon the business of reawakened life, many a young field mouse and noxious insect will go into his maw to his own and your benefit. If there go also some eggs and callow young of ground-nesting birds, why should you question his right, you, who defer slaughter out of pure selfishness, that a little later you may make havoc among the broods of woodcock and grouse?

Of all living things, only man disturbs the nicely adjusted balance of nature. The more civilized he becomes the more mischievous he is. The better he calls himself, the worse he is. For uncounted centuries the bison and the Indian shared a continent, but in two hundred years or so the white man has destroyed the one and spoiled the other.

Surely there is little harm in this lowly bearer of a name honored in knighthood, and the motto of the noble order might be the legend written on his gilded mail, "Evil to him who evil thinks."

If this sunny patch of earth is not wide enough for you to share with him, leave it to him and choose another for yourself. The world is wide enough for both to enjoy this season of its promise.

Some weeks ago we noted the prosecution of a member of the Governor's Staff for unlawful shooting, as a gratifying evidence that the game laws are intended to apply to all men irrespective of the handles affixed to their names. Another case in point, and teaching the same great truth, is that of the Chief of Police of Poughkeepsie, who was brought up with a round turn last week by Deputy Game and Fish Protector Mase, of that city, and fined for netting fish in a near-by lake. Every successful action brought against individuals, who because of office or position in the social scale may assume immunity from the protective statutes, affords an instructive object lesson, and commands respect for the principle of game and fish conservation.

The suggestions of Mr. Hallock and of Mr. La Roche respecting the relations of sportsmen and land owners are worthy of more than passing consideration. In a word, the plea is for square dealing. It is a plea which cannot be spoken too often or insisted upon with too great emphasis. Read the two letters and tell us what you think of them.

The Fish Protective Association of Monmouth County, N. J., has caused to be introduced at Trenton a bill to regulate the employment of pound nets. The text of the measure is printed in our fishing columns.

We publish to-day the programme of the recently organized National Shooting Association for its initial shooting festival in 1895. The formation of the Schuetzen Bund points to a growing interest in rifle shooting; and in 1895 we may expect to witness something like the fervor of the tournaments of Creedmoor days.

## The Sportsman Tourist.

### ARKANSAS FRUIT, FISH AND GAME.

I would like to sing a little about Arkansas, if you please, particularly about that portion of the State that lies directly beneath the shadow of the line separating it from Missouri, so close in fact, that five minutes' walk will put me where I can stand with one foot in each State. Mammoth Spring is the name of the town and Fulton the county, lying among the foothills or rather footsteps of the Ozarks, for this range of so-called mountains is only an upheaval of big hills, stretching across southern Missouri and northern Arkansas, at least that is the impression one gets in riding through it, the greatest elevation between Springfield and Memphis being about 1,700ft., from which point the eye sees no peaks, only a vast billowy wooded panorama—I say "the eye," but perhaps I should say my eye, for it may be that other persons can see, or have seen peaks "in the mind's eye, Horatio" if nowhere else. When the foliage is on the trees the view must be a beautiful one, but now the tints are sombre and the leafless branches of the oak which everywhere covers the hills and valleys, give little promise as yet of umbrageous drapery. This whole region is underlaid with minerals of almost every description, lead and zinc predominating, but it has been prospected only in spots, and it is the mineral that makes this country so exceptionally valuable for fruit growing. It is attracting the attention of fruit growers far and wide, and hundreds, yea thousands from the Northern and Western States have come down into the two lower tiers of Missouri counties, and the two upper tiers of Arkansas, within the past few years, and are still coming, clearing the forests and setting out orchards, largely of apple and peach, for it is proven that this is to be the orchard of America. The thrifty growth of trees, and flavor, size and beauty of fruit, are phenomenal. The big apples and peaches which carried off the blue ribbon at the Columbian Exposition, came from this vicinity. A prominent fruit grower told me a day or two ago, that he had any number of peaches last year that when measured were as large around as his neck, and then I walked around said neck, and as I couldn't see that his neck had gone down any, concluded that the fruit must have been about 5in. through. What he said was, that the gauge of those big peaches was the same as his neck, as shown by the calipers. When apples are big they weigh from 18 to 24oz., and are as crisp and delicious as they are big. I have seen plenty of peach trees here, three years old from the planting of the pit, that were over 2in. through at the butt and 8 to 10ft. high, and in bearing. Maybe budded trees bear as soon as they are set out. I shouldn't be surprised. Apples bloom regularly the third year from setting out, and frequently the second. All fruits flourish like the proverbial green bay tree. I suppose maybe I ought to except the cocoanut, orange and bread fruit, but I'm talking of fruits of the temperate zone now. The hills and valleys of this country are for the most part just covered with stone, a white-gray conglomerate of flint and limestone in chunks up to the size of a half bushel, and the strangest part of it is the fact that they are all on the surface, loose, none in the soil beneath. These rocks are plainly igneous, or largely so, and continually disintegrating, furnishing plant food *ad lib.* Of course I'm no rock sharp, and so geologists needn't feel obliged to accept my opinion, but how these stones came to be spread all over the face of south Missouri and northern Arkansas, a vast rocky coverlet, with the foot or two of rich soil beneath resting on ten or more feet of strong red clay loam, is a nut that the sharpest of geologists can pound on to their heart's content. I'm glad the correct solution of the question don't devolve on me. But here are the rocks, and if you should tell a Northern fruit grower that these forbidding, white, stony hillsides grow the best fruit in the country, probably you'd have to flee his presence and he'd flee the country. Now don't understand that every square rod of land is so covered. Oh, no. Sometimes it is only every other rod. The fact is that there is a considerable area, scattered around, where the stone is so small that it does not interfere at all with cultivation, and other areas where only here and there the stone is so large that picking it off is necessary. Some tracts have none to mention, but taking the country over the majority of the land is stony. Clear the surface and the labor is done forever, as far as stone is concerned, and being so rich in mineral elements the soil produces amazingly, and the fertility would seem to be permanent. So much for soil. There isn't much in this letter so far relating to sport, but it's just possible that one of your readers somewhere will be interested in something besides sport.

The town of Mammoth Spring is so named because of the existence of a spring here that is a veritable Jumbo. It boils out of the ground at the rate of 50,000 cubic feet a moment and makes a river from the word go—a river of beautiful greenish blue water clear as crystal that ripples and rushes down grade 28ft. to the mile (first mile anyway) over a gravelly bed, among rocks and under steep bluffs in a wholly captivating manner. Half or three-quarters of a mile below the spring the river (Spring River) is over a hundred yards wide. A dam of solid masonry has been built just below the spring, affording power for a cotton mill of 3,000 spindles, and a flouring mill with capacity of 300 to 500 barrels a day, both mills in constant operation, the latter day and night. The water above the dam covers an area of twenty-nine acres. The spring at its boil is 70ft. deep. It is said to be the largest spring in the world. In the river are fish of many kinds, mud cat, blue cat, goggle-eyes, "sun perch," bass, jack salmon (pike), suckers and eels, and the man that isn't satisfied with that list wants to have his pole and line taken away from him. Near the dam is situated a fish farm, a hatchery with a capacity of a million and over, and ponds and tanks proportionate. They hatched about a third of a million eggs this season. I went down a morning or two since and saw the man in charge feed the trout, which are largely rainbow, only a few speckled. In the stock pond, 600×200ft., there are 800 breeders, and about 100 more in the spawning race, 200×30ft., which have not been returned to the big pond. In the yearling pond, 200×100ft., there are 6,000 trout, and there are eight rearing tanks 4×30ft. with dirt bottom. The oldest fish are five years old, remainder one to three. Largest trout about 2ft. long. Besides these, there are 1,100 carp, scale and mirror, in a long pond, largest 20 to 25lbs., three

years old. This seems large to me, but I give the statement of the colored man in charge. I saw several large fish, but they were evidently several pounds less than twenty. The man said that the carp would weigh 4 to 6lbs. at one year old. In addition to the trout and carp, there are gold fish, some 800 yearlings, which sell for fifty cents apiece.

The trout bring 40 cents, the carp 10 cents per pound, and the demand cannot be supplied. The facilities are excellent, an unlimited supply of the purest water at a temperature of 60°, and I judge in the hands of a practical fishculturer there is a bonanza in it. The present owner is a lady living in Little Rock, who of course cannot give it that supervision which is imperative. I hear the plant is for sale. I walked to the edge of the different ponds and saw the fish churn the water to foam as the attendant threw the feed (cooked flour and chopped liver mixed) in, and it was a sight to make the blood leap to see thousands of trout rushing back and forth, leaping from the water a seething mass of whirling beauty; but when the big fellows in the stock pond got started and the piscine acrobatics was at its height, the bottom fell out of the language tank, and speechless admiration and tingling nerves held sway. I want to remark that it was a great sight.

Some years since a big freshet came sweeping down the valley, and, owing to inadequate waterway, backed up into the hatchery and washed a hundred thousand fry or so out into the river, where for some years they were occasionally caught, and even now I understand one is now and then caught; but it is thought they are gradually disappearing. There are some huge beauties in the dam, however, that refuse to be taken out.

For game hereabout there are some fox and gray squirrels on the hills, more in the bottoms, hares, numberless quail all through the woods, a good many turkeys back a little from the settlements, and in the sparsely inhabited sections many deer. I saw a young fox squirrel yesterday which a hunter had killed, that was nearly as large as a gray squirrel, and this is April 8. Walking through a large fruit orchard the other day with the owner, I saw just ahead of us on either side the peach rows twenty or thirty quail trotting along at a moderate gait, seemingly little alarmed. The proprietor said he never shot them nor allowed any shooting on the place, and that there were hundreds of birds probably scattered over the farm. It was a very pretty sight, and I wished I owned the quail—wouldn't object to the farm.

For birds there are the bluejay, and pewit, and tom-tit, and robin, redbird, great crested woodpecker (ivory billed?) and two or three other varieties, and the "mockingbird makes music all the day," especially in the evening.

I am surprised to find no grouse in these hills. It would seem that this would be the very country for them, but though I have inquired diligently I am unable to learn of any. It would be a good plan to try stocking the Ozarks, the only drawback I see is that the thickets are rather scarce, at least in this vicinity, and that leads me to remark that there is no very old timber in this region, nor ever has been, at all events there are no old stumps, and the oldest settlers say that when they first came to this country there was no good-sized timber and much of the land that is now covered with oaks 6 to 10in. through was perfectly bare of trees, and tall grass covered the land. I think I am safe in saying that nine-tenths of the timber is from 6 to 12in. in diameter.

This is a queer country, long neglected, there being twelve counties in northern Arkansas without a railroad, but with fresh blood and capital it will yet blossom as the rose, for it is budding even now. The natural advantages in various lines are here, and people who have struggled in Kansas, Nebraska and the Dakotas with grasshoppers, droughts, blighting winds, snow, ice and misery, are coming down into this land of short winters and fruit by the thousands.

MAMMOTH SPRING, Ark., April, 1894.

### REVERIES OF A DISMAL MAN.

AS I HAVE been a Dismal Man for many years, it is but natural that the cheerful, gushing and effervescent style generally adopted in shooting sketches should be distasteful to one of my nature. As a rule a shooting trip is a serious affair and a great strain upon one's nerves and digestion, and therefore should not be treated in a light and vivacious vein.

Sportsmen's reveries are described generally as taking place in a cosy "den." The sportsman sits before a blazing open fire, tilted back comfortably, with feet high above the head. The old and trusty pointer dozes upon the hearth. Outside the storm roars and the wind beats fitfully upon the casement. The smoke from the sportsman's Havanna (never domestic) curls lazily upward in fantastic shapes, etc., etc., etc.

Now, I haven't a den. I don't keep a pointer, for they come high and are expensive to keep, to say nothing of the constant worryment of mind over their evil doings. I do not smoke, for it makes me sick. I dare not extend my pedal extremities in the comfortable manner of the musing sportsman above, for at my time of life I find it extremely difficult to unhinge them after remaining long in that position. Outside, the storm is bad enough for all practical purposes, and I am reminded that my mackintosh is a delusion and a snare, though purchased in good faith from a seemingly honest house. I have no open fire to sit before, simply a radiator in my office. But I can "revere" just the same, for there is no business to attend to. My thoughts run riot; and again I am visiting the scenes of many a southern shooting trip.

December. Blowing, freezing, and anything but the ideal sunny South. A long, tedious sail down Currutuck Sound, and I arrive at my destination and spend the rest of the day and evening before a pine wood fire. At times roaring hot, then dying down till cold chills race up and down the spine. Then Jim "totes" in more wood, at the same time leaving the door open, letting in blasts of cold air. I bake one side, while the blood congeals in the other, and thus alternate until I retire. I sink into a feather bed and keep on sinking until my backbone rests upon the bed cords beneath. I arrange the few feathers in the tick on each side, and make a mental resolve to suggest to my host that he use larger bed cords, as they cut into the flesh less. An ancient and musty smell prevails. Why shouldn't it? Have not the feathers been imprisoned in the tick since time primeval?

After a few hours of fitful slumber I am aroused, and

don several layers of heavy clothing, and descend at an unearthly hour to breakfast. To be sure, the coffee is boiled, and the chicken dough called hockcake would be better if done more. Less grease would be more pleasing. I long ago learned that it is useless to try to reform such customs, so I partake of that which is set before me, endeavoring to feel thankful that it is no worse.

The skiff is ready. The cold sweet potato lunch is aboard. At the risk of bursting blood vessels the heavy boxes containing the live geese decoys are hoisted in, and we are off. Down the creek we pole. Darkness and silence reign and nature still sleeps. Brightly shines the morning star. The blind is soon reached, and as the water is too deep for the live decoys a clod from the marsh is cut for each goose and placed in the water, and ere long our birds are staked out. After a good bath each goose mounts his clod and converses with his neighbor. We get into the blinds and thrust feet and legs into the half barrel sunk in the marsh and until daylight I am employed in efforts to shrink myself into the smallest possible compass. The guide possesses this art to perfection, and at will can collapse into the half barrel. This I am unable to do, owing to length of limbs, and therefore "loom up" much too conspicuously. Lord! how cold it is. Is there a bleaker spot on earth than this hole in the marsh with but a few short reeds and water bushes to break the chilling blasts? How warm and comfortable that almost featherless bed was after all.

At last the eastern sky grows pink. Old Sol soon peeps up from behind the sand hills and begins his daily journey. Large flocks of ducks, and gangs of geese and swans rise from their feeding grounds to seek new quarters for the day. The boom, boom, boom, of heavy guns comes from every point, and at times one might imagine a heavy battle going on. Suddenly the guide whispers, "Ducks coming. Lie low. I will tell you when to shoot." I squeeze every possible portion of my anatomy into the barrel and await orders. The guide nudged me. "Here they are; jump up and let them have it." I now find that I am cast in my barrel; but finally, after a terrific struggle, get on my feet and manage to pour the contents of both shells after a fleeing bunch of redheads entirely out of range.

The flight now keeps up in good earnest and I blaze away at the birds instead of ahead of them. Result, only now and then a bird killed by me, though Jim repeatedly wipes my eye and cuts them down at long range after escaping my fire untouched. This state of affairs is anything but soothing to one's nerves and after each shot I make a mental resolve to hold well ahead, but make but little progress in that direction, the excitement proving too much for me, to say nothing of the disturbing influences caused by my frantic efforts to unlimber from my cramped position.

The weather, which early in the morning promised to be fine, changed, and a beastly drizzle and sleet set in, and for the rest of the day I sat hunched up and miserable while the rain slowly percolated the seams of my sham of a mackintosh; and I can think of no greater punishment for the wretch who sold it to me than to wish he were in my position.

Just before leaving the blind a gang of geese came over us. They evidently were suspicious and would not light, but with loud honking sailed overhead some fifty yards or more high. Slipping in a B.B. shell I for once held well ahead of a large gander and let drive, and have the satisfaction of seeing him wince, make a few frantic attempts to keep his wings going and fall, striking the marsh with a terrific crash, killed dead by the little 12-gauge. It is surprising what a change comes over one after making a good and successful shot.

For the rest of the day I heeded not the wretched rain. When, as I helped take up the decoys, I stepped over the top of my wading boot and let a pint of water down, I neglected to pour forth the usual volley bewailing my luck, though I knew it would take a week to dry that boot. In quite a cheerful mood I sat in a pool of water while Jim paddled home, and after eating a large and indigestible supper I sit by the fire and toast my shins, close my eyes and see that goose come down again, and for the nonce forget I am

A DISMAL MAN.

### WILD GEESSE IN THE FOG.

BOSTON, April 8.—*Editor Forest and Stream:* One year ago the 1st day of this month, I was nearer to a bunch of wild geese than I ever expect to be again.

Arthur Cahill and I were exploring for trout, and being unsuccessful were resting a while. Presently my ears were greeted by the calling or honking of the geese, who were bewildered by the dense fog. Gradually they drew towards us until they were directly overhead and not more than 25 or 30ft. above us.

To say that I was thrilled would be talking mildly. The only chance in my life and not a gun at hand. On opening day this year Mr. Cahill and I took a trip to one of the noted brooks in the vicinity of Sharon. We were unable to discern anything that resembled a trout, although we were assured by some of the knowing ones that they were waiting to be caught. Later we hoped for more success.

Mr. G. J. Brann and I have been enjoying ourselves very pleasantly during the past winter with the whistlers and old squaws. And right here on Revere marsh, too. No need of going off to the great Horicon marsh Mr. Hough tells about, to have a little fun, though I know that Mr. Hough would not consider our shooting as worthy of his consideration. When he can take Roll Organ's gun and knock down a pair of big fat redheads out of a bunch of 19, of course no common old squaws would have any charms for him.

Black duck (so-called) have been fairly plentiful this spring. We averaged about two dozen each during the first two weeks of the arrival. They are very wary fellows and do not seem to decoy readily. During the day they spend their hours on the flats off Nahant, feeding, etc.

At dusk they wend their way into the many small streams that abound through the marshes, and if allowed will remain till morning. But they do not obtain much rest, as they are kept on the go all the time by rapacious man. They are very poor in flesh and hardly worth the getting. Our fish dealers had some very faded looking trout on last Monday morning, April 2, evidently not more than three or four days out of water.

JOHN P. WALLACE.

## Natural History.

### THE WOLVERINE AT HOME.

ALTHOUGH most of the better known quadrupeds and birds of this country are frequently discoursed upon, and many curious and interesting accounts of adventure with them are related, there is one animal of which we rarely see mention made in print. This is the wolverine or North American glutton.

During several years' wanderings in some of the wildest sections of the Northwest, I have been brought in contact with various individuals of this most interesting species. Hunting the wolverine has, at different times, afforded me some of the keenest pleasure, besides supplying matter for both surprise and reflection, for there is no member of the Carnivora inhabiting the continent that is of more absorbing interest. Most works on natural history give the inquiring mind but scant information regarding it, stating merely that it is known in Europe as the glutton, belongs to the *Mustelidae* or weasel family, and is a great nuisance to the fur hunters of the far West, owing to its annoying way of robbing their traps. From this source one gains little insight into the true nature of the wolverine, but in the course of a winter passed in the Cascade Mountains I received considerable enlightenment on the subject, and these experiences may perhaps be worth relating.

Although several thousand wolverine skins are annually disposed of at the London fur sales, none but the hunters themselves can conceive the wonderful cunning and matchless audacity displayed by these animals in their natural home. In appearance a wolverine strongly resembles a small short-legged brown bear, with which species it is frequently supposed to be connected. This is erroneous inasmuch as the animal is the largest member of the weasel tribe, a good specimen measuring 4½ ft. from tip to tip. It is compactly and powerfully built and possesses amazing strength, while for courage and bulldog tenacity of purpose, it has no equal. It will fight, when cornered, to its very last breath; and no other animal approaching its size will attack it. Although a slow runner the wolverine is very agile and an excellent tree climber, and it is partly on this account that credence has been given to many wonderful stories of its habit of lying in wait for its prey. It has even been asserted that the elk and moose were dropped upon from above and thus attacked and overcome, but these "yarns" have been exaggerated. The truth is, animals of that size are far beyond the wolverine's strength, as it is exceptional for one to reach the weight of 60 lbs.

In the fall of 1891 I found myself at Lake Chelan in the new State of Washington. The extreme beauty of the place, its fine climate, and the excellence of the hunting said to be obtained there, all proved strongly attractive to me, and I decided to spend the winter at a spot some fifty miles up the lake, in company with a hunter and mountain man of life-long experience. The location selected was on a flat bar of 150 acres or so, which had formed at the mouth of a deep cañon that extended about twenty miles back into the great Cascade Mountain range, and down this gorge coursed the foaming torrent of a stream fed by the glaciers and snow banks on the mountain summits which here mingled with the deep clear waters of Chelan. To the left of the bar, when looking up the cañon, stood a solitary mountain some 2,000 ft. high and removed a mile or more from the main range, and in this space was a small lake about two miles in length and possibly half a mile wide. It was at an altitude of nearly a thousand feet above its larger neighbor. The shores were thickly timbered to the water's edge, and the surrounding mountain slopes were covered with a heavy growth of fir and pine, and a dense forest of cedar stood at the upper end of the lake. My friend Shannon and I had determined to try fur hunting, and as this seemed a promising bit of country from a trapper's point of view, I resolved to string my line of traps through it, while my companion handled the wooded slopes on the other side of the cañon.

We built our cabin down on the bar, and by the first of October it was completed, and a supply of provisions consisting of flour, groceries and vegetables, laid in. For fresh meat we were to depend upon our rifles, and we calculated on having a sufficiency of everything for the entire winter, and nothing now remained but to spend a few days in hunting deer, as we needed meat for ourselves and bait for our traps, and venison would supply both.

We soon discovered that, as a hunting country, our new location was greatly over-rated. In fact, deer were very scarce and they stayed so high up on the mountains that we hunted for two days with but little success, except for some blue grouse, which seemed quite plentiful. "Heads or nothing," was the word then, and heads generally went, for when shot in the body by one of our rifles most of the bird disappeared into space, leaving little but a bunch of feathers with a hole in it. Late on the afternoon of the third day, however, I saw a young buck on a little bench in some heavy timber. He was looking directly at me and was not more than 70 yds. away, and at the sharp clear crack of my rifle he gave a couple of wild plunges down hill and fell dead. The bullet had passed nearly through him endways, and we were no

longer troubled about the question of fresh meat. Now came the most important part of our work, that upon which depended the question of success or failure, *i. e.*, the putting out and baiting of our traps. We each possessed considerable knowledge of our work and thought that we had little to learn about the trapping of the fur-bearing animals of the Washington forest, but this confidence in our powers was somewhat misplaced, as we were destined to find out in a most convincing manner.

The day after the killing of the deer we took with us an axe, hatchet and a load of traps and bait, and, climbing the steep trail that led up to the little lake, we made our first attempt just beyond the ridge. Collecting a number of light poles 8 or 9 ft. long, we built up an open pen shaped like the letter V, and about 2 ft. high at the angle. This was roofed over with small fir boughs for 3 ft. or so from the angle, and under this covering was a stake, placed as far back in the pen as possible. On the stake was impaled a piece of venison, and about 6 in. in front of this bait we set the trap, which had been previously attached by its chain to a heavy drag pole, usually a 4 ft. piece of green fir. Then the trap was carefully covered with light moss or dead grass cut up short, and everything was ready for the expected visitors.

My line led down into the dense brush at the head of the little lake where we placed another one; we had also to clear a trail here in order to travel. Then through some little openings in the forest and on to a long grassy open slough or hay meadow, along which my trail went, and this brought us to the heavy belt of cedar through which a small stream meandered. Beyond the cedar swamp was the wooded base of the main mountain,

last one on the line was untouched. It was also clear to me that not one, but two or three of these gentry had come in company, and the question now was, how to be ready for them in the future, for I was confident they would repeat their visit. Fortunately the last pen contained a large-sized bait, so I divided it up into smaller ones and re-set my traps, and in order to prevent a repetition of the burrowing process, I cut thick stakes with my hatchet and drove them deep into the ground along the outside of the poles and returned home with but one marten for my day's work and with a vague presentiment that my new friends would cause trouble in some manner or other before long.

Next day I took a fresh supply of bait and attended to the other three traps besides making the pens narrower, and over our pipes that evening the subject was discussed. Shannon had heard something of these tricks, he said, but had caught wolverines in Idaho and had no great bother with them, although he admitted that he might have something to learn yet, in which I fully agreed with him. He also expressed a wish to see some of their work, as we decided that should any more such thefts occur he should accompany me one day and investigate matters.

Several heavy snowstorms now came, keeping us within doors for nearly a week, and then the weather cleared; but 2 ft. of new snow made walking extremely hard, as we had no snowshoes. Taking a shovel with me I managed to clear eight of my traps and get them in order again, for the entrance to the pens was sometimes drifted full of snow, notwithstanding the shelter afforded by the overhanging branches of the trees, under which we always placed them. At dusk I reached the cabin resolved to go again next day and attend to the remainder. That night was clear, and the stars and a young moon shone out brightly—a good night for fur to run, we thought—and next morning found us both on the warpath again, each on his own line. I got a fine large marten at my first trap down on the bar, which seemed to be doing very well, as I had caught four there so far, but the next five traps were untouched save for a squirrel, which was utilized as bait, but on approaching the last one reached the day before, a great shambling track was seen close by and a few scattered blue feathers and a missing bait showed that chance had foiled me this time. A thieving jay had been caught and served to sharpen the appetite of a hungry wolverine, and not content with that morsel the brute had also devoured the bait. However, anticipating this, I had brought some more in my knapsack, and after replacing it with a fresh piece I proceeded on my way, taking the shovel with me. The trees were heavily laden with snow, presenting a most beautiful appearance, and now and then some over-taxed limb would release its burden and a dense feathery mass would descend in a momentary storm from which I occasionally received the benefit. But my attention was fully occupied with the signs on the white carpet underfoot, for night prowlers had evidently been out in force, and a little band of wolverines had been traveling in every direction. To the uninitiated it would seem as if there had been a dozen of them, but I knew that only three or four had made the tracks, and their object had been the same as before, *i. e.*, to rob my traps, and in this they had succeeded

most admirably, as everything was in their favor. A marten lay dead in one, killed by a bite across the shoulders but not eaten, as its flesh is not liked by them and is rarely touched. Another trap contained the paw of a fisher, being all that was left. This was going to extremes, as fisher skins were valuable and very scarce hereabouts, and this act made me more anxious than ever to catch the perpetrator, and I also found that another pen had been entered from the side—there being a wider space than usual between the poles—and of course despoiled in the usual way, so I once more went to work to make things secure. Every open space was stopped by driving in stout fir stakes, and all weak looking places were reinforced in the same manner, and it really looked to me as if no animal could possibly reach the bait in the last six pens without going in at the front. The other traps nearer home were not molested, as the marauders confined their attentions to those in the cedars and along the foot of the mountain, and then retreated to their haunts in the almost inaccessible recesses of the rocks and dense brush and timber away back up the cañon, emerging at intervals of a week or so to feast at my expense, it seemed. This was getting exasperating, as we were doing quite well otherwise, and it made us all the more anxious to add a wolverine skin or two to our collection if only for the sake of variety.

Another heavy snowstorm now came and for several days neither of us went away from the house. Then we started in company one fine morning for the cedar swamp, clearing the pens of snow as we proceeded, and by noon we reached the scene of operations. A glance told us there had been trouble in one bait house anyway. The roof was partly torn off and a hole appeared in the side of the pen, and the trap, a single spring No. 1½, was dragged through as far as the chain would allow, but it was empty. The heavy weight of snow held the drag pole firmly down and the wolverine's great strength had enabled him to pull his foot out and escape, which it could never have done had the clog been loose. However, this was encouraging, so we proceeded on our way, seeing no tracks, as this had occurred before the last snow fell, but a sur-

A MAINE WHITE DEER.

Killed at Lobster Lake, Maine, October, 1893.

broken into numerous ravines and ridges and thickly strewn with fallen timber to the very edge of the river cañon. Here we set the last trap, having placed my line of fourteen at intervals of a quarter of a mile or so, besides putting one down on the bar where the cabin stood, and, after setting out Shannon's line of sixteen in the same manner, we were ready for business.

It shortly became manifest that, although deer were scarce, other animals of more importance to us were fairly plentiful, the beautiful little pine marten predominating, and soon everything was working nicely. The heavy snows back in the mountains commenced to drive the deer down and Shannon killed two fine bucks on his line, while I floored another on the further end of mine, and by the end of November our string of furs began to assume a very handsome appearance. Several bunches of marten furs, four fine fisher skins, two foxes and a lynx were hanging in the cabin. We also saved our deer hides and tacked them on the walls in company with those of a black bear and two white goats, and the interior of our log house became quite attractive. The snow gradually got deeper, and by December it was three feet in depth around the little lake, but we kept our trails open by continual traveling until they were beaten hard and firm.

We usually visited our traps twice or thrice a week, and one day after a light fall of snow I noticed the track of a large animal. It crossed my trail just beyond the cedar swamp, and after making a short detour, re-entered and followed it, soon coming to a pen. But however efficacious this proved in catching other fur-bearing animals, it was plainly evident that it would not work with this fellow, for a mound of dirty snow, round behind, told its own tale. The visitor had burrowed beneath the poles, abstracted the bait and made off with it, and a smooth hollow in the snow a short distance away with blood stains and a few fragments of bone explained the rest, for there he had made his meal.

It was a wolverine, of course. Both the tracks and the work told me that, and the next three traps had fared no better, for two were snapped and the third held the remains of a mouse and all the baits were gone, but the

prise awaited us at the next place. Pen there was none; a mound of closely packed dirty snow had replaced it. Bits of wood pitted with teeth marks were strewn around. Poles three inches thick were gnawed in two and the ends here and there protruded from the smooth beaten snow together with some of the fir branches that composed the roof, and there was not even the semblance of a trap pen left. Closer examination showed the broken end of a chain at the top of the pile of snow, and the author of all this had escaped with a double spring No. 2 trap on his foot by way of a memento. As before, the clog was held fast by the snow and the wolverine, after destroying everything within his reach, had broken the chain and made off, trap and all.

It took us twenty minutes to straighten up things here and cut new poles, and then we had no trap to set, but we had a spare one at home and resolved to utilize it on my next visit, and at the very next pen we found a most convincing example of the wonderful cunning possessed by these animals—a cunning amounting almost to powers of reason it seemed, for this was surely more than mere instinct. The pen happened to be one I had strengthened and was, as I thought, unassailable, but after fruitless efforts to enter from behind, the wolverine had attacked the roof, dug through 2 ft. of crusted snow, eaten a hole through the fir boughs and secured the coveted morsel. Shannon was fairly astounded at the wonderful sagacity and boldness displayed, while I, too, was learning an interesting lesson, but we at once went to work to frustrate such dodges in future. Every bait was thoroughly protected by more poles driven in, and, as it were, forming a pen within a pen, with but a narrow opening in front where the trap was, and when we returned that night we felt sure that our efforts would now prove successful, as it was evident that our only hope lay in causing these gluttonous brutes to forget their cunning in their extreme greed, and to this end all our efforts were directed. Hanging a bait over the trap I had found by trial to be worse than useless, so we stayed by the pen system as being suitable for everything that might come along.

For a week or so nothing was caught except camp robbers (a mischievous, meat-eating bird common in the

A FAMILY OF WOLVERINES.

North), bluejays and one or two pine martens, when the weather, which had held very fine, changed again. Two inches of snow fell, which was just what we wanted, and then, warned by previous experiences, I looked out for a visit, knowing that everything was in order, and better prepared than ever before, and one morning early in January I started once more on my usual trip.

Long before reaching the mountain base beyond the cedars I became aware by numerous tracks in the new snow that the previous night had been a favorable one for the denizens of the forest, and after despoiling two nice martens of their rich brown skins I approached my ninth trap with feelings of keen anticipation, but, save for the legs of a bird, there was nothing, although my friends had been there, eaten both bird and bait, as usual, and then gone toward the next pen. This was where the chain had broken before, and they had carefully avoided a too near approach to this spot, but the pair, for there were two of them, kept on to the next inclosure which contained a heavy trap, one of our largest and strongest, and the first glimpse told me of success. The trap and drag pole had gone, and a broad trail leading down into a dark hollow in the heavy timber adjacent told me in which direction, and I immediately followed it. For a hundred yards or so it was easily traced, and the clog had occasionally caught in a small bush which was promptly mowed down by the powerful jaws of the animal, which again struggled onward with its incumbrance, only to be stopped every few feet in the same manner, and presently I saw him. The drag was entangled in a clump of willows, and a big wolverine, held fast by the forepaw, was fiercely attacking them. On seeing me he ceased his exertions a moment, growled at me, and then made desperate efforts to escape, but all to no purpose, and a little bullet from a Stevens pistol dropped my snarling enemy dead.

At last! A feeling of extreme satisfaction came over me as I gazed on the dark, thick, glossy skin of the wolverine, and when I examined the muscular limbs and compactly built form, I no longer wondered at its strength. This was a fine specimen too for this section, although those from the far north are finer still. Moreover, if one could be caught, others could too, and after taking off the hide, which was fully prime, I reset the trap and looked at the remaining three, all of which had been visited and one of them snapped. A marten carcass was untouched, but the venison bait had disappeared, and that night as we dressed and stretched our furs we agreed that, as the winter progressed, some more of that little band would share their companion's fate.

Nor were we disappointed. The cold of January and the pangs of hunger overcame the caution habitual to them, and when hard pressed they went for the meat more boldly. Shannon, too, caught three without having any

of the trouble I had experienced, and, although I lost two more by reason of my traps being too small for this kind of game, we were proud of the seven fine hides we secured, and our handsome pile of furs was much admired when we took them down the lake in the spring, although it was a difficult matter to convince people of the wonderful boldness and cunning shown by a wolverine when at home in the forests of the North. The foregoing narration of simple facts will suffice to show that it is not always the largest and noblest specimens of our North American fauna that command the greatest wonder and admiration on our part. Some of the smaller members are equally worthy of attention, and prominent among them—in the front rank indeed—stands the wolverine, for in cuteness, sagacity and courage it is simply unrivaled.

CHARLES GREENWOOD.

#### Freaks in the Hen.

CERTAINLY the thoughtful, philosophical farmer must often be interested in the peculiarities—may I call it idiosyncracies?—of fowls. Rev. R. F. Patterson of Barbourville, W. Va., had a hen that, instead of laying her eggs in a nest, dropped them from the roost regularly every day. The roost was about 4 ft. from the ground. The eggs, however, were not broken, as the ground was soft and yielding. After the usual time she began to cluck and would sit on the roost as persistently as other hens do in the period of incubation. The freak is strange indeed, but nevertheless a fact.

Some months ago I gave an account of a hen I had that would come off the nest daily for weeks, cackle, but lay no eggs. We killed the hen, which was fat and healthy. We found a sac about as big as a man's fist composed of successive layers of a skin-like substance, and within it two full-sized eggs of a yellowish color without a shell covering. The eggs were smooth and about as hard as hard-boiled eggs. There was another sac about half as large containing only a fluid. There was no unusual odor about them. The other eggs were in the normal natural stage of progress. It is probable that the hen would have sickened and died had she not been killed.

N. D. ELTING.

#### The Saucy Weasel.

THE weasel is a robber, but a cute little fellow for all that. One day my mother heard one of our hens, which was tied some distance from the house, making a great outcry. She guessed some "varmint" was on a raid, and so it proved. A weasel had caught a chicken and was running into a stone wall with it. She put in her hand and drew the chicken from the weasel's grasp. But the little rascal was not so ready to give up his victim. He came out after it, but dodged back with every attempt to hit him. Mother then resorted to stratagem. She held a stone just above the hole and enticed him with the dead chicken, and pinned him the next time he put out his head.

Notwithstanding the weasel's reputation for bloodthirstiness, I would rather have half a dozen of them around than one positive chicken-killing rat. The former comes boldly out, but the latter sneaks through the grass and drags the chicken to its den without awakening a shadow of suspicion. I once saw a rat seizing a chicken half as big as a bantam hen and trying to force it into a stone wall. Doubtless he would have succeeded if I had not gone to the chicken's rescue.

N. D. ELTING.

#### An Albino Deer From Maine.

BANGOR, ME.—*Editor Forest and Stream:* I send you a photograph of an albino deer, which I received for mounting last fall. Having often seen inquiries about albino deer in your columns, I think it will prove of interest to you. We have had no less than five deer this season that showed more or less albinistic forms. The one I photographed was the most perfect I ever saw. The deer was killed at Lobster Lake Oct. 21, 1893, by Mr. C. P. H. Corbin, of London, Eng. It was a spike-buck, and is shown as mounted by S. L. Crosby & Co. I believe in your platform. Stop the sale of fish and game; that will shut off the poachers more effectually than any other law can do.

S. L. CROSBY.

[Mr. Crosby also sends us a photograph of a handsomely mounted moose head, from which we have made the engraving on page 335. The moose was killed in Maine, in October of 1893.]

#### What Are These?

WILLINGTON, Conn., April 2.—I have often seen the red-winged blackbird here and have seen the bird mentioned by John W. Sage, of Portland. Every year in May there come for a day or two a few small, pure white birds with red wings. The loveliest little creatures! quite tame. They always come to the black ash tree very near to the house. Can you tell me what they are? Thanks to Lloyd J. Smith for his bat experience. I have never been over-fond of bats. Shall now regard them more kindly.

ANNIE A. PRESTON.

#### Buffalo Galloway Cross.

MT. C. W. PUFFER, superintendent of Mr. Rutherford Stuyvesant's Tranquillity Park, at Allamuchy, N. J., writes us:

"I believe I told you last winter about our crossing a buffalo with Galloway cows. We have one heifer calf from the only cow with calf by the buffalo. We shall try a number this spring, and another year I am in hopes to give you a better report. The calf is a beauty, and I believe the only one ever born in New Jersey. Game in Mr. Stuyvesant's park has wintered well and we have had no losses."

#### The Last Chapter of "Danvis Folks."

WITH sincere regret I have just read the last chapter of "Danvis Folks." All earthly things end sooner or later, and likewise the story of our Danvis friends. To me the whole tale, from the school meeting in Uncle Lisha's shop, to the closing lines where the lights go out "one by one," has been most interesting, perhaps from the fact that the greater part of my life has been spent in one of the back towns of New Hampshire, where there is not a railroad, a lawyer, a doctor nor a poorhouse, and I have personally known some quaint characters who would not have been out of place in the gatherings at Uncle Lisha's shop. While fully appreciating the contents of each number of *FOREST AND STREAM*, I always read Mr. Robinson's chapter first.

My dear Mr. Robinson, couldn't you have made the story of "Danvis Folks" a little longer?

C. M. STARR.

DUNBARTON, N. H.

## Camp-Fire Gleanings.

"That reminds me."

### A Memory of the Frontier.

In the year 1871-2 I made a trip to Kansas City to have a hunt. Kansas City was at that time a small town and very dead. Many of the stores were unoccupied and business was at a standstill. I had my camp outfit with me, tents, dogs and guns. On my arrival I made the acquaintance of a man who owned a fine store on Main street that was vacant. He gave me the use of the store free of rent, and I pitched my tent on the floor. The store is occupied now by one of the best tailoring firms in the city, and no doubt pays an enormous rental. I used to shoot quail, sometimes as many as one hundred in a day on the hills, where now is the best and most thickly settled part of the city.

I had been reading for several days in the daily papers an account of a party having been massacred out near Fort Dodge; and being a tenderfoot I had paid considerable attention to it. One morning I read that a party was being made up to go buffalo hunting, and my greatest desire on earth was to see and shoot a buffalo. I hunted up this party, who were old buffalo hunters, and of the wild and woolly character, but as afterward proved to be men of the best of stuff. I told them I was from the East and would awfully like to go with them, assuring them that I would cause them no trouble and pay my way. They seemed to enjoy the idea of my going and said, "Stranger, get your gun and come with us."

When all was ready we started with our outfit, wagons, ponies, etc.; our route was over the famous Santa Fe Trail. We were some time making the trip, and enjoyed much good sport; the country was alive with chickens, antelope and much other game. I got along nicely with my new made friends and finally we came to the point where we were to go into camp and do our buffalo shooting. We saw the spot where the party had been massacred by the Indians, the ashes and remains of their wagons. Of course from what I had read and seen I expected to see Indians, buffalo and antelope jumping up from behind every blade of grass.

We went into camp in the afternoon at a spot most of the party well knew, for they had been here before. While some were pitching tent and others getting stuff for fire, one of the party told me to take a pail and follow the trail over a hilltop about a quarter of a mile, where I would find a nice spring of water and to get some for coffee. I had with me a single-shot rifle, .38cal., which I used for sport. I took the pail; and expecting that I might see something to shoot I took the little rifle with me; but this, it seems, none of the company knew.

I found the spring, saw nothing to shoot at and started toward camp with my pail of water. I had got well over the hill and in sight of camp, when I heard reports of rifles in my rear. I looked back and saw, to my horror, several Indians shooting at me and yelling with all their might. I do not believe that any man was ever more scared than I was. I knew I could not get to camp; and I suppose it was by instinct that I set down my pail and gave them a shot with the little .38cal. I did not think that I took aim at anything, but just fired. My shot, however, did its work, and I had killed a pony from under its rider. Not expecting this turn of affairs, they immediately threw off their blankets and disclosed to me that they were my own party, who had sent me out for the purpose of having a little fun, and as quick as I had gone had mounted their ponies, wrapped blankets around them and ridden around the hill to come in behind me. While I was really so frightened I could hardly hold my gun they never knew it, but thought I was a brave tenderfoot.

I spent six weeks there with them, and never had a better time in my life. There is no life like the hunter's and no place like the frontier. If I could do so I would spend every year of my life from August to January in the West, commencing in Dakota in August on chicken and working south as the winter advances.

A. M. D.

AFTER an unusually successful day with the black bass, while we were packing our fish preparatory to our long ride home, an old man, whose age had had no less effect upon his physical than his mental powers, came up and looked with a good deal of interest upon our catch. After he had satisfied his curiosity he straightened up and with a shrug of his shoulder said, "They are fine ones, but I caught on to one over there by the island that was an old rouser. I was a-fishing for bullheads when this fish bit, and I knowed by the way he took holt he was a big un; so I pulled in my anchor so the skiff could float. Off he started, a-draggin' me and the skiff arter him. As we went along by the shore we sort of sheered in under those maples and I ketched holt on one of the branches. He pulled and I held on till suthin' gave way, and overboard I went. I waded on shore and looked to see which way he had gone, and there lay my pole floating on the water a little way out. I got the skiff and shoved off to get the pole. When I pulled my line in I had the darndest big bass head on my hook you ever saw; and say, Mister, that fish had pulled himself in two a-tryin' to get away. I wish I could have got the rest of him, for his head weighed 7 lbs."

M. D.

## PUBLISHER'S DEPARTMENT.

### For Value Received.

A dozen of the largest firms of dealers in sportsmen's supplies have advertised continuously in the *FOREST AND STREAM* through its twenty-one years of publication. They are shrewd and successful business houses, and do not expend money except for value received. Would they go on year after year paying for advertising unless this advertising paid them?

### On the Home Table.

*FOREST AND STREAM* goes into thousands of families, and is read by old and young. No occasion to scrutinize it either. The editors never break faith with their subscribers. Never a copy leaves the press that may not with welcome—as a well spoken guest—enter any home in the land.

The Bridgeport Gun Implement Company has just issued a supplement to its catalogue that contains illustrated descriptions and prices of a number of articles of interest to sportsmen. Among these may be mentioned bullet moulds, reloaders, creasers, cleaning sets, etc. A patent pistol clip and a special measure for Wadsro powder are also listed, as well as the new Bridgeport cyclometer.

## Game Bag and Gun.

### THAT VANISHING MOOSE.

I HAVE read with great interest Mr. Madison Grant's article on the moose in the *January Century*, which I would like to supplement with some facts coming under my own observation. A residence of 57 years in the northern wilds of New Brunswick, 30 of them in the lumber woods and 16 in charge of the Restigouche River and its tributaries, to whose head-waters I made periodical visits, gave me exceptional opportunities for observation.

The face of this country, from Gaspé through the peninsula in Quebec, away around the Metis and Rimouski rivers, and around the head-waters of the St. John, Tobique and Miramichi, is all very much alike in contour, the streams all interlocking, passing each other on the divide, all—big and little—having lakes as their sources. All the streams in the northerly portions are banked by hills 400 to 900ft. high, many of them very steep, brooks, ravines and gulches, entering the main streams very frequently. The traveling, therefore, is mostly up one hill and down another. So you can judge of the impracticability of road making in such a country. Notwithstanding the roughness of the country, nearly all the larger streams are navigable by the lumberman, either by towing with horses or toting on the ice the winter supplies.

The original growth of wood on those hillsides was the pine, spruce and cedar, the small level ridges producing birch and maple. Within the last forty years many hundreds of miles of those mountain sides have suffered from the lumberman's fires, in stream-driving time, the smoke often obscuring the sun for days at a time. On those burned hills the new growth soon appears, unless the soil is totally burned to the rock; if it is, the blueberry soon grows up—a pasture for Bruin. If soil is left, the aspen, white birch, moose and white woods come up so thick as to stunt the growth of the individual trees. None of the original wood ever grows again. So every fire brings the lumberman nearer the end, now in sight.

Now, this young wood is the moose's paradise; it is exactly his favorite food. From June to October they keep as near the water as possible, not for feed alone, although the water-lily is a great favorite, but the moose fly pest drives them into the mud and water, along with the caribou. In November and December, with perhaps a portion of January, they range along the brows of the hills and on the hardwood ridges, cropping the branches of the rowan, birch and whitewood, not yet peeling the bark, but continually moving; generally the cow with her two spring calves, perhaps with one or two bulls in company.

Just as soon as the snow gets about two feet deep a move is made for the winter yard. Probably the moose have some knowledge of where they are going, but the place is never near the one where they have been feeding. I have followed their trail for fifteen miles, and during this tramp they will not feed or break a bush. In choosing their yard they pick out a thick growth on the hillside, about half way from the bottom and facing the sun. They need no water, the snow supplying that. The bulls now part company from the cows and young. Often two of them keep together, sometimes three. Why they separate is as yet unknown. Indians say, "Bull kill em calves." This is imagination, as the cow does not drop her young until May. On this sidehill and among the thick growth a small space will suffice for them, and they break up hill, rearing up and trampling down the snow, and peeling the bark from the saplings and every branch an inch and a half in diameter. In spring one of those yards looks like a chopping or clearing. Should the yard be on a level, which sometimes occurs, they commence breaking in a circle, extending it as needed. Some hunters travel round on the ridges, among the early fall nooks, fearing to tackle the snowshoeing on the steep sidehills, thick growth and loose snow. Amateurs after a week or two of tramping get astray and out of provisions, and come home without meat or hide.

There are laws in the Provinces (on paper only) for the protection of moose; officers are appointed who are paid by half the penalties, on conviction of the offender, but should the suit fail, the officer pays the expenses. The officer cannot arrest but he may confiscate if he can; as likely as not he never saw the men personally, is ignorant of their names or perhaps of their residence. As for going to search a lumber camp for moose meat, a game warden knows better than to attempt this; the hides, if any, are put out of the way and are sold when the season is open, and a man who undertakes game wardenship must be prepared to meet obstacles he little dreams of.

But let us go back to our moose yard. In March when the snow is crusted there is no chasing to be done. The moose cannot leave the yard, and cows and yearlings can be knocked on the head. I have seen a bull go for a mile through six feet of snow—without crust on it—but the moment he sighted me he turned on his tracks for battle. I never knew a cow to show fight, even to save her calf.

One peculiarity in both moose and caribou is that they can't believe their eyes. In going up or down our rivers in canoes I have got within 20 or 30ft. of the moose on the bank or in the water. It would stand there, head up and nostrils dilated, but as soon as the scent was caught the first move was a turn, then leap after leap, until he or she was a quickly vanished moose. Of course, should the animal be to leeward of you the vanishing would take place before you came in sight. The caribou, although keen of scent, does not seem to mind the advent of the hunter. Like the moose, they will often run 50 or 100yds. and then stop and look back. They do not fear the lumberman's works, but will poke around the fallen treetops, selecting the moss from the dry branches, of which they are peculiarly fond, having beaten paths through and around. In such places they are often snared by the lumbermen in a running noose.

I well remember the first moose works I ever saw. About 1840 I was hauling provisions from the river to our lumber camp, in early winter. At a turn in the road I saw a small-sized rowan tree heavily laden with its scarlet berries. I noticed that the bark was torn off, and on examination found the tree all torn and furrowed. At that time I had been four years out from Scotland, but had never heard of the moose. As my team was moving along the road I had no time for close examination, but could think of no explanation except that a bear had been trying to reach the berries and owing to the smallness of the

tree could not climb it. On describing what I had seen on my arrival at camp, an Acroostook lumberman told us it must have been a moose, describing the animal and what he lived upon, and saying also that they were plenty in the Maine woods and excellent beef. Of course we did not believe the man, and laughed at what he termed his "Yankee gas." This was the first sign of moose seen on the Restigouche or in northern New Brunswick.

The Indians, however, had a legend among them that one hundred years before moose had been plenty, but that all had been killed. Why they moved and why they returned is a mystery so far unsolved.

It appears that moose are not found east of the Great Saguenay River and it is just possible the forest growth in this very large territory is unsuitable, the growth being nearly all spruce, which I never saw touched by the moose, although when pressed by hunger toward spring they will strip the balsam fir.

The grandest example of the wonderful power and activity of the moose that I ever had was on the Upsilquitch River. I was paddling down it facing a strong east wind when on rounding a turn I saw what I thought was four horses wading up the stream a half mile below us. At first I took them for a lumberman's tow team, but not seeing the barge I could not think where the horses came from. Directly the largest bull I ever saw lowered his head, bringing the huge antlers into view. My man reached over to uncane the repeater, but this I would not permit, as I never killed unless the meat could be utilized.

As we drew close to them they stopped wading, looking at us in wonder, and I actually paddled within ten feet of the large bull and might have struck him with my canoe-pole. In another instant they had the scent; one of them gave a peculiar snort; they seemed to jump into the air with all four feet at once, then sprang for the bank, about 30ft. away, the large bull leading, the two

throwing the whitewoods—strong hardwoods 4 to 6in. in diameter at the butt, 10 to 12ft. high, with numerous branches—to right and left, bearing and breaking them like pipe stems. You could hear the blows given to a stouter bush than common when the antlers struck. His hide was steaming, his eye fairly gleaming, as he lowered his nose every minute, and when he came to the big dry tree he hesitated only for an instant; with a slight backward step he was in the air, over the top of the great dry limbs and again on his course. I now said to my Indian, "That fellow follow cow. Kill her sure when catch her." "Wogh, never catch him; hab him plenty," such was my Indian's reasoning, and I think it correct.

I never had a fight with a bull, although I have killed a good many. I have had them turn on their track when chased, coming back for fight if you choose. In such a case discretion is best, as all you have to do is to move aside behind a tree, killing the bull as he passes. If you have a good dog the moose will soon come to bay, tramping a battle ground under some wide-spreading evergreen where the snow is shoaler. The cow runs until exhausted, never turning. Few dogs will go near the moose when thus prepared. A fine mastiff I once had got a young bull thus cornered, and when I arrived the dog seemed determined to go into close quarters, and would not mind my calls. He circled around the moose and thought by using the tree as a blind he could grab the ham nearest to him. As he sprang from the tree the moose struck with the hindfoot, missed the dog, but struck the tree, peeling off its bark. The dog missed the ham; his spring carried him under the moose, and he tried to get clear by going through between his forefeet. Alas, the moose caught him with both feet and cut him in two.

I never yet met a hunter or Indian who ever saw a pair of bulls fighting. If they strike at a man it is the forefeet they use, although the hindfoot comes handy and it has a long reach. My opinion is, if two large bulls came in

A MAINE MOOSE HEAD. SPREAD OF ANTLERS, 57 INCHES.

young cows and bull following. The ascent began at the water's edge, and the hill was furrowed in places to the bare rock by the snowslides in spring, with patches of trees and bushes scattered over its surface, and was between 400 and 500ft. in height. Up this hill went those four large animals, and for the first 100ft. they jumped straight up its face. The large bull was the first to try quartering, followed by the others, but they all passed him before reaching the top.

Myself and man were poling up one of our small branches late in September. Just as we got in sight of its forks we saw a cow moose deliberately walk over the beach or spit at their junction. On reaching this spit we drew our canoe on the shingle and prepared lunch. We just had the kettle boiling, when on the hill behind us, covered with a dense growth of young wood, we heard what resembled a large boulder tearing the bushes and young trees on its way down the slope. At its foot the wood was not quite so dense, and we saw a great moose emerge from it. At one bound he was on the spit beside us. Pausing for an instant he lowered his head. Never looking at us or our fire he jumped over the canoe, crossed the other branch and vanished. After crossing we could trace his course by the sound of the bushes breaking whenever he lowered his head to follow the scent of the cow.

The following year, in company with an Indian hunter, I was cruising out a lumber berth in September. I had climbed a large spruce to have a look around, and seeing a ridge of pine on the border of a lake I called up the Indian to see if he knew the locality. Just as he got to my side we heard something coming toward us, which turned out to be a cow moose. I thought her actions were erratic, for she was traveling in a zig-zag course. Close to us a large dry spruce had blown down, its great, long, dry limbs extending outward and upward in all directions. She did not care to go round it and it lay well up from the ground, in which an inequality or hollow enabled her, by going on her knees, to go under. I said to my Indian, "Moose crazy?" to which he replied, "May be. See bye and bye."

We had just begun to descend the tree when we heard quite a thrashing, cracking noise drawing rapidly near, and soon a splendid bull was in sight, following as rapidly as possible exactly in the footsteps of the cow,

contact with force they would tear the antlers from the skull, as they are not bedded in the bone as in the domestic bull. I also think they are really more horsey or mule-like in their nature, particularly in the head and quarters. The hoof is small for such an animal, sufficiently sharp and hard to prevent slipping on clear ice. As for the great chisel teeth and powerful jaws, should the moose get a hold with them the piece would be torn out. I therefore think that when fighting occurs it is much more after the horse mode.

Our northern moose do not reach the size of the Maine or Upper Canadian. Few will weigh 700lbs., in fact that is a big moose in northern New Brunswick or Quebec. Moose have now been with us for fifty years, and for all the slaughter done—often 200 in a winter killed for the hide alone, by whites and Indians—they are still here and fairly plenty, and I must say much more meat is now brought to market than ever, and few hotels are without a moose steak for the traveler if he wants it. One thing is certain, if our law-makers would give them even half protection they would not leave us again, and they are much plentier now than they were ten years ago, the lighter snows of late years, together with the thick growths of young wood, saving many of their lives.

JOHN MOWAT.

#### Adirondack Deer.

UTICA, N. Y., April 12.—A. D. Barber, Frank R. Groves, Frank M. Baker and E. A. Klock, of Honnedaga Lake, in the Adirondacks, recently made a long trip into the wilderness, mainly for the purpose of ascertaining how the deer had wintered on the lands of the Adirondack League Club. Starting from Forest Lodge, on Honnedaga Lake, they went to Jones Lake, Indian River, Indian, Squaw and Beaver lakes, and thence to Moose River, returning by the way of Brook Trout Lake, the West Canada Lakes and West Canada Creek. They found plenty of deer signs, but no dead deer. They do not believe any of the animals died of starvation. At one of the lumber camps they saw a man who had been around the woods a great deal during the winter and he had only seen the carcasses of two deer, and those had been killed by dogs. The fish hatchery at Honnedaga Lake is working well and some of the fry have already been distributed.

PORTSA.

## STOP THE SALE OF GAME.

A PLATFORM PLANK.—The sale of game should be forbidden at all times.—FOREST AND STREAM, Feb. 10.

BINGHAMTON, N. Y.—*Editor Forest and Stream:* I am heartily with you in your platform. "The sale of game should be forbidden at all season." My observation has proved to me the necessity of some such legislation. I have seen shipped from a small western Pennsylvania town to the New York market at one time 40 pheasants, 60 quail, 45 gray squirrels and a box full of rabbits. For this amount of game the shipper paid the magnificent sum of \$11 and made a clear profit of \$40 or \$50. We examined the birds pretty carefully and could find no shot marks on many of them. These probably "fell dead from fright." Now, figure on the profit to the rural sportsmen and farmers' boys in that \$11. Would it not have been more profitable for them to protect the game on their farms and then charge for the shooting privilege? I have found farmers usually a very kind and gentlemanly class; having made it a rule to ask permission to shoot over the land I have rarely met with a refusal. There is only one way to do it; ask permission, and if you cannot get it bid Mr. Farmer good morning and seek "green fields and pastures new."

Now, suppose FOREST AND STREAM's plank made into a law, the pot-hunter and the farmer's boy are the two classes who would oppose it. As far as the pot or market-shooter is concerned a word is sufficient; he is in a hopeless minority in any community, let him wail and fine him every time he breaks the law. I have known a good many farmers and farmers' boys, and have shot with them too, and found them good fellows and true lovers of sport for its own sake. The farmer or his boy who sells game usually does so to pay for his ammunition. Now, if those who go on the farmer's land would remember this and so arrange it, with tact and delicacy—for the farmer is very keen to resent any seeming slur on his hospitality—to leave either ammunition or its equivalent in money, the hearty co-operation of the farming class in observing the law will be assured. A dollar for a pot of coffee, a few quarts of milk or a horse feed has often brought a good day's sport on favorable grounds and a very kind invitation to come again. Sportsmen generally would certainly be willing to pay enough for the privilege of shooting in good covers to reimburse the farmer's boy for his loss in the sale of game. I once knew a man who wanted \$5 for the right to fish 500 yds. of trout stream one afternoon, but that is another story.

J. H. LAROCHE.

VICTORIA, B. C.—*Editor Forest and Stream:* I am sorry that H. W. D. L. thinks your correspondents who are in favor of prohibiting the sale of game are at all selfish. I know quite well that if the market-hunter were stopped here there would be more game for every one. There are hundreds of fine blue grouse killed for the market and I think it is a great shame it cannot be stopped.

E. M.

## FIELD PERMITS.

ONCE upon a time, in the indefinite past, the woods and fields were alive with wild game which it was everybody's privilege to shoot. To-day freeholders have only a few partridges, quail and prairie chickens left on their premises, and a sorry chance even for them, for most of this class of farmers have little leisure for sport, and every gunner from town or neighborhood has an envious eye on the birds and covers. Lands are for the most part posted, it is true, though strangers who are gentlemen usually get permission to shoot over them for the asking. Nevertheless, human nature is so perverse that it generally prefers to trespass rather than apply, and disputes are consequently occurring constantly between shooters and land-owners as to their respective equities in creatures which the law adjudges to be *feræ naturæ* upon the public domain, and exclusive property only so long as they remain on grounds in which there is vested fee. To adjust these conflicting claims has been an irritating problem for many years, for which litigants and claimants would gladly accept a solution that would be mutually satisfactory. Perhaps a combination might be effected in a way which involves no humiliating concessions from either party, and it might even aid, Mr. Editor, in your commendable scheme to preserve the game and squelch the market-shooter. Let me submit it dialectically:

When a farmer grants a sportsman the privilege to shoot over his fields, the sportsman bags the game, but what consideration does the farmer get? Often nothing, not even a thank you, for the sportsman usually leaves the premises at a more convenient point than where he entered, so that he does not meet the owner, who occasionally suffers an actual loss in crops and fences by the permitted raid. He does not deem it incumbent or obligatory to make acknowledgment or amends. Now, in the woolly West and bumptious South, where it is customary to farm "on shares," the owner furnishes the land and seed, and the tenant the tools and labor, and the two divide the returns even, or *pro rata*. Just so it should be between sportsman and farmer. As soon as permission is given the former to enter the premises they become partners. The farmer furnishes the land and the birds (which are the seed), and the sportsman the tools and ammunition, and does all the work. Obviously, the farmer is entitled in equity to a division of the game, and so they divide the proceeds, as agreed upon.

This, Mr. Editor, is the mainspring of the movement, and I am persuaded that sportsmen's hotels and railroads would not only countenance and abet the scheme, but become potential factors in inaugurating it. Jealousy between farmers and gunners would cease by removal of its cause. Market-shooters and pot-hunters would be excluded from the fields by the right of land owners to discriminate in granting permits, and the inducement of pecuniary gain to mercenary land owners and market men would be diminished one-half by the regulation requiring division of the spoils. Prosecutions for trespass would cease. Game wardens would be strengthened in the performance of their duty, and hayseed would no more stick to the green cloth. Besides, the radical tergiversation involved by the legal adoption of your "platform plank" would be tempered by letting it into place gradually. *Bona fide* sportsmen who hunted on shares with farmers might be permitted to sell game in restricted quantities, whereby it would be possible for invalids who had no shooting friends to obtain a bird now and then by purchase. The masses of the community ought not to be

disbarred from the luxury of eating game in order that Lucullus may feast.

Whether feasible, sensible or advisable, I believe that my idea is at least novel; and it may serve to start a discussion in your paper, such as is needed periodically to stimulate its circulation.

CHARLES HALLOCK.

## JIM.

WE were camped amid the wilds of the Rockies in Wyoming, and on the banks of a small, noisy mountain stream. H. had gone fishing that morning, but after futile attempts to lure the trout from their cool and sparkling homes, he concluded to go up the mountain to where a bear trap was set. Here he found a brown bear fast in the jaws of steel and two of the cutest little cub bears near her. But, immediately upon his approach these ran nimbly to the very top of a tall tree. A shot quickly settled the mother bear, and then H. did look longingly at those little fellows in the treetop. Camp was five miles away, that tree was high and devoid of limbs to the very top; he could not fell it without an ax, and not knowing the natures of bears, was afraid to leave them for fear they would come down and make off while he was gone.

Suddenly an idea flashed into his mind, and calling to Ranger, a handsome bird dog, he took a fish cord from his pocket and attaching it to Ranger's collar secured him to the tree. He said he left the place as quickly as possible, for Ranger's howls were piteous.

The news excited all at camp, and after a hurried lunch we were soon to the spot. Here a pretty scene presented itself. A dead bear, and up the tall tree, more properly a pole, a little, cunning black head on one side and four paws clasping the tree, and just below the picture repeated, and at the base the wondering Ranger.

HAS A SWEET TOOTH.

To climb the tree was impossible for any one there, and Daddy, our helper, was soon making the chips fly. Down came the tree but no bear, for the top had lodged in another tree and the little fellows were safe in its top. Another pine fell and with it one cub, but the other escaped to another treetop. H. immediately grabbed the one and sent him head foremost into a gunny sack and handed all to me for safe keeping. I secured the sack and put it on the ground some 25 ft. from the carcass of the mother, but the poor little fellow with cries almost human, crawled in the sack to her side.

Meanwhile Daddy was felling another tree, and when this was nearly ready to fall, H. admonished Daddy to fall it easily, so it would not kill this cub. The admonition was of no avail, as the tree crashed into the only clearing around and the poor little brother was kicking his last when H. and my husband reached him. We all felt bad, for it would have been pleasure to have had both.

But soon he and his mother were stripped of their coats and we were at camp again. The cub was immediately christened Jim, and secured by a chain attached by a piece of rope to two buckskin thongs around his neck and back of his legs. He would drink condensed milk eagerly. One tablespoonful in a tin cup of milk-warm water three times a day was his rations and he thrived. He was cunning and amused us very much by his antics. He and Ranger were good friends and a pretty sight it was to see them asleep with the bear's head on the dog's neck.

But alas! for human hopes and ambitions. One afternoon Jim was missed, and upon investigation we found he had severed the rope from the chain and gone with the two thongs of buckskin around him. We searched everywhere but we never found him and H. was obliged to go home without him.

But the story of Jim is not without a sequel. Some two weeks after H.'s departure, an Indian appeared at one of our small stores with a brown cub that had two buckskin strings around him when caught. To inquiries of "How did you catch him?" the Indian said, "Him heap tame, him no fight, no scratch, no run. Me heap catches." It seems that while hunting in the mountains he had come upon him, and Jim having no fear of man was easily made captive again. He was purchased from his second captor and sent to H., and when he and the cub attempted to renew acquaintance Jim bit the ends of his fingers so severely that H. declares they are not on speaking terms now.

The picture appended shows Jim in the act of gratifying his constant desire for sweets by reaching for a stick of candy.

Mrs. D.

## IN DIXIE LAND.—VII.

[From a Staff Correspondent.]

## A New Sporting Country.

THE Rockport region is one undoubtedly unfamiliar to many if not most of the FOREST AND STREAM readers, and is worthy of careful description. I shall try to cover in advance some of the questions sure to be asked about it. It is a new sporting country.

The town of Rockport is situated on Aransas Bay. There is little marsh about the region, except at the heads of the bays. The live oak motte country comes down close to the town on the north.

Aransas Bay is one of those long shallow bays which skirt the coast for perhaps hundreds of miles. Its outer boundary is one of the long, low, narrow sand dunes common in the coast contour. The outer island, key, or sand spit, is known as St. Joseph's Island. To the west of this runs the Mustang Island. These outer fringes of land are not much visited. They are covered with sand and scrubby trees in many parts. From Rockport to St. Joseph's Island is only about six or eight miles.

Beyond these narrow outside skirts of land the Gulf of Mexico lies. The points where the Gulf breaks through and connects with the inner bays are called "passes." The "deep water" scheme was to open a ship channel from the passes across the shallow bays and up to the towns on the mainland. Corpus Christi, Aransas City and Rockport all had this dream and the consequent boom. Rockport is thirty years or more old. It is simply a quiet, lazy, sleepy town of perhaps 1,000 inhabitants, with a lovely climate and a large indifference whether school keeps or not. Many winter resorts have been built up with not one-tenth of the attractions naturally possessed by this town. Twenty years ago Rockport was wealthy. Twenty years from now it may be wealthy again.

The average temperature in winter is 57°; in spring months, 77°; in summer months, 86°; in fall 60°. The summer climate is not bad, being tempered by night breezes.

The town is built on a live oak peninsula. Back of this lies the great extent of the Fulton ranch, once the property chiefly of Col. Fulton. Since the recent death of Col. Fulton it has been known as the Col. Fulton estate. This ranch comprises 172,000 acres. I have spoken of visiting the Puerto Bay, then of going west of that 20 miles to the Shellbanks, and then of sailing 20 miles further west to Shamrock Cove. In all this stretch we had hardly sailed the length of the shore line of this one great "pasture."

Part of this "pasture," or what was once the pasture, is that lovely live oak promontory which runs out into the bay at one side of the town site, and which is practically or will be part of the town. This high and breeze-swept peninsula separates Aransas Bay from Copane Bay.

The Aransas Hotel, conducted by Mr. Milton Everett, is the one where the sportsman naturally goes, because of Mr. Everett's sporting tendencies, as well as because the hotel is the best of the town, is at the center of the town, and at the main wharf. Rates here are \$2 and \$2.50 a day, \$15 a week. Mr. Everett knows how and where to go for all the sport of the region.

## Sailing and Boating Waters.

There are no finer sailing and boating waters on any coast than those of Aransas and adjoining bays. The outer bar or island forms a breakwater, so the river bay is not rough like the Gulf. Then there are bays within bays. One may be half a mile from land and not have over 8 ft. of water under him.

There are plenty of sailboats and rowboats, but no steam or naphtha launches. The tarpon fishing is 10 miles or more from the hotel, and when one depends on a sailing craft, he may lose his day, for there are no accommodations of any extent at the Pass. In time there may be better transportation. The present methods are in keeping with the climate and with the whole disposition of the place, and perhaps they are better than more rapid ones for him who is seeking a resting country.

## Varieties of Ducks.

The redheads seem, perhaps, the most numerous ducks, and of these the market-shooters say there are as many as ever. Pintails are also very numerous, and there are some bluebills (*dos-grés*). The marsh ducks in general come on the salt flats to feed, but the pintails more especially. At least this was our experience. We did not see a mallard nor a teal.

Chief of all the fowl is the canvasback. This country is a natural winter home for this bird. We saw great numbers of them. As was stated, they are annually shipped by thousands out of Rockport, which is one of the greatest of the market-shooting headquarters. The annual shipment is 25,000 to 60,000 head of canvasbacks, I was told. The best months are November and December. Ice is obtained readily of the fish and oyster companies. This year the low price of game stopped the shipment.

## No Club Preserves.

Rockport is probably, indeed almost certainly, the best canvasback water now left open to the public in the United States. There are no club preserves. I do not know where to direct any one for better open duck country.

## Character of Shooting.

The shooting is almost all open-water shooting. The shallow bays afford untold miles of feeding ground. The shooters stick down bushes into the mud, making brush blinds, into which they run their boats. For this sort of shooting one needs large fleets of decoys. The local decoys are rude but seem to serve. The sailing boats carry some decoys. There are few houses at which one can stop, and practically one must figure on stopping on board his schooner. Terms for schooner, as mentioned, average \$8 a day.

The shooter should take with him all the ammunition he needs. He can get nothing good but shot at Rockport. The best way is to take in shells loaded with powder and wadded. These can be shot and crimped at Rockport by the shooter, who will find its weight saved in baggage a great consideration.

Take plenty of the best gun oil and rust preventives, and be very careful with your guns, for the sea air and salt water will rust them fearfully. My friend's expen-

sive ejector gun became disabled by the rust, and he had to lay it aside.

Other Game.

Rockport is just below the quail country. One can make short rail or wagon trips and get good quail shooting (at the Bob White). Chiltepin Creek is an old turkey country. Beeville turkey country, much written of, is only a short way above Rockport. By a brief rail trip one can get into the timbered watercourse, where he can get as good turkey shooting as he can anywhere in the country. There is no place where one can get all these sorts of shooting on the same piece of ground, but there is probably no place in the world where one can get them all so close together. The Nueces River bottoms are good for turkey.

Deer abound in this part of Texas. There are numbers on St. Joseph's Island, six miles from the Aransas Hotel. One party brought in two deer one day while we were there. They saw 21 deer that day. If one wants a wider and wilder country, he can go back on the Fulton pasture, or he can go by rail over toward the Nueces country. There are no deer in the dooryards, but the shooter at Rockport is in a deer country, and can get his deer by going after it in hunter fashion.

Jack Snipe and Geese.

In all seasons the jack snipe shooting is fine along the bays. The amount of rain also determines the supply of geese, brant, swan, etc., etc., which often is very large. Doves in the South are held to be game birds. Their strength of wing and wariness entitles them to the claim, though in the North they are protected as song birds. Dove shooting is one of the liveliest sports in Texas. These birds abound along the roads and fields back of Rockport.

Sea Food.

Oysters of great size and fine quality are to be found all through the bays. Most of the edible sea fishes of the latitude come into the market, as do also the green sea turtles. The diamond-back terrapin is still taken in considerable quantities, and there are several terrapin farms. Sea trout (weakfish), redbfish, Spanish mackerel, sheeps-head, etc., etc., are taken with rod and reel. The great jewfish is sometimes captured. One can have very decent fun at the smaller sea fishes if he likes.

Tarpon—Tarpon—Tarpon!

I did not make any attempt to fish for tarpon, but wished keenly that I had been earlier, or later, in the season. There is no doubt whatever that the tarpon fishing here is the finest in the country, though that fact is not known at all outside of a very limited part of the State. The tarpon fishing is really the greatest and most rare and valuable attraction which Rockport has. Is there any other tarpon country which has also so many other sporting attractions?

Mr. Milton Everett writes thus about the tarpon fishing of Rockport.

The home of the tarpon is to be found in Aransas Pass. The Pass is the channel between St. Joseph and Mustang islands, connecting the waters of the Gulf with those of Aransas Bay. It is about a half mile long, 1,600ft. wide and from 30 to 45ft. deep. The tides and winds cause strong inward and outward currents to prevail at all times, and in these seething waters the tarpon makes his home, his feeding and play ground, and is to be found nearly all the year round. Here they spawn early in June, the young fish seeking the shallow grassy flat in the bay, where they remain until of sufficient size to keep out of way of the big fish. In the month of July, while fishing for trout, I have caught them 4 to 6in. long, and again in September I have caught several from 8 to 10in. long.

The action of the young ones when caught is the same as the grown ones, and it is an amusing sight to see them vainly striving to get unhooked. Only within the last three or four years has rod and reel fishing been practiced here.

Aransas Pass is beyond the dream of any tarpon fisherman who has never been there and tested it. The supply of tarpon is practically unlimited. They play and feed by hundreds. I have many times seen a hundred of them out of water at once. This might seem an extravagant statement to some, and to others, who have never fished for them except in Florida, a colossal fish tale, yet it is the whole truth and nothing but the truth. This statement can be verified by Judge W. W. King, district judge; Mr. T. H. Micklejohn, Hon. A. W. Houston, general attorney S. A. & A. P. R. R.; Senator P. J. Lewis, Judge Bryan Callaghan, Capt. Phil Sharden, and others who live in San Antonio, and who form a coterie of sportsmen who first introduced reel fishing here. Gentlemen who have been in the habit of spending their winters in Florida in search of this fish will hardly credit this story, but it can be substantiated by one trial. During the spring months these fish go all over Aransas and adjoining bays and can be seen everywhere. Several have been hooked by parties fishing off the Rockport wharf and at other points along the shore in the town.

All Tell the Same Story.

Of course, there will be surprise at statements like the above, but pleasant surprises like these occasionally await the readers of a reliable sportsmen's paper. I have no wish nor intention of lowering the character of FOREST AND STREAM for reliability, and do not believe I am doing so in publishing the above, though, of course, it is in one sense hearsay evidence only. It was impossible to verify everything on one short trip, yet I consider the tarpon statements the best substantiated of any we heard as to the sport of the locality—in no respect of which were we in the least disappointed. All agreed as to the excellence of the tarpon fishing. The San Antonio gentlemen above mentioned bear authority with them. Another piece of testimony to which I attach great value is that of Johnnie Blutdworn, whose fair and quiet conversation we had every reason to admire.

"I could guarantee a man a tarpon a day in the best season," said Johnnie. "You've no idea how many there are over there at the Pass. I've stood on the jetty and seen them swimming under me in the channel by dozens and dozens, and sometimes I have harpooned them there. On the whole I think September is the best month for the tarpon fishing. I have often caught two or three a day, and, of course, you get a great many strikes you never land. The best way to fish for them is to troll for them with mullet bait. January and February are the poorest months for them. In March they will begin to come in. If we had a stretch of warm weather we might get one even in January, though we don't often catch any then. They bite all summer long and all through the fall. If a fellow wants a tarpon he wouldn't have much trouble getting one here."

What Rockport Needs.

What Rockport needs is a good hotel—not at Rockport, but at San Antonio. A really good hotel at San Antonio would help Rockport more than if it were at Rockport. A really good hotel at San Antonio would help the State

of Texas, and I don't see why the San Antonio people don't realize this. The winter tourist who stops at San Antonio will drop down to the coast to shoot a bit and kill a tarpon, and once there, he is apt to stay a month or so. The winter tourist, more especially those of the more rugged sportsmanlike type, is to be a factor yet in this odd old sunny corner of the world.

And so we must dismiss Rockport, which I believe to be the most interesting and valuable sporting discovery I ever fell upon.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

A Texas Ducking Score.

SAN ANTONIO, Texas, April 6.—*Editor Forest and Stream:* From the attached clipping I see that Mr. O. C. Guessaz is your representative at this point. I inclose you herewith a copy of the Corpus Christi *Caller* with this marked item. It speaks for itself:

DUCKS BY THE HUNDREDS.—On Saturday night Messrs. A. B. Critzer and O. C. Guessaz came down from San Antonio to indulge in a little sport of shooting ducks. Sunday morning bright and early, in company with Messrs. Max Luther and J. T. Conforth, they drove down to the Oso and put in the day shooting ducks. The hunters returned to town about supper-time and brought back with them 410 ducks. Monday the same party went to the Oso again and returned in the evening with 392 ducks, making 802 in all, the result of two days' shooting. This is the best record made this season in the way of shooting ducks, and the San Antonio gentlemen returned home Tuesday, completely carried away with their success.

I understand that Mr. Guessaz is also one of the vice-presidents of the National Game Protective Association.

A ROCKPORT TARPON.

I understand that your valuable paper is in favor of game preservation and not extermination, and trust that this matter is of enough importance to take up. If this story is false—though it has been bragged about by the parties openly—Mr. Guessaz should have a chance to refute it. I am one of a large body of sportsmen who are trying to preserve and protect game. We have a hard time, and it is uphill work, and if we have not the support of the prominent papers representing our interests we can accomplish but little. A protest through your valuable paper reaches thousands, where we can reach no one by any other means. I am secretary of the San Antonio Gun Club of this city, a club pledged to protect game, and this is my reason for appealing to you.

WILLARD L. SIMPSON.

Frightened to Death by Quail.

*Editor Forest and Stream:*

At Wynne, Ark., a few days since a young lady school teacher came upon a bevy of quail while on her way home from school, and was so frightened by the noise of their wings that she died within three hours—frightened to death. I never flush a bevy of quail without becoming startled at their rise, and I know of many sportsmen who are similarly affected; but this is the first instance that has come to my notice where the fright was so severe as to cause death.

WM. E. SPENCER.

CLARENDON, Ark., April 7.

A Bill for Park Protection.

FIFTY-THIRD Congress, second session. H. R. 6442. In the House of Representatives, March 28, 1894. Referred to the Committee on the Public Lands and ordered to be printed. Mr. Lacey introduced the following bill:

A bill to protect the birds and animals in Yellowstone National Park and to punish crimes in said Park, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That it shall be unlawful for any person or persons, without the written consent and authority of the Secretary of the Interior, to kill, ensnare, trap, catch, or in any manner injure any wild beast, bird, or wild animal of any nature or description within the boundaries of the Yellowstone National Park as such boundaries are now or may be hereafter defined.

Sec. 2. That it shall also be unlawful for any person or persons to catch any fish within the said limits of said Park otherwise than as may be authorized and provided by the regulations now or hereafter to be made by the Secretary of the Interior.

Sec. 3. That all guns, traps, teams, horses, or means of transportation of every nature or description used by any person or persons within said Park limits engaged in or guilty of killing, trapping, ensnaring, or capturing such wild beasts, birds, or wild animals shall be forfeited to the United States, and may be seized by the officers in charge of said Park and held during the prosecution of any person or persons arrested under charge of violating the provisions of this act, and upon conviction under this act of such person or persons using said guns, traps, teams, horses, or other means of transportation, said

forfeiture shall be adjudicated and ordered by the court as a penalty in addition to the punishment provided in this act. Such forfeited property shall be disposed of and accounted for by and under the authority of the Secretary of the Interior.

Sec. 4. That any person found guilty of violating any of the provisions of this act shall be punished by fine not exceeding one thousand dollars, or by imprisonment not exceeding two years, or by both such fine and imprisonment, in the discretion of the court.

Sec. 5. That the Yellowstone National Park shall hereafter be under the sole and exclusive jurisdiction of the United States, and that all the laws applicable to places under the sole and exclusive jurisdiction of the United States shall be in full force and effect in said Park. If any offense shall be committed in said Yellowstone Park, which offense is not prohibited or the punishment thereof is not specially provided for by any law of the United States, the offender shall be liable to and receive the same punishment as the laws of the State of Wyoming in force at the time of the commission of the offense may provide for a like offense in the said State; and no subsequent repeal of any such law of the State of Wyoming shall affect any prosecution for such offense committed within said Park, and the laws of such State defining such offenses are hereby extended over said Park. All fugitives from justice taking refuge in said Park shall be subjected to the same laws as refugees from justice found in the State of Wyoming; that the said Park, for all the purposes of this act, shall constitute a part of the United States judicial district of Wyoming; and the district and circuit courts of the United States in and for said district shall have jurisdiction of all offenses against the laws of the United States committed within said Park.

Sec. 6. That if any or all rights granted in any contract, lease, agreement, or privilege heretofore made or that may hereafter be made, shall become forfeited by the failure of the lessee to comply with the requirements of the law or the stipulations of the contract or lease, it shall be the duty of the district attorney of the United States for the State of Wyoming to institute proceedings in the district court of the United States for said State to have such contract, lease, agreement or privilege declared forfeited and the possession of the granted premises or privileges restored to the Government of the United States, and the said district court is hereby vested with jurisdiction to hear and determine all such cases.

Sea and River Fishing.

A SPRINGTIME MUSING.

"Announced by all the trumpets of the sky,  
Arrives the snow, and driving o'er the fields,  
Seems nowhere to alight, the whited air  
Hides hills and woods, the river and the heaven,  
And veils the farmhouse at the garden's end."

R. W. Emerson.

"SAW you ever the like of this?" said Stephens, as he came into my room and shook himself vigorously to free his clothing from the clinging snow. I turned from the window where I had been looking out upon a blurred and indistinct scene, caused by the fast falling snow.

"How it does come down," I said, "I cannot see to the Court house."

"Yes, a nice April shower," he replied. "It looks a heap like we'll go a-fishing next week, don't it?" I had to admit that the outlook was not good for wetting a line in the near future in any of the lakes of northern Minnesota.

"And we can't hire a special car and be whirled off southward as some of our pampered sportsmen can either," he said.

"No," I replied, "we haven't even influence enough to get a dog 'franked' through like the brilliant representative of FOREST AND STREAM."

So we talked on for a while until Stephens, looking out of the window, said: "This is just about such a day as the one I recall, when two despondent fellows were sitting in a tent up on Isle Royal and watching the snow come down so fast that they could not see across either Washington or Grace harbors."

"Yes," I replied, "but that snowstorm was in June, and we were four hundred miles from home and had come that distance for trout, and it did seem too bad to be knocked out by a snowstorm so far out of season."

"Well, we had a good time anyway, and I never shall forget how pathetic you looked as you stood on the shore, all dripping, after your unexpected bath."

This unkind remark of Stephens referred to my going after a pail of water, and slipping on the snow-covered rocks, went head first into the clear, cold water of Lake Superior. Stephens heard the splash and he came to the tent door in time to see me crawl out on shore.

He started to laugh, but I stopped any undue show of hilarity by assuring him that if he dared to laugh I'd kill him then and there. He has had many a joke about it since, and has often graphically pictured the scene to the unbounded edification of our friends.

"Are you going to stick to the old bamboo this year?" he asked.

"Of course. How could I go a-fishing with anything else?"

This "old bamboo," as Stephens calls it, has been with me on every fishing trip, and had part in every catch which I have made for the past five years. On inland lake and stream, on "north shore" river and creek, and old Superior's waters, it has filled its place and filled it well. Bass, small-mouth and large, pike and pike-perch, muscallonge, ouananiche, brook trout and "lakers" have tested its suppleness and strength. Never a tip has been broken or a joint cracked, and it lies in its case to-day ready for use, as good seemingly as when Stephens gave it to me, five years ago. At that time I had only a solid wood rod, which I had used for some time—a gift of a friend in St. Louis. The rod was an aggravation to Stephens, and he often said "I'll make way with that rod sometime." The sometime came one fair July day when he and I and a friend went north of town to a little lake famed for bass of the large-mouth variety. When we started I saw an extra rod case among our traps, and upon inquiry was informed that it was a new rod, that one of his friends wished him to take and try the mettle of. We arrived at the lake, put up our tent, for we were to stay all night, ate our dinner, shoved the boat into the water and went to setting up our rods—at least Stephens and our friend did, but I was in a "state of mind," for I could not find my rod. I distinctly recalled taking it from the wagon and placing it with the rest of the tackle, but now it was not to be found. I hunted excitedly everywhere in the vicinity, but no rod or sign of rod could I find. At length Stephens called from the boat:

"Come on, we're all ready; you can use this new rod and when we come back we'll help you find the old rod you're making such a fuss about." After a further unavailing search I went to the boat and there found, all set up, an elegant split-bamboo rod. My reel was already on it, and grumblingly I picked it up. We shoved off and went to fishing. Many times Stephens asked me that afternoon how I liked the rod, and I could soon assure him it was a good one.

When we went to shore with a goodly string of bass, I at once prepared to resume my search for my rod, when Stephens stopped me with, "See here old man, I know where your old stick is, and you'll never see it more. Take this rod and many be the fish you catch therewith." That is how I came in possession of my first and, up to this time, only split-bamboo—all of which has been suggested by the inquiry of Stephens, as to using my old rod the coming season. How our thoughts do rove. From my room with an April snowstorm raging—a storm which lasted twenty-four hours—to a camp on Isle Royal, and a June snowstorm—to a midsummer trip after bass, on a placid, landlocked lake, where

"On sunny slope and beechen swell,  
The shadowed light of evening fell.

MYRON COOLEY.

DETROIT CITY, MICH.

## THE OUANANICHE.

Editor Forest and Stream:

I notice in your issue of the 7th inst. that Mr. A. N. Cheney quotes a communication received by him from a friend, who takes issue with me in my claims regarding ouananiche, set forth in my article in your issue of March 10.

I have made a conscientious study of the ouananiche in my own experience of six years, and have endeavored to hold to exact facts in all that I have written.

In instituting comparisons between the Canadian and American landlocked salmon, I have been handicapped by the fact that I have never had any experience with the latter personally. Consequently I have been obliged to do the next best thing, depend upon those that have. I have paid no attention to hearsay, nor have I depended upon the experience of any one prejudiced. I have had long talks with a large number of fishermen, well known and otherwise, who have caught landlocked salmon in New England waters, and then have fished in the Lake St. John country. I have gone into, with them, every detail of the American fishing, and having secured a thorough knowledge in regard to it, I write "whereof I know."

I have yet to find a single one who has caught both fish, who does not freely admit the great superiority of the Canadian ouananiche. Not in size, I will admit, but in their superior fighting qualities, than which nothing can be greater, if perchance it can be equalled. I always note too that these same fishermen never return to the Maine fishing, but do to Lake St. John year after year.

I maintain that a fish born and bred in the swiftest running rapids is far stronger and a better fighter than the one found in the deep waters of lakes. For comparison, two young men grow up together, one enters athletics, becomes strong in every muscle, able to cope with an adversary, to withstand any amount of fatigue. He leads a life of activity, his development becomes perfect, he is a perfect man without superfluous flesh. His companion with equal health and physique, chooses easy-going sedentary habits. Without the constant exercise of an athlete he becomes fleshy, and will outweigh his companion. He has only his weight and certain natural strength to aid him in a contest, while his companion has the science of tense, well developed, hardened sinews. Is there any question which is the better man? Is there any question which will transmit to his children the greater amount of vigorous manhood?

From the comparison made in my communication of March 12 there can be no question that the Canadian salmon is a much stronger fish, a much harder fighter than those caught in American waters. I do not mean that a 34-pound fish of Canada will outfight or even equal an American cousin of 25lbs—one that makes "bloodless hands" and "complete nervous demoralization." (These same effects I have seen, by the way, produced also in catching large pickerel and maskinonge.) But, pound for pound, and even with an extra allowance of weight to his competitor, the ouananiche of Canada is the superior.

As previously stated, small ouananiche, in the same manner as small trout, will come to the surface of lakes at evening, and can be taken on the fly, but not the larger ones. The American landlocked salmon do not exist under the same conditions of waters as in the Lake St. John country; no one questions that. As a consequence, they cannot be caught in the same manner in the same kind of pools; and to quote from Mr. Cheney's letter, "environment of course modifies habits and conditions, size and energies." The fish of the States does not possess the environments, hence has the modified habits, size and energies.

As to the idea that "fish that spend their lives fighting a turmoil of waters have no time to grow," that is a witticism, not an argument. The ouananiche of Lake St. John are a species of landlocked salmon peculiar to themselves, and the fact that none larger than 8 or 8½ lbs. have been seen or caught, proves that to be their limit of growth.

I have great respect for a fish of 15, 20 or 25 lbs. weight, whatever may be the kind; but I venerate one that has fighting blood in his veins. If possessing this latter quality you hook him on a 7-ounce or even a 10-ounce rod, no human power can bring it successfully to net under three-quarters of an hour's playing or even a longer time, and preserve the tackle intact. Now, if I can successfully land a fish of his caliber in an hour, and one of only one-quarter the weight or less in from fifteen to twenty-five minutes (not just fifteen minutes, as the misquotation from my letter states), which, I would ask, is the greater fighter in proportion? Has not the smaller fought more in proportion to his weight?

The 7½ lb. ouananiche shown in my book, "The Leaping Ouananiche," just issued, required 55 minutes of hard work to bring successfully to net. How much more in proportion is this to one double or treble the weight that may require one or even one and a half hours to kill?

Give me the "minnow," the "fighting pigmy" of the Grand Discharge, fighting as he does, as he will outfight in proportion on a time allowance his "abnormal," overgrown relative of the deep New England lakes.

I am far from despising this latter, and would gladly seek him did opportunity offer. I do not believe that it has any "lesion of the fighting quality lobes," except to the extent that bringing up in still waters would naturally bring about. I do know that no "lesion" exists in the Canada ouananiche, as its daily life in rough waters prohibits it. As a consequence, I prefer to fish for the latter in the limited fishing time at my command.

Again, I am misquoted in saying that the ouananiche

are "usually washed off the hook when struck in their native element." I have never made this statement, but such a thing is occasionally possible, and has doubtless occurred, particularly if the fish, when hooked, is allowed to run under a fall or across a swift rapid. As soon as hooked in a rapid, I always lead my fish, where possible, and it generally is, to a more quiet eddy at the side, where I master him or he masters me. Therefore, the majority of my fish are played in comparatively quiet waters, and their fighting is neither by or attendant upon rough rapids.

Then, also, after much study given to ouananiche fishing, and trying all ideas that may present themselves, I firmly believe that, owing to the manner in which they hook in the lip, lightly, and their constant and hard fighting, they should be led to net at the earliest moment commensurate with safety. Hence another reason for short playing.

I still maintain as my many informants have all advised me, that the landlocked salmon of New England are more frequently taken on the spoon than on the fly. At only certain seasons there, can they be found in rapids within reach of a fly; first, because it is not the natural abiding place for this fish, and again, such waters do not exist in any similarity or extent with those of Lake St. John. The results of fly-fishing in the States, therefore, are far from satisfying except in a few very favored pools, and the spoon must be called into requisition to insure success.

Finally, I would add that if my critic would try the Canadian variety of landlocked salmon—ouananiche proper, he would have more respect for them. He would find that avoidupois does not alone constitute gameness. If the Maine salmon fought in proportion to his size, with the vim of the Lake St. John fish, I doubt if tackle could be made strong enough to catch it.

Now, as to the idea of applying the name ouananiche to all landlocked salmon as a generic appellation, I certainly can see no objection; but that there is a difference in the species, as I have endeavored to prove, I must maintain. From these differences it will be found that fishermen seeking Canadian waters will hold to the original name, ouananiche, and those seeking New England lakes will still say landlocked salmon.

As to the pronunciation of the word ouananiche, I have made a special effort in the past to get it correctly, both from full-blood and half-breed Montagnais Indians. I find among them but little if any variance of pronouncing the word. The majority pronounce it as if the first syllable were spelled ow, and this is strongly accented. The a in an following is pronounced as in father. The third syllable an, is pronounced as in man, making it *ow-ân-ân-ish*. I have heard it spoken in this way so often that I find I always pronounce it in the same way myself. Be that as it may, the varieties of pronunciation of the name will only be equaled by the varieties of opinion regarding the merits of the two species of the fish.

So it will continue until numberless fishermen will unite without controversy, in one consensus of opinion, namely, that the famous ouananiche of Canada is the gamest fish that swims in fresh water. EUGENE MCCARTHY.

## ON THE NORTH SHORE OF LAKE SUPERIOR.

(Continued from Page 318.)

The morning broke beautifully over the ringing woods and rippling lake, and the entire camp was astir when the first soft sunbeams made the leaves glisten and the roses smile. It was really a halcyon morn for our tramp, and all were eager for a prompt departure to the far-away home of the lovely trout.

The Indian who was to pilot us was an early visitor, for he doubtless had an eye single to the breakfast in preparation, to which he well knew he would be invited when the half-breeds succeeded us at the table.

I was everything but satisfied with my right knee when I first arose, and the more I walked the more painful it became. Despite this intense pain, I was still in humor for the trip, and hurried myself with the preparations while breakfast was being served.

After we had all partaken of the meal and about ready to start, I found it simply impossible to walk the three or four miles to the pool; for I had now taken on a decided limp, every step sending a thrill of pain through that particular knee that made me writhe in agony.

"I can't go," I said to Ned when he was about to start. "What, not go?"

"Even so," and then I pointed to my knee by way of explanation, and taking a camp chair, seated myself on the shady side of the tent, looking the very embodiment of despair. Ned sympathized deeply with my affliction and proposed to abandon the trip; but I would not tolerate such a sacrifice. At last he reluctantly left with the Indian guide and Kenosh, leaving Peter with me as chief medicine man and custodian of the camp.

I followed them with longing eyes until they disappeared in a grove of cedars near by, and then my mind ran to that magnificent pool, weaving fanciful pictures of piscatorial delights that I well knew they would realize. At that immediate time I would have parted with much wealth to have been with them; but prudence dictated the course I had taken, so I nursed the aching knee instead of playing the rôle of an angler.

Sighing after the unobtainable is folly, and therefore I at once dismissed the idea as if it had never possessed me, and then taking a book was soon absorbed in its fascinating pages, it being a realistic narrative of a coal mine strike, entitled "Nana's Brother," from the wizard pen of the illustrious Zola, who has but recently won great renown in a masterpiece called "The Downfall."

Peter, the half-breed, in the meantime busied himself mending his clothes, and after that was completed came over to my tent and chatted a while, giving me a history as far as he knew of the Indians on the north shore of this great lake. He also trusted me with a very important secret, and that was his betrothal to one of the daughters of the Hudson Bay agent stationed at this place. As the marriage was to be consummated the second day on his return to the "Soo," the veil of secrecy no longer exists.

One of our oars having been broken on our trip up the river, I suggested to him now that he had time to make a new one. He started off, saying he thought he could find one; and sure enough he returned with one which, he stated, belonged to his prospective father-in-law. I demurred to such a piece of piracy, but he laughed at me

and said it was all right, and furthermore stated that the agent had borrowed a pike-pole of him last fall which he had never returned, and that this was simply an offset.

"Don't worry," said he, "I will soon be in the family and it will be all right," and then on his sawing off about 6in. of the blade and whittling down the handle the appropriation was made complete.

I didn't worry about it, but gave him to distinctly understand that it was a highly questionable proceeding and what a pale-face would style pure brigandage.

"He's got my pike pole, I've got his oar; everything is square," again muttered the stolid half-breed, who really could not understand my opposition to his taking the oar. He finally walked away, taking the oar with him and humming a French *chanson* as he went, evidently pleased with his method of balancing accounts.

The day had developed into perfection, spreading far and near a magnificent panorama which only the clear sky and the golden sunshine presents without a blur. Aguawa Harbor, with its glittering breastplate of perpendicular cliffs, was plainly in view; towering mountains with peak after peak, ridge beyond ridge, valley after valley, peaked to the right of the flowing stream, while miles after miles of a beautiful coast range of rocky bulwarks, illustrating every variety of picturesque formation, ran eastward in crescent lines till lost in the glare and glitter of the bright sunlight. By joining somewhat of the poet's contemplation to the artist's study, we may here see glimpses of sylphic shape that o'erlook the silver spray as it strikes the mighty blocks of ragged adamant. As if to give barbaric effect to all this poetic and rugged grandeur, a birch bark canoe, laden with children of the forest, darts out from a cove opposite and glides up the glinting stream with the little paddlers in frolicsome play. A veritable old squaw, with tangled and streaming black hair and repulsive mien, is attracted to the river's bank by the glee of the prankish children, and then there is an unmistakable recall. The canoe turns, reaches the bank again, and without ceremony the youngsters are roughly jerked out, the birch bark raised to the bank, and then the old hag hurriedly takes the tawny brood to her tent, as if fearful, in their sportive capers, the waters would engulf them.

At this juncture Peter called for the time, and as it was near noon I suggested dinner, telling him to prepare what he thought proper in addition to the trout, which we now had in superabundance. While he was attending to the preparation of the *menu*, I bathed my painful knee with some of Pond's Extract, the only remedy I could then think of as available, which, if it did not cure, might act as an emollient until I could secure something more active for reducing the inflammation. I now began to feel that I was truly a cripple, and that wading with me was one of the lost arts.

After dinner, weary of watching the soft white clouds which filled the sky, as well as depressed with the solemn stillness which was broken only by the murmur of the lake and the ceaseless song of the grasshoppers among the weeds, I determined to have Peter take the boat and row me to the first rapids with evident intent of slaughter among the small fry. The half-breed, who had got into a lazy humor, did not relish the idea of being disturbed in his dreamy state; but as he gave no expression to the revolutionary revolt within him, I gave no heed to it, knowing full well that a little activity would soon awaken him into a pleasant frame of mind. I almost regretted going myself, for the sun was blistering hot as we glided along the foliated banks, breast high with tangles of underbrush and beds of water plants. Reaching the rapids I got ashore on what formed a kind of peninsula, and with two small flies, one a pale evening-dun, and the other a yellow-drake, both on a No. 10 Sproat, started in to make sad havoc in the ranks of the little beauties that sport in the rippling shallows. Much to my disgust, there was little toying with the lures, but after an hour's hard work in the broiling sun I secured half a dozen from 8 to 10in. long.

My object in breaking the monotony of camp isolation that day being accomplished I was satisfied to return with my limited string of scarlet babies and patiently await the arrival of the party from the pool.

About 4 o'clock they showed up in single-file order, Ned leading with a heavy string of trout, followed by Kenosh and the guide similarly loaded with the freckled beauties. They had had most excellent sport and were unqualified in their praise of the big pool. Although the fish were not large, running from ½ lb. to 1½ lbs., they made a collection handsome enough in their spangled coats of mottled dyes to win the admiration of any disciple of the gentle art or other who had an eye for graceful symmetry and ravishing colors.

Ned gave me a very graphic description of the woodland trip, the magnificent pool and the sport. The location of the pool, he said, was wild and beautiful beyond power of description. It was hemmed in by dense and unmeasured forests of pine, birch and balsam, matted with ferns and fallen timber and in close companionship with almost impenetrable thickets, which threw their bending branches and grateful shade over the rushing waters that came tumbling in one wide sheet of foam into a picturesque basin below, and then wildly surging and fretting its way through masses of storm-worn granite that were heaped in the wildest confusion in the bed of the racing, roaring river. He was satisfied, he said, that after he had reached its craggy and ragged edges that there were concealed deep down in its rocky rifts, ledges and chasms, trout galore, but he sadly felt the want of a pair of wading boots or pants for the choice spots that were far from the torrent-washed shore. He fished a while from the bank, meeting with reasonably fair success, but he sighed all the time for the little islets of rock, around which the water dashed in bubbles and spray, that he might further advance his fortune with the *fontinalis*.

At last he struck upon a novel idea to reach the coveted place, and that was upon the backs of the half-breed and Indian, for being of portly frame he well knew that no one person could carry him safely over the stony and slippery bottom. "It was a laughable sight, but a far more serious event to me," he continued, "after I was well on the way, than I anticipated. We were all so full of laughter at the novelty of the situation that I was fearful every moment we would all be floundering in the water. Fortunately, I reached the isle of delight and then I made lamentation in the domain of the spangled beauties, for here I found the river a very Pactolus in golden treasures. Kenosh waded into the pool up to his waist and made a capital record. He threw his flies very deftly and generally let

them drop in the foam, for there the trout are always to be found, if anywhere. The most laughable sight, however, was that of the angling of the Indian guide. He used a pole that was almost as thick at one end as at the other and as crooked as a worm fence. To this was attached a common piece of wrapping twine with a good sized eyed hook. This he baited with some salt pork, and then taking position on a declivitous rock, where he could drop his line over a small spring that was bubbling up from the bed of the pool, quietly let his bait sink within an inch or two of the bottom; but he never put it in until he saw some trout that had come to sport in the cold flowing water. When there was a bite there was a sudden jerk, and if he missed the trout his hook would invariably catch in the branches of the tree above him. He as often hooked them foul as fair, and succeeded in catching as many as either of us. His crude angling was really farcical, and frequently I stopped my fishing and sat down and watched him till the tears rolled down my cheeks from excessive laughter. "Look out for the tree," I would cry aloud, when I saw his lips close and his fingers tighten, ready for the culmination of the bite. When he missed, and caught the tree from his violent jerk, I would yell; he would smile and Kenosh chatter a little Chippewa. It was a circus, I assure you, and would have made a donkey smile, if such a thing were possible."

Just before supper, a Mackinac, with two half-breeds and the angler from "Old Kentucky," one whom we had met on the North Shore last year, rounded into the mouth of the Aguawa and landed on the bank opposite to us, where they made camp. We paid him an immediate visit, and learned that he was *en route* for Michipicoton River and was after big trout, which he expected to obtain there. He stated that he had caught three large Mackinac trout on a spoon hook as he came along, and was kind enough to offer us one; but having more fish in camp than we could well dispose of or care for, gratefully declined accepting, and in turn proffered him some of our rose-colored beauties.

After Ned had given him an interesting account of his trip to the big pool, he concluded to remain over one day and give it a trial, if the weather was at all favorable in the morning; if not, he would simply try the small pools near the mouth. I was satisfied that his trip to the Michipicoton River would not result favorably, for the Indians located there are quite numerous, and had doubtless, ere this, cleaned the stream of nearly all fish that could be taken by net or otherwise. His boatman, however, had fully impressed him with the idea of monster trout to be caught there, and he was not to be deterred from his enterprise by our adverse talk. It was a long trip and along a very dangerous coast, and with contrary winds would prove anything but a pleasant voyage.

A signal for our recall to supper being made by our chef, we left for the feast with undue haste, as our appetites were as keen as if we had been chopping wood all day on half rations.

The evening closed in ethereal beauty, the sky being a poem in clouds, the lake in gentle ripples and the sun one burning blaze of golden light with lovely fleeces enriching the western horizon with the soft colors of rosy blush and crimson tint. This gorgeous spectacle continued till the stars came out, crowding the sky with silver points.

"Oh Night, most beautiful and rare!  
Thou giv'st the heavens their holiest line;  
And through the azure fields of air  
Bring'st down the gentle dew."

The morning, much to our surprise, opened rainy and foggy, seriously interfering with our trip to Jackson's Cove. We very sensibly concluded to wait for more propitious weather before breaking camp, as a day or two's delay mattered little to us, as we were not on the trip with a limited railroad schedule.

Time hanging heavily on our hands, we paid our neighboring angler across the river another visit and were delightfully entertained while there in listening to his account of his travels last winter in Japan. He gave us a more impressive and intelligent account of the condition of the country, its people and their habits, than could be garnered from the many books on that subject. Being a professional man, an attorney, he handled the subject with a complete understanding, illustrating it in a very elaborate and earnest manner. As Japan is not my subject proper, I will bid good-bye to the traveler and return to America and the painted beauty of the lake.

Toward the closing hours of the day there was a decided change in the weather. The dense banks of fog that had wrapped the mountains and the coast in a misty veil, began to fade away under the bright rays of a golden sun. The west was soon aglow with radiance—the most beautiful colors momentarily changing in the sky—and the reflection gilding the great lake at our feet, which the wind was gently tossing into little billows of silvery seas. Ned suggested, at this auspicious change, to take boat and ascend the river and toy with the troutlings as a means of diversion. I was in harmony with him, for I was tired of the inactivity which had possessed us during the day, and was therefore ready for any venture that had a scintilla of change in it. The boys were accordingly called from their cozy tent and the boat put in readiness. The half mile was soon made and then the rapids and pools were fished from the banks. Ned stuck to the first rapids, but I limped along to more favorable waters where I knew the dotted darlings were to be found in generous abundance. I waded no more, I assure you, and when I had to cross the stream it was on the back of my faithful half-breed, Kenosh. When I came to a pool where wading was required, I handed the rod to my man Friday and let him have his share of the angle, for he not only delighted in it with the zest of a professional, but cast a fly equally as well.

As we had but a couple of hours in which to fish, the time soon came for us to retrace our steps and renew the fording. The trout were not rising well at all, but we managed to basket a few 8 and 10in. ones, which well repaid us for all the toil. Ned had three to his account, but as usual I found him in the boat drinking in the boundless glories of the sapphire sky—which had so suddenly grown into ethereal splendor—and the wide-reaching landscape, with its miles of towering mountains and hazy valleys.

We lost no time in going to our quarters, for the evening shadows had spanned the lovely stream and were fast creeping up the aspiring heights where the eagle had his eyrie. Of course my crippled knee had suffered from the brief outing, but as I was to have a day of rest in sailing

on the morrow, if the wind were favorable, I felt that it would then take a step or two toward recovery. Consoling myself with this comfort in prospective, I gave the demoralized old limb no further attention and went to the call of supper as if the entire ailment were but a trifle and would soon bid me an adieu.

The bright sun having dried up the moisture from the heavy fog, sank to its resting place as if pleased with its kind mission, while a myriad of ephemera from their cloistered retreats sprang into existence with their pallid wings, as if the night were theirs alone. Cloud upon cloud of them assailed us as never before, until it seemed to take double doses of the repellent to keep them at any distance at all. Ned said it was a grand attack by the entire host, and so direful was their revolutionary ferocity that we at last were compelled to beat a retreat to our tent and take refuge inside the mosquito bar. There we held them safely at bay and let them hum their indignation in choruses *pianissimo* or *fortissimo*, as they might elect. Slumber soon took us in her embrace, and then I went off in one of those remarkable dreams where I saw the blood-thirsty insects expand into such gigantic growth as to perfectly appall me. There they were, with ferocious heads and big bulging eyes, and armed with such horrid implements of torture, that I awoke with a cold shiver to find that I was without cover and nearly frozen. I was soon in my blankets again, and then a gentle warmth possessed me and once more I was in dreamland; but this time it was of an idyllic land, in which were magnificent pools with trout of unexampled beauty and of tarpon-like size, that gracefully sported in the soft sunbeams that fell in rosy flashes o'er the crystal waters. I awoke, just as I was about to try the virtue of a mammoth fly, with a ray of the bright sun streaming through the opening of the tent. Ned, who had already risen, declared the wind in the right quarter, and the morning one of perfect loveliness. The camp at once assumed a busy air for the onward move to the haunts of the iridescent and gameful fish.

ALEX. STARBUCK.

[TO BE CONTINUED.]

## ANGLING NOTES.

### Plants for Aquaria.

A CORRESPONDENT asks to be informed "what plants he will need to make an aquarium self-sustaining, and how often it will be necessary to change the water."

I assume it to be a fresh-water aquarium, in which case bladderwort, water-crowfoot and brook starwort (*Callitriche*) will prove to be excellent plants for the purpose, as they have been used successfully, if a moderate number of animals, especially fishes, are included. If the plants and fishes are properly proportioned to the water it will not be necessary to change the water, except to add to it as evaporation takes place, and this must be determined by observation and experience.

Mr. Wm. P. Seal, one of the foremost aquarium experts of the world, says the plants most commonly sold for aquarium purposes are *Myriophyllum*, *Ceratophyllum* and a species of *Cabomba*. That they do the best under all circumstances, and have from choice the largest sale. The correspondent does not say that he wishes to introduce fish into his aquarium, but it is presumed that he does, in which case the plants should be introduced first and the fish a week later. Some aquatic plants root, some do not, and the latter will grow freely, fastening down or floating loose. Bladderwort and *Ceratophyllum* are of the latter sort. Seal says: "The water should not be changed unless the fish show signs of great distress by keeping their mouths out of the water and sucking in air. This denotes the exhaustion of the air or free oxygen in the water. The water may be re-aërated by the use of a syringe or by dipping it out and pouring it back." Seal gives four points demanding consideration to insure success in the management of aquaria. First, absolute purity in the vessel used; second, an abundance of light; third, to avoid overstocking with fish; fourth, great care in introducing food into the aquarium.

### Modern Angling Literature.

A very dear friend of the writer's affects to look upon the information given in the pages of angling periodicals as ephemeral, and to contend that in order to convey a lasting impression upon any given subject one must employ the vehicle of a printed book. There is some force in this argument when applied to a specific object, an atom, as it were, which with other atoms constitute a combination of the entire matter under a general head, as for instance, "A Treatise upon the Five-Spined Stickleback. Its History, Habits and Habitat. Illustrated," might in book form contain more researches and information concerning this valuable game fish than could be found in any single issue of FOREST AND STREAM, and thus condensed, be more indelibly fixed upon the retina of the mind, than if the same information were given in fragments in this journal. But is it not true that the modern technical periodical plays a most important part in gathering together the fragments from every "corner of the earth" (although I never could understand why a round body should have corners), to make the treatise possible? Would the treatise ever see the light of day between book covers if it were not for the modern technical periodical which does this collecting without expense for railway and steamer fares and hotel bills?

Modern angling literature is not confined to the printed pages of books any more than the literature upon any other subject, however much it may be assumed that angling literature is book literature. Literature is not bounded by or bound in books, for it is "the collective body of literary productions, embracing the entire results of knowledge and fancy preserved in writing; also the whole body of literary productions or writings upon a given subject."

Now, I might ask what part does angling literature play in the history of a people, but an unknown Scotch writer has answered the question far better than I can: "It is obvious that this varied, yet simple, kind of literature will last as long as the taste for angling endures; it is part and parcel of the sport, and it is just as clear an indication of a natural characteristic of the time as the old legends of Tyrol which peopled the mountain, lake and dark forest with supernatural beings. It reflects a feature of the age just as much as the drama of the Restoration shows us the coarseness and the demoralization of its social life. Thus, as it has to be regarded as part of the body of modern literature for

its own merits or faults, in days to come it will be perused by the historian of the Society of the Nineteenth Century for indications of some of the noticeable characteristics of the period with which he is occupied. While, therefore, we may in serious mood look upon a great deal of it as trivial, we must not forget its relative character, we must not overlook the absolute and uniform healthiness of the entire body of it, and we must not shut our eyes to those parts which are full of charming description, which touch on enduring human interests, or which accurately portray and analyze the operations of nature."

### All on Account of the Festive Sucker.

"I wish to call attention to a law that outrages every natural right, and tramples down every principle of justice. A law conceived in ignorance and born in selfishness. There could be nothing more directly calculated to induce disregard for, and a violation of, all laws than one that legalizes the seizing of honest, upright citizens and hurrying them before a magistrate, away from their town, there to be charged for the high crime of fishing for suckers with a net, and subjected to fine and imprisonment.

"But such is the law of our land, such is the law we have had imposed upon us by those we have chosen as our law makers. A law, a blot upon our statute book, and a scourge to the people. Although its violation is a legal crime, it is not that of a moral obligation. While we may be bound to regard a bad law in the view of men, it cannot be a sin to disregard it in the sight of God."

This is a protest from Mr. J. V. W. Doty, of Dutchess county, New York, and it could not be more emphatic if double-leaded, not more in earnest if the Constitution and framework of the republic were in danger. It should be read slowly that it may not be mistaken for a call to arms to resist foreign invasion. The bulwark of our liberties as a free people is safe, and incidentally the suckers of Dutchess county are protected by law from the netter. Therefore this wail which rises to the empyrian blue and changes it to a terra cotta red. Mr. Doty should be calm; he need not retire to the primeval forest to conceal his emotions, for there is balm in Gilead. It is true, sadly true, as Mr. Doty more than intimates, that it is illegal to net suckers in Dutchess county, and this law was passed not so much to prevent the extinction of the gamesome sucker by the netter, as it was that the netter of our ponds and streams is proverbially species-blind and when he hauls his net he cannot distinguish suckers from trout, black bass or other fish, and it became necessary in order to protect any fish from capture by devices other than by fair angling, to include the sucker under the mantle of the law.

Mr. Doty should not give way to grief when the hand of the tyrant oppressor smites him and hedges the sucker about with the meshes of the law to the exclusion of the meshes of the netter, he should follow the example of the Puritan and emigrate to a land where the sucker, like necessity, knows no law, where it may be netted, speared and shot at any and all seasons of the year. Come to Warren county (and it is not far from Dutchess), the blooming oasis of netter and spear—"Little Warren," the lair of the poacher, who is under the protection of the same law which has coiled itself about the toothsome and bony sucker in Dutchess county. It is one of the beauties of a republican form of government that suckers are protected in one county and poachers are protected in another, so that a man has only to change his residence to flock with one or herd with the other.

Mr. Doty makes one statement which seems to me, to say the least, misleading, to wit: "The tendency, and it seems the purpose, of these laws (game and fish laws) is not to protect the birds or the fish, but to confine the taking of them to a privileged class."

The foundation of all game laws is protection during the breeding season, to enable fish and game to reproduce and keep up the stock. Regulations as to size and selling are natural sequences. What appears to the complainant to be class legislation is that, while no harm may be done (except to the suckers) if suckers are netted during the season that they are spawning, no guarantee company will give bonds for the sucker netter that he will not net fish at the same time that are not on the free list.

Perhaps with a higher state of civilization sucker nets, and a permit to use them, will be given away with a pound of baking powder.

### To Move a Fishway.

A petition signed by residents of Fort Edward, N. Y., has been sent to the Legislature asking that the location of the fishway in the dam across the Hudson River at Thomson's Mills or Fort Miller, as it is variously called, be changed, because it is alleged, the fishway in its present location is constantly filled with driftwood, so that fish are unable to pass through it.

A letter now before me from the member of Assembly from Washington county informs me that he has forwarded the petition to the Fish Commissioners of the State, with the recommendation that it be promptly considered.

The last letter that I received from the late W. H. Rogers, who built the fishway, was in relation to that structure. He said, in substance, that the fishway in question was located in its present position by an expert of thirty years' experience in such matters, and the location was selected because it was considered the best in the dam for the purposes for which the fishway was built. It was located where it now is for many reasons, any one of which is of vastly greater importance than the question of driftwood, and it was located with a full knowledge of the driftwood difficulty, which can be prevented in an hour's time by any handy man. Furthermore, when the builder left the fishway, the structure was provided with a guard against the driftwood.

At the time of writing me Mr. Rogers hoped to examine the fishways on the Hudson during the coming summer, but soon after I received a letter from Mr. Herber Rogers, a son, announcing his father's death.

It is more than likely that the fault complained of not due to the location of the fishway. A year ago a pair of Thomson & Dix's mill was carried away by the spring freshet, and with it a part of the fishway. Mr. Dix told me that he repaired the fishway when he repaired his mill, and it is quite possible that the floodwood guard were not replaced.

A. N. CHENEY.

## MY FIRST TROUTING EXPERIENCE.

THE hour is 7 in the morning. The sun is struggling mightily to peep out from behind its purple curtain of thick clouds. The stream is babbling and tumbling along, just down there in the woods at the foot of the rugged old hill.

At least, that is probably what I would have written, before the poetry had vanished out of the old hill and dark woods, and cool, inviting stream. But I had never been trout fishing in all my life; much less had I ever caught a trout, so it was only natural that, as I stood upon the summit of the hill and surveyed the scene of the work in hand, I should see nothing but green beauty, and pleasant retreats, and refreshing waters. I should see something different now, after the tragedy, or farce, or what you will, that was there enacted.

Two neophytes and an expert were the *dramatis personæ*; L., the strong, sturdy man, who worked out doors from season to season, and who had agreed to show us the best fishing we had ever seen; H., the bantam weight little bookkeeper, wiry and tough as whip cord, who had beguiled me away from my clients and my books; and I, pale and slender, brimful of conceit in my own powers of endurance, and longing for a breath of spring forest ozone.

After we had descended the hill, the burst of scorn with which H. greeted the dancing little brook was a magnificent masterpiece. "Was that the place," he demanded, "where we were to catch such numbers of trout, of giant size, as we had promised our friends we were to do? Why, the water wasn't a foot deep, etc., etc."

I thought that perhaps we were about to catch some minnows to use as bait for the big fellows; I'd heard of such things, but I did not know that in my creel was a small tin box full of nasty, wriggling worms and grubs. Nor, by the way, did I know how much that creel weighed. I thought at 7 o'clock that 5 lbs. would be a big estimate; at 1 o'clock 25 would have been nearer the mark.

L. only said sententiously, "Rig up." It beats all how decisive old trout fishermen become, in time. They must, somehow, catch the snappy, no-room-for-argument spirit of their favorite quarry.

The splendid luck which I had fondly anticipated attended us from the start. H. carefully laid his tip down upon the moss, and in less than ten seconds I had stepped squarely on the middle of it. Of course I didn't mean to, but that made no difference. It never occurs to a fellow with eyes like telescopes that a near-sighted man cannot see every little thing like a tip, when he has left his spectacles fifty miles behind him. Before H. had fairly got under good scolding headway, however, the damage had been repaired after a fashion, thanks to L.'s handiness with an old bayonet of a thing that he sarcastically called his pocket knife; it looked more like an abbreviated cavalry sabre.

In the meantime, following his instructions, I prepared my own tackle, unearthed the worms from beneath my sandwiches and proclaimed myself ready to catch a fish. Stepping cautiously out upon a bit of stone I tossed my line down stream just in front of an old mossy log. No bite, so I went along a few yards further and did the same thing again. This time a queer little jerk at the end of the line warned me that a fish of some kind had taken the bait. But I didn't jerk back, oh no, I only swished the line swiftly across the stream and said, "Scat, you little fool!"

"Catch that fish!" cried L. softly to me.

"He's too small," I whispered back, "he'll scare the big ones."

"Catch that trout!" again commanded my instructor, and I proceeded to obey. He took the hook the very next time and I dangled him out. L. said he was a "beauty," and he did look rather pretty as he flopped around on the bank, all golden and red, and full six inches long.

"But say, you," exclaimed L., "if you think all you've got to do is to walk down this creek and have 'em jump into your basket from under the bank you want to mend your ways of thinking. That's a trout, that's the way to catch 'em and that's the last time I want to see you scorn Providence when she just flings fortune at your head. Ten to one you won't catch another all day."

I took my reproof meekly, and harmony restored, a-down the winding stream we all three started, L. ahead, H. next and I last. Suddenly the woods rang with a frightful yell, which startled an old crow in the top of a neighboring tree so badly that he nearly fell off his perch and went clamoring away through the air like mad. A scared look in H.'s direction revealed that fisherman cavoring around on the bank like a dorky at a husking bee, and vainly clutching at his first trout swinging gracefully from a dead branch over the water, just out of his reach. How that "beauty" got there I couldn't quite make out; he certainly didn't grow there. Perhaps H. could have told, but he wouldn't; perhaps a tangled fish line, wound dozens and dozens of times around every twig on the branch, had something to do with it. At any rate we rescued the trout, line and all; and after some more mild comments from L. upon the uselessness of yanking a fish into the treetops of the next county, we drifted along.

In five minutes L. was out of sight. He had the most astonishing trick of disappearing from right under our noses, that mortal man ever could acquire. How he would thread his way through a network of brush and limbs that apparently would have stopped a rat-terrier, and that H. and I never attempted to penetrate. It was not a great while after he had vanished before I wanted to borrow that mighty pen-knife. L. said he wanted to use it also, after I had done with it; just as though I would let him have it, there in that vast forest whose solitude was tenfold, now that L. had disappeared from sight! Oh, how endless it seemed, and how somber and wild it suddenly grew! Why, what would I do, in case a bear or a catamount sprang out from behind some fallen tree, to claim a dinner? I wanted that knife very much; and the more I thought about it, the more I wanted it; so taking my line from the water, I started rapidly ahead to find L. Now, the sober truth of the matter is, I did not overtake that man for near an hour. When at last I did come up with him, he was sitting on a mossy log, calmly waiting for us laggards, more than a mile from where he left us; and he had pretty good evidence that he had fished most of the time, too.

We both waited for H., whose speedy arrival told that

he hadn't fished much of the time, and whose first breathless demand, "L., let me take your knife," caused L. to smile. But I had the weapon, and I wasn't done with it either, although it lay stowed away in the right hand pocket of my coat. A few minutes' breathing time were allowed H. and myself, and then we were up and at it again. This time it was for me to make some remarks to L., and I think he must have been impressed with my language, or my manner or something, because he kept to the rear and within easy hail the rest of the morning. But in ten minutes H. and I were whelmed in difficulties. If travel along that infernal stream had heretofore been hard to us, that which we now encountered was simply excruciating. The brook took its course through a tangled growth of hemlock, and sapling and willow; and it wound, and turned and twisted around on itself, and choose the most mucky, oozy portion of what I took to be a young Dismal Swamp in which to make its bed. I punctured a great hole in one of my heavy shoes, by stepping sideways upon a sharp, iron-like stub, and ripped my clothing in more than a dozen places. It would have been a tremendous task for me to have walked through there unencumbered by fish-basket and rod; with that impedimenta I was in a continual drooping despair of ever getting out alive. That fishing-rod seemed to assume the unwieldy proportions of a gigantic pine; and the hook and line developed into a fifteen-fathom cable with an anchor at the end of it. I tried to fish; but, alas! the hook would catch in some old, sunken log. In trying to untangle that the rod would mix itself up with the limbs and branches around and overhead. Many times when I wanted to go to one side of an intervening tree that rod would insist on traveling another way. How it would shoot up through the brush tops; how it would whip itself around some slender tree just when I desired to cast my bait into some quiet, limpid pool, from which L. would subsequently be sure to take a beauty; and how it would hang my line a dozen feet overhead just at the moment I wanted to use it myself. In one of my struggles with rod, line and underbrush, H., who fished pretty close to that pen-knife, somehow got mixed up with his paraphernalia. In the excitement a lithe sapling was bent to the ground by me, and when released it carried skyward with it a good-sized piece of his trousers. How I thanked my stars that those spectacles were not astride my nose, even though I couldn't see ten rods without 'em. I couldn't have kept them there an instant. Once in a while L. would appear serenely to view and exclaim, "Just got a fine one back there by the root of that old stump;" and it was always sure to be the very place where H. and I had vainly tried to cast our lines. However, we two slowly achieved success, at the rate of a trout an hour; but when 1 o'clock came I struck for grub. Out from the mess of fish and worms I rescued a substantial lunch, and quickly put it where it would not make my back ache any more. L. and H. were probably better fishermen than I, but when it came to lunch, I was away ahead. Half an hour for rest, and L. gave the word to start in again. He might as well have told me to fly! I was exhausted, disgusted, humiliated. My legs were stiff from sitting still, and I quietly informed my companions that I was going back to the house. It took L. about ten seconds to comprehend what I meant; then he went all to pieces, and acted like an idiot. Said he, "Well, you are a good one! Why, you haven't seen any trout fishing yet; wait till we get down to the swamp—"

He never finished that sentence, because I promptly injected some vigorous king's English into it. If he wanted me to wait till I got into the swamp, I wanted him to tell me where I had been for the last four hours. Then he changed his tune and sang wonderful songs of great trout which were anxiously awaiting our advent "only about half a mile below here." However, I consulted my lame legs, sore foot and brief but bitter experience, and very shortly ended the argument by unjointing my rod and setting out across lots for home. I was completely done up for the rest of that day, and what galled me most was that H. had outworked me. It seemed funny; I could have put him over my shoulder in a scuffle, but he had bested me then, and badly, too. Three hours after I got home H. and L. arrived. The former had a creel pretty full of trout, but a suspicious emptiness in L.'s basket accounted for that all right. A hearty supper was eaten, plans laid for the next day's sport, and candle-light found me snug in bed.

It seemed to me that I had only just closed my eyes when that owl L. came booming into the room with "Come, get up here, breakfast's ready, so's the horse, and we must get an early start, for a whole crowd are going down to Little River and we must get there first—or-r-buzz-z-z-m-m." Yank! and the bed clothes went flying into the far corner of the room. Why couldn't that devil have let me sleep a few minutes. I soon heard him hammering away at H.'s door, and judging from the racket which immediately issued from the room he was giving that gentleman some assistance in getting up. I arose, tottering across the floor on my lame legs, and after a refreshing scrub, went down to a glorious breakfast of fried trout. How good they did taste; I thought H. would eat till he burst.

"Say, L.," said he suddenly, "where did you get these fish?"

"Oh, you and I caught 'em yesterday."

The look of blank dismay which broke over poor H.'s face was pitiful to behold.

"I intended to take my fish home," he wailed, "and here you've made me eat every cussed one."

Breakfast done, we drove five or six miles across the country and struck the same stream where it had grown into proportions which justified the name of Little River.

"That is the place to catch fish," said I, "this idea of tramping over a whole township to catch a trout is all nonsense. I'm going to stand right here on the bank and fish all day in that deep pool."

"No you ain't either," replied L., crescendo, "you're going to hoof it down the current just three miles, and back again up to that old saw mill about a mile above here, today." I collapsed.

Our horse was duly cared for in a neighboring barn, by a big, blue-eyed farmer whom L. knew, and once more we started in. The stream here issued out of the most dreadful looking swamp I ever saw; the one in which I had yesterday fought, and from which I had ingloriously fled, was respectable farm land compared with it. But for half a mile or more, the river then ran in the clear, open

meadows. And here we saw another exhibition of L.'s great skill as an "across country" fisherman. Before H. and I had reached the first fence, he was over the third, and going in apparent disregard of his errand in that part of the world. It was only apparent, however, as was afterwards proved. Blessings on him! He meant to do the right thing by us, and sincerely undertook to teach us how to do it. As well might the sailing kite have attempted to teach the average rooster how to soar. He probably forgot all about H. and me, ten minutes after he wet his line.

Deserted by L., we two determined upon a course of action for ourselves. H. was to take one side of the stream and I the other; by keeping pretty close together, and giving each other points from our personal experiences, it was H.'s idea that we might "catch on to the hang of the thing, without L."

That gentleman was soon lost in the shadow of the far-away woods, along which, at the foot of a giant hill, the brook skirted for a quarter of a mile, but neither H. nor I was in any hurry to leave that pleasant mead.

"All solid ground to walk on here, and nothing over your head but the sky," was the way he put it.

Pretty blue and white flowers dotted the turf in wonderful profusion, their fragrance lingering with us long after they themselves had been left behind. The air was warm, and balmy, and delicious; bluebirds everywhere were warbling their liquid springtime song; the peeping grass was green and velvety beneath our feet, and from the woods on the distant hillside, dark and solemn, the murmur of the rapid rushing little river was borne back, dreamily and pleasantly, to our ears.

"Verily, this is the poetry of life," thought I; "How I should like to linger here by the hour, solitary and alone—"

An ear-splitting screech from H. set the echoes ringing, and waking once more to the sterner realities of life I discovered that individual making a desperate effort to grant my mental wish, so far, at least, as his presence was concerned. A slight commotion in the grass on the opposite side, followed by a light plunge into the water, needed but the one word wildly yelled by H., "S-n-a-a-k-e!" and I had the explanation of it all. Another nice feature of this delightful recreation. L. had assured us that it was too early for snakes to be out. I succeeded after a time in coaxing H. back to the stream, down which he meandered very gingerly for nearly three miles, finding L. at an old bridge, just below which the water formed a deep black pool thirty feet in circumference. This was the terminus of our excursion in that direction. Into that pool we eagerly cast our lines, L. trying patiently every known art to the fisherman, or at least saying that he did, to entice a trout from its lair. No use, not even a nibble from what looked to me to be the most promising bit of water we had yet seen.

L. claimed to be amazed; he dwelt at length upon the size and numbers of trout which he had taken from that pool in days gone by, until H. said quietly, "Look here, L., we're too frail to stand that all at once." L. quit.

We fished back up stream more rapidly than coming down, and finally arrived at the spot where we began that morning, near the swamp. The brook here cut directly across the end of this swamp, and emerging on the other side for a rod or so, turned around almost upon itself and flowed through the very heart of it. What a place for a tenderfoot to be caught in! At the very worst spot on the creek, I had the good fortune to kill a really fine trout. The water here came tumbling over the exposed root of an old tree, and with many a swirl and foaming eddy, shot swiftly under the green, mossy bank. I cast directly into that miniature maelstrom, the hook went swinging in to the dark cavity, and flash! I had him. I won't repeat the story; you FOREST AND STREAM readers know just what I would like to say, so I won't say it; only, as I lifted the glorious fellow out, and chased him flopping around over half an acre of dense underbrush, I felt something of the triumph of a true trout fisherman in all his glory. He weighed one pound.

That encouraged me to go on. Proceeding a few rods further, we came to a wide tract of cleared lowland. Later in the season it would probably have been a pretty good pasture; now, however, it was a gigantic mud hole concealed beneath a last year's growth of coarse grass. Along the margin of this lowland the creek ran a short distance. A wide and deep ditch, draining the water from the flat here emptied into the stream, its opening being just at a point where the creek itself emerged from under a dreadful mass of underbrush. H. was ahead, I next, and L. somewhere behind, owing to an accident to his rod, which had detained him. We two could have been easily pardoned for the error we made, of taking the wrong watercourse and fishing patiently up the ditch for ten rods. When we discovered our mistake, instead of going directly back, as we should have done, we thought to save time by cutting across the marshy flats and striking it further up. As I said, the stream turned off from the flats almost at a right angle, so of course the further we went, the further out of the way we were. Over an hour did we struggle in that wandering maze, fighting several million varieties of swamp flies meanwhile, until H., up to that time chock full of pluck, cried out, "Enough! Let's quit and go home." We never saw the stream again. I never want to.

A long, weary tramp brought us to the place where our horse was put up, and while resting we were joined by our burly, blue-eyed friend, the good-natured farmer. He seemed to take a real interest in our hardships, looked over our fish, complimented me upon my good fortune, and gave us a lot of advice about trout fishing which I, for one, will never follow. Some time later L. put in his appearance, "wet, and soiled, and wearied." I went for his creel, and the very first fish I brought to light was a "darling," about four inches long. L. blushed deeply, and became very glum indeed, while H. and I were making the neighborhood echo to our howls of laughter. He didn't even smile, but grumbled something about "catching it for luck." Fifteen minutes afterward, when we were well on the road toward home, L. turned savagely upon us with, "You blanked fools, didn't you know that man was the game constable, and the crankiest one in the business?"

How should we?

A faithful summary of my experience as a trout fisherman would read about as follows: Disbursements, six dollars, three days, lots of good energy, my profane vocabulary several times over. Receipts, 500 fly bites, scratches too numerous to mention, a lame foot, violent

shock to my faith in outdoor recreation, and seventeen trout. Balance largely against me. Anathema upon the whole business!

H., who has read this manuscript down to this point, adds: "Bass fishing, with a minnow, out of a boat, is good enough for me."

D. F. HALL.  
OSWEGO, N. Y.

FISHING ON PATRIOTS' DAY.

BOSTON, Mass., April 16.—The trout fishermen have done nothing for a week beyond talking the matter over and getting ready. Such weather in April is almost beyond the record. The storm began early in the week and continued almost to the end of the week. Snow on Sunday in Massachusetts, followed by rain on the coast on Monday and with snow in the interior. A gale with more snow and rain on Wednesday, Thursday and Friday, the weather not clearing, in fact, till Sunday again. Such a record for the week has been enough to keep anybody at home, to say nothing about following the swollen streams with line and rod. Such a record is good for the trout, and doubtless the fishermen are just as happy, for the trout are left to be taken some other day. Massachusetts has abolished Fast Day, appointed by the Governor, and has made April 19 a holiday for all time—the date of the battle of Lexington. Somehow the name Patriots' Day has become affixed to the holiday, though I believe nothing in the act of appointment makes this name binding. As a holiday it comes at about the right time. The fishermen are planning to improve it. A large number of Boston lovers of the rod and reel have signified their intention of going a-fishing on that day. At the tackle stores there are a good many bundles of new rigging that has been selected and is to be held in readiness. May the day prove to be propitious.

Reports from Maine mention the worst of weather for April. Ice has actually been forming, rather than melting, for a week or more. The date of the departure of the ice from Moosehead and the Rangeleys has been still further put off by the prophets, and the trout season, instead of being early, as indicated during the warm weather in March, may be very late—all depending upon the weather. But the preparations for fishing in Maine were never greater. This assertion is from actual observation, rather than from any desire to boom the business, such as actuates some of the reports in the Maine papers. Nearly every fisherman I have talked with is planning a trip to Maine, instead of the World's Fair, as last year. But there is a feeling of discontent as to the old resorts, and new fields will be sought for. Sportsmen are looking with longing eyes to some of the points that have been opened up by the completion of the Aroostook Railroad last year. They tire of the much advertised resorts where "thousands of trout are to be had for the catching, and big game is only waiting to be killed." Sportsmen have learned that such advertising really means no game and no fish; simply the tracks of the summer tourist.

Trout Opening.

THE trout season in New York State opened last Saturday, April 14. The date named in the law is April 15, but the 15th was Sunday; and the act adopted by the Legislature last month makes the preceding Saturday the opening day in all such cases.

The cold and stormy weather of last week had put the streams out of condition for fishing, and although Saturday was a lovely day, the anglers' rewards were not generous.

In accordance with time-honored custom Mr. Eugene E. Blackford celebrated the occasion with a handsome display of brook trout, the specimens coming from Vermont, Massachusetts, Rhode Island, Connecticut, New York and California.

Utica Association.

UTICA, April 12.—At the annual meeting of the Utica Fish and Game Protective Association, held last evening, the following officers were elected: President, Gustavus Dexter; Directors, I. C. McIntosh, W. K. Gilmore, W. E. Wolcott, T. Jay Griffiths, Elton G. Brown, M. M. Colby, A. S. Oatley. The secretary and treasurer will be elected by the board of directors.

PORTSA.

Fishculture and Fish Protection.

The Pennsylvania Association.

PHILADELPHIA, April 16.—The regular monthly meeting of the Pennsylvania Fish Protective Association, held on Saturday evening, April 14, at the rooms 1020 Arch street, Philadelphia, was well attended. Additional information upon violations of the fish laws was presented and acted upon.

The executive committee reported satisfactory progress in correcting several violations previously reported. The topic of destructive effects of the use of pound nets along the Atlantic coast line was then introduced and discussed at length, and it was the sense of the Association that the great decrease of fish in the bays and estuaries along the New Jersey coast was due in a large degree to these fish pounds, which should have shorter leaders and a larger mesh than those now in use, and should be placed not before June 15 and removed before Sept. 15. A resolution was therefore adopted earnestly recommending such legislation as will permit the increase of fish along the coast.

A general revision of the constitution was then proceeded with and provision made for the election of a board of trustees to take charge of the permanent fund of the Association.

A special committee was appointed to arrange the necessary preliminaries in conjunction with a similar committee of the Fish Commission for the reception of the American Fisheries Society on the occasion of its annual meeting in Philadelphia, May 16.

M. G. SELLERS, Sec'y.

A Bill to Regulate Pound Nets.

The following measure has been introduced as Senate, No. 122, in the New Jersey Legislature, by Mr. Bradley, of Asbury Park:

Sec. 1. Be it enacted by the Senate and General Assembly of the State of New Jersey: That hereafter it shall not be lawful for any person or persons to put, place, maintain or use in any of the waters within the jurisdiction of this State, including the waters of the Atlantic Ocean within three nautical miles of the coast line of this State, either on his own account and benefit or that of any other person or persons, any pound net, heart net, trap or other fixed or stationary device, for the capture of fish, except upon the following conditions, namely, that such net, trap or device has in all of its parts meshes of not less than four and one-half inches drawn measurement; that such pound net, heart net, trap or device shall not be used in any of the said waters, excepting between the fifteenth day of June and

the fifteenth day of September; that the wings or leaders connecting with any trap (which shall be limited to one compartment) shall not extend further than two hundred feet therefrom; that no such net-trap or device as aforesaid, shall be so placed that the same shall be nearer to each other than two miles, nor shall the same be placed within the distance of one mile of any permanent inlet of the Atlantic Ocean along the coast line of this State.

Sec. 2. And be it enacted, that any person or persons who shall offend against either of the provisions contained in this act shall, upon conviction thereof before any justice of the peace, either in the county in which said offense is committed or in which the offender resides or may be found, be punished by imprisonment in the county jail of the county where the conviction is had for the term of ten days, or by a fine of one hundred dollars and costs for each and every offense, one-half of the said fine to be paid by the said justice to the county collector of the county in which such conviction is had, and the other half to the person or persons making the complaint, and when any fine or imprisonment is imposed by virtue of this act the offender or offenders shall stand committed until the fine and costs are paid.

The third section provides for the seizure and forfeit of apparatus.

The Kennel.

FIXTURES.

DOG SHOWS.

April 17 to 20.—New England Kennel Club, at Boston, Mass. D. E. Loveland, Sec'y. Entries close March 31.  
April 18 to 21.—Southern California Kennel Club, at Los Angeles, Cal. C. A. Sumner, Sec'y.  
May 1 to 4.—Special show of St. Bernard, Collie, Spaniel and Fox-Terrier clubs, in connection with the Hempstead Farm show, Madison Square Garden.  
May 9 to 12.—Louisville Kennel Club, at Louisville, Ky. St. Marc M. Munday, Sec'y.  
Sept. 10 to 14.—Toronto Industrial Exhibition Association, at Toronto. C. A. Stone, Sec'y.  
Sept. 18 to 21.—Rhode Island State Fair Association, at Cranston, R. I. W. W. Dexter, Sec'y.

FIELD TRIALS.

Sept. 5.—Manitoba Field Trials Club, at Morris, Man. R. J. Gallaugher, Winnipeg, Sec'y.  
Nov. 6.—International Field Trials, at Chatham, Ont. W. B. Wells Sec'y.

The Specialty Club Show.

Editor Forest and Stream:

There are many matters in relation to the Bulldog Club's Specialty show, which will be held at the Madison Square Garden, New York, on May 1 to 4, in connection with the Hempstead Farm "Farm Show," to which I should like to draw special attention. For this reason I beg a corner of your valuable space, as I know of no better way to reach the public.

We hope to make our display on the benches as extensive and as interesting an exhibition of bulldogs as ever seen in America. In addition to the \$140 cash offered in the regular classes, the following specials will be open for competition: The W. K. C. offers \$25 for the best kennel of four bulldogs. The Madison Square Garden Company offers \$25 for the best pair of bulldogs (dog and bitch). The Woodlawn Park Stock Farm, \$10 for the best dog in the open or novice classes. Also \$10 for the best bitch in the open or novice classes, and \$5 for the best puppy. The Bulldog Club of America offers its silver medal for the best American bred dog owned and exhibited by a member; silver medal for the best American bred bitch owned and exhibited by a member. Mr. John H. Matthews, president of the Bulldog Club, offers \$10 for the best American bred puppy owned and exhibited by a member. Mr. Wm. Mariet, of Milwaukee, Wisconsin, offers through the Bulldog Club, \$10 for the best dog or bitch owned and exhibited by a non-member. The Club Caps and Bowl were offered at the W. K. C. Show for competition, and as our rules provide for only one offering each year, we cannot again place them upon our list of specials. Our trophies, however, will be on exhibition at the coming show. Unusual efforts are being made to add every feature that may increase public interest in this much abused breed of dog, and we propose to advance our pleas in every legitimate manner, and remove the prejudice and ignorance which now so generally exists regarding his good and bad qualities.

The Bulldog Club will have a competent man constantly in attendance at the show to see that all the dogs (whether the property of club members or not) are properly benched and securely chained; that each animal is provided with clean and comfortable bedding; that the stalls will be frequently renovated, and that their food and water is properly prepared and fed in abundance. In case of illness or injury to any dog, he will report the facts at once to some member of our bench committee, and suitable care and treatment will be given without delay. Any special orders or directions sent by mail to the writer as to the feed or care required for any particular dogs will be faithfully carried out; the exhibitor, however, will be expected to pay any extraordinary expense.

This "superintendent" will be sufficiently posted on all essential matters that he may give proper information to all inquirers that may address him in regard to affairs of our club, etc., and he will also be instructed to allow the public every opportunity of viewing the dogs, removing them from their benches for critical examination when so requested (always at proper times), and in every way to give the visitors an interesting and profitable exhibition. The resident members of the Bulldog Club and such others that may be in attendance will consider themselves members of a self-constituted committee to assist in carrying out our arrangements to perfection.

The exhibits of club members will be specially designated by our usual stall card (which will be nailed in each stall), bearing the dog's name, thus assisting visitors during their inspections, without continual reference to the catalogue. There will be, however, no distinction made as to the care and attention to be devoted to the others; all will share and share alike.

I feel sure that you will pardon this lengthy letter, which will seriously encroach on your limited space, if you but see that our will and objects are to bring our selected breed of dog properly before the public, to demonstrate that the bulldog is a faithful, companionable brute, worthy of affection; and that the Bulldog Club proposes to come boldly forth and proclaim its mission, and will spare no pains to establish its claims as a useful and hard-working institution, that works with a will for a good purpose, and has and will be blessed with good results.

BULLDOG CLUB OF AMERICA,

Per JOHN H. MATTHEWS, Pres.

New York, April 16.

Cocker Truths.

Editor Forest and Stream:

In your last issue a letter by our esteemed friend Uncle Dick merits the attention of every spaniel lover. If his theories are right, the views of the writers of several letters which have recently appeared in your paper are most decidedly wrong and *vice versa*. My first impulse on reading his letter was to answer it at once, but the old saying of "Second thoughts are best" prevailed, and I decided to defer my answer until after he has judged the spaniels at Boston, where, if he practices what he preaches, an answer will be necessary, whereas, if he preaches what he does not practice, he will, as heretofore, have set the seal of his strong disapproval on his utterances through the medium of the kennel press. I may possibly at the same time turn the search light of open criticism on some strange decisions at other shows. Watch and wait.

SOLUS.

Philadelphia K. C. Meeting.

THE Philadelphia Kennel Club held an enjoyable meeting last Tuesday week at the Aldine Hotel. Mr. Pierre Lorillard, Jr., and some new members were initiated into the club's jollity, which this time was enlivened by a string band. The combination with the Eastern Field Trial Club was the principal subject of discussion. They have secured a well stocked preserve of 6,500 acres, at Newton, N. C. The stakes and final conditions of the coming trials are as follows:

Members' Stake.—To be run Friday, Nov. 23; entries close the evening previous, and no dog that has been placed in any open recognized trial to be eligible. Members must handle their own dogs. Eastern Field Trial members to be admitted to the Philadelphia trials, and vice-versa; the entrance fee, \$5.

Derby Stake.—To start Monday, Nov. 26; entrance fee, \$35; first forfeit \$10, payable June 1; second, \$10, payable Sept. 15; additional \$10 to start. Value of stakes, \$600; \$300 to first, \$200 to second and \$100 to third.

All-Aged Stakes.—Open to pointers and setters; to be run on the conclusion of the Derby. Entrance fee \$30; entries close Oct. 15; value of stakes, \$600; \$300 to first, \$200 to second and \$100 to third.

The Selling Stakes.—Originated by the Eastern Field Trials Club. To be run conjointly after the Eastern Club's All-aged stake. To be for dogs that have never been placed at an open recognized field trial. Entries close Oct. 1; entrance fee, \$10. The starting fee to be 5 per cent. of the selling price, payable the evening before the stake is run. The price of entry, which is not to exceed \$300, must be placed upon each dog at time of payment of the starting fee. Winning dogs to be offered at auction by the club at 9 A. M. of the day the awards are made. Any surplus over such price to go to the club. Beaten dogs may be claimed at entered selling price at 10 P. M. In the event of more than one claimant for a dog, the ownership to be determined by auction between such claimants. A certificate signed by judges and presidents and secretaries of the two clubs will be given all dogs showing merit as good shooting dogs. Value of stakes, \$350; \$200 to first, \$100 to second, \$50 to third.

The object of the stake and conditions is to give men interested in dogs a chance to attend the trials and see the dogs run in the field and in competition, and purchase them afterwards at a moderate price. The certificates of merit will show for the dog's working qualities, and as all surplus beyond the fixed price at the sales reverts to the club's treasury, this will prevent members from running high class field trial dogs and bidding them in themselves.

Toronto Local Show.

A VERY successful show was held by the Toronto Kennel Club in the Granite Rink, at Toronto, Ont., April 13 to 14. The attendance was excellent and some of the competition proved very exciting. The indefatigable secretary, Mr. W. P. Fraser, was ably aided in his arduous duties by other officers of the club. Cocker and fox-terriers were the principal breeds, and some very good dogs were shown. The judges did their work well, as judging was almost completed the first day. The judges were: St. Bernards, J. S. Williams, Toronto; mastiffs, great Danes, Newfoundlanders, greyhounds, foxhounds, Irish setters, spaniels, collies, bulldogs, beagles, all terriers, except fox-terriers, pugs, toy spaniels and miscellaneous class, George Bell, Toronto; pointers and setters, English and Gordon, C. A. Stone, Toronto; fox-terriers, smooth and wire-haired, Richard Gibson, Delaware. Airedale terriers made a good showing, and the signs are that this breed will be taken up earnestly in the future.

A. K. C. Meeting.

THE regular quarterly meeting of the executive committee of the American Kennel Club will be held on Thursday, May 3, at 3:30 P. M., at the specialty dog show at Madison Square Garden, New York city. Admission tickets will be furnished to delegates upon application to Mr. Thos. H. Terry, 59 Liberty street, New York. A full attendance is respectfully requested.

DOG CHAT.

The W. K. C. have used every possible endeavor and have gone to considerable expense to find the St. Bernard and Irish terrier that were lost at their recent show. When they heard that the Irish terrier Shaggar had been seen running down Broadway, they at once put on detectives who searched every likely place, as far as South Ferry, where the dog would likely be detained. The disappearance of Lord Walbeck is most mysterious. The story of the lost dog from Minneapolis has probably no connection with it, as we hear that this dog was sold by a policeman for \$15, and then shipped 100 miles into Wisconsin. Mr. Miller, his owner, brought suit against the W. K. C. for Lord Walbeck's loss, and if the case should come to court it would have an important bearing on the question whether show committees are responsible for the dogs committed to their care.

It is not generally known among the dogmen exactly what the coming exhibition in connection with the specialty show will consist of. Under the auspices of the Hempstead Farm Co. a farm show on a very ambitious scale will be given. This will consist of horses, cattle, ponies, donkeys, goats, sheep, pigs, fowl and rabbits, etc., in fact everything in connection with live stock farming will be set forth. There will also be a flower market, vegetable exhibition as well as a model dairy, etc. The idea is to give an exhaustive and, at the same time, lucid demonstration of what a model farm should be. This being the case the exhibition should prove most interesting to visiting fanciers, in fact almost more so than the regular New York dog show.

The Maybrook Kennels sold their bitch Roche Tacit to Fred Kirby for Mr. Dallas, of Philadelphia, but they still have two very good pups out of her by Roche Talmu, that were imported *in utero*; they are a wire and a smooth. The wire is especially good.

A Canadian correspondent sends us word that Mr. Bell's black and tan terrier Perfection has gone the way of all good dogs. Great things were expected of this young dog—he won at Philadelphia, and we regret to hear of his death, but black and tans are tender cattle and should be treated as such.

The Maybrook Kennels have brought charges before the A. K. C. against the P. K. C. on account of their withholding from them the special advertised at their late show, in the premium list, as for the best greyhound in the show. This was afterward changed in the catalogue to read, "best owned in Philadelphia," and was thus awarded.

Mr. James Mortimer will judge fox-terriers at the Louisville show. A class has been provided for Schipperkes, with prizes of \$10 and \$5, Mr. Bell to judge.

The Maybrook Kennels have imported the crack greyhound Southern Belle.

Mr. W. H. Nicoll, of New York, received last month a fox-terrier from England by the steamship Tauric.

## POINTS AND FLUSHES.

[By a Staff Correspondent.]

IT may be possible that the affairs of field trials are a wearisome theme to many readers, the more so since an agreement on anything is seldom reached and discussion seems to multiply differences of opinion. But only by discussion can progress be made, be the same regularly rapid or slow, or only a little at long intervals. In my opinion, the men, whose ability is conceded and whose experience is measured by numerous events in many years, should be conceded a knowledge of the subject in respect to which men of small experience or theories evolved from heresy, have but opinions. Such men always write something sound and comprehensive, and of such is a letter recently received from Capt. C. E. McMurdo, from which I take the liberty of quoting some most pertinent matter on field trial interests. He says: "General interest in field trials is certainly falling off, and one of the chief reasons is no doubt as you say, due to the bringing to the front so often of dogs which were not field dogs except by the grace of an empty name." This will continue so long as judges allow themselves to be misled by flash dogs, ones with great speed and range perhaps, but lacking in bird sense and quality. A really high-class dog is always high-class, and if he fails to show his qualities, it is due to want of opportunity.

"It is very unfortunate that some of our most competent judges have ceased to help us, Mr. A. Merriman in particular. Mr. S. T. Hammond would have made a first-rate judge. I remember years ago he pointed out in his report the difference between a high-class and a common dog, giving as an example the work of two young pointers, both of which were about equal in pace and range. They were put down in a long and rather narrow stubble, with the wind blowing direct in their teeth. The high-class dog took in about half the width of the stubble and the whole length in his first cast of about 600 yds., and on the return cast, coming down wind, wheeled around, making a sort of loop every 50 yds., till he got within some 100 yds. of the starting point. The common dog had struck the scent of the covey soon after the start but had not succeeded in locating it in the time that the high-class one had taken to beat out the whole field.

"We know how some of the flash kind will go at a killing pace with a great show of quality in throwing their heads up, but which never locate their game in good shape, except when the scent reaches them just in the on way that suits their style of hunting. These are the worst kind of frauds, for they so much resemble the really high-class dog that it takes an expert to detect the difference. Palpably low-class dogs occasionally get to the front because they have bird sense, and succeed in doing a good deal of effective work in their own common way. I think that judges should more often avail themselves of the power so wisely given them in the club rules of testing one dog at a time. Of course a handler hates to take up his dog just at the moment when he thinks he would have an opportunity of showing how superior his dog is to that of his competitors, but that should not for a moment deter them from doing so. Every dog should be worked till the judges have satisfied themselves as to his quality, and no longer.

"I believe that the most interesting feature of field trials is the breeding of puppies, and that the Derby ought to be a stake for puppies only, and not for dogs that are old enough to know nearly as much as they ever will, that thorough breaking should not be required, but that steady pointing and backing, together with a reasonable amount of obedience to orders, should be considered enough. This would put amateurs on a more even footing with professionals. It is the breeders who are the greatest supporters of field trials, and they should never be discouraged by seeing their high-class puppies placed behind lower-class ones, simply because the latter may chance to find more birds or behave better.

"In regard to the All-Age Stakes, I think that all dogs in them should be thoroughly broken, and that their handlers should not be allowed to interfere with them in any way when they are making game. Their doing so is liable to hinder the judge from seeing what their natural qualities really are."

Nothing could be more positively expressed in favor of abolishing the time limit than one sentence in the foregoing, namely, "Every dog should be worked till the judges have satisfied themselves as to his quality, and no longer." It is a peculiar phase of a competition where a man is allotted a certain minimum time in which to run his dog, whether the latter has any merit or not. It, too, denotes the absence of that quality of true gameness, moral and physical, when a competitor insists on having to himself something or other outside of the direct line of the competition. It, too, denotes a weakness on the part of clubs in conceding something unnecessary and not competitive in the competition for the sake of an entry fee. The demand for a time limit is confined to a few, and has not a competitive origin. Some trainers do not like to have a worthless dog beaten or ordered up in ten or fifteen minutes, as it brings the dog's inefficiency too distinctly into notice, which is not desirable for business reasons. When a time limit of thirty or forty minutes is enforced, the heats then average a more uniform length one with another, and thus it does not seem that a poor dog is so poor as he really is. The usage furthermore helps such owners as love the sport for the revenue it brings, inasmuch as the judges are tied up in cutting out the dogs on the real merits in respect to time, and thus we have the

peculiar competitor who can say, "You can lick me, but you can't do it real bad, for if I don't get anything else I get thirty minutes for \$30."

The remarks on the age of puppies are worthy of consideration. When late winter trials were established, they gave an additional three or four months to the age of puppies, an age already exceedingly liberal. They now permit an age limit of over two years, an age when a dog is matured physically and quite well mentally. He is not a puppy in any sense at that age. Of course it helps to swell the entries when the age limit is so great, but, in the matter of getting

clous. When an owner enters his bitch in a competition, he does so with a full knowledge of the possibility of his bitch coming in season at the time of competing. So far as rules and usages go, there is no hardship inherent in them. The hardship, if any, comes to the owner from entirely extraneous circumstances, the same as if his dog suddenly became lame, or was injured or sick.

It is further held by some whom it seems should know better, that the modern field trial dog is so keen a hunter that when at work he will take no notice of a bitch in season. He loves work above all things else. He is so bred that he bounds away joyously over hill and dale in an ecstasy of working delight. His neck is clothed with thunder. He skims across the earth's surface with head erect and tail lashing furiously. What, to him, this modern-bred hunter, are porterhouse steaks, warm sunny corners in which to bask, or companionship? He is bred to work, work, work. A great science is this science of breeding high-bred dogs to work.

But there are dogs, possibly of coarse natures, which eat betimes, sleep betimes, work betimes, and in a general way follow out the laws of their being, betimes. The most powerful instinct in dog is sexual. He will battle with the males of his own sex for possession of the female. He will dig under board fences, or gnaw a hole through oak boards with his teeth to effect the same purpose. Defeated in his purpose, he grieves and frets and will not be comforted.

It certainly is a hardship to an owner to be forced to run his dog with a bitch in season, if the dog from the circumstances will not hunt. A much better way would be to leave the matter to the discretion of the judges.

909 SECURITY BUILDING, Chicago.

## Field Trials and Our Dogs in America.

THE International Field Trials, held at Chatham, Ont., were originated by Mr. Brailsford, manager of one of, if not the finest kennel of sporting dogs in England, belonging to Mr. Heywood-Lonsdale, of Ightfield, Salop, England, and it was by his advice that Mr. W. B. Wells, assisted by a number of other sportsmen from London and elsewhere, have brought these trials to such perfection that they have become both popular and recognized throughout the continent.

In 1890 the Ightfield Kennel dogs swept all before them, but since, so great has been the improvement in our dogs, that those sent out to compete last year, found their match, although Ightfield Musa, Mr. Brailsford says, "is one of the very best pointers I ever walked behind." This speaks volumes, for although the breed of most of our American dogs came originally from the British Isles, it shows that the breeding has been carefully sustained, and with less material to work on, the proficiency in work has in no way deteriorated. Field trials all over the continent of America point clearly to this. Few better dogs could be found anywhere than those owned by Mr. W. B. Wells, of Chatham, Ontario, and by Mr. I. Kime, of the same place. Also some fine workers are invariably entered from Michigan and Manitoba, whose owners spare neither time nor expense in seeing that they are equally as good in the field as they are in appearance.

The State game laws of the United States and the Provincial game laws of Canada, as they are at present, have been great factors in the increased proficiency in the work of our sporting dogs, as now almost anywhere quail can be found either in greater or smaller numbers, although, of course, it is necessary for the better working of the dogs, and the time being generally limited that the trials be held where the game is most numerous and the country practicable and accessible.

Of late years sporting dogs have been greatly on the increase, and many fine looking animals can be seen in almost any town, but at the same time a great number of these are good to look at and nothing more, in fact they are worse than useless; these belong, as a rule, to persons who know little or nothing about the training and management of dogs, but let them roam about at their own sweet will, annoying every one, and picking up all kinds of bad vices. No thorough sportsman allows his dogs out except under proper control. Where birds are scarce it is reasonable to expect that a dog's work would not be up to the mark, but surely where a well-bred sporting dog is kept, it is worth while to give him some tuition, and were field trials held more

frequently on this continent there would be fewer useless canines roaming at large and the breeds would be greatly improved.

There is a great diversity of opinion as to which breed is best suited for general field purposes in America—pointers or setters. Many say the former, giving as a reason that they can stand the heat better, want less water, burrs do not collect on their coat, and when once well broken do not require much work to keep them proficient. Then others say the latter, as they can stand cold and damp better. But be it as it may, taking the field trials altogether, both breeds are fairly balanced as regards work, so that it would seem that the nature of the country and its climate must decide which is the best breed of dog to shoot over.

Our dog shows in America have certainly done wonders toward improving the breed of our dogs, but it is a pity that in regard to sporting dogs that the number of events won at the different field trials should not be brought to bear toward winning prizes at dog shows, of course according to the age of the animal and the estimation in which the particular

CRAGSTONE KENNELS TAKE TO WATER.

five dogs which are nearly equal in merit after the first and second prize winners, and to select one from them often required some fine and perhaps trivial reasons. It is now a fairer arrangement of the money. If someone handler comes in and "scoops" the whole purse from first to fifth, I have no doubt but what the club can so arrange the purse and conditions that he cannot do it again.

It seems as if nearly every phase of field trial practice has gone from one extreme to the other in some part of its history. The latest subject to excite interest is in respect to bitches in season. For many years, all rules have a clause as follows: "Dogs afflicted with any contagious diseases, or bitches in season, or unduly attracting the attention of the competing dog, will not be permitted on the grounds." The U. S. F. T. eliminated that part of the clause referring to bitches, on the ground that it was a hardship to an owner to be prevented from running his bitch, since he had paid his entry fee the same as the owner who entered and ran his dog. So, too, did the man whose dog may be suffering from a contagious or infectious disease. The reasoning is falla-

event in the particular field trial is held. The reason of this being, without doubt, that many dogs win prizes at dog shows that are worse than useless, having nothing to recommend them but their appearance, in fact are full of bad vices contracted from never having been trained or kept under proper control. It is a fact almost entirely ignored that these very vices, sheep-killing, poultry-killing, hunting on their own account, egg-sucking, and the fault (hardly a vice) of being gun shy, are passed on from one generation to another. Field trials are therefore beneficial in more ways than one as they are conducive to the better preservation of game and the proficiency in work of dogs in the field, though if dog shows worked more in unison with field trials in regard to our sporting dogs, there would be no need of the saying "Handsome is that handsome does," for both would be as near perfection as possible.

Flaps from the Beaver's Tail.

TORONTO, Can.—A curious law is in force here which permits a man to steal a dog and practically go unpunished. If he, however, takes the collar he can be "sent down." The fact is that the dog is not recognized as personal or chattel property and is not recoverable except on a replevin suit, which most times is an utterly useless expense. To have this law changed and rectified a deputation of local breeders lately waited on the Attorney General for Ontario and laid their grievances before him. The deputation consisted of Dr. McCully and Messrs. J. Morgan, W. P. Fraser and David Kennedy, who were introduced by Mr. Joseph Tait, M. P. P. They asked that dogs be declared as chattel property. They are chattels when imported and have to pay customs duty, and are also subject to a municipal tax of from one to five dollars per annum. Sir Oliver Mowat, the Attorney-General, declared this phase of the case was new to him, and there appeared to be sound logic in the arguments adduced; he could, however, give no final decision, but it should receive the best consideration.

It will be in place here to print an extract from a letter from Mr. Frank A. Stanton, manager of the Chateau Frontenac, Quebec. He says: "In my own case my Irish terrier bitch Miss Stout, C. 1638, has twice been stolen and is 'out of sight now,' and although I have a fair idea of where she is, I shall have to steal her before I can recover her."

H. B. DONOVAN.

Mr. J. B. Martin's (San Francisco) new purchase, the fox-terrier Blemton Spinaway, from the Blemton Kennels, arrived safely on the Pacific coast. She will be bred to Blemton Reever.

Hunting and Coursing.

The Oaks Coursing Meet.

THE Oaks Coursing Club's inaugural meeting was held April 3 to 5. The first two days of the meeting were marred by bad weather and a start was not made till the afternoon of the 4th. The moisture resulting from the recent snows left the going very heavy. We have seen better coursing grounds than the club had at their disposal, but never have we seen the hares so resolute and as speedy as we found them at Oaks. Only two weak hares were raised and on these a short slip probably aided a quick kill. With but few exceptions the slips were exceedingly long, due to the wildness of the hares. In nearly every instance puss sought safety on plowed ground, thus upsetting all calculations. The stake was for thirty-two all-aged dogs at \$5 each, first dog to receive \$135, second \$65, third and fourth \$32.50 each, and four more \$5 each, if the stake filled, with a proportionate decrease if the stake did not fill. Only sixteen paid entrance money—a fair stake for the first attempt.

The officers of the club are: H. C. McCartney, president; A. P. Slocum, secretary; H. E. Goodrich, treasurer. Executive Committee—H. C. McCartney, H. E. Goodrich and C. M. Good. Field stewards, W. J. Wilson, B. F. Raddle and J. M. Reynolds; judge, E. H. Mulcaster; slipper, Joe Keating. And they did all in their power to make it pleasant for coursers and visitors. Mr. Mulcaster's decisions gave thorough satisfaction. Being an experienced horseman he was always well up with the dogs, but never placing himself in position to be dangerous to their work. It is pleasing to course under a judge who gives his decision on the merits shown and is capable of splitting a pair of close working greyhounds.

At 10 P. M. Monday night the last string of dogs arrived and the club officers immediately proceeded with the draw, which resulted as follows:

H. C. Waterhouse's Slater—W. W. Good's Bess. Columbia Kennels' Laplander—D. C. Luse's Nettlefield. A. P. Slocum's Rachel—Eastern Coursing Kennels' Judge Barnaby.

A. P. Slocum's Roy's Canary—Eastern Coursing Kennels' Royal Crest.

R. Miles's Ansel—Eastern Coursing Kennels' Will-o-the-Wisp.

M. Williams's Guess—Columbus Kennels' No Mercy. A. P. Slocum's Outcast—Columbus Kennels' Ramona. A. P. Slocum's Rendezvous—M. Williams's King.

Nothing could be done Tuesday on account of the weather. Wednesday broke unfavorably but the boys decided to make a start after dinner.

At 1:30 P. M. a long string of carriages and dog wagons started southwest through mud and an occasional flurry of rain. At 2:30 P. M. the first brace was called to slips. A small patch of stubble was crossed before reaching the prairie and after a long tramp of two hours without sighting a hare the crowd was momentarily interested by the gestulations of an approaching horseman. "He has a hare located," came from different individuals in the crowd. But on his arrival we found it was only a red fox. We would have liked the chase but it was not on the programme, so we proceeded on our weary tramp. The grass being damp, it was evident that the hares were not on the prairie. This fact was demonstrated when we reached a small strip of stubble. A hare was raised at 100yds. to the left and 50yds. back of the slipper.

SLATER—BESS.—Getting the dogs fairly well into line, they were delivered in a long run up. Bess secured the first turn by four lengths. Going on she did some good work, brought the hare back within 100yds. of where it was raised, wrenched twice when Slater dashed in for the kill. Bess won a one-sided course.

LAPLANDER AND NETTLEFIELD went next to slips. A short walk to a piece of stubble up one side of which Keating took the dogs. A hare was raised and the pair delivered to a long slip. Before Nettlefield was sighted, Laplander dashed up directly behind his game, while Nettlefield ran to the right some distance before she sighted, thus giving Laplander a tremendous lead. Laplander turned toward Nettlefield and it looked as if she would get in for an exchange, but Laplander went on, driving a stiff hare through a long course alone, Nettlefield never getting up. The hare got away on a piece of plowed ground. No course.

RACHEL—JUDGE BARNABY.—A short walk and a good hare was raised out of the same stubble. A long slip, somewhat in Rachel's favor and Judge Barnaby dashed up on the outside for the first turn. Going right to work he ran up several points, driving his game into a piece of plowed ground which was unsuitable to his style of going. Rachel on the contrary proved to be a wonderful mud lark; going by

Judge she got in and showed some wonderful working qualities, soon wiping out the score and won a hard course. The hare ran away.

ROY'S CANARY—ROYAL CREST.—The crowd shifted around and again worked the stubble. A hare was soon up and Keating (to a very long slip) delivered them fairly well. Crest immediately showed in front. In a long run up (all on stubble), Crest got first turn by any number of lengths. Canary finally got in for a few weak wrenches, but Crest went on after an awfully stiff hare, never allowing the bitch a chance. The hare got away.

LAPLANDER—NETTLEFIELD were then called for the undecided. After a long tramp, working alternately the stubble and prairie, a horseman rode up and directed us to where he had one located. The hare raised as if bewildered with the crowd, refused to run, and after squatting a couple of times to the discomfiture of the slipper, he finally let them go, Laplander immediately showing in front, got the first turn by two lengths; going on he worked his game merrily, never letting Nettlefield to the hare. Puss evidently was in form, for pulling away the pair quick.

This finished the work for the day, leaving the remainder of the card to be run through on the morrow.

THURSDAY.

Second Round.

Morning dawned clear and bright and the start was made at 10 A. M. for grounds some six miles southeast of town.

WILL-O'-THE-WISP—ANSEL were first in slips. A nice piece of prairie was worked, and on nearing some stubble a hare raised in direct line of the slipper, but a long way out. They were delivered, Will-o'-the-Wisp going out unsighted, The hare disappeared over the little hillock. Ansel pulling to the left, the hare came his way, and going in he did some sharp work, driving puss on to stubble. Will-o' the Wisp, sighting, after a long run, got in, worked Ansel away from his game, never allowing him a look in. Will-o'-the-Wisp won.

NO MERCY—GUESS were then called. A hare was soon up. To a good slip No Mercy went up a good length for the turn. Going on for the next, Guess came in for a turn. No Mercy raced by, drove puss through a wire fence, getting a nasty cut on his thigh, but she went on and won a long course alone. The hare got away.

RAMONA—OUTCAST.—The crowd coming around to the left soon raised puss. Ramona, immediately showing up in front, raced two lengths for the turn, going on for the next placed Outcast. Puss doubled right back, jumped clear over Outcast, who was coming fast. She sighted around behind her game, but Ramona raced by and worked puss until it went into a hole.

RENDEZVOUS—KING.—A hare was located and the crowd drew up on a high place in plain sight. Rendezvous drew out four lengths for first turn; keeping well behind his hare, he did good work. King went by and wrenched to Rendezvous, who killed it and won.

Third Round.

LAPLANDER—BESS.—To a stiff hare Laplander went up five lengths for the time, going on working his game placed Bess; she was only able to wrench twice; Laplander went by, drove the hare into some stubble. Bess scored a go by, but never got up to the hare, which ran away.

ROYAL CREST—RACHEL.—Working through a piece of stubble, a hare was soon raised. To a good slip Crest led up two lengths for the turn, held his place for the second, made some strong wrenches, drove his hare into a pasture, where he turned to Rachel, who got quite busy and did some telling work, turned to Crest, went by and was on even terms when the hare stretched away on some heavy going. Crest, not to be denied, raced past, wrenched and drove the hare into a hole, winning a long, well worked course. This finished the day's work.

FRIDAY

Morning clear and bright. By 10 A. M. we were on the way to the grounds in the same locality where we coursed yesterday. It was 11 P. M. when

NO MERCY—WILL-O'-THE-WISP were placed in slips. A half-mile walk brought us to a strip of stubble. A hare was put up, and clearing the stubble they were delivered to a very short slip, just as the hare tripped and turned a double somersault, alighting with face toward the crowd. He shifted about just as Will-o'-the-Wisp dashed up and wrenched to No Mercy, who wrenched back. Will-o'-the-Wisp killing and winning a very unsatisfactory trial.

RAMONA—RENDEZVOUS.—A hare was soon up a long way out and ran across the path of the dogs, and the slipper being unable to get them behind the game, let them go to a side slip. Ramona immediately forged away from Rendezvous, but the hare was lost in some weeds before she could effect a turn. They were ordered back into slips. In the next attempt Keating got the dogs in line with the game and delivered them to a long slip. Ramona immediately drew away, but before she could get up the hare had reached plowed ground. She dashed in, however, turned puss off the plowing, and Rendezvous coming up, immediately necked in and drove the hare along the prairie, leaving Ramona laboring on the plowing, and ere she reached good footing Rendezvous had evened matters. The bitch came again, but Rendezvous seemed always to nick in and keep her at a disadvantage. Ramona finally got in for a few wrenches, but could never rub out the dog's score. Rendezvous went on, but could never get up to his game, the hare escaping to some stubble.

ROYAL CREST—LAPLANDER.—A hare was soon up to the right of the slipper. To a good slip they were away neck and neck for 40yds. when Laplander drew away for the turn, being slightly favored; Crest came in, turned to Laplander, who did some good work, placed Crest, went by and wrenched to Crest, who got in a few wrenches, when the hare broke away up a nice piece of road; Laplander came with a rush, got alongside of Crest and it looked all over for the mighty son of Greentick, when the hare from his own accord shifted into a piece of fall plowing; Crest seeming to realize his opportunity got in and did some good work and had evened matters up when the hare broke away to a piece of spring plowing. Crest went on but could never get up, winning the grandest course of the meeting by an awful near thing. Lunch was then indulged in.

Fourth Round.

RENDEZVOUS—WILL-O'-THE-WISP were placed in slips at 1 P. M. and quite a distance was traveled before we raised puss. To a very short slip Will dashed in for the first turn, wrenched twice and made an unsuccessful attempt to kill; Rendezvous then went in for some very rapid work, killing off his own turn and getting the flag, a near thing. After the customary thirty minutes

Deciding Course.

ROYAL CREST—RENDEZVOUS were placed in slips. A long weary uninteresting tramp followed over prairie, stubble and plowed field without any signs of game. A council was held and it was decided to make a move to the grounds we coursed on the previous day. The dogs were ordered out of slips, and after a half hour's drive a nice piece of prairie was reached. The dogs were again put in slips, and after an unsuccessful attempt to find game on the prairie, a piece of stubble was worked. It being full of Russian thistles and tumbling weeds, Rendezvous refused to go through it; so the dogs were carried to the opposite side and again taken in charge by the slipper. A hare was raised, but it was impossible to deliver them on account of bad going. While crossing a road, Mr. Slocum made a proposition to divide, but Mr. Wilson (who was handling Royal Crest) wisely ordered the

slipper to proceed. Entering another piece of stubble a hare was soon up, and the pair let go to a very long slip. Crest drew away and got first turn by a number of lengths, going on he drove his hare out on a piece of prairie; this suited Rendezvous and he got in some telling work, a fine exchange followed, Rendezvous came again and made it look like bad for Crest. In attempting to kill he was only rewarded with fur, then Crest jumped in for a few quick wrenches and a kill—winning the stake outright.

C. R. H.

Huron Coursing Meet.

THE grounds for the spring meeting of the Huron Coursing Club were in the finest condition, and, with the exception of a high wind, the weather was at its best. The hares were very plentiful and the stakes were finished sooner than expected.

Mr. E. H. Mulcaster's grand horsemanship and his ability to split a brace of close-working greyhounds to the satisfaction of the most experienced coursers, once more leaves convincing evidence of his ability as a judge. I do not give the credit due him when I merely say he gave perfect satisfaction. The confidence in his judgment proves itself when the owners of such greyhounds as Judge Burnaby, Sir Hugo, Nettlefield and the strong puppy Glenkirk, as well as others, send them to be run in the hands of men strange to them.

The officers of the club did their work well. The slipping of Mr. E. B. Dinneen was very good, with the exception of one or two cases, and I presume those were due to the condition of the slips. As we know, this is the most trying position a man can be in, and the slips were not in order after the first or second brace of dogs went from them. Mr. Dinneen's judgment is good and his delivery is better than the average.

A word for the president of the club is not out of place. Mr. Huntley did his work most commendably, and that he will continue faithful to his fellow lovers of the leash seems pretty certain. The other officers of the club did comparatively as well.

April 9 at 9 P. M. the entries closed. In all there were twenty-six entries, ten for the Sapling Stake and sixteen for the All-Age. The favorites in the Sapling Stake were, after the first round, Master Glenkirk, Miss King and Gilkirk. In the All-Age, No Mercy, Sir Hugo and Judge Burnaby were the favorites, but there was very little money at stake on any of them.

TUESDAY.

Sapling Stake—First Round.

Tuesday morning was beautiful and a large crowd started out about 10:30 to witness the sport. The first brace was slipped about 10:30 A. M., and at 3 P. M. we stopped for lunch, after which the first round of the All-Age was run through.

No better bred saplings ever met on American soil than at this meet. The first pair to the slips was

COON—MASTER GLENKIRK.—This was a short course and given to Coon, but I really think Master Glenkirk won this course. He led to the hare, and with a few exchanges the kill was made, both heads together.

LADY DEDLOCK—JESSIE GREEN.—To a good slip, in the first 300yds. Lady Dedlock led Jessie Green by five lengths. Jessie then drew past, and in a long lead to cover, got the verdict.

ROBERT LE DIABLE—MISS KING.—Robert led by a length for first turn; Miss King then getting an opening, and in a long course had it all her own way, the jack going to ground.

THOMAS B. REED—GILKIRK.—Gilkirk led Thomas B. a couple of lengths to the game; went on for a nice sequence. Thomas B. then got in, and in a long trial worked the jack for a long chase.

WM. MCKINLEY—GLENN WOOD.—The jack slightly fooled McKinley, who got up for first turn, and after some nice exchanges Glenn Wood went on and finished the course with credit, showing good speed and excellent staying qualities.

This completed the Sapling Stake and a stop was made for lunch, after which the All-Age Stake was commenced.

All Age Stake—First Round.

The first pair to the slips was

LADY—JACK.—Lady led to the jack by five lengths, and in a long course never let Jack have a chance, Lady making the kill.

GUESS—NO MERCY.—To a poor slip No Mercy led to the jack by two lengths for first turn, placing Guess for next. No Mercy then got in and did some clever work, and never left any room for doubt in the course. She made a kill and had it all her own way.

WILLIS H.—GROVER.—The dogs ran wide, Grover shifting the jack to Willis H., who got first turn. Grover came in for second turn and made a wrench and a kill. This gave the course to Grover.

RACHEL—SIR HUGO.—Sir Hugo ran out for first turn by three lengths, and kept in for some good wrenches, never letting Rachel in until toward the end, when Rachel scored a go-by and got in for a turn. Sir Hugo won easily, the jack getting away.

RAMONA—RENDEZVOUS.—To a poor slip Ramona led to the jack for first turn, keeping her place for next, and in a long and pumping trial had things her own way, puss going in a hole.

LAPLANDER—WILL-O'-THE-WISP.—Laplander led for the first turn by two lengths, coming around nicely for the second. Will-o'-the-Wisp then got in and made a few wrenches. Laplander tripped and fell. Coming to his feet again he raced past and kept his place during the remainder of the course.

CARTER C.—NETTLEFIELD.—Nettlefield led Carter to the jack by three lengths for first turn, Carter coming in for the next. After a few changes Carter C. finished the course alone, making a kill.

FLASH—JUDGE BURNABY.—Judge led Flash full five lengths and kept his place to the end, never letting Flash in. Judge made a strong race and a nice kill.

Thus ended the first round and the day's sport.

WEDNESDAY.

Sapling Stake—Second Round.

Another beautiful day and a larger crowd went out to see the stakes ended. On account of a natural bye and guarding it made one brace and three byes for the second round of the Sapling.

COON—THOS. B. REED.—The former was a little the speedier from the slips, but in a long chase Tom Reed was too strong for her.

JESSIE GREEN (a bye).

MISS KING (a bye).

GLENWOOD (a bye).

All-Age Stake—Second Round.

LADY—NO MERCY.—No Mercy showed the most speed and killed.

GROVER—SIR HUGO.—Hugo led some five or six lengths and did not let Grover in until after a long, hard pull, possibly the longest race of all. No kill.

RAMONA—CARTER C.—The former beat him pointless.

LAPLANDER—JUDGE BURNABY.—The judge led a few lengths to the turn and with a bit of luck won.

Sapling Stake—Third Round.

THOMAS B. REED—JESSIE GREEN.—This was a beautiful course, the former leading a length or two, then they exchanged very evenly until the kill gave the course by a small advantage to Thomas B.

MISS KING—GLENN WOOD.—Miss K. showed the effects of her hard bye-course and was handled quite easily by Glenn Wood, whose work had been light before.

### All-Age Stake—Third Round.

NO MERCY—SIR HUGO.—Hugo led to the hare; they then took turn about, when Hugo tripped and fell; the hare then favoring No Mercy, and she being very clever with her teeth killed and won. This was very close. Hugo was not in as good form as he should be, owing to his previous hard pumping course, but came up to the slips well and game.

RAMONA—JUDGE BURNABY.—Down a road they went from the slip, the Judge in the lead and leaving the bitch further every jump. When he turned puss he was some ten lengths ahead; made another turn, and then let Ramona in for the kill.

### Sapling Stake—Deciding Course.

THOMAS B. REED—GLENWOOD.—Glenwood was too speedy for his brother, and won the Sapling Stake, leaving Thomas B. Reed runner-up.

### All-Age Stake—Deciding Course.

NO MERCY—JUDGE BURNABY.—They both went into the slips with a forefoot injured. No Mercy spraining her ankle in the course before, and the Judge ran the stake through with a sore pad, caused while training. The Judge beat the bitch to the hare, making the turn and placing her, and from then on she gained points on the Judge until the kill.

No Mercy won, Judge Burnaby runner-up, Sir Hugo and Ramona third and fourth. H. G. N.

Mr. J. H. Watson, of Brooklyn, must feel very proud over the success of his greyhound, Royal Crest, and so must Mr. Nelson, who is associated with him in the Eastern Coursing Kennel. The very interesting account of the meeting sent us by Mr. Huntley, president of the Huron Coursing Club, makes us almost feel the stirrup iron round our feet. Mr. Watson has stuck persistently to the game and has had his full share of hard knocks and we are therefore more than ever pleased that the dog which gave him his first sorrows has consistently run a true greyhound until victory came to cheer his owner. A number of the dogs such as Ramona, Laplander, Will o' the Wisp, won in the International Meet at Huron last year, and for Royal Crest to go out there and defeat such dogs on their own heath, is glory indeed to himself and his great sire, as all his courses seem to have been regular.

## Yachting.

### Cruising in the Cy-Pres—1893.

(Concluded from Page 324.)

Tuesday, July 18.—We were up at daybreak, hoping to make Provincetown; the weather was calm and hazy, but we hoped it would clear away as the day advanced. We were ready to start at 6 o'clock, and as there was a light air stirring from the west, we weighed anchor and were off. We were about half-way across the harbor, the dredged channel, when the breeze died out completely, and the ebb tide carried us out of our course, so that there was danger of our sticking in the mud. I jumped into the dinghy and towed back into the channel, when the breeze sprang up again, so that we were able to keep on our course. The fog settled down occasionally, but was not at any time so thick that we could not see Long Beach. We were following the channel as laid down in the chart corrected in 1891, and thought we would be perfectly safe if we stuck to it, so after passing the beacon on the end of Long Beach, we turned eastward, expecting to pass through the channel, where the chart gives from 15 to 25ft. of water at low tide.

The breeze had increased a trifle, and the tide being with it, we were fairly flying along, when suddenly we felt the boat bump gently in the soft sand and then stop dead. We knew at once that we were in for a long siege this time, as the tide was ebbing fast. We stowed all sail and threw a kedge overboard as a safeguard, then got into the dinghy with our leadline and sounded all the way across from where we lay to the beacon on the end of Long Beach. The deepest water we could find was 5ft., and it was not yet low water. We learned from a fisherman who was rowing by that this channel was called the Slit, and that it was constantly shifting and changing, and could not be depended on.

The tide fell very rapidly, and it was not long until there was a crescent-shaped sand bar entirely out of water, stretching from N.W. of us round to N.E. by E. This bar should be left on starboard hand going out, but by consulting to a chart of date we attempted to cross it, with disastrous result. I would advise any one going into this harbor to get the very latest chart obtainable, and even then it would be a good thing to take a pilot.

The tide continued to rush past us till there was less than 18in. of water on an average near us. We could see that the light sand was being carried along in great quantities, and the bottom was rough, looking like a brick road, and that started by a brisk breeze, we stepped overboard, after taking off his shoes and stockings and rolling his trousers up as far as his knees; the water seemed very shallow and the bottom very hard, but he was deceived in both, and at the first step plunged in over his knees, thoroughly soaking his clothes. The water was nice and warm, and he could not resist the temptation to take a bath, so stripped and plunged into a little oval pool near by, where he rolled and splashed about for a few moments very much as one would in a big bathtub.

We lay a little quartering to the direction of the current. It eddied and swirled around us, stirring up the sand, so that the water was turbid and looked as though a very large quantity of ashes had been thrown in. The sand was scooped out on our starboard side till there was a large hole there over 6ft. deep, while it was deposited on the other side, filling up all along the bilge of the boat, so that at slack water we did not heel over any more than we were accustomed to when sailing in a stiff breeze. The rail on the lower side was nearly 6in. out of water when she was over to the furthest point. The rapidity with which the shifting of the sand took place caused us some uneasiness, and we feared if it piled up on the other side in the same way when the flood should set in, that we might have some difficulty in getting off.

Thinking that the incoming tide might swing her head off and twist the keel before it should be deep enough to float her, I took off my trousers and jumped overboard, F. lowered the anchor and I took it in my arms and carried it out about 10 fathoms, straight in a line with the direction of the current. I worked one of the flukes deep down into the sand, and then with the windlass got a good strain on the chain. By this time the fog had cleared off and the sun shone down on us with terrific heat. As the yacht was listed well over, we could not use the awning, so got out one of our blankets and with clothespins fastened one side to the peak halliards and the other we held down outside the cockpit rail by weights. This made a very comfortable "lean-to," and we ate our lunch under its shade, winding up with the big watermelon purchased at Plymouth.

After the yacht began to right we kept her moving all we could to loosen her keel from the sand that was piling up on each side of her. We would both run out on the bowsprit and sway up and down, then we would loosen the main sheet and swing the boom far out, first on one side and then on the other, adding an occasional kick of the fixed sail each time. The sand continued to pile up around us, and we concluded that our lying at an angle to the current helped it to do so, and tried the experiment of slowly paying out the chain, letting her head gradually fall off. We were astonished at the tremendous power of the current, for as the boat got more and more of her broadside to the stream, she strained so on the chain that the bobstay across which it pulled was permanently bent out of shape, although it was a solid bar of 9/16 in. iron set up taut. We worked carefully, one of us slacking out the chain while the other rocked and swayed the boat, and gradually got her round where the current swept more nearly in a fore-and-aft direction, and it was surprising how quickly the pile of sand under our bilge was cut away.

We lay still in the tide for some little time, as we drew most water just under our stern post, but finally we swung off and brought up with a jerk that bid fair to part our chain, but fortunately it held us all right. The breeze sprang up with the turn of the tide, and we immediately made preparations to get under way.

It was too late to think of going to Provincetown, so we decided to put back into Plymouth and try again another day. We had been so busily occupied getting loose from the sand that we had not noticed the change in the weather until we were ready to break out our anchor, when we saw a very heavy thunder storm gathering in the N.W. We hesitated for a moment about starting in the face of such a squall, but, thinking anything was better than a renewal of the experience we had just been through, we made sail.

The wind by this time was sucking strongly toward the approaching storm, and we had to tack against it all the way back to the dock on Long Beach in front of the pavilion. Our experience with the shallow water of the harbor made us very cautious, and one of us stood up

forward watching the color of the water while the other steered. We took very short tacks and managed to keep in the channel this time. The storm seemed to be chasing us and it grew very threatening, the black ragged-looking clouds hung low over the water, and the fog which had continued outside was rolled up by the wind in long cigar shaped clouds, that looked like cotton. The fishermen came flying in from outside, and were evidently in the edge of the squall, as they were running some with lowered peaks and others with double reefs in. The hardest part of the wind and rain passed off to the east of us and we got but a little puff of the one and none of the other.

We ran a little past the end of the dock so as to be out of the way of the ferry boat and other passing craft and anchored in 4½ fathoms of water. Not knowing exactly where the best water was, we got out our lead-line and sounded all around the yacht, finding we had plenty of water to swing in any direction without getting aground. This first thunderstorm was followed by a singular succession of others during the afternoon and evening. We counted five distinct thunder gusts from 1 o'clock until we turned in, each one accompanied by more or less rain. They seemed to gather west of Duxbury, then came up over the Standish monument and passed out to sea beyond us. We felt the strong breeze sucking in toward each storm center, but got only a few drops of rain from the first three. The fourth came more to the southward and while we were in the cabin at supper. It grew quite dark, and the first warning we had was the roaring, rushing sound of the wind, accompanied by the sharp clatter of hailstones and the patter of big drops of rain. We threw on our rubber coats and scrambled out on deck as quickly as possible. The heaviest part of the squall seemed to be right over us. The wind blew with terrific fury, forcing the yacht up against the ebb tide and she darted from one side to the other, tugging at her chain like a live creature determined to get loose. The squall was short and sharp; in half an hour it was perfectly calm, and we cleared away our tea things.

On coming on deck again we saw another black gust forming, more angry looking if possible than the last one, during which we had been in constant danger of bumping into a large boat moored near us. We decided to put down our large spare anchor with its heavy

MAGNOLIA.

manilla line to keep us more nearly in the center of the channel. This anchor was in the lazaret and it was quite a job to get it out, put it together and bend on the line. We were in the midst of this task when this final storm broke on us. The wind was not quite so strong as in the preceding one, but the rain fell in torrents, and it was so dark it "could be felt."

We went on with our work in the drenching downpour with no light except our lanterns and got our second anchor down where we wanted it, then shortened our cables till we had out only enough to ride by at high tide. We felt better after this job was completed, as we felt sure now that there was no danger of the yacht dragging in the night, and either fouling our neighbor or going on the mud. When the rain ceased we found ourselves very wet and uncomfortable. F., especially, who had torn one sleeve out at the shoulder, was drenched to the skin on one side, while both of us were soaked from the knees down. We got off our wet clothes, rubbed down with a crash towel till we were dry and warm, and then turned in. We passed a quiet night, although we got up two or three times and looked around to see how things were going.

Wednesday, July 19.—Having had a long hard day of it on Tuesday we slept till 7 o'clock. The morning was beautifully bright and a delightful sailing breeze was blowing from the northwest. The barometer was high and there was every indication of a fair day. We decided that this was a fair chance for Provincetown, so hurried through our breakfast and got under way at 8 o'clock. We took short tacks in the long narrow channel, avoiding every appearance of shallow water. Giving the cause of our yesterday's experience a wide berth, we turned the black buoy on Brown's Bank in safety and with lifted sheets made a straight course for the whistler off the mouth of the harbor. While beating to windward we had found the breeze all we could well stand, our rail being frequently pressed under, but as soon as we eased the sheets a little and got out into open water where the white caps were running the sailing was delightfully exhilarating. Our course from the Gurnet Light to Wood End Light on Cape Cod was east by south. It was nearly a beam wind for us and we tore along at a great rate, passing the whistler off the Gurnet Light at 9 o'clock and dropping our anchor near the long railroad wharf in Provincetown at 1 o'clock, making the distance of 24½ miles in four hours.

We would have made much better time than this but in our hurry to get an early start we paid no attention to our dinghy, and did not notice until we were well off shore that it was full of water. When we did notice it we were in too much of a sea to make bailing out a comfortable operation, so we were forced to drag it along as it was until we made port. The day was clear and bright and at the end of the first hour's sailing we could just make out the spires of Provincetown. About the time we lost sight of the Gurnet Light we could see the Wood End Light, which made the trip across simpler and easier than we had expected. Manomet Point is the most conspicuous landmark on this part of the coast, and we did not lose sight of it till we rounded Long Point and shut it out behind the land on Wood End. It would be the proper point to steer for if one were going from Provincetown to Plymouth, and did not feel sure of his compass.

We were delighted with Provincetown as a harbor. The bay is large and there is no bar or obstruction of any kind at the broad entrance. Numerous fishing schooners are always lying there and they show where to anchor. We ran through the fleet and beyond them until well inside of two long wharves that make out from the town. The one on our left is the steamboat dock, where the daily steam from Boston lands her passengers. The one on our right, which is the longer, is the railroad dock.

After eating a hasty dinner we went on shore and were much amused with the quaint old town. The principal street runs round close to the water, following the curves of the shore. There is no sidewalk on the side next to the water, in fact there is only room for one, and that a very narrow one, two boards wide. The dwellings and stores are mixed in together in the most singular way, dry goods, ship chandlers, grocers, bakers, shoemakers and liquor sellers side by side, all the way down the long winding street. There are a few dwellings on one or two side streets, but almost the entire town is on the main street. We wandered up to the top of a high sand dune called "Wren Hill." To preserve it for park purposes, grasses are sown there, and the dune has been planted on its steep, sloping sides, to prevent it washing away. It is a very picturesque and charming spot and the view of the bay from the tip is fine, and well worth the climb up there. A very interesting view of the barren sand hills that go to make up this end of Cape Cod can also be had from this place. On our way back we bought some provisions, loaded our dinghy with a little for several days but, thinking it was due to the glare on the water and that it would soon pass off I paid very little attention to them. This morning when I awoke they were very much worse, and I found on examining them with the aid of a hand mirror that an ulcer had formed on the corner of the right eye. Having had a very painful experience the year before with the same thing, I had been treating me a little for several days but, thinking it was due to the glare on the water and that it would soon pass off I paid very little attention to them. This morning when I awoke they were very much worse, and I found on examining them with the aid of a hand mirror that an ulcer had formed on the corner of the right eye.

Thursday, July 20.—A strong N.E. wind sprang up in the night, and hearing it moaning through the rigging we got up and paid out more chain. We lay so close to the shore that there was no sea on, and we slept long and soundly, and did not get up until 7 o'clock. My eyes had been troubling me a little for several days but, thinking it was due to the glare on the water and that it would soon pass off I paid very little attention to them. This morning when I awoke they were very much worse, and I found on examining them with the aid of a hand mirror that an ulcer had formed on the corner of the right eye. Having had a very painful experience the year before with the same thing, I had been treating me a little for several days but, thinking it was due to the glare on the water and that it would soon pass off I paid very little attention to them. This morning when I awoke they were very much worse, and I found on examining them with the aid of a hand mirror that an ulcer had formed on the corner of the right eye. Therefore to sail immediately for Seaside, hoping to go on from there to Boston the next day, where I could find a doctor and where the

yacht could be left in good hands if necessary until such time as should be able to use her again.

As the wind was still fresh from N.E., we started off under single reefed mainsail and foresail at 8 o'clock. Just after rounding Long Island Point we met a steam fishing-vessel coming in. They waved frantically at us to go back, and came near to us and hailed us, saying "Go back! Go back!" We supposed they must have had some warning of an approaching storm or they would not have paid any attention to us, so turned back and followed them in, feeling very much disappointed that our plans had been so quickly upset. After dropping our anchor and furling our sail we jumped into the dinghy and pulled over to the wharf, where they were lying and asked them why they advised us to go back. They replied that there was a very heavy sea outside, far too heavy for a craft of our size to be out in. We regretted very much on hearing this that we had not kept on, for we had the utmost confidence in the sea-going qualities of our little Cy-Pres, and there was not the slightest evidence of a storm.

I felt that I ought not to lose any more time in getting to Boston, so went on shore to see about trains. I found that there was but one train I could go on, and that arrived there about the same time as the steamer, so I concluded to take the latter, preferring to be on the water rather than in the dusty cars. After telegraphing my wife to meet me at Boston with a decent suit of clothes and a "billed" shirt we went back to the yacht and waited quietly for the time for the steamer to sail. It was agreed that I should telegraph F. immediately after consulting the oculist whether I could return and finish the cruise or not. If not he was to engage a sailor in Provincetown to help him bring the boat back to Magnolia. We had a beautiful trip on the steamer, and I could not help thinking all the way over what a lovely sail we would have had if we had kept right on that morning.

It was nearly dark when the steamer reached her dock. I took a herdic up to the hotel, and as I opened the door two or three bellboys sprang forward with their usual celerity to take my "grip," but when they saw my long, lean figure clad in worn-out, salt-stained trousers, flannel shirt, loose jacket and no vest, sneakers on my feet and a faded soft felt hat pulled down over my eyes, they slunk back into their chairs with a "no nickel there" kind of a look on their faces that

was immensely funny. I was ordered by the good doctor to go back to the cottage and stay there a week, and by no means go on to or even near the water, so I telegraphed to F. that the fates were against us, and he engaged Capt. Joshua Cook to sail with him back to Magnolia, where they arrived on Saturday afternoon just before 4 o'clock, having left Provincetown just before 6 in the morning. The trouble with my eyes proved more serious than I at first expected and for five weeks the Cy-Pres lay swinging idly at her moorings, riding safely through the two terrible southeast storms of August when so many yachts were wrecked along our Atlantic coast. CHUISER.

### Yacht Races at Atlantic City.

THE Corinthian Fleet of Atlantic City, N. J., is an active and enterprising organization that is doing much for racing and sailing in general, and is reaping its own direct share of profit thereby. With a view to further stimulating racing about the Delaware River and southern New Jersey, it has this year arranged a series of races to take place in August, and has sent out the following invitation to all such clubs as are likely to be interested:

Secretary — Y. C.:

DEAR SIR—I have been instructed by the Corinthian Fleet, of Atlantic City, to extend a cordial invitation to the Y. C. to attend the series of races to be sailed at Atlantic City on the 10th, 11th and 13th of August next, weather permitting.

Aug. 10, annual race of the Corinthian Fleet, open only to mosquito type 25 entries.

Aug. 11, second annual race for the Muckle cup, under the auspices of the Muckle cup race committee. Open only to mosquito type or boats of similar measurement and sail area; probable entries, 75.

Aug. 13, special ocean race over a course of 10 nautical miles to windward and return, under the auspices of the Corinthian Fleet. Open to sloops and cutters of the second, third and fourth classes. Start and finish to be made outside the sea buoy. Sails limited to cruising rig, clubtopsails barred. Time allowance as per rule of the Philadelphia and Corinthian Yacht Clubs, of Philadelphia. Nine prizes will be offered, three for each class entering five yachts or more. Eighteen yacht clubs will be invited, besides the Y. C., to witness the races of Aug. 10 and 11, as well as to actively participate in the special ocean race of Aug. 13.

Sail limit to be decided by vote of yacht owners at meeting one day prior to race.

Entry blanks for this race will be gladly furnished upon application to the secretary of the Corinthian Fleet, and must be accurately filled out and returned prior to Aug. —. The bar off Atlantic City can be safely crossed by any yacht not drawing over 6ft.

A warm welcome is assured to any yacht or member belonging to your club, and every assistance will be given regarding information as to anchorage, fresh water, ice, provisions, etc.

Earnestly hoping to have the opportunity of welcoming a representative number of yachts from the Y. C., believe me, very truly yours, Wm. H. Edwards, Esq., Secretary.

P. O. ATLANTIC CITY, N. J.

### Southern Y. C.

THE Southern Y. C. of New Orleans held its annual meeting and election on April 5, the election furnishing one of the liveliest campaigns in the history of the veteran organization. As a consequence of the friendly rivalry between the factions, the yachting spirit has been stimulated and the club itself greatly benefited by being brought prominently forward so early in the season. Twenty-three new members joined, making 305 in all. The administration of boat-owners' tickets was the battle. Com. Thos. Sully, Vice-Com. Alex. Brewster and Rear-Com. L. O'Donnell being re-elected, and J. Walton Glenn, Sec., and H. T. Howard, Treas., all by a handsome majority. The fight was started by the boat owners and ended in a sweeping victory in their favor. Those of the boat owners who bravely stood by Com. Sully were more than rewarded and have seen their course justified by the decided manner in which his popularity in the club was demonstrated. The steam yacht Helen will continue to be the flagship. Ex-Sec. F. F. Hall and ex-Treas. Hugh Brown were honored with a life membership in the club in consideration for long and faithful services.

The full list of officers is as follows: Com., Thos. Sully, steam yacht Helen; Vice-Com., Alex. Brewster, sloop yacht Mephisto; Rear-Com., L. O'Donnell, sloop yacht Florence; Sec., J. Walton Glenn; Treas., H. T. Howard; Meas., A. Forch; Fleet Surgeon, Dr. John E. Elliott; Governing Committee, T. R. Richardson, A. M. Ancoin, J. W. Stone, N. E. Baumgarten, C. L. DeFuentes; House Committee, W. W. Crane, H. T. Catham, W. B. Leonard, J. D. Farrell, Robt. Lynd.

The fine club house at West End has suffered by the severe storms of the past season, but will be placed in thorough repair, and the season of 1894, which opens with the annual regatta on May 13, bids fair to out rival all previous ones. The club has adopted the same uniform as the New York Y. C. The button adopted for the club is a very attractive emblem and represents Vigilant plowing along under a cloud of canvas. The initials S. Y. C. are on the mainsail in gold. Ex-Com. Robt. S. Day has been requested to draw up a deed of gift for the cup donated by Mr. H. M. Little. There will be half a dozen cups sailed for this season. The club book for 1894, in new and handsome form, and containing the new rules, is nearly ready to leave the printer's hands.

## Modern Yachts as Sea Boats.

The question of the sea-going qualities of the modern racing yacht has been generally discussed among yachtsmen for some time, and with no definite conclusion, the opinion of many being that the new type, with forefoot cut away and mast stepped well forward, is much inferior to the older craft built prior to 1870. The *Valkyrie*, in opposing the present racing rule of the Y. R. A., has strongly commended the later yachts, and in particular has criticised the performance of Queen Mab and Valkyrie in their passage across the Atlantic. The following letter to that paper is particularly interesting as coming from an old sailor, Admiral Montague, who presumably shares the prejudices of most deep water sailors in favor of the ideal "ship" as opposed to the racing machine. A long experience in yacht racing, supplemented by an extensive experience in yacht racing, fully qualifies the writer to criticize the qualities of a vessel; and as to the new yachts in particular, Admiral Montague has built in succession the three 40-raters Corsair, Vendetta and the new Carina.

Editor of the Yachtsman:

I see you have another crack at the seaworthiness of the modern racer, for in your last number you state that "even in the height of summer the British cruisers may consider their vessels ill adapted to a short North Sea voyage." This is rather strong. As a matter of fact, the distance is about 700 to 750 miles from the upper Thames to Kiel; from the Skaw down to Kiel it is more or less landlocked, if I recollect my Baltic campaign days rightly, so that open sea without shelter cannot extend more than 350 miles. Did you notice, sir, the weather Britannia encountered down Channel, and afterward in the Chops, when she had to come to anchor for almost speed. Your cruisers you were fond of were built for speed before they became ex-racers. They could not build them faster because they did not know how to do it. I grant that they laid to better in a gale owing to forefoot. What's the good of only being able to lay to in a gale? Queen Mab had atrocious weather and weathered it somehow with an inexperienced skipper and a crew ignorant of Queen Mab's peculiarities. Valkyrie had also a success of bad weather and gales in crossing America. The taste is always the best proof of the pudding, and I have instanced at least three modern racers, all of which have weathered different degrees of bad weather in crossing the perhaps worst stormy parts of the world's seas.

If, sir, your theory is that we are building a bad type of vessel for racing to-day that will make an inefficient cruiser to-morrow, your ship's cook cannot stand up in comfort in his galley owing to want of head room, or the owner cannot store his wife's basket-trunk under hatches, then I am, to a certain extent, with you. But we can never go back to slower vessels for the want of headroom or the stowage of ladies' basket-trunks; nor yet because greater displacement in the bows offers you a better ship to lay to with in your beloved gale, with what are termed good sea-boat qualities. That the modern racer will come to bad fall off and get too much headway I verily believe while laying to; but you will always weather the point, which is far more important. I have sailed and been in very bad weather in many different types of vessels for many years of my life; luck goes a great way, but the helm is everything in 99 cases out of 100. V. MONTAGUE.

## American Model Y. C.

The annual meeting of the American Model Y. C. was held on April 6, the following officers being elected: Com., W. V. Hanson; Vice-Com., C. Van Ness; Treas., G. W. Townley; Sec., Herbert Fisher; Meas., Frank Nichols; Regatta Com., Messrs. Davis and Nichols.

Messrs. Hanson, Grabn and Nichols were selected as a board of experts to decide on the eligibility of models of recent construction under the 9½ rule. Those who are about to build or are building, are required to place in the hands of the board a drawing of midship section, and stating the L.W.L., that they may decide as to whether the boat, if built, will be allowed to compete under the rule in future races, thereby giving the designers an opportunity to alter their plans to fit the requirements of the rule. It is to be regretted that the model yacht Neola will not start in any of the races this season, as her owner, Mr. G. E. Pfeiffer, has tendered his resignation, which has been accepted. The 9½ rule is suggested as the cause of his withdrawal from the club, as he will no doubt debar his 3d class model yacht Ampere under the rule. There are a number of other boats that will succumb to the 9½ axe.

The opening races of the club will be sailed on May 30. It has not been decided as to whether they will be sailed on the Prospect Park lake or at Communipaw, the salt-water station of the club.

## YACHT NEWS NOTES.

The new 20-rater, designed by Will Fife, Jr., and building by C. Hansen & Sons, Cowes, for A. Barclay Walker, will be named Thelma. The Watson 20-rater building at the same yard for Prince Henry of Battenberg will be named Asphodel. Another 20 is under way at White's yard, Cowes, designed by C. P. Clayton for a syndicate, including Prince Bathyan, Stratmann, Count Andriewsky and Paul Stiller. She will be named Stephanie. Lord Dunraven's new 20, designed by himself, is building at Summers & Payne's yard, Southampton, and Charles Nicholson, the designer of the unsuccessful Virginia for the Earl of Dudley last year, has a new 20 under way at Camper & Nicholson's yard, Gosport, for the same owner. As already stated, Lord Dunraven, after selling his last year's 20, Deirdre, to the Earl of Londsdale, has purchased the very successful Dragon III, of F. C. Hill, and has had her hauled up at Summers & Payne's yard for alteration by the addition of a centerplate. The 20-raters thus far have been all keel craft and Dragon has been the best of the lot; the experiment of converting a successful keel boat into a centerboard craft is a novel one and the result is likely to be important, as Lord Dunraven is certain to make the trial a thorough one, and with some ten yachts in the class there will be every opportunity for ascertaining the merits of each. The experiments with the centerboard in deep cutters, as made in Irena, Dis and Queen Mab, have been very unsatisfactory so far as yachtsmen in general are concerned, however much the designers may have profited by them. While Dragon is not the type of boat to be improved by a centerboard, and by no means what a designer familiar with centerboard boats would turn out for the 20-rater class, the experiment will not be without value. Deirdre will be raced in the class by her new owner, and nearly as possible in last year's form, serving as a trial horse. Dragon will be sailed by Charles Bevis, of Hamble, formerly skipper for Mrs. Schenley in the smaller rating boat racing by her.

A meeting of the New York Y. R. A. was held on April 13, with Pres. Sutton in the chair. The proposed annual dinner on April 18, was postponed indefinitely. The following resolution, offered by Com. Prime, was adopted: "Resolved, That a committee of five delegates be appointed to revise the constitution, by-laws and sailing rules of the Association, and that they submit to each club of the Association on or before May 15, 1894, such changes as they may deem proper for the club's approval, and request that such clubs pass on the same, and give notice to such clubs that they will present such proposed changes to the Association at a meeting to be held on June 22, 1894, and that such committee report such changes to the Association at a meeting to be held June 22, 1894." President Sutton appointed the following committee: Com. A. J. Prime, Yonkers Corinthian Y. C.; Judge Charles E. Sims, Y. C. of George's Island; George W. Cowan, Y. C. of New York; Norman L. Rowe, Pavonia Y. C., and N. Smith, Canarsie Y. C. The application of the yachting department of the Newark Bay Boat Club for membership was placed on file. A committee was appointed to purchase prizes for the winning yachts in last year's regatta.

The hearty patronage of the German Emperor is having a good effect on yachting in German waters, and the present year promises to be a notable one, the chief event being the racing about the Baltic between June 23 and July 2, of the Kaiserlicher Yacht Club. The fleet of 40-raters will be a strong one, including Irene, built three years since from Watson's design for Prince Henry of Prussia, Lais and Varuna, lately sold to German owners, and a new Watson 40, Kommodore, building by Schichau at Ebing. It is now proposed that the English fleet shall visit the Baltic instead of the usual trip to the Clyde, the German yachts returning with them for Cowes week. Admiral Montague is likely to take his new 40, Carina, to Kiel, and some other British yachts will find their way there in all probability.

The Kill von Kull Y. C. has elected the following officers: Com., John Cronk; Vice-Com., H. E. Buel; Rec. Sec., L. H. Delle; Fin. Sec., John Y. Caughey; Treas., Henry S. Vroom; Trustees, for two years, David F. Simonson, Jacob I. Hoeman, W. H. Prall and Abram W. Applegate; Trustees, for one year, Chas. E. Griffith, Frederick Jehan,

Chas. Notz, Geo. H. Dunham and Geo. Rose. At a meeting of the trustees the following committees were appointed: Regatta, George Ross, H. E. Buel, J. S. Donovan, Membership, H. E. Buel, Wm. H. Prall, Chas. E. Griffith, House, A. W. Applegate, Abram Walsh, John J. Caughey, Auditing, Wm. Prall, F. Gehan, Chas. Griffith, Bowling, D. L. Simonson, E. J. Van Pelt, W. M. Lose, Billiards and Pool, John Cronk, Geo. Ochs, Geo. H. Treadwell. The club is now at home in its fine new house at Port Richmond.

The Schoodic Y. C. has been honored beyond any similar organization in this country. Capt. Geo. Goodwin, of the ship Dirigo, a member of the club, having expressed a wish to use the club colors as his private signal, has been presented with a beautiful 20ft. flag made after the design of the club pennant. This beautiful flag will wave over the first iron ship ever built in the United States and will be carried by a member of the Schoodic Y. C. to the most distant parts of the world. The flag was purchased by Commodore Willard Pike and a few of the active members and presented to Capt. Goodwin as a mark of their regard and good wishes, and hope it may be a mascot to himself and his beautiful steel ship Dirigo, as well as a remembrance of his friends on the St. Croix.—Daily St. Croix News.

The yachtsmen west of Ontario have made a new effort for the formation of a permanent organization, and at a meeting on March 21 in Cleveland, the Interlake Yachting Association was organized, with the following officers: Com., the Hon. George W. Gardner, Cleveland Y. C.; Vice-Com., J. E. Guinckel, Ohio Y. C.; Toledo, Rear-Com., H. C. Kendall, Citizens' Y. C., Detroit; Sec'y, Treas., E. W. Radden, Cleveland Y. C.; Meas., W. A. Ladd, Put-in-Bay Y. C.; Fleet Surgeon, Dr. A. E. Claypool, Ohio Y. C., Toledo; Race Committee, C. B. Lockwood, Sandusky Y. C., chairman; Wm. Gates, Toledo Y. C.; C. J. Lichtenberg, Detroit Y. C. A meet will be held at Put-in-Bay, Lake Erie, with races on July 17-18, and a cruise starting on July 19.

The third annual spring regatta of the Oak Point Y. C. will be sailed on June 17, from off the club house, 149th street, East River, New York. The courses will be: For sloops over 25ft., around Gangway Buoy, 20 miles naut. For all smaller classes, around Stepping Stones Light, 10 miles naut. The start will be made at 11 A. M., with 5 minutes to cross. Two handsome cups, similar to last year's Commodore's cup, will be given for boats over 25ft. The prize for the 20ft. class will be two lamps; for the 20 to 22ft. jib and mainsail class, a set of yacht lights and a gold badge; for the 16 to 18ft. class, a silver-mounted punch bowl. The entries already number 28.

The Corinthian Y. C. of San Francisco will open its fifth season with a dinner on April 28 at the club house, Tiburon, with a squadron cruise on the following day. Our list of fixtures shows that the club has planned a busy season, in which short squadron cruises will be the feature. The officers are: Com., T. F. Tracy; Vice-Com., A. T. Lyons; Sec'y, F. E. Baker; Treas., N. F. Dwyer; Meas., F. Stone; Port Capt., J. H. Keefe. Regatta Committee, J. R. Howell, W. H. Crowell, C. A. Graham.

The Bay Shore Y. C. has elected the following officers: Com., H. M. Brewster; Vice-Com., J. R. Howell; Rear-Com., Edgar Reybert; Treas., Dr. E. S. Moore; Sec'y, Arthur Dornley; Meas., Josiah Robbins. Regatta Committee—Henry L. Brown, John Daggett, S. C. Hulse. House Committee—Harry S. Raven, Samuel B. Gibson, Ned Dornley. The opening regatta will take place on June 13.

On April 12, Capt. Cranfield and twenty of Valkyrie's crew arrived at New York on the Majestic and were taken on the White Star tug

LAIS.

40-rater, designed by Will Fife, Jr., 1893. From an amateur photo.

Pulver to Tebo's, where they installed themselves aboard the yacht. The work of fitting out is going on, the two new masts will soon be shipped, and the yacht will sail for Glasgow as soon as possible. She will be fitted with a wheel instead of a tiller for the ocean voyage.

The Savannah Y. C. has elected the following officers: Com., F. S. Lathrop; Vice-Com., A. S. Bacon; Rear-Com., G. L. Coope; Sec.-Treas., M. A. Cohen; Stewards—H. A. Palmer, M. Y. Henderson, H. M. Comer, Jr., F. F. Jones, W. D. Simkins, I. Beckett, W. W. Starr, H. H. Gilmer, John Severe, Jr., J. A. G. Carson, G. J. Baldwin, J. L. Walworth. The annual regatta will take place about May 15.

The Carolina Y. C., of Charleston, S. C., has elected the following officers: Com., E. A. Simons; Vice-Com., C. E. Prioleau; Sec., E. P. Ravenel; Treas., W. D. Middleton; Meas., M. D. Haig; Fleet Surgeon, E. F. Parker, M.D.; Solicitor, G. M. Trenholm; Executive Committee—James Armstrong, F. Y. Porcher, H. M. Tucker, Jr., M. B. Hamilton, J. S. Harleston, R. B. Leboy, R. Holmes, D. J. Porter.

The Victoria Y. C., of Hamilton, Ont., organized last fall, starts its first season with a membership of 68, the officers being: Com., Rev. Chas. E. Whitcombe; Capt., T. Stephens; Sec'y, W. Bayley; Treas., W. J. Briggs; Meas., Robt. Hunter; Asst. Meas., W. J. Lewis. The club will make a special effort to promote skiff racing. It has applied to the Lake Y. R. A. for admission.

The Minnetonka Y. C. has elected the following officers: Com., Wm. Peet, Jr.; Vice-Com., F. J. Hopkins; Sec., Robert G. Gale; Treas., C. S. Langdon; Measurer, B. C. Hurd; Directors, Wm. Peet, F. J. Hopkins, J. B. Janney, C. B. Eustis, W. K. Morison, James Wyman, F. B. Long, C. S. Langdon, W. A. Ramsey; Regatta Committee, F. B. Bailey, C. H. Sweeney, Willis Williams.

The New Haven Y. C. has elected the following officers: Com., Henry S. Parmelee; Vice-Com., H. S. Holcomb; Rear-Com., F. T. Hammer; Measurer, George W. Hunn; Trustees, Chas. Kimberly, Geo. P. North; Sec., Geo. W. Guion; Treas., Geo. R. Chamberlain; Regatta Committee, Daniel M. Goodridge, Stephen D. Baker, James Gallagher, Jr.

A cablegram from Mr. Lloyd Phoenix to the Secretary of the Navy, states that Intrepid had called at the Cayman Islands and recovered the bell, memorial tablet and logbook of the wrecked Kearsarge from the wreckers who stole them and burned the wreck.

The Carolina Y. C., of Wilmington, N. C., has elected the following officers: Com., Geo. W. Kidder; Fleet Capt., Geo. N. Parsley; Flag Capt., Anderson Lord; Meas., Donald MacRae; Purser, J. McCre Cowan; Marshal, H. McL. Green; Governing Committee, J. H. Walters, Junius Davis, Chas. E. Borden.

The Milwaukee Y. C. has just been organized with the following officers: Com., C. J. Williams; Vice-Com., H. A. Coleman; Rear-Com., John J. J. Jr.; Sec., E. T. Bolcan; Treas., Fredk. Cook. Two previous attempts have been made, in 1870 and 1880, to establish a yacht club in Milwaukee, but each has failed.

The Winchester Arms Co. have just completed two very fine Lavigne yacht guns of large size for the new steam yacht Columbia, J. H. Ladew. They are on high carriages of mahogany, to clear the rail, without portholes. Another fine gun now on exhibition in the Broadway store is for Mrs. Carnegie's new steamer Dungeness.

The recent numbers of *The Yachtsman* have been specially interesting on account of a number of excellent views of Nice, Monaco, Marseilles and other Mediterranean ports now much heard of among yachtsmen. The colored supplements are very fine and many other views have appeared in the letterpress.

Gloriana, cutter, has been sold by W. Barton Hopkins to H. M. Gillig, owner of Ramona, schr. Mr. Gillig will not fit out Ramona this year, but will race Gloriana, his old skipper, Capt. Gibson, going from the larger to the smaller boat.

The rigging and tackle of the schooner Dauntless were sold at New London last week to Mr. Morgan of that place. The sails have also been sold, and the fittings and furniture have been taken to Hartford. The hull will be moored in the Connecticut River.

The Keystone Y. C. of Woodsburg, has elected the following officers: Pres., F. K. Walsh; Vice-Pres., Jos. Rotino; Sec., W. H. Jay; Treas., B. W. Lyon; Governing Committee—G. A. Wilson, E. C. Smith, Jos. Rotius, B. W. Lyon, E. L. Miller, C. A. Frost and F. K. Walsh.

At a meeting of the race committee of the Rhode Island Y. C., the following fixtures were arranged for the season of 1894: June 22, ladies' day and June regatta; July 10, annual cup regatta; Aug. 20, open regatta.

Eidolon, cutter, designed and built by Chas. Olmstead for Vice-Com. Crosby, Riverside Y. C., was launched at Bay Ridge on April 10. Gardian, the 25-footer built last year, was also put over at the same time.

Neckan, steam yacht, lately launched at Bristol, is now in Florida with her owner, H. C. Baxter, of Brunswick, Me., and his family on board. She will start this week for Boston and Portland.

Among the new British yachts' names are Carina, for Admiral Montague's 40-rater, and Romara, Unorna and Armorer for smaller racers. One new boat is to be named Gaiety Girl.

The Lincoln Park Y. C. has elected the following officers: Com., W. A. Paulsen; Vice-Com., E. E. Berryman; Rear-Com., A. C. Mather; Sec., C. O. Andrews; Treas., D. D. Dutton.

Nada, steam yacht, Chas. R. Flint, has returned from a cruise to the Southern sounds, and is at Wood & Son's yard, City Island, for repairs.

Shearwater, steam yacht, has been sold by Henry Wolcott to Vice-Com. E. M. Brown, New York Y. C., former owner of Fedalma.

Capt. Hank Haff will speak before the Massachusetts Y. C., at an early date, giving some of his experiences in international races.

Avenel, steam yacht, has been sold by A. J. Drexel, through Waterhouse & Chesbrough to a Boston owner.

The Riverside Y. C. has announced the following fixtures: July 16, annual cruise; April 17, club ball.

Ventura, the 53ft. Pride of the Bronx, has been sold by H. J. Tiffany to Baron Harden Hickey.

Lt. Henn is reported as dangerously ill at his father's home, Paradise Hill, Ennis, county Clare, Ireland.

Polly, sloop, has been sold to C. C. Noyes, who is having her altered at Poillon's.

The Yonkers Y. C. will build a new club house at once.

## Canoeing.

## The A. C. A. and its Critics.

Editor Forest and Stream:

I have been very much interested in the various contributions that have appeared in your columns regarding the reformation of the A. C. A., and not a little amused at some of the reformers' attempts to tell how it should be done and also the amount of "undeveloped" wit found in our midst. There is surely one thing that we have learned; that is, where to look for our "board of governors" next summer.

I never see a "scurp" of this kind going on without having a desire to take a hand in it, and had not weightier matters (sending out circulars soliciting advertisements for the year book, as "Pulex" says) kept my hands full I should have spoken my little piece before.

Briefly stated, my ideas of the *casus belli* are as follows: First, Mr. Holden comes out and says, "Knock that chip off my shoulder." Then Mr. Burns jumps on him and *vice versa*. "Flex" next sets him up and knocks him down, and then "Pulex" jumps on the wreck and incidentally nearly every one else (my turn will come next, I suppose). "Lanthé" gets indignant and fires up, and then "Pulex" "laughs," and so it goes. As "Pulex" says, "Now, gentleman, don't get flub-dusticated."

My impression is that if this discussion is carried on in proper lines it will result in possibly new ideas, and at any rate an interchange of thought that should result in good. But just as soon as you begin to throw stones somebody's windows are bound to get broken.

Mr. Burns and "Flex" have the right idea—that it is advancement, and not reform, that the A. C. A. needs. I might say for the enlightenment of many, and which Mr. Holden has already found out if he is a member of the L. A. W., that even with their membership of nearly 50,000 and the immense trade backing that they have they could not successfully publish an *emerald* and send it to every member against the annual dues of \$1, but have this year raised the dues to \$1.50. Moreover, they don't have the expenses, without more than a commensurate gain, of an annual meet that the A. C. A. does.

Now, I have an idea that will give the "funny men" a chance to show what they can do.

I have heard of an old saying that "What is lightly earned is lightly spent," or another applying to a man "That what is lightly gained is lightly held." This refers to membership in our Association.

I do not think the dues are too light, but I do think the initiation fee is. It should at least be \$3, or more properly \$5. Then our membership would not be so lightly gained and would be much more strongly held. Then, to protect our members, the camp dues of non-members should be raised proportionately.

This question of raising down the racing and the racing machine should not be. Rather let us increase it all, and not only this but the cruisers as well, and all other things pertaining to our camps and canoeing. Goodness knows we don't want to go backward, as C. A. B. would have us, to the time when we nearly broke our back legs trying to "hold" the canoe up; whereas now we are comfortable and dry in a sliding seat. Nor do we want to abolish the plate board and go back to the time when we could not make it to every end against the tide or even in a heavy blow; or for that matter to the old open cockpit, when you would get swamped in a sea-way, or in case of a capsize had to wait for some one to rescue you. These things should not be legislated against but rather left to work out their own kill or cure as experience proves them to be good or bad.

I was quite amused last week to have one of my club mates come to me and ask me who "Katrina" was and something about him; so I suppose there will be something in answer to his letter in your columns soon. I, at least, am glad to hear from "Katrina" and know that he is still interested in the old A. C. A. Such letters as his show the feeling that we should have for the association and its meets. Would that he could come to Croton Point this summer and receive the hearty welcome that would await him, for many are the inquiries that have been made both to and by me as to his health and probability of attendance at each camp since we met at Slave Island in '89.

While I am at it, I might as well go through the list. To "A member of six years' standing" regarding his proposition for life membership, without criticising the idea, but merely as he would have it carried out, I would like to ask if he thinks the secretary is looking for a job, or needs some more detail to his work? If he does, I could give him a tip or two. Now, gentleman, is your chance to "jump" but don't jump too hard or you won't get any year book. Geo. F. DOUGLASS.

Editor Forest and Stream:

I think a laugh in print would look about as funny as "Pulex" in a canoe!

No, no, "Pulex," you take the cake for being funny, and you really must not try to evade the issue by asking every one to "smile" with you when you are safe in the oblivion that your *nom de plume* gives you. If you should call at my store, for instance, and ask me to take a "smile" with you, I would quickly grab my hat and go out with you. Please don't be so tantalizing as to do it in print, though.

But to come right down to business. Why, when I mentioned four things that "Lanthé" does, and racing as the last one, did you select only that one to elaborate on about your "conditioning?" That seems to be but a fair sample of the way you meet the question all through.

Also, why did you not deny my allegation that perhaps you "could not show a certificate of membership or any credential that you are even a canoeist?"

Did my inspiration strike nearer the truth than even I had any serious thought of? Now, own up to the truth and don't beat about the bush or even pass it by altogether, but come right out and tell us. Are you a member of the A. C. A. or even an active member of any canoe club?

As a matter of fact, I believe you don't know why or what you are talking about. It's prove my assertion.

Surely you are opposed to so much racing, and yet in your first letter you wrote, to quote your own words, "But eliminate the racing feature and the Association camps would be dull places indeed to spend two weeks. There would probably never be another Association camp. Why is this? Because the average canoeist attending the Association meets does not care enough for cruising and camping."

How do you reconcile these facts, as a first question, to what I state above and secondly, you are deaf, for the records will corroborate me that each year a smaller and smaller percentage of the men attending the meets go in the races, and besides the racing men are but a small percentage of the total attendance of the meets.

I am sure that the cruisers are as anxious as any one to attend the meets, why I even knew of one fellow that called himself a canoeist, and he came from the famed Rutherford, too, who was so anxious to attend one of the meets that he "walked" all the way to Lake Oka to plain to do it, and I doubt if he ever set foot in a racing canoe, either.

I am glad to see such men as "Katrina" take a hand in this argument, for they are well qualified to talk on this subject.

No, "Katrina," you are wrong if you think I would class you as a false pretender. I have too high a respect for the men of your standing in the old days, when as you rightly say, "lanthe" was not in it."

But do not for a moment think I do not know who you are. Even without the points you give as to your identity, have I not heard my fellow club members tell about how you led the fleet in the trophy race in 1889 for three rounds and until your tiller broke?

I regret that I do not know you better than by reputation. I sincerely regret that continued ill-health keeps you from our camps, and in this I know I am echoing the sentiments of many others.

However, I hope that the day will not be far distant when you will have sufficiently recovered to do some more of the oldtime canoeing.

LANTHE.

### The War Canoe Calla Shasta.

WELL! WELL! WELL!!! WELL!!!! HA!!!! HA!!!!!!

AMID a howling snow storm on April 8, the Springfield Canoe Club's war canoe Calla Shasta was christened and launched at the Wish-tonish Canoe Club's house at Northampton by Raymond Apollonio, and the crew, including Apollonio and Cutler of Boston, Blelock (Diacks), Banks, Sergeant, Hodgdon and Knappe, started on their first cruise, with wind and rain beating on their backs, bound for Springfield.

The start was made at 12 M., arriving at the Holyoke Canoe Club's summer resort, Sans Souci, at 1 P. M., where Messrs. Schuster, Metcalf, Brown, Ramage and Cox did themselves proud in serving a wholesome and merrily enjoyed dinner at their club house, after which the different canoes comprising the camp were visited. Leaving Sans Souci at 3 P. M., Holyoke was reached at 3:30, where a carry of two miles around the dam was made, and the crew started, full of life and enjoyment, for Springfield, arriving at 6 P. M., having made a most successful cruise. During the paddle the crew inaugurated their war cry, Messrs. Apollonio and Blelock being the authors.

AGAWAM.

### A. C. A. Membership.

EASTERN DIVISION.—R. H. Hammond, Geo. H. Hill, A. M. Whitcomb, Chas. A. Earle, W. U. Hyde, A. A. Seymour, E. M. Chase, W. Libbey Eaton, Northern Division.—F. A. C. Bickerdike, R. Bickerdike, Jr., Montreal.

### CANOE NEWS NOTES.

The Mohican C. C. has always been at a disadvantage in the matter of a club house, the quarters at Piepenbrink's boat house being inconvenient and in a very bad part of the river for canoeing, near the center of the city and close by a sewer. The club is now building a handsome and convenient canoe house on the river bank immediately below its summer house at Staats's, down the river, a stairway up the hill connecting the two.

The Buffalo C. C. has elected the following officers: Com. E. W. Dunston; Vice-Com. H. D. Pulsifer; Sec'y-Treas. F. D. Wood; Trustees, G. L. Kelley, C. P. Forbush, F. R. Rosseel.

The Newburgh Canoe and Boating Association has elected the following officers: Com. Wm. T. Hilton; Purser, Jas. T. Van Dalseu; Treas., Chas. D. Robinson; Chairman of Regatta Committee, Henry J. Jova.

The new Hartford war canoe will compete in the war canoe race at Calla Shasta on May 30; the crew, which is now at work, including Messrs. Reginald Berney, captain; D. S. Morrell, stroke; J. W. Ball, W. R. Sloum, Iva C. Park, F. H. Hills, T. S. Cheney, J. W. Cheney, J. W. Danforth and J. C. Stables.

At a meeting of the Cataragui C. C. on April 12 the following officers were elected: Capt. H. W. Richardson; Mate, R. Easton; Burns, Purser, C. W. Kent; Committee, C. Gay Shannon, I. McD. Mowat. The club will hold races once a month during the season. The club membership is 71 and the A. C. A. membership is 71 also.

## Rifle Range and Gallery.

### Ross vs. Dorrier.

THE 100 shot rifle match for \$100 a side between Fred C. Ross, of Brooklyn, and Michael Dorrier, of Greenville, N. J., which has been the topic of interest to the New York riflemen for weeks past, was shot off at Wiese's Cypress Hills Park on Monday afternoon, and much to the disappointment of the friends of the two shooters the match was declared a tie by the referee, Wm. Hayes.

The day opened fine, a bright and almost cloudless sky, a light breeze, varying from east to northeast, kept the range free from smoke.

The two principals were early on the grounds and devoted considerable time to preliminary practice. The practice of both men was closely watched by all present.

Ross's rifle was the first to sound the tocsin, his first effort was a 21 at 6 o'clock. Dorrier's first shot followed closely after, and resulted in a 24 at 12 o'clock. Ross's second shot was another 21 at 4 o'clock. Dorrier's second and third shots were 24s at 12 o'clock in close proximity to the first. Ross followed with 22 on his third. Dorrier's fourth shot developed another 24 at 6 o'clock, 96 points out of a possible 100 on the first four shots of the match—wonderfully fine work, and the question arose in the minds of many interested watchers: How soon will he break this fine run? A 22 on his fifth shot startled them a little, a 25 on the sixth and a 24 on the seventh shot put every one on the edge of their seats. The eighth shot gave a slight chill to those who had anticipated a record score; his tenth was a 24, giving him a total of 234 for his first ten shots. Ross was for the first two or three scores apparently a little nervous. The total for his first ten shots was 214 against 234 for Dorrier. This was an unexpected event to every one. Dorrier's second score was another surprise, from the brilliant 234 he dropped to 214. Ross's second was 213, adding another point to Dorrier's lead.

Again did Dorrier give another surprise and at the same time brilliant exhibition in bunching a series of shots. The total of his third string was 239, the best recorded 10-shot score ever made in a 100-shot match, and within one point of the best 10-shot (240) record score, made by Wm. Hayes seven years since. Ross, from the commencement of his third score, began to get settled down to steady work. He however got an accidental shot on his 27th, which was a 15; but under the rule as agreed upon previous to the match, that any shot not pulled or if declared accidental by the shooter it should not count, Ross was given an extra shot. He finished his third string with a total of 223. His 4th string was still better, he making a total of 229. From this point on to the 8th string he shot in good form, keeping up an average of 22 and better. The 8th string brought a break in his good work. He fell off to an average of 21 or 210 for the string. His 10th was the best of his 10 strings, being 230. The 10th and last string to wind up his 100 shots showed good steady holding, he getting 228, a grand total of 2,217 for his 100 shots.

After Dorrier's third string he made no more brilliant spurts, 215 each in the 4th and 5th strings, 224 in the 6th, 214 in the 7th, 223, 230 and 220 in the 8th, 9th and 10th gave him a grand total of 2,229 against 2,217 for Ross. But hereby hangs a tale, which when told changes the whole aspect of the final results of the match. When the match was opened Geo. W. Plaisted and Jos. Bonzer were appointed scorers to record the shots as called out by Mr. Hayes, the referee. Barney Zettler and John Wissel went down to the targets to watch the marking by the men at the targets, and at the same time keeping record of the shots from that end of the range as they came into the target.

On Dorrier's 16th shot the markers showed up a 21, which the referee called out and which was recorded as such. This was the beginning of the trouble. This 24 was in reality only a 19. The markers had mistaken a wet patch on the target for a shot. They corrected their error by showing up the figure 19 in place of the 24, but the referee had in the mean time turned away from the target and did not see the correction, so that the 24 continued to stand to Dorrier's credit at the upper end of the range. In the mean time Ross got his accidental 15. The referee decided this no shot. The men at the other end of the range not knowing this marked it up against Ross.

In the meantime one or more errors had been discovered in the showing of the numbers at the targets, and Boston began to circulate that there was a mistake in the recording of the shots either in the target house or in the shooting house, and as nearly every man on the ground had a little cash invested on the match and was keeping score of the shots from whatever point of view he could, the consequence was that as the match drew near the end there was much excitement. Outside of the two scores kept in the house with the referee there were no two kept by the others that agreed.

Ross, in his last two scores, by steady holding and remarkably good nerve, pulled Dorrier's lead down to zero, and in fact his friends claimed that he had won the race by a margin ranging from one to seven points. Dorrier and his friends claimed that the victory rested with Dorrier.

The referee called for each man's target containing the 100 shots of each, and with the two principals and the scorers from both ends of the range repaired to the hotel in the park where, with the aid of a

penknife and the expenditure of much patience the patches upon the targets were removed and an effort made to verify the shots with the scores. Did anybody ever undertake to name the shots in a bullseye that contained from 90 to 100 shots and the most of them inside the 22 ring? Well, this was the job that Referee Hayes, the two principals and the scorers set out to accomplish in order to demonstrate who won the match. This committee started in on this job at 5:15 P. M., just after the match closed. At 8:30 they were still deeply interested in the question as to how many bullets might have passed through some particular hole and what was the value of each. In despair the referee went back to the original scores as kept under his supervision. He deducted 5 points from Dorrier's 16th shot, making it 19, to correspond with the correction made in the target at the time it was shot. Ross was given credit for one more point on his 33rd shot, which was claimed should have been a 24 instead of 23. This correction made Ross's 4th score 230 instead of 229, and Dorrier's 3d score 209 instead of 214, giving each a total of 2,218. The match was then declared a draw and all bets off.

That such a decision was not satisfactory goes without saying. But it was the best that could be done under the circumstances. The betting men broke even. The shooters are yet both champions in the eyes of their followers. Another match made and shot off under Schützen rules as this one should have been, will demonstrate who is the best shot of the two. Why not eliminate this element of gambling from our sports? We'd be the better for it.

### National Shooting Association of the United States.

ABOUT one year ago the prominent German-American shooting society located at New York City, the Schuetzen Verein (Schuetzen Bund) for the purpose of holding a grand shooting festival in New York in 1895. Since the formation of the association we have from time to time published reports of the progress that was being made by the board of delegates representing the societies interested in the movement. Since our last report the committee on prize programme, Messrs. Walther, Hayes and Krauss, finished its task, and at the last regular meeting held a few days since, submitted the result of its labors to the full board. That the work was both thorough and complete in all its details is obvious from the fact that the programme as submitted to the full board was adopted with hardly any changes. Through the courtesy of the committee we are permitted to publish a synopsis of the programme in advance of its regular distribution to the public. As yet no board of directors has been decided in which of our local parks the festival will be held. There are, however, strong probabilities that the final adjustment of the matter will result in favor of the Union Hill Park, located at Union Hill, N. J. Its location and adaptability for accommodating a large number of visitors, and its fine shooting range give it the preference in the minds of many of the delegates who have had previous experience in the management of large festivals of the association. We append the board of officers of the association and the programme:

#### OFFICERS.

President, Wm. Weber, captain Independent New York Corps; Vice-Presidents: First, Lorenz Zeller, captain Harlem Independent Corps; second, Henry Olfertman, captain New York Corps; third, A. Richter, captain New York Central Corps; fourth, C. D. Rehm, captain New York City Corps. Recording Secretary, Fred. Baumann, New York Central Corps. Corresponding Secretary, Chas. F. Roedel, New York City Corps. Financial Secretary, Henry J. Behrens, Independent New York Corps. Treasurer, Geo. H. Schenck, New York Corps. Shooting Masters: First, Bernhard Walther, present Zettler Rifle Club; second, Gebhardt Krauss, ex-captain Williamsburgh Shooting Society; third, Wm. Hayes, Newark Shooting Society. Trustees: Fred. Cook, ex-captain New York Corps; Robt. Henke, captain New York Schuetzen Gilder; Fred. Erxmeier, captain Hoboken Independent Corps; F. W. Witte, captain Brooklyn Schuetzen Corps; George H. Friedrichs, captain Hoboken Schuetzen Corps.

#### PROGRAMME.

The following targets will be in use: Association targets—one Union, one Silesian, distance 200 yds. Open only to members of good standing in societies belonging to the association, (public) Prize targets (open to all comers), Ring, Man, Standard American and Point.

Note.—Riflemen not members of some society belonging to the association, in order to shoot upon the public targets will be obliged to purchase a festival ticket costing \$1. Union Target.—Open to members of the Association only: This target is the regular ring target divided into 25 rings 1/2 in. apart. The black (bullseye) 12 in. in diameter containing rings 1/2 to 2 1/2. The balance of target white, containing rings 1 to 17. All prizes given by the different societies connected with the Association and individuals will be placed upon this target. The Association guarantees \$1,000 cash to be divided into three prizes, \$500, \$300, \$200. The other prizes will undoubtedly be numerous and valuable. Tickets for three shots \$7.50, which must be taken in conjunction with the ticket for the Silesian target. The shooter making the highest score shall be entitled to first choice of prizes, etc. In case of ties such ties shall be decided by the last best shot or shots.

Stich Target.—Open to members of the Association only: This target has a black of 12 in. in diameter at the center of which is placed a bullseye, also black, 6 in. in diameter; the balance of target is white. The shooter hitting a bullseye nearest the center shall be entitled to first prize, the shooter hitting the next nearest to the second prize, etc. Tickets for three shots \$7.50, which must be taken in conjunction with the ticket for the Union target. \$1,000 cash will be divided as follows: First prize \$300, second \$200, third \$100, fourth \$50, fifth \$30, sixth \$20, seventh \$10, eighth \$5, ninth \$4, tenth \$3, eleventh \$2, twelfth \$20, five of \$15 each, ten of \$10, twenty of \$5, thirty of \$3, forty of \$2.

Ring Target.—This target is the same as the Union; i. e., the regular 3 1/2 in. division. The shooter making the highest score on any one ticket shall be entitled to first prize, the shooter making the next highest score on any one ticket to second prize, etc. Tickets for three shots \$2. Number of tickets unlimited. In case of ties, the shooter having the next highest score shall be given the preference. Fifteen hundred dollars cash will be divided as follows: First prize \$300, second \$150, third \$100, fourth \$50, fifth \$30, sixth \$20, seventh \$10, eighth \$5, ninth \$5, tenth \$4, eleventh \$4, twelfth \$3, thirteenth \$3, fourteenth \$3, fifteenth \$3, four prizes of \$15 each, five of \$10 each, twenty-one of \$5 each, twenty-five of \$3 each, thirty of \$2 each.

Man Target.—This target represents the upper part of a man's body, the whole figure being black and divided into perpendicular lines 1/2 in. apart, the center line counting 20, the numbers running down on each side to 1. The shooter making the highest score on any one ticket shall be entitled to first prize, etc. Tickets for five shots, \$3. Number of tickets unlimited. In case of ties, the shooter having the next highest score shall be given the preference. Fifteen hundred dollars cash will be divided as follows: First

prize \$300, second \$100, third \$50, fourth \$30, fifth \$20, sixth \$10, seventh \$50, eighth \$45, ninth \$40, tenth \$35, eleventh \$30, twelfth \$25, thirteenth \$20, four prizes of \$15 each, six of \$10 each, twenty-two of \$5 each, twenty-five of \$3 each, thirty of \$2 each.

American Standard Target.—The well-known American standard target, with 10 black, will be used. Open to any rifle, same as other targets. The shooter making the highest score on any one ticket shall be entitled to first prize, etc. Tickets for five shots, \$2. Number of tickets unlimited. Ties to be divided as on ring target. One thousand dollars cash will be divided as follows: First prize \$150, second \$100, third \$50, fourth \$30, fifth \$20, sixth \$10, seventh \$5, eighth \$3, ninth \$3, tenth \$2, eleventh \$2, five prizes of \$15 each, five of \$12 each, seven of \$10 each, ten of \$8 each, twelve of \$5 each, twenty of \$3 each, thirty of \$2 each.

Point Target.—This target has a black of 12 in. diameter, the inner circle, which constitutes the bullseye, being 3 in. diameter counts 3 points. The next circle of 6 in. diameter counts 2 points and the balance of black counts 1 point. Shots out of the black do not count. The shooter hitting the bullseye nearest the center shall be entitled to first prize, etc., same as the Stich target. Tickets for 10 shots \$1; number of tickets unlimited; \$1,300 cash will be divided as follows: First prize \$100, second \$80, third \$70, fourth \$60, fifth \$50, sixth \$45, seventh \$40, eighth \$35, ninth \$30, tenth \$25, eleventh \$20, twelfth \$18 each, four \$15, five \$12, eight \$10, ten \$8, ten \$7, fifteen \$6, fifteen \$5 and twenty \$4.

Each shooter upon making 25 points will be entitled to a "Festival" silver medal; 150 points, a "Festival" gold medal, value \$15; 300 points, a solid silver goblet.

Premiums.—For the first and last (flag) bullseye of the festival \$5. For the first and last (flag) bullseye each morning and afternoon of each day \$2.

King of the Festival.—The shooter making the most points in his first 200 shots shall be declared king of the festival and shall be entitled to the king's medal, value \$100, and \$250 cash.

The shooter making the second most points \$50, third \$40, fourth \$30, fifth \$25, sixth \$20, seventh \$15, eighth \$12, ninth \$10, tenth \$8, eleventh \$7, twelfth \$6, thirteenth \$5, fourteenth \$4, fifteenth \$4, sixteenth \$4, seventeenth \$3, eighteenth \$3, nineteenth \$2, twentieth \$2.

### Rifle at San Antonio.

THE San Antonio riflemen had a jolly meeting on the 8th inst., the regular practice day. The shooting was well up toward the expert mark, with Althaus again breaking the rest record by piling up 109 at 200 yds. Score, 200 yds., muzzle rest, globe and peep sight, 10 shots per score:

## TEXAS STATE SHOOT.

The eighteenth annual tournament of the Texas State Sportsmen's Association, advertised for April 4, 5, 6 and 7, at Austin, Tex., is now a thing of the past, and has glided into historic shades as one of the most enjoyable events within the recollection of the oldest trap shot of this State.

The Miller boys, under whose auspices the shoot was given, devoted all their time and energy to catering to the wants of the shooters. The service at the traps was excellent, live pigeons plentiful and of good wing, and altogether a very fair lot—some duffers of course, but it makes it all the more interesting to have a lazy incoming cock and then a screaming tailer. The thanks of the fraternity are due Miles and Wallace Miller, two of the most popular gentlemen of the Association.

The attendance was not large, owing to the hard times generally and the drouth in southern Texas in particular. But the fraternal spirit with which the average Texan breast is laden was doing business at the old stand, and we had a good time.

"Where's the droll and his cannon?" was one of the first questions; and nothing but sympathetic expressions were heard in response to the statement that the absentee's wife was ill unto death.

Mr. C. Tribler, who for years has been known by his *nom de trap* "St. Hubert," and who has not failed to attend the tournament for years, wrote that "hard and dry times prevented my attending what I have always considered my happiest day."

The veteran "Jim" (W. F. Stewart, of Galveston) was also conspicuous by his absence, and a letter of regret was also received from him.

A. Holzapfel, of Cuero, was one of the first on the ground. As will be seen by the scores below, he is now champion of the State by virtue of his having won the individual medal. Brown, of Burton, tied him, but on the second round of the tie-out Brown slipped his trolley a little on a pair of blue pigeons, and the little Dutchman from Cuero came in an easy winner.

One of the most conspicuous characters present was "Red" Register. He is large because he is big, both in heart as of stature, and he contributed, along with "Fritz" to the enjoyment of the shooters. Hempstead's guide, in the person of W. H. Wheeler otherwise known as McGinty, was in hand in all his glory. He killed all his singles in the individual shoot, but slipped up on his doubles. Farmersville was represented by that famous pair of giants, Messrs. Moore and Hope, two men hard to down at any kind of shooting. Mr. A. E. Wilson, of Hearne, dropped in on the third day, interviewed a few friends, dropped into a lucky "hole" by himself, raked in fifty dollars and gracefully bowed himself out. Mr. Ambold, of Waco, was on hand part of the time camping on Forsgard's trail. His big 10-gauge and six drams of black powder made the heavens frown with a damp disapproval. A petition was circulated, signed by all present, asking him to leave his soft coal burner at home the next time he came.

Mr. Sparks, of Giddings, Messrs. Cleveland and Speers, of Georgetown, were under the protecting wing of Ben Rogers, of Brenham, the new president, who knows more about chaperoning shooters than the devil knows of holy water. Ben is a good man and the Association will have a president in him that will do it a great deal of good.

San Antonio of course sent the largest delegation, it always does. She was ably represented by Messrs. H. E. Vernon, A. W. Adams (partly of Chicago), A. B. Fritzger, G. A. Chabot and O. C. Guessaz, otherwise known as "Texas Field."

The meeting of the Association was held at Salge's parlors on the evening of the 5th inst., and the following officers were elected: Pres., Ben Rogers, Brenham; Vice-Pres., A. B. Fritzger, San Antonio; Sec'y-Treas., Adolph Dreiss, San Antonio. San Antonio was chosen as the next place of meeting and that announcement alone is sufficient to secure a large attendance. Scores:

## The LEAPING OUANANICHE

What It Is

When, Where and How to Catch It  
BY EUGENE MCCARTHY.

The Ouananiche is rapidly coming into prominence, and is attracting the attention of anglers everywhere. Seven years' experience in catching and studying the Ouananiche has thoroughly fitted the author to speak with authority on his subject, and the work is a valuable one. The book contains a large number of half-tone cuts from photographs taken by the author, and a correct portrait of the fish itself. A line map of the St. Johns country, also made by the writer, is given. This work will be a recognized authority, and should be in the library of every angler. Paper, 66 pp. of text. Price 10 cents. Published and for sale by

FOREST AND STREAM PUBLISHING CO.,  
318 Broadway, New York.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

If he is a friend of yours; if he is interested in the gun or the rod; if he is not a reader of FOREST AND STREAM; if you would like to have him see it for three weeks; and if you will give us his name, we will supply him with one of the

FOREST AND STREAM'S SILVER BULLSEYE Cards, which will make it easy for him to send for the paper. . . . .

## ACTION BY THE SENATE.

We announced last week the passage in the House of Representatives of Mr. Lacey's bill providing protection for the Yellowstone National Park. This bill having gone to the Senate was there amended so that, although it is no longer the same bill that the House passed, it will go back to the House as a House bill and will thus have preference over a Senate bill proper, being treated as a House bill with Senate amendments.

As soon as the bill came to the Senate it was referred to the Committee on Territories, and two days later Senator Carey reported it in its changed form. In this form it includes the best portion of the Vest bill, the Carey bill, and the Lacey bill, and while there are some points in which it might be improved, yet it is emphatically a measure that deserves support.

On Monday last Senator Carey called up the bill in the Senate, and after some discussion and some amendments it passed that body.

One of the most important changes in the bill as finally passed is that its provisions apply to the whole Park instead of to "the Yellowstone National Park in the State of Wyoming" as Senator Carey's bill originally read, since, as narrow strips of the Park lie in Montana and in Idaho, a law which limited protection to that part of the Park in Wyoming would merely invite law breakers to settle on such portions as are without the boundaries of that State, and from these strips—where they would be safe from punishment—they could at will raid the treasures of the National Park. Another most useful amendment is that increasing the penalty for receiving for transportation game or dead animals from \$100 to \$300. The inadequacy of the original penalty was obvious.

The bill now goes to a conference committee of members of both houses, and this body should have no difficulty in determining the form which the measure shall finally take. It is essential to the proper protection of

the game and forests of the Yellowstone Park that a section should be added to this bill extending its provisions over the area of the adjacent forest reservation, and pains should be taken to clearly express the evident and proper intent of the bill, that the penalties of this statute and not of the laws of Wyoming, are to be enforced. It is also desirable for many reasons that the Circuit Court should appoint the commissioner and the deputy marshals for whom the act makes provision. These officials should be so appointed that they will not be swayed by local influences.

Senators Vest and Cary have earned the thanks of all friends of the Park by their prompt action, and the interest which Congress at last appears to feel in the matter is a hopeful sign. The interest was long in awakening, but if, as now seems to be the case, Congress is aroused to a realizing sense of the dangers which threatens one of the choicest possessions of our people, it will be an easy matter for the future to prevent the abuses which have prevailed for twenty years; and the destruction of life which has recently taken place will have been a blessing instead of a bane if it shall induce Congress to pass the laws so urgently needed.

On the other hand it must not be imagined that this is a time for any relaxing of effort by those who hope to see the National Park preserved forever as the people's pleasure ground. Good bills for the Park's protection have passed the Senate before, and the matter has ended there. This bill should meet a better fate and should become a law of the land.

## THE GILBERT TROUT BILL.

A SECOND time the Gilbert trout bill in the Massachusetts Legislature, having been passed by both houses, has met a veto. The measure as passed this year provided that trout artificially reared in private ponds and streams might be sold for food during February and March (close months) under such restrictions as might be prescribed by the Fish Commissioners. Franklin, Hampden, Hampshire and Berkshire counties were excepted. The measure met with determined opposition from the Massachusetts Fish and Game Protective Association. The brief of objections prepared by the Association has been printed in our columns. This opposition was maintained even after the adoption of the measure by both houses, and to the intelligent presentation of the case by the Association to the Governor must be credited the executive action which has come in the very gratifying form of a veto, which reads as follows:

To the Honorable Senate and House of Representatives:

I return herewith without my approval "Senate bill 66," entitled, "An act to permit, during February and March, the sale for food of trout artificially reared in this commonwealth," assigning for such action the following reasons:

First—The words in the act "artificially reared" are not precise and definite, and are liable to various interpretations, meaning, on the one hand, trout reared in hatcheries of elaborate construction, and, on the other hand, trout reared in a greater or less degree on food artificially supplied in ponds and streams or in inclosures of rude construction.

Second—The difficulty of readily distinguishing artificially reared trout from wild trout must make the administration of the proposed law practically ineffective.

Third—The opening of the closed season in the manner proposed, even with restrictions prescribed by the Commissioners, would in effect tend to bring in all kinds of trout, wild or artificially reared, and to annul or impair the policy of preserving and protecting fish and game which has become the established policy of the commonwealth.

Fourth—The discrimination in regard to the counties of Berkshire, Hampden and Hampshire does not appear to be based on constitutional principle or on good and sufficient grounds.

[Signed,]

FREDERICK T. GREENHALGE.

The absolute necessity of prohibiting the sale of fish and game in the close season is the very A B C of protection. Gov. Greenhalge has done well to veto the Gilbert bill. It is a pity that he did not recognize the same reasoning and adopt a similar course of action with respect to the iniquitous measure which has received his approval this month legalizing the sale of game in close time. At this distance from the big dome in Boston, it is difficult to reconcile the approval of the game bill with the veto of the trout bill. The principle of one is identical with that of the other. Moreover, the selling clauses of the game law are inimical to the interests of the Commonwealth of Massachusetts and of her sister States as well.

As amended by the present Legislature the game law is altogether in the interest of the Boston markets as a "dumping ground" for game in season and out of season. The law reads, "That any person, firm or corporation

dealing in game or engaged in the cold-storage business may buy, sell or have in possession, and any person may buy from such person, firm or corporation, and have in possession if so bought, quail, from the fifteenth day of October to the first day of May; and any such person, firm or corporation may have in possession on cold storage, quail, and may buy, sell and have in possession pinated grouse, wild pigeons and any of the so-called shore, marsh, or beach birds, or of the so-called duck species, at any season, if said quail, grouse or other birds have not been taken or killed in this Commonwealth contrary to the provisions of this act."

In practical working such a law invites the market hunters of the West to ship tons of game to the East, and it invites the game snarers of Massachusetts and neighboring States to kill game in season and out of season. There cannot be protection for game and an open market for game at the same time. This, we repeat, is the A B C of the matter; and everybody knows it. Experience demonstrates it, and the experience of New England and of every other portion of the country has by this time been so ample and so instructive that no legislature can plead ignorance of the facts. The law as adopted this year is a disgrace to Massachusetts.

## SNAP SHOTS.

MR. ARMIN TENNER recently propounded in our Natural History columns a theory to account for the disappearance of the thousands of song birds imported into America by the Cincinnati Acclimatization Society. Mr. Tenner's theory was based upon the observations by Heinrich Gätke, of the migratory flights of the birds of Germany, whence the Cincinnati birds had been brought. In the autumn migration, according to Gätke, the flight is first westward and then south; from northern Germany they fly across the North Sea, bound for England and Ireland, and thence south by way of Gibraltar to Africa. Following this instinct, argued Mr. Tenner, the birds liberated in Ohio would first fly west, and mistaking the Pacific Ocean for the North Sea would try in vain to cross it, and finally fall exhausted into the sea and perish. If this theory is based on facts, it would appear that it must have application no less to the German song birds put out on the Pacific Coast, and that following the migratory instinct guiding them westward these birds too should lose themselves in the Pacific. But the fact is that the introduced song birds are now returning to Oregon in flocks. Mr. Charles F. Pfluger, the secretary of the society which imported the birds, reports that many of the songsters are back from their winter migration, including starlings, goldfinches, skylarks and black thrushes, all of which have become fixtures in the State. This certainly is extremely encouraging, and if the birds can be acclimatized on the Pacific Coast, why may they not be added to the bird contingents of other regions?

Our canoeing columns this week contain the first chapter of a report of an expedition made in the summer of 1893 "Away Up North" in the Laurentian Wilderness of Canada. The report is of decided interest, for it notes new waters to be explored, amid inspiring scenery and in a country which, the canoeist, being the first comer, may have all to himself. What with the enterprise and push of the sportsman tourist of the day, there are not left many districts possessing the novelty and freshness of this one.

Mr. C. F. Amery, so widely known as the secretary of the Audubon Society, now occupies a chair on the editorial staff of the *Literary Digest*, a journal which is winning its way as the busy man's weekly compendium of the literature, science, art, politics and intelligence of the day.

Maryland needs a State sportsmen's association to be constituted of non-partisan elements, irrespective of political affiliations, bent only upon securing measures which will meet the urgent requirements of the hour, if game interests are to be served.

Dr. Frederick A. Cook, who is fitting out a summer excursion to Greenland, was the ethnologist of the Peary Expedition of 1891-2. He is an enthusiast on the attractions of the North, and the itinerary he has laid out for this summer is an inviting one.

## RAMBLING IN WYOMING.

VISALIA, Cal.—*Editor Forest and Stream:* On July 2, 1893, Ernest Britten, of Three Rivers, John Broder, W. T. Cooper and myself left here for a pleasure trip through Wyoming and the Yellowstone National Park. We took passage for Casper, Wyoming, the terminus of the Fremont, Elk Horn & Missouri Valley railroad, distant 220 miles from Cheyenne, located upon the south bank of the famous Platte River, and built upon the site of old Fort Casper. Carey Bros., one of whose ranches is near Casper, are among the largest cattle growers in the State. From them we secured nine head of horses at the reasonable figure of \$20 per head. They were the regular Wyoming cow ponies, averaging 900 to 1,000 lbs., and proved most excellent animals for both riding and packing; their endurance was astonishing.

All offers of a guide were rejected, and on the morning of July 10 we left Casper for the southern spur of the Big Horn Mountains, distant 85 miles. The whole of this distance lies across Casper desert, where, save an occasional sage brush, nothing green is seen; it is 20 and 25 miles between watering places, and so strongly is the water impregnated with alkali that one must be very thirsty to drink it. This difficulty was greatly overcome by carrying drinking water in a large keg lashed on a pack-horse, and also in canteens.

The first camp was pitched 25 miles in the desert, where we found some springs of water. Antelope abounded and the camp was well supplied with meat. The sage brush was literally alive with prairie chickens, the young of which, being about two-thirds grown, were delicious eating. Next morning while breakfasting we could see a hundred antelope curiously surveying the camp from the neighboring hills.

Four days' travel brought us to Oakley post office, on Bad Water, and within a few miles of the southern spur of the Big Horns. Bad Water seemed a misnomer, for the water was pure and cold; the Indians so named the stream on account of its rising rapidly after a rain and doing great damage along its course.

On July 14 camp was pitched in the spur of the Big Horns, a series of low, gently rolling hills about 30 miles wide by 100 miles long. This country presented an unbroken carpet of luxuriant green grass; pure water was everywhere abundant, and an occasional copse of pine or spruce timber dotted these beautiful hills, upon whose gentle slopes anywhere a wagon could be driven. Deer, elk, antelope and prairie chickens abounded. The apparent excellence of this country for a stock range was frequently remarked, but only a few bands of sheep were seen and they were there but temporarily, the herders using tented wagons to enable them to move easily from place to place. This beautiful domain is unsurveyed, and why it should remain unsettled can be explained only upon the probability of very severe winters. Seven days' travel brought us to the snow-capped peaks of the famous Big Horns, whose range is 200 miles long by 40 miles wide. Camp was pitched on Little Ten Sleep Creek, a stream veining with any of those on Kern River in the number, beauty and quality of its speckled trout; its waters literally teem with these pretty fish, all eager to see which can get into your frying-pan first. Prior to this, other trout streams were found, but none compared favorably with this. Before the day closed four deer and two elk were slaughtered, Mr. Broder bringing in the finest deer—a four-point buck. Camp was now well supplied with meat, and for a time hunting gave way to fishing. At this point, unfortunately, the ranks of our little party were broken by the departure of Mr. Britten, who accepted the position of packer with a party of soldiers, out on a pleasure trip from Buffalo, Wyoming.

The Big Horn range is heavily timbered with pine and spruce of small diameter; rarely is a tree seen measuring more than 1½ ft. in diameter. In times gone by extensive forest fires have prevailed, killing a great deal of timber; in many places one can walk for miles on fallen dead timber.

Big Ten Sleep Creek, twenty miles further north, proved a most attractive place. Camp was pitched on the lake of same name, a body of water one-fourth mile wide by one mile long, surrounded by snow-capped mountains and beautiful woodlands, its mirror-like surface reflecting a splendid picture of the gorgeous scenery about it. The quiet loveliness of this pretty place stirs the soul and kindles feelings of the keenest pleasure. The fishing here was equal to that of the former camp, and elk and deer abounded.

Were the game laws of Wyoming strictly enforced the non-resident hunter would be shut out entirely. Under the law non-residents are allowed to kill nothing. Hides, horns and meat of wild game are not allowed to be shipped out of the State by any one. But like the game laws of California, they are not strongly enforced, and the non-resident hunter usually finds little difficulty in shipping his hides and horns.

Two days' travel northward brought us to the banks of one of the largest and most interesting streams in the Big Horns—South Paint Rock Creek. Some difficulty was encountered in reaching this camp, we being compelled to cut our way for a distance of five miles through what is termed in Wyoming a "wind fall," or fallen dead timber. Once through this we had plain sailing. Traveling in the Big Horns, even without a trail, is usually good; there is always more or less open country.

The reader may be puzzled to know how we avoided being lost, being in a strange country and having no guide. This was obviated by good maps and compasses. By means of these, and a scale of miles provided with the map, and by keeping a record of the distance traveled daily, our locality could always be determined with tolerable accuracy. Locality was a matter of little concern. If plenty of wood, water, grass and wild game were found, it was a royal residence,

South Paint Rock is a rushing stream similar in size to Little Kern River, and one of the most famous trout streams in Wyoming.

When the excellent fishing and hunting afforded by this locality had been well enjoyed, we determined to turn westward, cross the Big Horn Basin, and explore the Shoshone range of mountains for game and fish. From our camp on Paint Rock there extends toward the basin a gently sloping tableland, through which, for a distance of fifteen miles, the creek had cut its remarkable cañon, 2,000 ft. deep and less than a quarter of a mile wide. Everywhere could be seen the skeletons of numerous elk and mountain sheep that had perished there during severe winters. For miles this cañon presented an unbroken surface of gigantic wall and a magnificent display of colors. In many places the precipices were blood red from summit to base, relieved by horizontal strata of yellow, purple, brown and gray. Red predominated, and hence the name Paint Rock Creek, the beautiful and tumultuous stream that traverses the cañon. To the lover of the beautiful and grand this is a most glorious place.

Big Horn Basin is 150 miles long by 75 miles wide, much lower than the surrounding country, and formed of low hills and tablelands poorly watered. The basin is bounded on the east by the Big Horn Mountains and its southern spur, and on the west by the Shoshone and Owl Creek ranges. The Big Horn River flows a northerly course through the center of the basin and empties into the Yellowstone.

Pickering, catfish and grayling are caught in the waters of Big Horn River, the pickerel and cat frequently weighing 10 to 15 lbs. The borders of the river are well timbered and the adjacent country abounds in wild game—antelope, deer, elk and bear. Little time was spent here after game, our destination being the picturesque Sho-

A STUDY OF ELK.—By J. B. BURNHAM.

shones. For three days the course was up the river, at the end of which time the Owl Creek range was sighted and camp was pitched at the mouth of the creek of the same name, one of the largest tributaries of the Big Horn having its source in the Owl Creek and Shoshone ranges.

Here we left Big Horn River, and for three or four days traveled up Owl Creek, along whose little valley we saw a few ranches, nearly all of which were devoted to alfalfa, cattle and horses. The absence of wheat and barley was remarkable, not a field of these cereals having been seen in the State. During the third day's travel up the creek two of the largest cattle ranches in Wyoming were passed. The first of these was the Keystone, whose herd numbers 20,000 head, and superintended by Mr. McCoy, of Denver, Colorado. A few miles distant was the Embar ranch, their brand being the letter M and a bar beside it, hence the name; their herd numbers 100,000. Embar post office was soon reached, where we waited two days for our mail.

Our first camp in the Shoshones was upon the headwaters of Big and Little Grass creeks, twenty-five miles to the northwest. This proved a fine elk country, every cañon containing a band of them. Not well understanding the habits of the elk and his ability to elude the hunter, several fruitless attempts were made before any were killed; on the third day's hunt a bull elk was killed, dressing 500 lbs. Do not make the mistake most hunters do who are unused to hunting this royal game—that because he is as large as a cow he can be as easily captured. At this season of the year they are to be found in the highest timber at the heads of cañons; rarely does he feed during the day, but ventures forth on moonlight nights. During the dark of the moon he takes his food during the earliest hours of the morning, retreating to heavy timber on the approach of sunrise. They are ever on the alert for their enemies, and their fleetness of foot and keenness of eyesight, hearing and smell, make them among the most difficult game to capture. The elk does not bound like the deer or gallop like the horse, but he is a most excellent trotter; during his flight the nose is elevated and the huge antlers rest on the back; it is truly astonishing what headway they can make through timber. On first seeing a frightened elk speeding over the mountain, it was strongly suggested to the writer that could one be harnessed to a sulky the world's trotting record could be easily lowered and the famous Maud S. would not be in the race at all. The elk of to-day is a much smarter animal than the elk of twenty years ago; he is no longer stupid enough to venture upon the open plain to fall an easy target for the hunter's rifle, but makes his home in dense forests, from which he seldom ventures save for food and water. The deer soon recovers from his fright, and you find him waiting for you in the neighboring gulch; but the elk, once alarmed, does not halt till he is ten or fifteen miles from his pursuer. The experienced hunter chooses his feeding time in which to hunt him, taking great care to keep the wind in his favor and well knowing that to hunt with the wind is the

utmost folly. Unless those vast forests are destroyed and since the Indians are growing less numerous, it is certain that they will gradually increase in numbers. The sleek, plump body, graceful head, large lustrous eyes, gigantic antlers and majestic carriage combine to make the elk the most royal game of the forest.

Fifty miles to the northwest we encountered Wood River and its grand cañon twenty miles long, up which we passed. The beauty and sublimity of this cañon is worthy of remark. Snow-capped summits 4,000 to 5,000 ft. high rise precipitously and almost continuously throughout the length of the cañon. The cañon was headed and the dividing ridge crossed, bringing us to the headwaters of the east fork of Wind River, down which we passed toward the main stream.

The head of Wood River cañon is a noted place for mountain sheep and goats, and a day was spent in search of these wary animals, but a snowstorm cut short what might have been a successful hunt. It was suggested by a member of the party that a pair of wings would prove of great service in the pursuit of mountain sheep. I quite agree.

Three days' travel gained "Two-ow-tee Pass," the dividing ridge between the headwaters of the Wind River and Buffalo fork of Snake River. "Two-ow-tee" is not the famed Two-Ocean Pass, from which the waters upon one side flow into the Atlantic and those upon the other into the Pacific Ocean. How impressive and almost incomprehensible must be the sight of two streams, whose sources are only a few yards apart, but whose destinations are separated by thousands and thousands of miles.

The Pass is about 10,000 ft. high, on reaching the summit of which a grand sight was presented. A few miles to the northeast lay an immense terraced mountain several miles long and around which the Almighty had placed a splendid inclosure. The vertical walls of the principal terrace was a magnificent palisade hundreds of feet high and rivaling the famous palisades along the Hudson River, New York, while sixty miles westward and shooting high into the heavens, were the clear cut spires of the unique and beautiful Teton range. They lie just west of Snake River and along the eastern boundary of Idaho, and are among the most strangely picturesque and beautiful mountains in America. Unlike our Sierra Nevadas, they have no foothills, but resemble a series of cathedral spires rising from a level plain to the sublime height of 14,000 ft. The picture they present amid the glories of a summer sunset, once seen is never forgotten.

Vast numbers of elk, antelope, deer, bear and many moose and caribou are found in the range, but so rugged are they and so dense the timber that the hunter finds pursuit of game almost impossible.

We traveled down Black Rock Creek, one of the tributaries of the Buffalo fork, passing through lovely valleys and much pretty, sparsely-timbered country untenanted by man and untrodden by anything save the deer and the elk. We soon reached Snake River, up which we traveled on the Sheridan trail toward the National Park, the second day's travel bringing us just within its southern confines, and at a point called Snake River Station, where a few soldiers were guarding the Park.

T. J. PATTERSON.

[TO BE CONCLUDED NEXT WEEK.]

## IN NEZ PERCES TIMES.

DURING the Nez Perces Indian war I drove a small band of horses down in to what is called the Cove, a nice range for horses in between a small hollow that put down from Mount Idaho and the Clearwater. Here I could look after them occasionally and could prevent the Indians from driving them off. One day I went down and as I was not feeling very nervous I took nothing but a Colt's .45 revolver. I had got along down nearly half way from the summit to the river when I saw my band of horses not more than half a mile distant. They were all in a bunch, and from their appearance I knew that they had seen something in a small thicket between me and them which I could overlook. I jumped off from my horse and led him back a little so I could see without being seen, and about the first thing I thought of was Indians. Then I began to wish that I had brought my Remington. I had but a few minutes to complete all my wishes when out from the brush walked a good-sized brown bear. He was going quartering up the mountain. I had quite a rocky place to go down. I started and kept my eyes on the bear, for I did not want him to get alarmed and bolt for the Clearwater Cañon. He soon stopped and so did I, when he started I led on as fast as I could; when he would stop so would I. In this way I reached the bottom, where I had fair going, just as he passed over a small rise into some buck brush.

I soon galloped up on to the rise when I saw him disappear and was looking too far to my right, when my horse threw up his head and looked quartering to my left. I turned my head just in time to see the bear get down from his haunches and start down the ridge through the open timber and buck brush. I gave chase and my horse became excited, and it was hard for me to hold him down to a gait I considered safe. I soon ran up to within 10 yds. of the bear, but he would not take to a tree. He crossed the hollow and started up a very steep bank which was about 50 yds. high. I stopped at the foot of it and took a running shot at him. At the crack of the revolver he rolled back down the bank not 20 ft. from my horse. He struck the bottom at the foot of a big, leaning fir tree, and before I had time to make a good shot he jumped up and started to climb the fir. I shot at the back of his head and he rolled out dead. After he quit kicking, I rode my horse up to him and he did not care at all, but went to nibbling grass unconcerned right by the side of the dead bear.

I went back to Mount Idaho, got a good pack horse, and my brother-in-law and me went back and got the bear, which I think would have weighed 300 lbs. We took him to town, hung him up and skinned him in the main street and told every one to help themselves. Col. Green was there with a company of cavalry. He examined the bear, congratulated me on my luck and said he considered himself well posted on the efficiency of the army revolver, yet he had had no idea that it would make such a wound as was shown in this bear. I got \$4 for the gall; the hide being a summer skin was not good.

LEW WILMOT,

OROVILLE, Wash.

Natural History.

WOODCHUCKS AFIELD.

Soon it will be woodchuck season in New England, and the young rodents will be abroad to forage on the spring grass. The hill country of Massachusetts is a favorite habitat for these creatures, where they are troublesome to farmers on account of their numbers. In some localities they afford almost the sole sport at present for the farmers' boys and their dogs.

Woodchucks hole in together for the winter, sometimes as many as fourteen in a community. When the young ones have grown big enough to hustle for themselves, they are turned out of the domicile, when they betake themselves to stone walls, where the dogs find them and kill many. One collie dog in Cummington, belonging to A. S. Streeter, has a record of seventy-eight woodchucks in one season. The boys often help by pulling away loose stones so that the dogs can get at them. It takes a clever dog to yank a chuck out of a wall without being much bitten. A chuck in a stone wall is almost as good game as a badger, as he sits in the embrasure with only his ivory muzzle presented to the aggressor. Sometimes the boys bury steel traps in the sand and gravel which the animals have thrown out at the entrances when digging their burrows, and frequently they drown them out by deluging the holes with two or three barrels of water, which they spend much energy in filling and hauling to the spot on a wagon after school hours. Occasionally they catch or shoot them afield, for often the woodchucks forage at long distances from their holes. Clover is preferred to other food, though havoc is made with the growing stalks of small grains. Young woodchucks dig new holes or appropriate old ones according to circumstances. Frequently skunks take possession and are caught in the traps, to recover which gives the boys a sweet-scented job. If they happen to have no guns they cut a sapling as long as they can wield with effect, so as to be beyond reach of the varmint's trajectory, and then beat him to death with the end. Generally they are obliged to bury their clothes after the achievement. There are sometimes two entrances to a burrow, which is dug first downward and aslant if in a level field, or straight into a bank, then upward for a foot or two, and then down again at a steep incline to a big round cavity at the terminus, which is used for a nest. Prairie dog burrows are dug in the same fashion, the object being to prevent their being flooded by heavy rains, as well as to resist encroachment of intruders. Holes in banks have an obvious advantage over those in levels, as it is impossible to flood them. Boys, however, locate the nests, and digging down to them pour the water directly in. Many whip lashes used to be made of woodchuck hide in New England forty or fifty years ago, and the flesh was often baked and eaten. A dead woodchuck is a superlative plaything for a young puppy, especially when on chain. It amuses him more than a ball, a rag baby, or an old bonnet; it educates his nose and stimulates his ardor for field work.

CHAS. HALLOCK.

NOTES ON FOXES.

GRAND VIEW, Tenn.—I suppose that I really ought to know something about foxes, having caught them in every possible way and manner that I ever heard of their being, except, perhaps, the method which Samson took when he captured those 800. There were some four or five varieties in the States of New York and Pennsylvania, but the red were the most numerous, say about 70 per cent. I estimate, as I found them forty years ago. There were two varieties of the gray fox. The dark gray is a fine specimen, a trifle larger and more heavily built than the red, full furred, and the long hair tipped with black, black legs and furred clean down to the toes, and invariably with a tuft of long white hair on the end of the brush. This fox when running on snow, directly from or toward you, might easily be mistaken for a genuine black fox.

The cross fox is believed by many to be a distinct variety, but I imagine it is only a cross between the dark gray and the red.

The light gray fox is a red-legged chunky little animal, although considerably outweighing the red; his legs are bare of fur and his tracks very much resemble the tracks of a small dog. Under favorable circumstances he gets quite fat. His fur may be reckoned as third rate.

I describe foxes as they are found in early winter; they appear somewhat different in spring and summer. The Samson fox is about the size of the red and covered with a short woolly coat of a dirty pale yellow, destitute of fur and nearly so of hair, having somewhat the appearance of being singed by fire, hence the name of Samson fox. Whether this apparent freak of nature is caused by a disease of the skin, or whether it is a distinct variety as some believe, I am unable to say. This I know, that when stripped of its skin the body shows no signs of disease. The red fox has wonderful running power, and is a shrewd, sharp, cunning hunter with marvelous instinct, reaching far beyond that of ordinary game animals.

ANTLER.

[The dark gray fox mentioned by our correspondent is evidently the gray fox (*Vulpes cinereo-argentatus*), the species which is somewhat notable for its tree climbing habits. The Samson fox is not known. Its peculiar coat may be due to disease or possibly to age.]

LINCOLN, Neb., April 10.—A friend writing from my old hunting ground in Presque Isle county, Mich., states that during a recent stroll through the woods, he came upon and killed a fox or something of that species, and describes it as follows. I cannot tell him anything definite and submit his question to you. Is it a freak or some distinct species?

"It is black from head back to behind shoulders, gray and black back to tail, tail black all but tip end, say 3 in., and this is white as snow. It is a very small fox, no one here ever saw anything like it; may be you could tell me something about the kind of animal it is and what is its value as fur. Wish I had got it mounted."

E. E.

[The animal was probably a gray fox (*Vulpes (urocyon) cinereo-argentatus*), though the tip of tail in this species is usually dark.]

A HOLLOW-HORNED BUCK.

COUTTS, Alberta, Canada, March 17.—*Editor Forest and Stream:* Not very long ago while hunting with a friend near here we killed an ordinary black-tail (mule deer) buck which had hollow horns. The animal is a common deer with five points and was in very good condition when killed.

The head, which is now stuffed, belongs to a great friend and fellow hunter here. He is also a taxidermist and he values the head very much, so I am unable to send you the horns. The hollow commences in the fork of the top prong and consists of a small hole about the size of a .32cal. rifle. How big the hollow is further down I cannot say, but my friend who stuffed the head says it is a good deal larger. While examining the head I took a small stick and could shove it down through the cavity nearly to the head. This hollow is in the left horn; the right antler has no hole that you can see, but on tapping the horn it sounds hollow, and the owner assures me that it is so. You can notice nothing strange about the animal or antlers different to any other deer.

I think that is all the information I can give you. My friend who owns the head and who has had great experience in all kinds of deer, assures me he has never seen anything like it before, and I can say the same for myself, and I have seen and shot many deer in my time. This is why I informed you of the matter, hoping it would interest the readers of that splendid paper, the FOREST AND STREAM.

W. SHAW LOGGIN.

[We have hanging above our desk in this office a pair of Virginia deer horns, the right antler of which has a hole about an inch long, through the beam from above downward. It is no doubt due to an injury to the antler when it was soft.]

A Twenty-one Point Elk Head.

BOZEMAN, Mont.—*Editor Forest and Stream:* We send you a photograph of a 21-point elk head. The widest spread of horns is 68 in. We have had it mounted, and it is now at our store, the Montana Armory. This elk was

TWENTY-ONE POINT ELK HEAD.

Property of the Montana Armory.

killed last year in the upper Madison River Basin. It is an exceptionally fine head, and is quite a curiosity, even to the old hunters.

We also have a bison bull head, the horns of which measure 16 in. in circumference at base, 20 1/2 in. each in length; and the spread of the horns is 38 in. The head we consider the largest perfect bison bull head in America.

MONTANA ARMORY.

A Snake in a Fix.

SILVERDALE, Wash.—I was hunting ducks along a marshy draw in Nebraska some months ago, and while walking along a small brook fringed with weeds and tules, I frightened a small garter snake into the water a few feet ahead of me. As I came to the place where I saw him slip down the bank I glanced down in the water; there I stopped, for the snake was acting in a curious way. The head was out of sight under the grass that hung down from the opposite side of the brook, but the rest of his body was twisting and turning in the water until it struck a weed or grass stem; then two or three turns of the tail would wind about the object and a tension of the muscles would "bring it all adrift." I didn't understand that kind of business, so I cut a big sunflower and stuck it down within reach. Pretty soon I "got a bite" and hauled out the snake with a freshwater clam tightly closed on its neck.
